The Online M.S. in Crop Sciences program enables students to strengthen their education typically through part-time study, as most students are working professionals. Courses are delivered mainly through online and other distance education technologies and occasional site-based programming (site-based courses are optional and not required to complete the degree). The Crop Sciences online M.S. program is typically completed as a non-thesis degree, but a thesis option can be pursued pending Departmental approval. The program has a 30-plus year history of providing high quality University of Illinois courses and began granting off-campus MS degrees in 1986 to agriculture professionals across Illinois, as well as in neighboring states. Students may enroll in individual courses for personal or professional advancement or may apply for admission to the master’s degree program in Crop Sciences. Students who successfully complete three qualifying courses may also receive a Professional Development Certificate in Crop Sciences.

The Online M.S. in Crop Sciences program also works in conjunction with the Natural Resources and Environmental Studies Online M.S. program and the Agriculture Education Online M.S. program to offer a diverse set of courses. The Department of Crop Sciences is looking to the future and the needs of non-traditional students. Therefore, new courses are continually in development for online delivery and blended formats. A student may complete their entire degree requirements online from anywhere in the world and they are available to in-state students and out-of-state students at the same tuition rates. For more information on Crop Sciences, the Online M.S. in Crop Sciences degree program or certificate offerings, please visit cropsci.illinois.edu/online-program.

Master of Science in Bioinformatics, Crop Sciences Concentration

The Crop Sciences concentration within the M.S. degree in Bioinformatics can be earned with a thesis option or a non-thesis option, which requires optional supervised research experiences.

E-mail: cigradprograms@ed.illinois.edu

Major: Curriculum and Instruction
Degrees offered: Ed.M., M.S., M.A., C.A.S., Ph.D., and Ed.D.
Graduate Concentration: Second Language Acquisition and Teacher Education (Ph.D. only), Writing Studies (Ph.D. only)

Major: Early Childhood Education
Degrees offered: Ed.M. with teacher licensure

Major: Elementary Education
Degrees offered: Ed.M. with teacher licensure

Major: Secondary Education
Degrees offered: Ed.M. with teacher licensure
Graduate Concentrations: English, Mathematics, Sciences, Social Studies

Off-Campus Program: Curriculum and Instruction
Degrees offered: Ed.M.

Medical Scholars Program: Doctor of Philosophy (Ph.D.) in Curriculum and Instruction and Doctor of Medicine (M.D.) through the Medical Scholars Program (http://www.med.illinois.edu/mdphd)

Graduate Degree Programs

The Department of Curriculum and Instruction offers graduate programs leading to the degrees of Master of Education (Ed.M.), Master of Science (M.S.), Master of Art (M.A.), Certificate of Advanced Study (C.A.S.), Doctor of Philosophy (Ph.D.), and Doctor of Education (Ed.D.). Students may work with faculty who specialize in:

• Aesthetics Education
• Bilingual/ESL Education
• Curriculum Studies
• Early Childhood Education
• Early Literacy
• Elementary Education
• English Education
• Literature for Children and Adolescents
• Mathematics Education
• Multicultural Education
• Reading Education
• Science Education
• Second Language Literacy
• Secondary Education
• Social Studies Education
• Teacher Education
• Technology Studies
• Writing Education

Graduate students interested in writing can obtain a concentration in Writing Studies (http://www.cws.illinois.edu/graduate) at the Ph.D. level.
Through the Master of Education and the Certificate of Advanced Study, experienced teachers are prepared to become more competent and better informed practitioners who serve as leaders for educational reform in local schools and school districts.

Also offered are master's degree programs leading to teacher licensure for individuals who have a degree in a field other than education and who wish to become teachers. The three majors leading to licensure are Early Childhood Education, Elementary Education, and Secondary Education. Students in these programs follow the same sequence of professional education courses as undergraduate students, in addition to completing the courses required for an Ed.M. degree.

Only master's students wishing to become licensed teachers in one of these three areas should apply to the Early Childhood Education, Elementary Education, or Secondary Education majors. Master's candidates who do not wish to become teachers, or are already teachers, should apply to the majors in Curriculum and Instruction.

Two doctoral degree programs are offered. The Ph.D. program prepares degree candidates for careers involving research and scholarship, including those in colleges and universities where research is generally combined with teacher education. The Ed.D. Program prepares scholarly practitioners for leadership positions in teacher training institutions, state education agencies, and public school districts.

Length of time for a degree: an Ed.M. program can be completed in a calendar year, while the M.S. takes longer. The Ed.M. with licensure typically takes two years to complete. Doctoral programs usually require four to five years of full-time study.

**Admission**

Applicants should apply online at www.education.illinois.edu/ci/admissions. In addition to the application, the applicant is required to submit the following information: a statement of purpose, updated resume, official transcripts from all colleges attended, and three letters of recommendation. Scores for the Graduate Record Examination (GRE) must be submitted for Ph.D. applicants who wish to specialize in mathematics, science, instructional technology, or early childhood. No test scores are necessary for other areas of study or degrees. A scholarly writing sample in English, such as a master's thesis, article, or paper, is required for application to the doctoral program. Applicants for the master's degree with teacher licensure must submit passing scores on the Illinois Licensure Testing System Test of Academic Proficiency (TAP) or use their ACT/SAT score in lieu of passing the TAP (http://education.illinois.edu/students/prospective-students/ACT) and if required for your area of licensure, the appropriate content area examination. Note: The master's with teacher licensure program admits students only during the fall term.

International applicants must submit TOEFL scores. The Department of Curriculum and Instruction's TOEFL requirement for full status admission is greater than 102; the minimum score for limited status is 550 on the paper-based test, 79 on the internet-based test and 213 on the computer-based test. International applicants must also submit a Declaration and Certification of Finances. Please note: TOEFL or IELTS scores must be less than two years old from the first day of class at the proposed term of entry in order to be valid. In addition, individual academic programs may require a higher score, or evidence of spoken English language proficiency; contact your proposed program of study office (http://www.grad.illinois.edu/admissions/depts) for the minimum TOEFL, TSE, or IELTS requirement for admission. For additional details, refer to the Graduate College Handbook www.grad.illinois.edu/admissions/instructions/04c.

**Degree Requirements**

- Masters (p. 639)
- Doctoral (p. 639)
- C.A.S. (p. 639)

For additional details and requirements refer to the department's Web site (http://www.education.illinois.edu/ci), the College of Education Graduate Programs Handbook (http://www.ed.illinois.edu/students/grad_handbook), and the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).

**Medical Scholars Program**

The Medical Scholars Program permits highly qualified students to integrate the study of medicine with study for a graduate degree in a second discipline, including Curriculum and Instruction. Students may apply to the Medical Scholars Program prior to beginning graduate school or while in the graduate program. Applicants to the Medical Scholars Program must meet the admissions standards for and be accepted into both the doctoral graduate program and the College of Medicine. Students in the dual degree program must meet the specific requirements for both the medical and graduate degrees. On average, students take eight years to complete both degrees. Further information on this program is available by contacting the Medical Scholars Program, 125 Medical Sciences Building, (217) 333-8146 or at www.med.illinois.edu/msp.

**Faculty Research Interests**

For information about specific faculty research interests, current grants, and publications, please visit the Faculty Research Profiles web site: www.ed.illinois.edu/ci/frp.
Facilities and Resources

Departmental resources consist of cooperation with Children's Research Center, Center for Small Urban Communities, as well as other resources in the College. Students who are interested in second language acquisition can become a part of the SLATE program. The department is connected to the University of Illinois Writing Project and the following journals: *International Journal of Education & the Arts*, *Journal of Curriculum Studies*, and *American Educational Research Journal*. We also have resources for graduate students such as the Language and Literacy Student Organization and other student-initiated groups in Curriculum, Aesthetics, and Teacher Education; and Mathematics, Science, and Technology.

The College of Education also has many resources to assist graduate students through their academic career. The Bureau of Educational Research works with students to secure research funding. The Council on Teacher Education entitles candidates seeking a Professional Educator License and provides accreditation of professional education programs. Each student completing a degree program is assigned a graduate adviser, who is available to assist the student with planning the program of study and determining degree requirements, courses and timelines for degree completion.

Information on University resources can be found at www.grad.illinois.edu/campus-resources.

Financial Aid

Financial aid in the form of assistantships, scholarships, fellowships, and tuition waivers can be found throughout the college and campus. There are opportunities available through the department (http://education.illinois.edu/ci), the College of Education (http://education.illinois.edu/students/graduate-financialaid), and the Bureau of Educational Research. (http://www.ed.illinois.edu/ber/fundingresources.html) Please note: Graduate students employed as Staff by the University of Illinois at Urbana-Champaign are not eligible for a College of Education Award or Scholarship. Campus opportunities can be found at the Graduate College (http://www.grad.illinois.edu/funding-jobs) and the Office of Student Financial Aid (http://www.osfa.illinois.edu).

Certificate of Advanced Study (C.A.S.), Curriculum and Instruction

The University of Illinois at Urbana-Champaign's College of Education complies with the U.S. Department of Education's Gainful Employment requirements by disclosing information to applicants regarding our Certificate of Advanced Study program. Required information can be found here (http://provost.illinois.edu/ProgramsOfStudy/2014/fall/programs/graduate/CAS_C&I/Gedt.html).

If the student does not have a Master's degree from the University of Illinois at Urbana-Champaign, Foundation Courses must be completed as prerequisites:

For additional details and requirements refer to the department's Web site (http://www.education.illinois.edu/ci), the College of Education Graduate Programs Handbook (http://education.illinois.edu/students/grad_handbook), and the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).
Dance

www.dance.illinois.edu

Head of the Department of Dance: Jan Erkert
MFA Program Director: Jennifer Monson
907 1/2 West Nevada Street
Urbana, IL 61801
(217) 333-1010
Fax: (217) 333-3000
E-mail: dance@illinois.edu

Major: Dance
Degrees Offered: M.F.A.

Graduate Degree Program

The Department of Dance offers a graduate program leading to the Master of Fine Arts degree. The mission of the MFA Program is to foster substantive choreographic research that posits dance as a force in contemporary culture. The program embraces a wide spectrum of individual movement research and embodied practice to create a dynamic learning atmosphere for critical engagement with choreographic process.

The Dance Department expects MFA candidates to conduct a creative inquiry that leads to the development of a sophisticated sense of self-definition. Individual research and analysis should culminate in the development of a personal artistic process and mission and should be evident in the following contexts:

Choreographing- Candidates will develop a distinctive choreographic research methodology and demonstrate its skillful application in a performative context. This artistic process/vision/field of interest must establish a solid foundation for ongoing research and engagement that contributes to the global dialogue about dance and contemporary culture.

Communicating- Candidates will develop the ability to express their choreographic vision and process in verbal and written language that is clear, cogent, and demonstrates clear analytic skill, critical thinking, awareness of historical context, and knowledge of contemporary culture.

Moving- Candidates will demonstrate a commitment to movement investigation and practice that defines, advances, and sustains their choreographic vision.

Teaching- Candidates will apply their research vision in clear pedagogic principles while fostering a stimulating teaching/learning environment.

Developing a Career Plan- Candidates will devise bold and innovative career strategies in order to advance their artistic mission in the field and demonstrate the capacity to implement these plans with professionalism in all the above contexts.

Admission Requirements

Prerequisites for admission to the MFA program are:

1. An undergraduate degree in dance is preferred, but we do accept students with undergraduate degrees in other subjects. Depending on background and skills, students may be expected to complete other dance requirements.
2. Demonstrated potential to engage in critical thinking and writing.
3. Demonstrated choreographic achievement and potential to make innovative contributions to the field.
4. A minimum grade point average of 3.0 on a 4 point scale, computed from the last 60 hours of undergraduate work and any graduate work completed.

International students must have a minimum TOEFL score of 79 on the internet-based test, 213 on the computer-based tests, or 550 on the paper test for limited status admission. Students with these minimum scores must take the English as a Second Language Placement Test (EPT) upon entry to the University. International students who receive a score greater than 103 on the internet-based test, 257 on the computer-based test, or 613 on the paper test are eligible for full status admission. Students with these scores are exempt from the English as a Second Language Placement Test. The GRE is not required.

Faculty Research Interests

An extraordinary faculty of artists, researchers and scholars has gathered at Illinois, who are creating new paradigms for interactions between the professional arena and the academic training ground. Our group of professional artists includes Jan Erkert, Sara Hook, Philip Johnston, Linda Lehovec, Jennifer Monson, Rebecca Nettl-Fiol, Tere O'Connor, Cynthia Oliver, Kirstie Simson, John Toenjes, and Renee Wadleigh, all of whom share a commitment to teaching and preparing students for leadership roles in the field of dance.
Financial Aid

Two forms of financial aid are offered to graduate students by the Department of Dance:

- Teaching, video and administration assistantships are available to graduate students. Assistantships of 25% or greater qualify the student for a tuition waiver. All students are required to apply for Federal Work Study.
- A variety of Fellowships are available through The Graduate College each year, including: (A full listing of Fellowships can be found at: www.grad.illinois.edu/fellowships
  - The Creative and Performing Arts Fellowship, which may include stipends up to a maximum of $6,000 for a student demonstrating outstanding choreographic and performance talent.
  - The Graduate College Fellowship for Underrepresented Students provides fellowships in the amount of $8,000 and are available to outstanding minority students.

Graduate teaching assistantships are awarded to experienced teachers. Prospective students who have had prior teaching experience may apply for a teaching interview by completing the enclosed Teaching Audition Application Form. A letter of recommendation from a dance professional who has observed the applicant’s teaching is required with the application.

Prospective MFA candidates are encouraged to apply for financial assistance through the Office of Student Financial Aid, 420 Student Services Bldg., University of Illinois at Urbana-Champaign, Champaign, IL 61820. (217) 333-0100.

Master of Fine Arts in Dance

Some degree of curricular flexibility is permitted depending on previous experience and current interests and goals. Cross-disciplinary work and independent study in areas of interest are encouraged. The ability of the candidates to pursue graduate study is assessed at the midterm of the second semester in the first and second year in residence, at which time a decision is made regarding continuation in the program and the length of the residency requirement.

In rare cases, the department (in collaboration with the Graduate College) will waive up to a maximum of 12 hours of credit because of extensive prior experience which is defined by "exhibiting a large scope and depth of successful practice in the field of dance." These hours may be in one of or a combination of Composition, Performance, or Technique. This consideration for waiver of credit will not be made unless the prior dance experience is of the highest quality (on a national or international level) and has been sustained consistently over a number of years (at least a decade). This experience must be well documented and must be confirmed and demonstrated by the candidate's contributions to the department. Therefore, such waivers cannot be considered until well into the student's program of study.

East Asian Languages and Cultures

www.ealc.illinois.edu

Head of Department: Gary Xu
Director of Graduate Studies: Makoto Hayashi
2090 Foreign Languages Building
707 South Mathews Avenue
Urbana, IL 61801
(217) 244-1432
E-mail: ealc@illinois.edu

Major: East Asian Studies
Degrees Offered: M.A.

Major: East Asian Languages and Cultures
Degrees Offered: Ph.D.
Graduate Concentration: Medieval Studies (p. 811) (Ph.D.), Second Language Acquisition and Teacher Education (p. 891) (Ph.D. only)

Medical Scholars Program: Doctor of Philosophy (Ph.D.) in East Asian Languages and Cultures and Doctor of Medicine (M.D.) through the Medical Scholars Program (http://www.med.uiuc.edu/mdphd).

Graduate Degree Programs

The Department of East Asian Languages and Cultures offers academic programs in the languages and the humanistic cultures of China, Japan, and Korea, and of the East Asian region, leading to the Master of Arts in East Asian Studies and the Doctor of Philosophy in East Asian Languages and Cultures.

www.ealc.illinois.edu/programs/graduate/

Admission

Applicants are expected to have a strong background in at least one East Asian language; normally, this means a minimum of two years of formal study. Applicants to the graduate program must submit an application for admission online (www.grad.illinois.edu/admissions/apply) and submit a statement of purpose, three letters of reference completed by teachers, advisers, or recent employers, and a 10-20 page writing sample. Original transcripts (with English translations if applicable) showing all undergraduate and graduate work completed should be sent to:

SLCL Graduate Student Services
3070 Foreign Languages Bldg.
707 S. Mathews Ave.
Urbana, IL 61801

Graduate Record Examination (GRE) scores are required and should be submitted to institution code 1836. Applicants whose native language is not English are required to take the Test of English as a Foreign Language (TOEFL) and must score at least 103 on the internet-based test (iBT) for admission with full standing; they must also pass the speaking sub-section of the iBT with a minimum score of 24 (see www.grad.illinois.edu/Admissions/instructions/04c). Students with a B.A. or B.S. only should apply to the M.A. Applications are accepted for fall admission only. Application questions may be directed to SLCL Graduate Student Services at slclgradservices@illinois.edu. (slclgradservices@illinois.edu)

Medical Scholars Program

The Medical Scholars Program permits highly qualified students to integrate the study of medicine with study for a graduate degree in a second discipline, including East Asian Languages and Cultures. Students may apply to the Medical Scholars Program prior to beginning graduate school or while in the graduate program. Applicants to the Medical Scholars Program must meet the admissions standards for and be accepted into both the doctoral graduate program and the College of Medicine. Students in the dual degree program must meet the specific requirements for both the medical and graduate degrees. On average, students take eight years to complete both degrees. Further information on this program is available by contacting the Medical Scholars Program, 125 Medical Sciences Building, (217) 333-8146 or at https://www.med.illinois.edu/mdphd/.

Graduate Teaching Experience

Although teaching is not a general Graduate College requirement, experience in teaching is considered an important part of the graduate experience in this program. Therefore, applicants are requested to include information on teaching background as part of the application, and students can normally be expected to teach at least one semester as part of their graduate experience. Non-native English speakers must first pass a test of their oral English ability.
Financial Aid

The Department makes every effort to assist graduate students in securing financial aid. Financial aid packages usually combine some form of fellowship support with teaching or research assistantships in a manner that allows for both teaching experience and timely completion of the degree. In recent years, the vast majority of EALC graduate students have received some form of financial support. Financial aid for graduate students in the Department of East Asian Languages and Cultures may include:

- University Fellowships
- Foreign Language and Area Studies (FLAS) Fellowships
- University Dissertation Completion Fellowships
- Minority Academic Partnership Plan (MAPP) Fellowships
- teaching assistantships
- research assistantships

All awards of financial aid are made following competitive application.

Master of Arts in East Asian Studies

Thesis Option

Two 500-level courses in the major field including one course designated as a research seminar in which the student produces a research paper using Asian language sources.

Minimum 500-level Hours Required Overall: 12

M.A. Examination

Minimum GPA: 2.75

For additional details and requirements refer to the department's guide to Graduate Programs (http://www.ealc.illinois.edu/programs/graduate) and the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).

Doctor of Philosophy in East Asian Languages and Cultures

Applicants to the Ph.D. program normally must hold a master's degree in East Asian studies or a related discipline with an East Asian concentration.

Candidates for the Ph.D. may specialize in culture (e.g., religion, literature, history), language acquisition, or language pedagogy, with a major concentration in China, Japan, or Korea.

Other general requirements include: an annual review of progress, including an evaluation of research capability; a written and oral preliminary examination in the major and two minor fields (after completion of coursework); presentation of a dissertation proposal (often as part of the preliminary exam); and completion and defense of the dissertation. www.grad.illinois.edu/gradhandbook/chapterVI/section01

Entering with approved M.S./M.A. degree

Courses in the major field defined by culture and discipline (500-level) 16
Research seminars (500-level) 8
Elective 500-level courses 8
Two graduate courses in a second discipline and two in a second culture must be completed as part of the Ph.D. coursework

Language Requirement:
Candidates must demonstrate a knowledge of one East Asian language at the fourth-year level by satisfactory completion of appropriate (400-level) coursework or examination and passage of a written examination covering material studied while in residence.

Demonstration of proficiency in a second language relevant to the student's course of study usually Chinese, Japanese, Korean evidenced by either a) completion of minimum of two years of an approved sequence courses; or b) by examination.

EALC 599 Thesis Research (32 max applied toward degree) 0-32
Total Hours 64

Other Requirements

Other Requirements may overlap

In addition to the language requirements noted above, Ph.D. students whose primary focus is Japan are required to take one year of classical Japanese, and those whose primary focus is China are required to take one year of classical Chinese. These may be counted toward degree requirements.

Qualifying Exam Required No
Preliminary Exam Required Yes
Final Exam/Dissertation Defense Required Yes
Dissertation Deposit Required Yes
Minimum GPA: 2.75

Economics

www.economics.illinois.edu

Head of the Department: Martin Perry
Associate Head: George Deltas
214 David Kinley Hall
1407 W. Gregory Dr.
Urbana, IL 61801
(217) 333-0120
Fax: (217) 244-6571
E-mail: econ@illinois.edu

Major: Economics
Degrees Offered: M.S., M.A., Ph.D.
Graduate Concentration: Policy Economics (M.S. only)

Medical Scholars Program: Doctor of Philosophy (Ph.D.) in Economics and Doctor of Medicine (M.D.) through the Medical Scholars Program (http://www.med.illinois.edu/mdphd)

Graduate Degree Programs
The Department of Economics offers graduate programs leading to the Master of Science in Policy Economics and Doctor of Philosophy degrees. The candidate for a Ph.D. may specialize in the following fields:

- microeconomic theory
- public economics
- macroeconomic theory
- international economics
- labor economics
- development economics
- mathematical economics
- econometrics
- industrial organization

The department is not admitting students to the M.A. at this time.

Admission
Admission to the Ph.D. program is available only for the fall semester. In addition to the standard undergraduate preparation in economics, students are expected to have had at least two semesters of calculus and one of linear algebra to be admitted to the Ph.D. program. The results of the Graduate Record Examination (GRE) should accompany applications for admission. Graduate College admission requirements apply. In addition, international students must submit Test of English as a Foreign Language (TOEFL) or IELTS results; if they wish to apply for a teaching assistantship, the Test of Spoken English (TSE) or completion of the speaking section of the TOEFL-iBT or IELTS is also required.

Medical Scholars Program
The Medical Scholars Program permits highly qualified students to integrate the study of medicine with study for a graduate degree in a second discipline, including Economics. Students may apply to the Medical Scholars Program prior to beginning graduate school or while in the graduate program. Applicants to the Medical Scholars Program must meet the admissions standards for and be accepted into both the Department of Economics and the College of Medicine. Students in the combined program must meet the specific requirements for both the medical and graduate degrees. On average, students take eight years to complete both degrees. Further information on this program is available by contacting the Medical Scholars Program, 125 Medical Sciences Building, (217) 333-8146 or at https://www.med.illinois.edu/mdphd/.

Graduate Teaching Experience
Experience in teaching is considered an important part of the graduate program and is encouraged as part of the academic work of all Ph.D. candidates in this program.
**Financial Aid**

In recent years, the Department of Economics has been able to offer assistantships to most students who meet the standards for admission or continuation in the PhD program. In order to qualify for a teaching assistantship, non-native speakers of English must pass a speaking proficiency test of the English language.

- Master of Science in Economics (p. 654)
- Master of Science in Economics, Policy Economics Concentration (p. 655)

**Doctor of Philosophy in Economics**

Students must pass comprehensive qualifying examinations on Econometrics, Macroeconomics and Microeconomics. Those who fail the comprehensive examinations will have a 2nd chance in the start of the fall semester and a 3rd chance at the end of the fourth semester (in this 3rd chance they will take the exams with the first year students of the next cohort). Students who have failed the 3rd chance will not be allowed to register for the following year. Upon meeting course and GPA requirements, they will be eligible to receive a master’s degree in Economics, provided they have not previously received such a degree from another institution.

Candidates must also successfully complete two fields through coursework and/or a written examination. A research paper must be submitted prior to the start of the third year and approved prior to the end of that year. Students who fail to meet these deadlines will have reduced financial support and be placed on academic probation. Unless they return to good standing by satisfying the requirement, they will be dropped from the program at the end of the following semester.

A dissertation is also required. In addition, candidates are required to give an oral defense of the dissertation proposal and pass an oral final examination covering the research. A student with an appropriate background who devotes full time to graduate work can complete the Ph.D. degree in four years beyond the bachelor's degree. An additional year or more is usually necessary, especially for those holding part-time assistantships. Students in the Ph.D. program may earn a master's degree as they work toward the Ph.D. degree.

Optional: A not-for-credit Math Camp after campus orientation, consisting of 12 hours of instruction. The aim of the Math Camp is to prepare students with no master's level coursework in mathematical economics for the program's first year classes. However, it will be open to all incoming students.

Additional information can be found at [www.economics.uiuc.edu/programs/phdprogram/](http://www.economics.uiuc.edu/programs/phdprogram/).

Master of Science in Economics, Policy Economics Concentration

This is a specially designed one- to two-year program to address the needs of two groups of students. One is promising young professionals and administrators who need additional training in the areas of economic analysis and quantitative techniques. The other is students who are potentially interested in pursuing a Ph.D. degree but require additional qualification to enable them to do so. While earning the master’s degree and acquiring the necessary tools for further studies, they will learn if the pursuit of a Ph.D. degree is within their reach and suits their purposes.

Students enter the program only in the fall term.

The required coursework is further enriched through

1. academic advising wherein an academic advisor with an open-door policy allows the MSPE students to drop by his office at their convenience, discuss their academic questions with him, and re-optimize their program of study on a continual basis. The academic advisor also provides guidance on study plans beyond graduation and provides support in achieving them;
2. an orientation program that includes an intensive mathematics course; this course serves as a refresher for the math content to be utilized during the students’ courses in the program;
3. opportunities to participate in field trips to observe the operation of financial institutions, modern industrial production facilities, federal and state government agencies, and international institutions;
4. scheduled lectures by outstanding, internationally known economists;
5. discussion groups and tutoring for participants who are having difficulty;
6. program staff assistance with visas, housing, and other nonacademic concerns; and
7. participation in social activities, including graduation dinners, holiday parties, picnics, and special luncheons.

This is a designated full-cost recovery program and no financial aid is available for the students in this program.

Please see www.mspe.illinois.edu for detailed information on the MSPE Program.

Other Requirements

The minimum length of stay in the Program is one year (fall and spring semesters plus one summer session).

| Minimum Hours Required Within the Unit: | 32 |
| Minimum 500-level Hours Required Overall: | 32 |
| Minimum GPA: | 3.0 |
For additional details and requirements refer to the department's graduate programs (http://www.economics.uiuc.edu/programs) and the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).

Major: Human Resource Education
Degrees offered: Ed.M., M.S., C.A.S., Ph.D.
Graduate Concentrations: Human Resource Development (Ed.M., M.S., Ph.D. only)

Major: Educational Organization and Leadership
Degrees Offered: Ed.M., M.S., C.A.S., Ed.D., Ph.D.
Graduate Concentrations: Higher Education (available to all degrees), Educational Administration and Leadership (available to all degrees)

Major: Educational Policy Studies
Degrees Offered: Ed.M., M.A., Ph.D.
Graduate Concentration: African American Studies (M.A., Ph.D.), Global Studies in Education (Ed.M., M.A., Ph.D.)

Off-Campus Program: Educational Organization and Leadership
Degrees Offered: Ed.M., C.A.S., Ed.D.

Online Programs: Human Resource Education, Ed.M. (Graduate Concentrations: Human Resource Development; Community College Teaching and Learning; Learning Design and Leadership);
Educational Organization and Leadership, Ed.M.; Educational Policy Studies, Ed.M.

Graduate Minor: College Teaching

Joint Degree Program: Human Resource Education and Business Administration
Degrees Offered: Ed.M. and M.B.A.

Medical Scholars Program: Doctor of Philosophy (Ph.D.) in Educational Organization, and Leadership, Educational Policy Studies, or Human Resource Education and Doctor of Medicine (M.D.) through the Medical Scholars Program (https://www.med.illinois.edu/mdphd)

Graduate Degree Programs

Degree programs in the Department of Education Policy, Organization and Leadership are designed to meet the academic and professional interests of individuals preparing for careers as academic professionals, adult educators, college professors, corporate trainers, educational policy analysts, governmental administrators, instructional designers/technologists, non-profit representatives, organizational development specialists, and university administration leaders. The department is organized into the following areas of specialization:

1. Education Policy
2. Higher Education
3. Educational Administration and Leadership
4. Human Resource Development
5. Social and Philosophical Foundations
6. Global Studies in Education

Admission

The Department of Education Policy, Organization and Leadership carefully considers all applicants for graduate study. Applicants should consult the department website for more detailed information and should apply online at http://education.illinois.edu/epol/admissions/howtoapply. (http://education.illinois.edu/eol/admissions/howtoapply) The quality of the applicant's undergraduate and graduate training and grade point average are primary considerations. Other important factors evaluated include the three letters of recommendation and statement of purpose. International applicants must submit a TOEFL score. Graduate Record Examination (GRE) scores obtained in the last four years are required for PhD candidates in the Human
Resource Education and the Educational Organization and Leadership majors. For additional admission details refer to the department’s Web site (http://education.illinois.edu/epol).

Off-Campus Programs

The EPOL department offers selected off-campus programs in the Chicago region, through the use of a cohort model. The Ed.M. and C.A.S. degree options with General Administrative Endorsement are offered in the Chicago region. Two Ed.D. degree cohorts also are available: Community College Executive Leadership and Superintendent Endorsement. Students enrolled in the Ed.D. program also attend selected classes on the Urbana-Champaign campus. Requirements for the off-campus Ed.M., C.A.S., and Ed.D. programs are identical to the on-campus degrees.

Medical Scholars Program

The Medical Scholars Program permits highly qualified students to integrate the study of medicine with study for a graduate degree in a second discipline. Students may apply to the Medical Scholars Program prior to beginning graduate school or while in the graduate program. Applicants to the Medical Scholars Program must meet the admissions standards for and be accepted into both the doctoral graduate program and the College of Medicine. Students in the dual degree program must meet the specific requirements for both the medical and graduate degrees. On average, students take eight years to complete both degrees. Further information on this program is available by contacting the Medical Scholars Program, 125 Medical Sciences Building, (217) 333-8146 or at www.med.illinois.edu/msp.

Facilities and Resources

The College of Education also has many resources to assist graduate students through their academic career. The Bureau of Educational Research works with students to secure research funding. The Council on Teacher Education entitles candidates seeking a Professional Educator License and provides accreditation of professional education programs. Each student completing a degree program is assigned a graduate adviser, who is available to assist the student with planning the program of study and determining degree requirements, courses and timelines for degree completion.

Information on University resources can be found at www.grad.illinois.edu/campus-resources.

Financial Aid

Financial aid in the form of assistantships, scholarships, fellowships, and tuition waivers can be found throughout the college and campus. There are opportunities available through the department (http://education.illinois.edu/epol), the College of Education (http://education.illinois.edu/students/graduate-financialaid), and the Bureau of Educational Research (http://www.ed.illinois.edu/ber/fundingresources.html). Please note: Graduate students employed as Staff by the University of Illinois at Urbana-Champaign are not eligible for a College of Education Award or Scholarship. Campus opportunities can be found at the Graduate College (http://www.grad.illinois.edu/financial-aid) and the Office of Student Financial Aid (http://www.osfa.illinois.edu).

Educational Organization and Leadership

• Master of Education in Educational Organization and Leadership (p. 671)
• Master of Education in Educational Organization and Leadership, Educational Administration Concentration (p. 670)
• Master of Education in Educational Organization and Leadership, Higher Education Concentration (p. 672)
• Master of Science in Educational Organization and Leadership (p. 679)
• Master of Science in Educational Organization and Leadership, Educational Administration Concentration (p. 680)
• Master of Science in Educational Organization and Leadership, Higher Education Concentration (p. 681)

Educational Policy Studies

• Master of Education in Educational Policy Studies (p. 672)
• Master of Education in Educational Policy Studies, Global Studies in Education Concentration (p. 674)
• Master of Arts in Educational Policy Studies (p. 668)

Human Resource Education

• Master of Education in Human Resource Education, Human Resource Development Concentration (p. 676)
• Master of Science in Human Resource Education, Human Resource Development Concentration (p. 682)

Educational Organization and Leadership

• Doctor of Education, Educational Organization and Leadership (p. 664)
• Doctor of Education, Educational Organization and Leadership, Educational Administration and Leadership concentration (p. 664)
• Doctor of Education, Educational Organization and Leadership, Higher Education concentration (p. 665)
• Doctor of Philosophy, Educational Organization and Leadership (p. 665)
• Doctor of Philosophy, Educational Organization and Leadership, (p. 666) Educational Administration and Leadership (p. 665) concentration (p. 666)
• Doctor of Philosophy, Educational Organization and Leadership, (p. 667) Higher Education (p. 666) concentration (p. 667)

Educational Policy Studies
• Doctor of Philosophy in Educational Policy Studies (p. 667)

Human Resource Education
• Doctor of Philosophy in Human Resource Education, Human Resource Development Concentration (p. 668)

Educational Organizational and Leadership
• Certificate of Advanced Study, Educational Organizational and Leadership (p. 661)
• Certificate of Advanced Study, Educational Organizational and Leadership, Educational Administration and Leadership concentration (p. 660)
• Certificate of Advanced Study, Educational Organizational and Leadership, Higher Education concentration (p. 663)

Human Resource Education
• Certificate of Advanced Study in Human Resource Education (p. 662)

Graduate Minor in College Teaching

The Department of Education Policy, Organization and Leadership (EPOL) offers a Graduate Minor in College Teaching. The minor provides students with the opportunity to explore the scholarly literature on and practice of teaching and learning in postsecondary settings. Students in good standing in the Illinois Graduate College are eligible to apply for the minor. For additional information, please contact EPOL.

Note: Students within the major can not minor in the same program.

Total Hours: 12

Other Requirements

In addition to the minor requirements, students must also complete the requirements of their major degree.

Hours counted toward completion of a minor may not also be applied toward any other transcripted credential.

For additional details and requirements refer to the department's Web site, the College of Education Graduate Programs Handbook, and the Graduate College Handbook.

We offer a Master of Education degree and online certificate programs that enable students to receive a University of Illinois education without ever coming to our campus. The online master's degree is available in the following areas of study:

Master of Education in Human Resource Education - Online
• Community College Teaching and Learning Concentration (p. 676)
• Learning Design and Leadership Concentration (p. 678)
• Human Resource Development Concentration (p. 677)

Master of Education in Educational Organization and Leadership
• Educational Leadership and Policy specialization (p. 669)
Master of Education in Educational Policy Studies

- Diversity and Equity Issues in Education specialization (p. 673)
- Global Studies in Education Concentration (p. 674)
- New Learning and New Literacies specialization (p. 675)
- Teaching Critical Thinking specialization (p. 675)

M.B.A. Joint Degree Program

Students in this unit may choose to earn their major degree and simultaneously complete an M.B.A., with 12 fewer required hours than when pursuing both degrees independently. Students must be enrolled in the M.B.A. program for three terms and complete all the requirements of their primary degree. Interested students should see the joint program requirements and contact the M.B.A. program and their major department office for more information.

Certificate of Advanced Study in Educational Organization & Leadership, Educ Admin Concentration

The University of Illinois at Urbana-Champaign's College of Education complies with the U.S. Department of Education's Gainful Employment requirements by disclosing information to applicants regarding our Certificate of Advanced Study program. Required information can be found here (http://provost.illinois.edu/ProgramsOfStudy/2014/fall/programs/graduate/CAS_EOL/Gedt.html).

If the student does not have a Master's degree from the University of Illinois at Urbana-Champaign, Foundation Courses must be completed:

## Master of Education in Educational Organization & Leadership, Educ Leader & Policy Specialization

This Master of Education degree focusing on Educational Leadership and Policy represents a unique opportunity to gain a P-20 perspective, with an enhanced policy focus on issues related to educational organizations. This program strives to develop primary, secondary, and postsecondary educational leaders, administrators, and policy analysts who seek to understand and address critical P-12 and higher education issues. Students will study different educational leadership and policy practices and theories with particular focus paid to educational access, equity, and excellence. This program does not provide administrative licensure.

### Master of Education in Human Resource Education, Community College Teaching & Learning Concentration

Our CCTL program is one of the only online or on-campus programs in the country specifically geared to improve the teaching effectiveness of community college faculty. The program provides conceptual foundations and practical, hands-on projects for faculty members at community and technical colleges. The program is especially beneficial for faculty members who have subject-matter expertise, but no formal training in teaching methods. Our CCTL program succeeds in improving the instructional capacity of faculty who educate a vital aspect of our workforce.

### Master of Education in Human Resource Education, Human Resource Development Concentration

The HRD online program was one of the first 100% online degree programs in the world. As the field of HRD has grown in importance, so has our program. The program emphasizes a conceptual understanding of adult learning, training, and organization development, while requiring the development of specific skills through hands-on projects. Students, alumni, and employers consistently report that the program has expanded their horizons of HRD and that course projects have directly impacted their organizations.

Major: Educational Psychology
Degrees offered: Ed.M., M.S., M.A., C.A.S., Ph.D.
Graduate Concentration: African American Studies (http://www.afro.illinois.edu/education/gradconc) (available to all on-campus degrees), Second Language Acquisition and Teacher Education (http://www.french.illinois.edu/grad/specializations/SLATE) (Ph.D. only)

Online Program: Educational Psychology
Degree offered: Ed.M.

Medical Scholars Program: Doctor of Philosophy (Ph.D.) in Educational Psychology and Doctor of Medicine (M.D.) through the Medical Scholars Program (http://www.med.illinois.edu/mdphd)

Graduate Degree Programs

The Department of Educational Psychology offers doctoral programs in the following areas of specialization:

- Cognitive Science of Teaching and Learning (CSTL)
- Child Development
- Studies in Interpretive, Statistical, Measurement, and Evaluative Methodologies for Education (QUERIES)
- Counseling

Students entering without a master's degree must first complete the requirements for a Master of Science (including a master's thesis).

The Department offers terminal master's degrees:

- An on-campus Master of Science (M.S.) degree, with a focus on Studies in Interpretive, Statistical, Measurement, and Evaluative Methodologies for Education (QUERIES)
- An online Master of Education degree (Ed.M.) degree, with focus on Evidence-Based Reasoning.

The Department offers a Certificate of Advanced Study (C.A.S.), a terminal degree for education professionals beyond the master's degree (http://education.illinois.edu/saao/handbooks/ghandbook_dr_cas).

Admission

The department accepts applications for the Ph.D. degree, from both applicants who have completed their bachelor's degrees and those who have a master's degree. Students who enter the program without a prior master's incorporate their master's class work and research into their doctoral program, and earn a master's degree as the first step toward their Ph.D. The department offers two terminal master's programs, an on-line Master of Education (Ed.M.) degree with a focus on Curriculum, Technology, and Education Reform (CTER) and an on-line Master of Education (Ed.M.) degree with a focus on Quantitative Literacy.

Applications

Doctoral applicants must submit a complete application for university admission, including three letters of reference, transcripts from all schools where undergraduate and graduate degrees were awarded or expect to be awarded prior to the application enrollment term, and other items listed in the department Web site (http://www.education.illinois.edu/edpsy). Applicants to our doctoral program apply for Fall enrollment. Current deadlines are posted on our department Web site (http://www.education.illinois.edu/edpsy). Applicants for both of our online Ed.M. program apply for Spring and Summer enrollment. Admissions requirements are somewhat different from the doctoral program. Applicants should consult the department’s on-line program Web site (http://cterport.ed.uiuc.edu) for current admissions criteria, deadlines and program description.

Doctoral candidates are admitted into one of four divisions: CSTL, Child Development, QUERIES and Counseling. When making admission decisions, division committees consider academic performance (e.g., grade-point average, GPA), GRE scores, letters of recommendation, and statement...
of purpose. Preference is given to those with research experience and research interests that are aligned with existing research programs in the Department. Master’s candidates are only admitted into QUERIES.

Grade Point Average

The preferred department standard for grade point average is 3.5 on a 4.0 scale. The University calculates undergraduate GPAs on the last two years of grades for degreed applicants and in the last one year for students who have not yet completed their bachelor’s degree. Graduate GPAs are calculated on the total of all graduate level courses taken beyond the undergraduate degree.

Test of English as a Foreign Language (TOEFL)

International applicants must have demonstrated English language competence with TOEFL scores of greater than 610 (paper and pencil test), greater than 253 (computer-based test), or greater than 102 iBT. An IELTS score of greater than 6.5 overall, with at least 6 in each sub-section, can be substituted for the TOEFL score. Students who are accepted with lower scores will be required by the University to enroll on a limited status basis for at least their first semester.

Area of Study Affiliation

All applicants to the Educational Psychology doctoral program must specify one of four areas in which they wish to study:

- Cognitive Science of Teaching and Learning (CSTL)
- Counseling Psychology (Counseling);
- Child Development
- Studies in Interpretive, Statistical Measurement, and Evaluative Methodologies for Research (Queries)

Detailed information about each area and about the research interests of the faculty can be found on the department Web site (http://www.education.illinois.edu/edpsy).

Although all Ph.D. students are admitted to a specific area of study, the actual coursework, research, and faculty often overlap area boundaries. Departmental policy makes it possible for a student to change advisers and affiliation from one area to another when interests and research foci become more clearly defined or change. Many faculty members are affiliated with more than one area of study.

Medical Scholars Program

The Medical Scholars Program permits highly qualified students to integrate the study of medicine with study for a graduate degree in a second discipline, including Educational Psychology. Students may apply to the Medical Scholars Program prior to beginning graduate school or while in the graduate program. Applicants to the Medical Scholars Program must meet the admissions standards for and be accepted into both the doctoral graduate program and the College of Medicine. Students in the dual degree program must meet the specific requirements for both the medical and graduate degrees. On average, students take eight years to complete both degrees. Further information on this program is available by contacting the Medical Scholars Program, 125 Medical Sciences Building, (217) 333-8146 or at www.med.illinois.edu/msp.

Faculty Research Interests

The faculty’s research agendas span a wide range of topics related to the study and application of psychological principles to develop and inform educational interventions and facilitate human development across the life span. Faculty conduct basic and translational research that explores the cognitive, life-span developmental, social-emotional, and socio-cultural factors that affect behavior, learning, and achievement in educational, clinical, and community contexts. They also engage in research on approaches to educational inquiry and the development of quantitative, qualitative and evaluative methodologies that underpin the development of evidence-based, policy-relevant studies. Faculty research profiles are available on the department Web site (http://www.education.illinois.edu/edpsy).

Center, Programs, and Institutes

Department faculty are affiliated with both research centers and institutes in the College of Education and the university more broadly, including the Adult Learning Lab, the Center for Education in Small Urban Communities, the Center for Advanced Study, the Beckman Institute, the Center for the Study of Reading, the Social Development Consortium, and others.

Facilities and Resources

The Department of Educational Psychology puts a high priority on working with its graduate students to secure fellowships and other awards. The College of Education also has many resources to assist graduate students through their academic career. The Bureau of Educational Research works with students to secure research funding. The Council on Teacher Education entitles candidates seeking a Professional Educator License and
provides accreditation of professional education programs. Each student completing a degree program is assigned a graduate adviser, who is available to assist the student with planning the program of study and determining degree requirements, courses and timelines for degree completion.

Information on University resources can be found at www.grad.illinois.edu/campus-resources.

Financial Aid
Financial aid in the form of assistantships, scholarships, fellowships, and tuition waivers can be found throughout the college and campus. There are opportunities available through the department (http://education.illinois.edu/edpsy), the College of Education (http://www.ed.illinois.edu/students/graduate-financialaid), and the Bureau of Educational Research. (http://www.ed.illinois.edu/ber/fundingresources.html) Please note: Graduate students employed as Staff by the University of Illinois at Urbana-Champaign are not eligible for a College of Education Award or Scholarship. Campus opportunities can be found at the Graduate College (http://www.grad.illinois.edu/funding-jobs) and the Office of Student Financial Aid (http://www.osfa.illinois.edu).

The department does not require a separate financial aid application.

Master of Education in Educational Psychology
Educational Psychology offers an online professional Master of Education (Ed.M.) degree specialization in Evidence-Based Decision Making. Admissions requirements are somewhat different and applicants should consult the college's on-line program Web site (http://education.illinois.edu/online-offcampus/ebdm/mdex.html) for current admissions criteria and specific course requirements.

Total Hours 28

Other Requirements:

Minimum of 12 hours at the 500 level
Minimum GPA 3.0

For additional details and requirements refer to the department's Web site, (http://education.illinois.edu/edpsy) the College of Education Graduate Programs Handbook, and the Graduate College Handbook.

Certificate of Advanced Study (C.A.S.) in Educational Psychology

The University of Illinois at Urbana-Champaign's College of Education complies with the U.S. Department of Education's Gainful Employment requirements by disclosing information to applicants regarding our Certificate of Advanced Study program. Required information can be found here (http://provost.illinois.edu/ProgramsOfStudy/2014/fall/programs/graduate/CAS_C&l/Gedt.html).
If the student does not have a Masters degree from the University of Illinois at Urbana-Champaign, Foundations Courses must be completed:

**Psychological Foundations Courses in Educational Psychology**

Major: Electrical and Computer Engineering
Degrees Offered: M.S., Ph.D.

Online Program: Electrical and Computer Engineering
Degrees offered: M.S.

Medical Scholars Joint Degree Program: Doctor of Philosophy (Ph.D.) in Electrical and Computer Engineering and Doctor of Medicine (M.D.) through the Medical Scholars Program (https://www.med.illinois.edu/mdphd)

Graduate Degree Programs

The department offers graduate study and research in electrical and computer engineering leading to the degrees of Master of Science and Doctor of Philosophy. Virtually every specialty within electrical and computer engineering is represented. Courses and research opportunities exist in the following areas:

- applied computation theory
- bioengineering, acoustics, and magnetic resonance engineering
- communications
- computer-aided design and test
- computer systems
- computer vision and robotics
- decision and control
- electromagnetic fields
- electrooptics, lasers, and plasmas
- integrated circuits
- microelectro-mechanical systems
- mobile computing and communication
- optoelectronics
- power and energy systems
- power electronics
- remote sensing and propagation
- semiconductor materials and devices
- semiconductor physics and computational electronics
- signal, image, and speech processing

The programs are very flexible to encourage interdisciplinary studies and research. Opportunity also exists for specializing in:

1. computational science and engineering and
2. energy and sustainability engineering within the department's graduate programs via the Computational Science and Engineering (CSE) Option (http://cse.illinois.edu/students/graduate-program) and the Energy and Sustainability Engineering (EaSE) Option. (http://ease.illinois.edu)

The Medical Scholars Program (https://www.med.illinois.edu/mdphd) permits highly qualified students to integrate the study of medicine with study for a graduate degree in a second discipline, including Electrical and Computer Engineering. The department is not currently accepting applications for the online M.S. degree.

For complete program information, visit the Electrical and Computer Engineering graduate program Web site (http://www.ece.illinois.edu/students/grad).
Admission

Applicants must have completed an electrical engineering curriculum or a computer engineering curriculum substantially equivalent to those of the University of Illinois at Urbana-Champaign. A minimum grade point average of 3.00 (A = 4.00) for the last two years of undergraduate study is required. However, because of space limitations, applicants with GPAs below 3.50 are rarely admitted. All applicants must submit scores from the general test of the Graduate Record Examination (GRE) (http://www.ets.org).

A master’s degree is required for admission to the PhD program. Applicants with master's degrees are admitted only if a faculty member is willing to serve as the Ph.D. thesis advisor. Accordingly, such applicants should write, call, or e-mail prospective Ph.D. advisors and discuss their research interests and potential Ph.D. thesis topics well in advance of application deadlines. Admission for the spring semester is possible, in addition to the usual fall semester admissions.

Graduates of curricula in the physical sciences, mathematics, and computer science may be admitted if they are judged to have the necessary background to profit from graduate work in electrical and computer engineering.

All applicants whose native language is not English must submit a minimum TOEFL (http://www.toefl.org) score of 96 (iBT), 243 (CBT), or 590 (PBT); or minimum International English Language Testing System (IELTS) (http://www.ielts.org) academic exam scores of 6.5 overall and 6.0 in all subsections. Applicants may be exempt from the TOEFL if certain criteria (http://grad.illinois.edu/admissions/instructions/04c) are met. For those taking the TOEFL or IELTS, full admission status (http://grad.illinois.edu/admissions/instructions/04c) is granted for scores greater than 102 (TOEFL iBT), 253 (TOEFL CBT), 610 (TOEFL PBT), or 6.5 (IELTS). Limited status (http://grad.illinois.edu/admissions/instructions/04c) is granted for lesser scores and requires enrollment in English as a Second Language (ESL) courses (http://linguistics.illinois.edu/students/esl/guidelines) based on an ESL Placement Test (EPT) taken upon arrival to campus.

Students may apply to the Medical Scholars Program prior to beginning graduate school or while in the graduate program. Applicants to the Medical Scholars Program must meet the admissions standards for and be accepted into both Electrical and Computer Engineering and the College of Medicine. An application to the Medical Scholars Program will also serve as the application to the Electrical and Computer Engineering graduate program. Further information on this program is available by contacting the:

Medical Scholars Program
125 Medical Sciences Building
(217) 333-8146
mspo@illinois.edu

Medical Scholars Program

Students in the Medical Scholars program must meet the specific requirements for both the medical (https://www.med.illinois.edu/mdphd) and graduate degrees. On average, students take eight years to complete both degrees. The first year of the combined program is typically spent meeting requirements of the Electrical and Computer Engineering graduate degree.

Faculty Research Interests

Research interests of the Electrical and Computer Engineering faculty include the broad areas of study described in the graduate programs section and more. Many faculty members hold affiliate status with other departments, and a number of faculty members from other departments hold affiliate status with the department. In addition, some faculty hold appointments in the Beckman Institute for Advanced Science and Technology, the Coordinated Science Laboratory, the Materials Research Laboratory, and the Micro and Nanotechnology Laboratory. All these affiliations provide opportunities for graduate student appointments to conduct research. For a detailed list of current research interests of the faculty, visit the department’s research Web site (http://ece.illinois.edu/research).

Centers, Programs, and Institutes

There are numerous interdisciplinary programs, laboratories, and centers for research within the department. These are described at the department’s research Web site (http://ece.illinois.edu/research).

Financial Aid

Fellowships, research assistantships, and teaching assistantships (all of which include tuition and partial fee waivers) are available for the majority of students who are admitted. International applicants generally are not awarded teaching assistantships but are eligible for the other forms of financial aid. All applicants, regardless of U.S. citizenship, whose native language is not English and who wish to be considered for teaching assistantships must demonstrate spoken English language proficiency (http://grad.illinois.edu/admissions/taengprof.htm) by achieving a minimum score of 24 on the speaking subsection of the TOEFL iBT or 8 on the speaking subsection of the IELTS. For students who are unable to take the iBT or IELTS, a minimum score of 5 is required on the EPI test (http://cte.illinois.edu/testing/oral_eng/epi_overview.html), offered on campus. All new teaching assistants are required to participate in the Graduate Academy for College Teaching (http://cte.illinois.edu/programs/ta_train.html) conducted prior to the start of the semester.
Master of Science in Electrical and Computer Engineering

A non-thesis and an online option exist for the M.S., but students are no longer admitted to these programs.

Other Requirements and Conditions

Other Requirements and Conditions may overlap

Credit in ECE 411, ECE 415, ECE 445, ECE 590 (seminar), ECE 596, ECE 597 (individual study), PHYS 404, PHYS 435, and PHYS 436, STAT 400, or any other seminar or individual study course does not count toward the degree.

At least one ECE 500-level course must be taken.

No course used to fulfill any degree requirement may be taken using the "Credit/No Credit" option.

A Masters degree is required for admission to the Ph.D. program.

Ph.D. exam and dissertation requirements:

Qualifying exam

Preliminary exam

Final exam or dissertation defense

Dissertation deposit

Minimum GPA: 3.0

For additional details and requirements refer to the department's Graduate Study Manual (http://ece.illinois.edu/current/grad/overview) and the Graduate College Handbook (http://grad.illinois.edu/gradhandbook).
English

http://www.english.illinois.edu

Head of the Department: Michael Rothberg
Director of Graduate Studies: Renee Trilling
210 English Building
608 South Wright Street
Urbana, IL 61801
(217) 333-3646
E-mail: engl_resources@ad.uiuc.edu

Major: English
Degrees Offered: M.A., Ph.D.
Graduate Concentrations: Medieval Studies (p. 811) (available to all degrees), Writing Studies (p. 954) (Ph.D. only)

Medical Scholars Program: Doctor of Philosophy (Ph.D.) in English and Doctor of Medicine (M.D.) through the Medical Scholars Program (https://www.med.illinois.edu/mdphd)

Affiliated Programs offering certificates or minors:
• Department of African American Studies
• Gender and Women's Studies Program
• American Indian Studies
• Unit for Criticism and Theory
• Unit for Cinema Studies
• Asian American Studies Program

Graduate Degree Programs

The Department of English offers programs of study leading to the Master of Arts and the Doctor of Philosophy degrees. The Ph.D. program is, in general, designed to educate and train teacher-scholars who will take positions in colleges and universities throughout the country. We consider the Master of Arts program to be the first step toward the Ph.D. degree; we expect students admitted to the M.A. program to receive the M.A. and go on to complete a Ph.D. We therefore do not offer a formal terminal M.A. program. We welcome qualified students who wish to pursue their interests in English, American, and Anglophone language, literature and film beyond the undergraduate level. Both the Master of Arts and doctoral degrees may be earned with a specialization in writing studies. Doctoral students may in addition earn a graduate concentration in Writing Studies. A graduate program in creative writing has recently been approved and has accepted applications since 2002, see Creative Writing (p. 630).

Admission

A student who wishes to be considered for admission to graduate studies in English must present the equivalent of at least 20 semester hours of undergraduate work in English and American literature, excluding required work in rhetoric or composition. Graduate Record Examination (GRE) scores for the verbal and subject tests are required for those applying for the literature program. The GRE subject test for literature in English is not required of writing studies applicants. All applicants whose native language is not English are required to submit Test of English as a Foreign Language (TOEFL) scores. Currently, a minimum score of 550 on the paper-based test (213 on the computer-based test) is required. Before a teaching assistantship involving classroom instruction or student consultation can be awarded to a non-native speaker of English, the applicant must take the Test of Spoken English (TSE) and achieve a score of 50 or higher (230 or higher before 1996). Because applications for admission usually far exceed capacity, in recent years undergraduate grade point averages of students admitted have been significantly higher than the 3.0 (A = 4.0) required by the Graduate College. The committee on admissions tends to select those applicants who have a solid array of undergraduate courses, knowledge of a foreign language, strong recommendations, and a compelling writing sample: in short, an academic record that shows promise of doing outstanding work in the field and earning degrees within a reasonable time. We do not admit part-time students. Applicants are considered only in spring for fall admission, and the deadline for submitting applications is noon on December 17th.

Medical Scholars Program

The Medical Scholars Program permits highly qualified students to integrate the study of medicine with study for a graduate degree in a second discipline, including English. Students may apply to the Medical Scholars Program prior to beginning graduate school or while in the graduate program. Applicants to the Medical Scholars Program must meet the admissions standards for and be accepted into both the doctoral graduate program and the College of Medicine. Students in the dual degree program must meet the specific requirements for both the medical and graduate degrees. On average, students take eight years to complete both degrees. Further information on this program is available by contacting:

Medical Scholars Program
Graduate Teaching Experience

Experience in teaching is considered a vital part of the graduate program and all M.A. and Ph.D. candidates will have ample opportunity to teach undergraduate writing classes.

Financial Aid

Financial aid is available to students in the form of fellowships, teaching assistantships, research assistantships, and waivers of tuition and service fees. For complete information about the program, prospective applicants should consult our website at www.english.illinois.edu/graduate/program/ or write to the above address.

Master of Arts in English

A full-time student can complete this program in two academic years. Students must choose to complete a specialization in Literature or Writing Studies.

Virtually every student will teach rhetoric classes, and is required to enroll in a teaching proseminar (ENGL 593).

Other requirements may overlap

| At least two semesters or the equivalent in residence |  |
| Minimum Hours Overall Required Within the Unit: | 24 (12 at 500-level) |
| Minimum 500-level Hours Required Overall: | 16 |
| Minimum GPA: | 3.0 |

1 For additional details and requirements refer to the department's Graduate Studies in English (http://www.english.illinois.edu/graduate) Website and the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).

Course work listing for M.A. requirements for the Literature Specialization:

Eight semester-long courses in British and American Literature and Critical Theory.

Courses (worth four hours of credit each) must be taken in six of the following nine areas:

- Medieval British Literature (beginning to 1485)
- Renaissance British Literature (1485-1660)
- Restoration/Eighteenth-Century British Literature (1660-1800)
- Nineteenth-Century British Literature (1800-1900)
- Twentieth-Century British Literature (1900-2000)
- Early American Literature (beginning to Civil War)
- Later American Literature(Civil War to present)
- Anglophone Literature (other than British and American)
- Critical Theory

Candidates may substitute another area (such as film) for one on the above list with the permission of the Director of English Graduate Studies. However, all students must take at least one course in a period before 1660, and one course in either Early or Later American Literature.

At least four of the eight courses must be in 500-level graduate seminars (limited to 14-18 students). The others may (but need not) be in 400-level courses (limited to 36 students) in which graduate students complete work beyond that expected of undergraduates.

In their first year of teaching, students are required to complete a Professional Seminar in the teaching of composition or business and technical writing for four hours of credit. (ENGL 593)
The Foreign Language Requirement may be satisfied by demonstrating a reading knowledge of an appropriate foreign language in one of the following three ways:

1. By completing the equivalent of three full years of undergraduate work
2. By passing a proficiency exam administered by a University of Illinois foreign language department
3. By passing a non-credit 501 language course with a grade of B or better

Course work listing for M.A. requirements for the Writing Specialization:

Eight semester-long courses in Writing Studies, Literature, and Theory.

Courses (worth four hours each) must be taken as follows:

At least 16 of the 32 required hours must be in 500-level courses. Eight of the 16 hours must be ENGL 505 and 1 course from the following list: ENGL 506, ENGL 582, ENGL 583, ENGL 584. In addition, students must take two courses in Literature or Theory and four courses approved by the Writing Studies advisor.

At least four of the eight courses must be 500-level graduate seminars (limited to 14-18 students). The others may (but need not) be 400-level courses (limited to 36 students) in which graduate students complete work in addition to that expected of undergraduates.

In their first year of teaching, students are required to complete a Professional Seminar (ENGL 593) in the teaching of composition or the teaching of business and technical writing for four hours of credit.

The Foreign Language Requirement may be satisfied by demonstrating a reading knowledge of an appropriate foreign language in one of the following three ways:

1. By completing the equivalent of three full years of undergraduate work
2. By passing a proficiency exam administered by a University of Illinois foreign language department
3. By passing a non-credit 501 language course with a grade of B or better.

Doctor of Philosophy in English

Students in the program who have earned their master's degrees must apply formally to the Ph.D. program. Applicants who have completed their master's degrees elsewhere may also apply. Seldom are applicants accepted with graduate grade point averages below 3.5. Students must choose to complete a specialization in Literature or Writing Studies. In addition, students may choose to complete the graduate concentration in Writing Studies (p. 954).

Interdisciplinary work is encouraged. Students may take courses outside of English. The special field examination is taken as the student completes coursework and prepares to write the thesis. The student then goes on to complete and defend the thesis under the direction of a committee composed of four professors. A full-time student can complete this program in four years beyond the master's degree.

Virtually every student will teach rhetoric classes, and is required to enroll in a teaching proseminar (ENGL 593) if s/he has not taken such a class at the Master's level.

Elective hours selected from the list below in consultation with advisor, to bring total course work hours to 32

The special field examination is taken as the student completes coursework and prepares to write the thesis.

Masters Degree Required for Admission to PhD? Yes
Qualifying Exam Required No
Preliminary Exam Required Yes
Final Exam/Dissertation Defense Required Yes
Dissertation Deposit Required Yes
Minimum GPA: 3.0
Course work listing for Ph.D. requirements for the Literature Specialization:

- Eight additional semester-long courses at the 400 and 500 level. These, selected in consultation with a faculty advisor, either focus on the proposed field of specialization and allied fields—in English or in other disciplines—or fill gaps in the student's background.
- Doctoral students in literature will either take a Professional Seminar in the teaching of literature or film or act as a teaching assistant for two semesters in a large lecture course before they teach literature courses. They are expected to teach at least one literature course during their Ph.D. work.
- The Foreign Language Requirement (if not already satisfied at the M.A. level) may be satisfied by demonstrating a reading knowledge of an appropriate foreign language in one of the following three ways: By completing the equivalent of three full years of undergraduate work; By passing a proficiency exam administered by a UIUC foreign language department; By passing a non-credit 501 language course with a grade of B or better.
- Completion of a Special Field Examination (oral, written, or both). The exam, administered by a committee of four faculty members selected by the student, is based upon the student's approved Special Field list of primary and secondary sources, including a discussion of its rationale and relation to the proposed dissertation topic. Approved fields include historical periods, genres, film, and critical theory.
- Completion and two-hour oral defense of a dissertation. Students working on their dissertations are eligible for fellowship support or released time from teaching. All students in good standing and making good progress will ordinarily receive at least one semester free from teaching. A few students receive a year or more of fellowship aid to work full-time on their dissertations.

Course work listing for Ph.D. requirements for the Writing Studies Specialization:

- Eight additional semester-long courses at the 400 and 500 level. At least 8 courses, normally at the 500-level, and including ENGL 505-ENGL 506 and 2 methodology courses (at least one of which is an ENGL 582; the second methodology course should be approved by the advisor and typically will be approved by the Center for Writing Studies for the methodology requirement in its Writing Studies Graduate Concentration). In addition, students must take one course in Literature or Theory. Specific courses taken at the MA level (ENGL 505, ENGL 506, ENGL 582) are counted as fulfilling those specific requirements at the PhD level.
- Students who enter the Ph.D. program with an M.A. from another institution must show demonstrated reading knowledge of a foreign language.
- Completion of a Special Field Examination (oral, written, or both). This exam, administered by a committee of four faculty members selected by the student, is based upon the student's approved special field list—which includes a discussion of its rationale and relation to the proposed dissertation topic. Lists are representative of the field of Writing Studies and include two or three concentrations within it. Approved fields include: Cognition and Composition, Computers and Composition Studies, Classical Rhetoric, Critical Theory, Discourse Processes, Gender and Writing, Literacy Studies, Technical Communication, Writing Across the Curriculum, Writing in the Disciplines, and Writing Assessment. Other combinations of fields are possible, including those that combine disciplines (e.g. African-American Studies, women's studies, and literacy).
- Completion and two-hour oral defense of a dissertation. Students working on their dissertations are eligible for fellowship support or released time from teaching. All students in good standing and making good progress will ordinarily receive at least one semester free from teaching. A few students receive a year or more of fellowship aid to work full-time on their dissertations.
Entomology

www.life.illinois.edu/entomology/

Head of the Department: May R. Berenbaum
320 Morrill Hall
505 South Goodwin Avenue
Urbana, IL 61801
(217) 333-2910
E-mail: entowork@life.uiuc.edu

Major: Entomology
Degrees Offered: M.S., Ph.D.

Medical Scholars Program: Doctor of Philosophy (Ph.D.) in Entomology and Doctor of Medicine (M.D.) through the Medical Scholars Program (http://www.med.illinois.edu/mdphd)

Graduate Degree Programs

The Department of Entomology offers graduate programs leading to the Master of Science and Doctor of Philosophy degrees. The program is designed to accommodate incoming students with a wide range of entomological expertise. The goal of the program is to provide students with a strong background in basic biology as it relates to insects and to equip them with the specialized intellectual and technical skills to pursue a career in research, teaching, and service in entomology and related biological disciplines.

Major areas of specialization within the department include systematics, evolutionary biology, molecular genetics, genomics, phytochemical ecology, population biology, toxicology, neurophysiology, neuroanatomy, developmental biology, behavior, sociobiology, endocrinology, and integrated pest management.

Admission

Graduate Record Examination (GRE) general and biology subject tests are not required, but strongly recommended. A Test of English as a Foreign Language (TOEFL) score of 550 or better is preferred. Previous training in entomology is unnecessary. It is recommended that students who intend to study for advanced degrees in entomology gain a thorough grounding in the physical and biological sciences, mathematics, and the liberal arts. Spring Admission is possible.

Medical Scholars Program

The Medical Scholars Program permits highly qualified students to integrate the study of medicine with study for a graduate degree in a second discipline, including Entomology. Students may apply to the Medical Scholars Program prior to beginning graduate school or while in the graduate program. Applicants to the Medical Scholars Program must meet the admissions standards for and be accepted into both the doctoral graduate program and the College of Medicine. Students in the dual degree program must meet the specific requirements for both the medical and graduate degrees. On average, students take eight years to complete both degrees. Further information on this program is available by contacting the Medical Scholars Program, 125 Medical Sciences Building, (217) 333-8146 or at www.med.illinois.edu/msp.

Graduate Teaching Experience

Although teaching is not a general Graduate College requirement, experience in teaching is considered an important part of the graduate experience in this program and is strongly recommended.

Financial Aid

Graduate student awards are available, including teaching and research assistantships. In addition, fellowships and traineeships are offered by the Graduate College and the School of Integrative Biology, and the Program in Ecology, Evolution and Conservation Biology. A single application to the department is sufficient for consideration for all awards currently available.

Master of Science in Entomology

A candidate for the M.S. degree is expected to become knowledgeable in entomology through coursework and independent research and to complete a research thesis in an area of interest chosen in consultation with an adviser.

Select four of the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>IB 427</td>
<td>Insect Physiology</td>
</tr>
<tr>
<td>IB 444</td>
<td>Insect Ecology</td>
</tr>
</tbody>
</table>
Doctor of Philosophy in Entomology

A candidate for the Ph.D. degree should be conversant with entomological aspects of ecology, genetics, systematics, physiology, and integrated pest management. The candidate must demonstrate professional competence in a specialized area by presenting an acceptable thesis based on original research designed in consultation with a faculty adviser and approved by a graduate faculty thesis committee.

Entering with approved M.S./M.A. degree

Champaign, IL 61820
Contact: Matthew A. Rosenstein
(217) 265-7515
Email: eucenter@illinois.edu

Major: European Union Studies
Degrees Offered: M.A.

Graduate Minor: European Union Studies

Graduate Degree Programs

The European Union Center administers an interdisciplinary program of language and area courses leading to a Master of Arts degree. The program is intended to serve three constituencies of students: those seeking to combine area expertise with professional training; those proceeding to disciplinary-based doctoral work; and those seeking a stand-alone, professional degree.

Admission

Applicants for admission to the Master of Arts program should have completed at least two years of a language of the European Union and hold a bachelor's degree from an accredited institution of higher education. The Graduate Record Examination (GRE) is required. Admission requirements of the Graduate College also apply. The minimum paper-based Test of English as a Foreign Language (TOEFL) score is 550 (213 on the computer-based test or 79 on the iBT).

Applicants must submit the Graduate College application for admission, certified transcripts of all undergraduate and graduate work, Graduate Record Examination (GRE) scores (verbal, quantitative, and written), a writing sample, and three letters of reference. Applicants must also submit to the European Union Center a statement of purpose showing how the M.A. degree in European Union Studies fits into their educational and career plans. This statement must show that the interdisciplinary nature of the MA in EU Studies will serve the student better than a disciplinary degree. Admission is ordinarily limited to the fall semester, but exceptions are made for spring and summer admission.

Master of Arts in European Union Studies

Students pursuing the thesis option are required to conduct an oral thesis defense before an MA thesis committee. The thesis committee must consist of at least two individuals, with at least one member drawn from the EU Center Executive Staff. The thesis advisor (committee chair) must be a member of the Graduate Faculty.

Language Requirement: A candidate must demonstrate proficiency in a language of the European Union, other than English, at the advanced (third-year) level. Up to seven hours of advanced language (third or fourth-year) course work may be used toward the MA total hours. (Max 7)

Total Hours: 36

Other Requirements

Other Requirements may overlap

- Minimum 500-level Hours Required overall: 12
- At least two substantial research papers on European Union topics as part of course work, when relevant to the candidate's professional orientation, are required.
- Coursework must come from at least three different academic units
- Up to twelve hours may be credited for MA-equivalent study abroad courses or eight hours for internship placement.
- Minimum GPA: 2.75

Graduate Minor in European Union Studies

The graduate minor in European Union Studies complements PhD programs in many departments and provides an opportunity for students to pursue an area studies program as well as their primary field. Graduate students may also come from professional schools, such as law, business, and education, and departments with professional degree programs, such as urban and regional planning.

Graduate students seeking admission to the graduate minor in European Union Studies program should check with an academic advisor in their major degree-granting school or department to confirm eligibility prior to pursuing an application. Students must submit a graduate minor application, available from the Center, and if approved, a petition to the Graduate College requesting to add the European Union Studies minor.

Students in the European Union Studies graduate minor program must earn at least 16 hours of graduate credit in approved courses in at least two departments. Two of the courses must be EURO 501 and EURO 502. The graduate minor requires that students demonstrate the equivalent of two years of college-level study of a language of the European Union other than English, to support development of a technical vocabulary in fields such as business, law, and agriculture. A list of courses fulfilling the minor is available from the Center.

Note: Students within the major can not minor in the same program.

Major: Finance
Degrees Offered: M.S., Ph.D.
Graduate Concentrations: Accountancy (p. 500) (M.S. only), Business and Public Policy (p. 709) (M.S. only), Corporate Governance and International Business (p. 573) (M.S. only), Information Technology and Control (p. 574) (M.S. only)

Graduate Minor: Finance

Graduate Concentrations: Business and Public Policy, Finance

Graduate Degree Programs

The Department of Finance offers graduate work leading to the Master of Science and Doctor of Philosophy degrees. The following fields are available for specialization: banking and financial institutions, corporate finance, insurance and risk management, investments, and real estate and urban land economics.

Admission

The minimum required grade point average for admission is 3.0 (A = 4.0). To be admitted without deficiencies, the applicant should have completed one undergraduate course each in computer science, financial accounting, managerial accounting, and principles of economics as well as two courses each in calculus, probability and statistics, and financial management. Courses to remove deficiencies may be taken after beginning the program, but such courses will not count toward the departmental requirements for graduation. All applicants are required to submit Graduate Management Admission Test (GMAT) or GRE scores. Most international applicants are also required to submit Test of English as a Foreign Language (TOEFL) IELTS or iBT scores. The test scores will be used by the Admissions Committee, along with other information, in evaluating the applicant’s qualifications for graduate study.

Master of Science in Finance

Terminal masters: The Master of Science in Finance (terminal master's) is a one-year program designed primarily for practitioners in finance-related positions. The program is designed to be completed in 12 months, beginning in early June.

Admission requirements and other details about the program can be found at www.business.illinois.edu/msf.

| Core courses | 16 |
| Graduate level finance courses | 12 |
| Elective graduate coursework | 12 |
| Total Hours | 40 |

Other Requirements

Other requirements may overlap
Minimum 500-level Hours Required Overall: 12
Minimum GPA: 3.0

For additional details and requirements refer to the department’s graduate programs (http://www.business.illinois.edu/finance/program.aspx) and the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).

Ph.D. only option

For Ph.D. students: A Master of Science degree is available for students in the Ph.D. program. Ph.D. students may earn a masters degree as they work toward the Ph.D. degree. Students interested in a terminal masters degree are not admitted to the Ph.D. program. Options available at this University for
a terminal masters degree in finance include the M.S. in Finance (terminal masters) described above, and the MBA with a track in finance as described under the section on Business Administration - MBA.

Doctor of Philosophy in Finance

The first stage toward the degree of Doctor of Philosophy ends when the candidate receives a master's degree in finance or earns the equivalent credit (a minimum of 32 graduate hours at this University or 32 semester hours or 48 quarter hours of acceptable work at another recognized university). The second stage comprises certain minimum coursework, fulfillment of other departmental requirements, and successful completion of qualifying and preliminary examinations. The third stage includes research, preparation of the dissertation, and the final examination. The minimum number of graduate hours required for the second and third stages combined is 64. A student plans courses and research with his or her adviser. Consideration is given to previous academic training, career objective, and the general requirements of the Graduate College and the department. The student should become familiar with these requirements and satisfy them as soon as possible.

To enter the third stage of the doctoral program, a candidate must pass the qualifying examinations to test his or her qualifications for further advanced study and research, as well as teaching. The examinations are written and oral. A written preliminary examination is required for the field of finance. An oral defense of the proposal for the dissertation is the final step in the second stage.

The Doctor of Philosophy is primarily a research degree, and the candidate must demonstrate the capacity for independent research by producing an original thesis on a topic within his or her major field of study. The subject of the thesis must be reported to the doctoral committee and to the Graduate College at the time of the preliminary examination. The candidate is admitted to the final oral examination by the dean of the Graduate College upon completion of the dissertation and the recommendation of the department.

The doctoral program generally begins in the fall semester. The application period typically runs the beginning of October through the beginning of February.

Additional details on the program may be found at www.business.illinois.edu/finance/phd/default.aspx.

Masters Degree Required for Admission to PhD? No, earned during Ph.D.
Graduate Minor in Finance

The graduate minor in Finance is reserved for students admitted to the Master of Accounting Science program. Accountants with expertise in finance are increasingly highly valued by many employers. The graduate minor in Finance is designed to allow students in the MAS program to demonstrate substantive competency in the field of Finance. Counting the prerequisite requirement, the graduate minor is the equivalent of four graduate courses. Admission is limited and acceptance is on a competitive basis.

Prerequisites for the Minor

Admission to the minor requires the completion of either FIN 221 and FIN 300 or FIN 520 as a prerequisite. All courses must have been taken for a grade.

Admission to the Minor

Admitted MAS students should first consult with the MAS Program Advisor to determine if the minor is appropriate for the student. Information on how to apply will be available through the MAS Program Advisor. Students admitted to the MAS program may also email finance@illinois.edu for more information on the Finance Minor.

Advising Notes

The graduate minor can only be completed within the Fall semester of the fifth year of the MAS program. The three required graduate courses are not available in the Spring semester. Students who drop any of the three required courses in Fall will be treated as having dropped the minor.

Students should have already completed FIN 300 before enrolling in the graduate minor. Students may apply while enrolled in FIN 300; however, the application decision may be deferred until successful completion of FIN 300. FIN 300 must be taken on this campus. Students who plan to take the graduate minor SHOULD NOT register for FIN 321, FIN 411, or FIN 412 as undergraduates. Students who have completed any of the following courses are not eligible to pursue the minor: FIN 411, FIN 321, or FIN 412.

Note: Students within the major can not minor in the same program.

Other Requirements

The Finance minor consists of these 3 courses, designated for the MAS students, completed during the Fall semester. There are no substitute courses.

In addition to the minor requirements, students must also complete the requirements of their major degree.

Please contact your department for more information regarding the addition of a minor to your program of study.

For additional details and requirements refer to the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).

Graduate Concentrations

- Finance (p. 709)
- Business and Public Policy (p. 709)
**Graduate Concentration in Business and Public Policy**

Today’s business leaders must make strategic decisions in an extremely complex world. In addition to navigating the rapidly changing market forces in their industry, companies operate in an environment that is strongly influenced by regulatory and public policy considerations. Furthermore, our public sector leaders must also understand how market forces can help or hinder alternative solutions to society’s most pressing problems. The business and public policy graduate concentration is designed to provide graduate business students a framework for evaluating the impact of public policy on firms and the markets in which they operate.

The concentration is open to all master’s programs (Master of Accountancy Science, Master of Science in Accountancy, Master of Science in Finance, Master of Science in Business Administration, Master of Science in Technology Management, and Master of Science in Business Administration (International Management) in the College of Business but required of none.

Candidates will apply to the Department of Finance for admission into the concentration. Students wishing to be admitted to the concentration should consult with their program advisor before applying.

**Other Requirements**

In addition to the concentration requirements, students must also complete the requirements of their major degree.

**Graduate Concentration in Finance**

This concentration is only available to students enrolled in the Master of Accounting Science program. The Finance concentration consists of these 3 courses, with sections designated for the MAS students, completed during the Fall semester. There are no substitute courses.

Admitted MAS students should first consult with the MAS Program Advisor to determine if the concentration is appropriate for the student. Information on how to apply will be available through the MAS Program Advisor. Students admitted to the MAS program may also email finance@illinois.edu for more information on the Finance Concentration.

Graduate Degree Programs

This Master of Science in Financial Engineering (MSFE) degree program is jointly sponsored by the Department of Industrial and Enterprise Systems Engineering (ISEE) in the College of Engineering and the Department of Finance in the College of Business. Graduates from this program receive the MSFE degree awarded by the Graduate College. The MSFE program complements other Finance (http://www.business.illinois.edu/finance) and ISEE (http://www.iese.illinois.edu) graduate programs offered by the sponsoring departments.

Financial Engineering (FE) is a relatively young, multidisciplinary field that pertains to the application of engineering approaches and methods to the analysis and management of financial problems, particularly in the financial asset arena. Common problems involve identifying and managing financial risk in asset portfolios and asset positions and pricing of financial derivatives. Other applications exist in proprietary security trading operations, as well as in practically all practical domains where risk is an important concern. The field has emerged as the result of the ever growing complexity required in describing and solving these business problems whose resolution requires fundamental economic principles and finance theory coupled with state-of-the-art mathematical methods, computational tools, and computer programming expertise.

Admission

Successful applicants to the MSFE Program will have a Bachelor’s degree with one year of calculus, one semester of linear algebra and differential equations, one semester of programming (preferably in C/C++), and one semester of probability and statistics. Knowledge of basic finance and economics is helpful but not necessary. Given its technical emphasis, applicants to this program typically will have completed a Bachelor’s degree in an engineering field, mathematics, physics, computer science, or economics that provides sufficient preparation to facilitate a fast-paced, in-depth learning environment.

All applicants are expected to have a minimum grade point average of at least 3.25 (A=4.00) for the last two years of undergraduate study and a 3.50 for any previous graduate work completed. Scores on the Graduate Record Examination (GRE) general test are required of all applicants. All applicants whose native language is not English must submit a minimum Test of English as a Foreign Language (TOEFL) score of at least 103 (iBT), 257 (CBT), or 613 (PBT); or minimum International English Language Testing System (IELTS) academic exam scores of 7.0 overall and 6.0 in all subsections.

Master of Science in Financial Engineering

Covering topics in finance, economics, numerical methods, stochastic calculus, and computer programming, the MSFE is a rigorous, three-semester, 48-credit, resident degree program with a summer internship opportunity. Twelve courses each of 4 graduate credits are required for graduation; they are expected to be taken in sequence in the respective semesters. Details on the program may be found at msfe.illinois.edu.

| Core Courses | 40 |
| Project | 4 |
| Elective Graduate Coursework, may be 400 or 500 level | 4 |
| Total Hours | 48 |

Information listed in this catalog is current as of 11/2014
Other Requirements

Minimum 500-level Hours Required Overall: 44
Minimum GPA: 2.75

For additional details and requirements refer to the program’s Web site (http://msfe.illinois.edu/academics/curriculum.aspx) and the Graduate College (http://www.grad.illinois.edu/gradhandbook) Handbook (http://www.grad.illinois.edu/gradhandbook).
Food Science and Human Nutrition

Urbana, IL 61801
(217) 244-4405
E-mail: FSHN-General@ad.uiuc.edu

Major: Food Science and Human Nutrition
Degrees Offered: M.S., Ph.D.
Graduate Concentrations: Food Science (all degrees), Human Nutrition (all degrees), Professional Science Master’s (p. 718) (M.S. only)

Off-Campus Program: Food Science and Human Nutrition
Degree Offered: M.S.

Joint Degree Program: Doctor of Philosophy in Food Science and Human Nutrition and Master of Public Health (p. 618)
Degrees Offered: Ph.D. and M.P.H.

Medical Scholars Program: Doctor of Philosophy (Ph.D.) in Food Science and Human Nutrition and Doctor of Medicine (M.D.) through the Medical Scholars Program (http://www.med.illinois.edu/mdp hdr)

Graduate Degree Programs

The Department of Food Science and Human Nutrition offers traditional graduate programs leading to the Master of Science and Doctor of Philosophy degrees with either a food science and/or human nutrition concentration. In addition to receiving training in the general field of food science or human nutrition, students have the opportunity to conduct research in the following areas of specialization:

- food processing and food engineering
- food packaging
- food chemistry
- food biochemistry
- food microbiology
- food safety
- biotechnology
- human nutrition through the life cycle
- nutritional aspects of exercise
- nutrient metabolism
- nutrition and disease interactions
- nutrient composition of foods
- sensory and instrumental evaluation of food quality
- community nutrition
- clinical nutrition

For additional information go to fshn.illinois.edu/graduate.

The department also offers a Professional Science Master’s (PSM) concentration. The PSM involves rigorous scientific training in the area of food science and/or human nutrition; additionally, instruction is provided in applied business knowledge and skills. This program is designed for those who seek careers in a science-based setting with significant managerial and leadership responsibilities. For additional information go to psm.illinois.edu/prospectivestudents/programs/foods cience.htm.

Admission

In addition to meeting the Graduate College admission requirements, a student planning to pursue a graduate degree in the department should have a baccalaureate degree in a recognized field of biological, physical, agricultural, or engineering science. Background deficiencies may be removed with graduate credit courses designed for this purpose. Graduate Record Examination (GRE) scores are required of all applicants, and those whose native language is not English are required to submit the results of the TOEFL or IELTS as evidence of English proficiency. Minimum TOEFL and IELTS scores
can be found at grad.illinois.edu/admissions/instructions/04c. Students can be admitted to start in fall, spring, or summer semesters except for the PSM concentration, which admits fall semester only. For information on the role faculty have in the admissions process go to fshn.illinois.edu/graduate/applying.

**Internship in Dietetics**

The Department of Food Science and Human Nutrition offers a dietetic internship for master's and doctoral students specializing in human nutrition. Completion of the degree and the internship qualifies the student to take the Academy of Nutrition and Dietetics registration examination administered by the Commission on Dietetic Registration. For information on our dietetic internship program please contact Dr. Sharon Donovan (sdonovan@illinois.edu).

**Off-Campus Program**

A Master of Science in Food Science and Human Nutrition degree program is offered online in live, synchronous sessions using distance education technology. Courses are typically offered in the evening or on Saturdays. Most students in this program choose the non-thesis option. For requirements, see table above and for additional information, please contact Dr. Dawn Bohn at dbrehart@illinois.edu.

**Medical Scholars Program**

The Medical Scholars Program permits highly qualified students to integrate the study of medicine with study for a graduate degree in a second discipline, including Food Science and Human Nutrition. Students may apply to the Medical Scholars Program prior to beginning graduate school or while in the graduate program. Applicants to the Medical Scholars Program must meet the admissions standards for and be accepted into both the doctoral graduate program and the College of Medicine. Students in the dual degree program must meet the specific requirements for both the medical and graduate degrees. On average, students take eight years to complete both degrees. Further information on this program is available by contacting the Medical Scholars Program, 125 Medical Sciences Building, (217) 333-8146 or at www.med.illinois.edu/msp.

**Graduate Teaching Experience**

Teaching is neither a Graduate College nor a FSHN requirement. A limited number of teaching assistantships are available to FSHN graduate students. Students are selected to be Graduate Teaching Assistants by the Department Head in consultation with the course instructor.

**Financial Aid**

Illinois PSM students may not hold assistantships or other tuition and fee waiver-generating appointments; statutory waivers and tuition scholarships are accepted. Financial aid for non-PSM graduate students is available in the form of fellowships, teaching and research assistantships, and tuition and partial fee waivers. Qualified candidates are considered for financial support upon application. Additional information on financial aid for graduate students can be found at fshn.illinois.edu/graduate/financial-assistance.

Doctor of Philosophy in Food Science and Human Nutrition, Food Science Concentration

If a candidate has a master's degree in a related area, a minimum of 64 graduate hours, including up to 38 graduate hours of thesis research, must be completed. In consultation with the adviser and advisory committee, the remainder of the 64 graduate hours required for the degree consists of courses selected from inside or outside the department that are appropriate for training in the student's field of specialization. Upon completion of all necessary formal courses and special options, the student is required to take an oral preliminary examination. After passage of the preliminary examination, the student's activities are primarily devoted to thesis research. Upon submission of the dissertation, the candidate is required to pass a final oral examination before a graduate faculty committee. The Ph.D. degree may be combined with an M.D. in the Medical Scholars Program.

Head of the Department: Marcus Keller
Director of Graduate Studies: Zsuzsanna Fagyal
2090 Foreign Languages Building
707 South Mathews Avenue
Urbana, IL 61801
(217) 333-2020
E-mail: french@illinois.edu

Major: French
Degrees Offered: M.A., Ph.D.
Graduate Concentration: Medieval Studies (p. 810) (available to all), Romance Linguistics (Ph.D.) (p. 885), Second Language Acquisition and Teacher Education (p. 891) (Ph.D. only)

Medical Scholars Program: Doctor of Philosophy (Ph.D.) in French and Doctor of Medicine (M.D.) through the Medical Scholars Program (https://www.med.illinois.edu/mdphd)

Major: Italian
Degrees Offered: M.A., Ph.D.
Graduate Concentration: Medieval Studies (p. 810) (available to all), Romance Linguistics (Ph.D.) (p. 885), Second Language Acquisition and Teacher Education (p. 891) (Ph.D. only)

Medical Scholars Program: Doctor of Philosophy (Ph.D.) in Italian and Doctor of Medicine (M.D.) through the Medical Scholars Program (https://www.med.illinois.edu/mdphd)

Graduate Degree Programs

The Department of French and Italian offers graduate programs leading to the Master of Arts and the Doctor of Philosophy degrees in French, and in Italian. Candidates for the master's degree may specialize in French Studies, French Linguistics, or French Language Learning. Candidates for the doctoral degree may choose one of three specializations: French Studies, French Linguistics, or Second Language Acquisition and Teacher Education (SLATE).

The following minors and certificates may be pursued: Cinema Studies (p. 963), Gender and Women's Studies (p. 964), Translation Studies (http://www.translation.illinois.edu/programs/certificate1.html), Criticism and Interpretive Theory (http://criticism.english.illinois.edu)

Admission

French

Students considering admission to the master's program should usually have had a college major in French. Applicants should apply online (www.grad.illinois.edu/admissions/apply) and submit a statement of purpose, three letters of recommendation and two writing samples (5-10 pages each), at least one of which must be in French. Original transcripts showing all undergraduate and graduate work completed should be sent to SLCL Graduate Student Services. Graduate Record Examination (GRE) scores are required of all domestic applicants and should be submitted to institution code 1836. International applicants who have taken the GRE are encouraged to submit their scores as well. Applicants whose native language is not English are required to take the Test of English as a Foreign Language (TOEFL) and must score at least 79 on the internet-based test (iBT); they must also pass the speaking sub-section of the iBT with a minimum score of 24. See http://www.grad.illinois.edu/Admissions/instructions/04c.cfm. Admission for the spring semester is rare. Students seeking admission to the Ph.D. program with a Master of Arts degree earned elsewhere are expected to have a minimum 3.5 grade point average in graduate coursework. The master's degree should be in French literature, French studies, or French linguistics, except that candidates seeking admission to the Ph.D. specialization in Second Language Acquisition and Teacher Education may hold a Master of Arts in Teaching degree.

For more information about how to apply, see www.french.illinois.edu/grad/apply/. Application questions may be directed to SLCL Graduate Student Services at slclgradservices@illinois.edu.

Italian

The normal prerequisite for a graduate major is an undergraduate major in Italian or consent of the department. Students doing graduate work for any advanced degree in Italian must possess a command of the language. Applicants should apply online (www.grad.illinois.edu/admissions/apply) and submit a statement of purpose, three letters of recommendation and a writing sample of approximately 10-20 pages in the form of one or two papers, at least one of which must be written in Spanish. Original transcripts (with English translations if applicable) showing all undergraduate and graduate work completed should also be uploaded. Graduate Record Examination (GRE) scores are required of all domestic applicants and should be submitted to
institution code 1836. International applicants who have taken the GRE are encouraged to submit their scores as well. Applicants whose native language is not English are required to take the Test of English as a Foreign Language (TOEFL) and must score at least 88 on the internet-based test (iBT); they must also pass the speaking sub-section of the iBT with a minimum score of 24 (see www.grad.illinois.edu/Admissions/instructions/04c). Applications are accepted for fall admission only. Application questions may be directed to SLCL Graduate Student Services at slclgradservices@illinois.edu.

**Medical Scholars Program**

The Medical Scholars Program permits highly qualified students to integrate the study of medicine with study for a graduate degree in second discipline, including French and Italian. Students may apply to the Medical Scholars Program prior to beginning graduate school or while in a graduate program. Applicants to the Medical Scholars Program must meet the admissions standards for and be accepted into both the doctoral graduate program and the College of Medicine. Students in the dual degree program must meet the specific requirements for both the medical and graduate degrees. On average, students take eight years to complete both degrees. Further information on this program is available by contacting the Medical Scholars Program, 125 Medical Sciences Building, (217) 333-8146 or at www.med.illinois.edu/msp.

**Graduate Teaching Experience**

Although teaching is not a general Graduate College requirement, the department requires Ph.D. candidates to do some teaching as part of their academic work because such experience is considered a vital part of the graduate program. Non-native English speakers must first pass a test of their oral English ability. See www.grad.illinois.edu/admissions/taengprof.htm.

Teaching Assistants in French are required to take FR 505 (Teaching College and Secondary French, 4 hours) or SPAN 571 as part of their contractual obligation. The course does not count toward the graduate degrees.

**Faculty Research Interests**

Our faculty possess strengths in literary interpretation, critical theory, the study of civilization, cinema, theoretical and applied linguistics, and computer-assisted teaching. Members of the faculty have received national and international recognition; graduates serve on the faculties of numerous colleges and universities both in this country and abroad. View the faculty’s areas of research at www.french.illinois.edu/people/faculty.

**Centers, Programs, and Institutes**

Our faculty hold appointments with the Departments of African American Studies, Gender and Women’s Studies, Linguistics, Media and Cinema Studies, as well as the European Union Center and the Center for South Asian and Middle Eastern Studies, the Programs in Comparative and World Literature, the Program in Jewish Culture and Society, the Program in Medieval Studies, and the Unit for Criticism and Interpretive Theory, broadening opportunities for interdisciplinary work.

**Facilities and Resources**

A language learning lab provides computer-based access to resources and audio-video services. The phonetics lab contains state-of-the-art equipment available to graduate student researchers. The Kolb-Proust Archive for Research, a unit of the Library, houses a wealth of information about Marcel Proust and his time, including the important collection of notes and materials assembled by Philip Kolb, who was a professor in the Department of French. Documents from the collection are accessible on the World-Wide Web through a searchable SGML-encoded Virtual Archive (www.library.illinois.edu/kolbp).

**Financial Aid**

All students who apply for admission are considered for financial aid. Subject to budgetary conditions, and assuming satisfactory academic and teaching performance, the Department offers two years of financial aid toward the M.A. degree and an additional four years of support toward completion of the Ph.D.

Teaching Assistantships are the most common form of graduate student support. The usual appointment requires teaching three courses during the academic year.

Research Assistantships require the recipient to assist with a faculty member’s research for a specific number of hours per week. A research assistantship may be combined with a teaching assistantship.

Fellowships are offered for new and continuing students. No separate application form is required.

Tuition and Fee Waivers are included with waiver-generating fellowship, teaching assistantship, and research assistantship awards.

Several graduate students in French each year may spend the academic year abroad under exchange agreements with universities in France, Belgium, and Canada, employed as teaching assistants.

For further information, see www.french.illinois.edu/grad/aid.

Specialization in French Studies
The doctoral program in French Studies is designed to prepare specialists in literature and culture. Candidates are required to include courses in textual criticism, linguistics or linguistically oriented textual theory, and French/ Francophone literature and culture. Students are expected to demonstrate a reading proficiency in one modern foreign language (other than French or English). They may fulfill this requirement by passing a fourth-semester reading course with a grade of B or better or by demonstrating an equivalent ability by examination. In addition, students specializing in medieval or Renaissance studies must demonstrate an equivalent reading knowledge of Latin. Students may choose to complete a minor in Cinema Studies, Gender and Women’s Studies, or to obtain a certificate in Medieval Studies, Translation Studies or in Criticism, and Interpretive Theory.

Specialization in French Linguistics
This Ph.D. curriculum in linguistics offers training in French and Romance linguistics in cooperation with the Department of Spanish, Italian and Portuguese and the Department of Linguistics. Candidates selecting this option are required to complete course work in at least three areas of linguistic theory, advanced study of French language and culture, and French and Romance linguistics beyond the requirements of the M.A. Advanced course work related to the candidate’s research area is chosen in consultation with the advisor from courses offered by participating departments. Students are expected to demonstrate proficiency in at least one other Romance language and may select a concentration in Romance Linguistics.

Doctor of Philosophy in Italian

Areas of specialization offered in Italian are literary and cultural studies, Italian linguistics, and Romance linguistics.

Coursework selected in consultation with advisor
SPAN 571 Proseminar For Lang Tchg (is required of all teaching assistants) 4
Language Requirement: Students in all programs except SLATE must demonstrate reading proficiency in two languages besides the foreign language of specialization (not including English).

### Master of Arts in French

Candidates in French Studies must take an examination based on a reading list covering the fields of French literature and culture. The examination in French linguistics is based on a list of readings in linguistics and in literature and/or civilization. The examination in French language learning/teaching includes readings in second-language acquisition and teaching methods in addition to selected readings in French literature and/or civilization. Candidates in all programs are required to demonstrate, at the time of the master's examination, an ability to communicate effectively in both written and oral French.

Geography and Geographic Information Science

www.geog.illinois.edu/

Head of the Department: Sara L. McLafferty

255 Computer Applications Building, 605 East Springfield Ave.
Champaign, IL 61820
(217) 333-1880
Fax: (217) 244-1785
E-mail: geograph@illinois.edu

Major: Geography
Degrees Offered: M.A., M.S., Ph.D.

Medical Scholars Program: Doctor of Philosophy (Ph.D.) in Geography and Doctor of Medicine (M.D.) through the Medical Scholars Program (http://www.med.illinois.edu/mdphd)

Graduate Degree Programs

The Department of Geography and Geographic Information Science offers programs leading to the Master of Arts, Master of Science and Doctor of Philosophy degrees in Geography. The department’s specializations are organized into three programs:

1. River, Watershed and Landscape Dynamics (fluvial geomorphology, watershed science and management, and ecosystem dynamics);
2. Society, Space and Environments (political ecology, environmental policy and social vulnerability, urban analysis, health geography and geopolitical analysis);
3. Geographic Information Science (geographic information systems, dynamic modeling of ecological and social systems, geocomputation and cyberGIS, aerial photogrammetry, remote sensing, interregional input-output modeling, regional science and spatial analysis). Detailed descriptions of these programs may be obtained from the departmental office.

Admission

Students applying for admission to the master's program are expected to have a strong undergraduate background in geography and/or related disciplines. In addition to other Graduate College admission requirements, a grade point average of at least 3.0 (A = 4.0) in the undergraduate major is required. Ph.D. candidates are generally expected to have at least a 3.5 average in previous graduate work.

Graduate Teaching Experience

Although teaching is not a general Graduate College requirement, experience in teaching is considered an important part of the graduate experience in this program. We have implemented a professionalization program in our department, where graduate students work with faculty members to receive advice and gain first-hand experience in teaching undergraduate courses. Several graduate students have also been provided an opportunity to teach introductory undergraduate courses over the last few years.

Facilities and Resources

The department maintains two computer-based laboratories for instruction - a main instructional facility containing 30 computers and a satellite facility containing 15 computers. In addition, a dedicated computer laboratory is available exclusively for graduate student use. The Regional Economics Applications Laboratory focuses on the development of models of urban and regional economies for impact analysis and economic forecasting. The Cyberinfrastructure and Geospatial Information Laboratory (CIGI) provides a cutting-edge cyberinfrastructure-enhanced GIS facility that is established as a virtual organization. The laboratory houses several high performance computers and servers for performing computationally intensive geographic analysis and problem solving in various research, education, and outreach contexts. The soil laboratory has a wide array of equipment for physical and chemical analysis of earth materials. The department is a participant in the Social Dimensions of Environmental Policy (SDEP) strategic initiative, which aims to understand the social and political-economic forces shaping just and sustainable environmental policy.

Map and Geography Library

The University Library has a substantial collection of geography books and journals. Most of the new and more recent books are located in the Social Sciences, Health, and Education Library (SSHEL); nearly all geography journals are available full-text through the University Library’s website. The Map Library holds a collection of over 626,000 maps and aerial photographs. Additionally, the Map Library houses an extensive collection of books on cartography and geographic information science. The Map Library also has a small collection of geospatial data on CD-ROM, and assistance in locating geospatial data can be obtained in either the Map Library or the University Library’s Scholarly Commons.
Medical Scholars Program

The Medical Scholars Program permits highly qualified students to integrate the study of medicine with study for a graduate degree in a second discipline, including Geography. Students may apply to the Medical Scholars Program prior to beginning graduate school or while in the graduate program. Applicants to the Medical Scholars Program must meet the admissions standards for and be accepted into both the doctoral graduate program and the College of Medicine. Students in the dual degree program must meet the specific requirements for both the medical and graduate degrees. On average, students take eight years to complete both degrees. Further information on this program is available by contacting the Medical Scholars Program, 125 Medical Sciences Building, (217) 333-8146 or at www.med.illinois.edu/msp.

Financial Aid

Fellowships, teaching and research assistantships, and waivers of tuition and some fees are available in the department.

Master of Arts or Master of Science in Geography

Successful candidates for the master's degree whose backgrounds are largely in physical geography or geographical information science are recommended for the Master of Science; others receive the Master of Arts.

Doctor of Philosophy in Geography

Admission presupposes distinction in undergraduate and graduate study. In the doctoral program, the student develops depth in the program chosen for specialization and further advances in research competence. A student must complete the course requirements as determined by an individually planned program, initiate and complete research projects, and qualify for candidacy by passing the departmental qualifying and preliminary examinations. Although there is no departmental foreign language requirement, students may study a foreign language as a research tool.

Entering with approved M.S./M.A. degree

605 E. Springfield Ave
Champaign, IL 61820
(217) 333-3542
E-mail: mkt@illinois.edu

Major: Geology
Degrees Offered: M.S., Ph.D.

Major: Teaching of Earth Science
Degrees Offered: M.S.

Graduate Degree Programs

The Department of Geology offers programs leading to the Master of Science in Geology, the Doctor of Philosophy in Geology, and the Master of
Science in the Teaching of Earth Science. Students have a wide variety of choices in their courses and research programs. Departmental research
programs include many aspects of geology, geochemistry, and geophysics.

Admission

The admission requirements of the Graduate College apply. In addition, scores for the aptitude test of the Graduate Record Examination (GRE) are
required for admission to graduate work in geology, as well as completion of at least one year each of study in college-level calculus, chemistry, and
physics. For more information, write to the graduate secretary. Under special circumstances, students can be admitted at the beginning of the spring
term.

Graduate Teaching Experience

Although teaching is not a general Graduate College requirement, experience in teaching is considered an important part of the graduate experience in
this program.

Financial Aid

Candidates for graduate degrees are usually supported through fellowships, research assistantships, teaching assistantships, and work-study programs.
Fellowships and assistantships include tuition and service fee waivers. Awards for financial assistance are based principally on a candidate's academic
record, statement of plans, and letters of reference. Continuation of financial aid depends on student performance and, in the case of teaching
assistants, on the receipt of good evaluations. Some assistants are appointed by the State Geological Survey located on campus.

- Master of Science in Geology (p. 729)
- Master of Science in Teaching of Earth Science (p. 730)

Doctor of Philosophy in Geology

Ph.D. students are evaluated by three oral examinations: a qualifying examination, a preliminary examination, and a final examination. The qualifying
examination tests breadth of knowledge as well as the ability to define and defend a research proposal in a specialized field at an early stage of
graduate study. The preliminary examination tests advanced knowledge in a specialized field and the ability to define and defend a Ph.D. dissertation
proposal. The final examination tests the ability to complete and defend Ph.D. dissertation research.

Entering with approved M.S. degree

**Master of Science in Geology**

Students in the Master of Science program can follow the “standard” (or thesis) option or the “applied geology” (or non-thesis) option. The non-thesis option is intended as a terminal degree for students preparing for professional work in environmental and engineering geology or in applied geophysics and who have already been admitted to the program. We do not currently accept new students for the non-thesis master’s degree. Admitted students must declare their intent to pursue the non-thesis option at least one semester prior to completing degree requirements.

German

www.germanic.illinois.edu

Department of Germanic Languages and Literatures
Interim Head of the Department: Craig Williams
Director of Graduate Studies: Yasemin Yildiz
2090 Foreign Languages Building
707 South Mathews Avenue
Urbana, IL 61801
E-mail: mwade@illinois.edu or germanic@illinois.edu

Major: German
Degrees Offered: M.A., Ph.D.
Graduate Concentration: Medieval Studies (p. 811) (available to all degrees), Second Language Acquisition and Teacher Education (p. 891) (Ph.D. only)

Graduate Degree Programs

The Department of Germanic Languages and Literatures offers graduate programs leading to the degrees of Master of Arts in German, and Doctor of Philosophy in German. Students in the department may choose an additional specialization in Cultural Studies and Interpretive Research (http://www.germanic.illinois.edu/graduate) or a concentration in Medieval Studies. Candidates for the Ph.D. in German may additionally obtain a certificate in Second Language Acquisition and Teacher Education (http://www.slate.uiuc.edu) (SLATE Certificate).

Admission

Applicants should apply online (www.grad.illinois.edu/admissions/apply/) and submit a statement of purpose, three letters of recommendation and a sample of their written work in English or German or both. For admission to the Master of Arts program, the writing sample might be a term paper, and for admission to the doctoral level, a master's thesis or seminar paper. Original transcripts (with English translations if applicable) showing all undergraduate and graduate work completed should be sent to:

SLCL Graduate Student Services
3070 Foreign Languages Bldg.
707 S. Mathews Ave.
Urbana, IL 61801

Graduate Record Examination (GRE) scores are required. The applicant should ask the ETS to submit scores to institution 1836. Applicants whose native language is not English are required to take the Test of English as a Foreign Language (TOEFL) and must score at least 79 on the internet-based test (iBT); they must also pass the speaking sub-section of the iBT with a minimum score of 24 (see www.grad.illinois.edu/Admissions/instructions/04c).

Graduate Teaching Experience

Although teaching is not a general Graduate College requirement, experience in teaching is considered an important part of the graduate experience in this program, and all students teach. Non-native English speakers must first pass a test of their oral English ability (see www.grad.illinois.edu/admissions/taengprof.htm).

Research Interests

The department faculty includes nationally and internationally recognized scholars in all areas of research within the field. These areas include older and modern German literature, Scandinavian literature, comparative literature, medieval studies, Renaissance studies, gender and women's studies, film, American-German relations, historical and synchronic Germanic linguistics, German civilization, and German language pedagogy. The University Library has one of the nation's outstanding collections of works pertaining to study and research in Germanic literatures of all periods and in Germanic and general linguistics.

Financial Aid

All students accepted into the program have financial support, usually in the form of a Teaching Assistantship (see www.grad.illinois.edu/admissions/taengprof.htm).

Generally, the department selects one student annually to study for a year at the University of Gottingen with an assistantship there; and one graduate student to serve as administrative assistant to the program director in the Austria-Illinois Exchange Program in Vienna. The stipends for these fellowships and assistantships are comparable to those for students serving in the department as half-time assistants. The department further has
contacts with a variety of universities and institutions in German-speaking countries; these cooperative endeavors also include arrangements for graduate students to study and teach abroad.

For continuing graduate students, the awarding of financial aid of all types is contingent upon making satisfactory progress toward a degree.

**Master of Arts in German**

Applicants should have completed undergraduate studies similar to the concentration in German at the University of Illinois at Urbana-Champaign, have a grade point average of 3.0 (A = 4.0) for the last 60 hours of undergraduate coursework, and be able to follow lectures in the German language. Acquaintance with German history and culture in their relation to the general European background is desirable. Admission to the program is on a competitive basis.

Candidates for the Master of Arts degree may emphasize either German literature or linguistics. All candidates must take courses in both literature and linguistics.

Doctor of Philosophy in German

Applicants must meet the admission standards outlined for the Master of Arts and, in addition, hold a Master of Arts in German (or equivalent) with a graduate grade point average of 3.5 (A = 4.0). Admission to the program is on a competitive basis.

Candidates for the Ph.D. in German may specialize in older German literature, modern German literature, Germanic linguistics, or Scandinavian literature.

Students working toward the Ph.D. degree must have completed all requirements for the Master of Arts degree given above and must complete an additional 40 graduate hours of coursework approved by the graduate adviser. At least 32 graduate hours must be for courses in Germanic Languages and Literatures. No more than 8 hours of credit in 400 level courses beyond those presented for the M.A. will be counted toward these ten units. The 40 hours may include up to 4 hours of GER 593, but may not include any credit for GER 496 for work taken as independent study. Residence requirements are those of the Graduate College.

Major: Social Studies, Teaching of
Degrees offered: M.A.

Medical Scholars Program: Doctor of Philosophy (Ph.D.) in History and Doctor of Medicine (M.D.) through the Medical Scholars Program (http://www.med.uiuc.edu/mdphd)

Graduate Degree Programs

The Department of History offers graduate courses leading to the Doctor of Philosophy degree, complete details of which may be found in the Graduate Studies section of the department's web site. Students are not normally admitted to a terminal master's degree program.

Admission

Applicants should have a minimum of 20 semester hours of undergraduate work in history and cognate disciplines with an overall GPA of 3.25 in the last two years. Applicants who have a master's degree should have a grade point average of 3.5 for previous graduate-level work. All applicants are required to submit Graduate Record Examination (GRE) scores (verbal, writing, and quantitative are mandatory; history is optional). All applicants are required to submit a writing sample. Language preparation may be weighted heavily, depending upon the field of specialization. Foreign students whose native language is not English need a paper-based Test of English as a Foreign Language (TOEFL) score of at least 600 (250 on the computer-based test). Most successful applicants have GRE verbal scores of over 80% and/or TOEFL scores of over 630 (260 computer). Only in exceptional circumstances are students admitted for the spring term. The department is not currently admitting to the Teaching of Social Studies program. For additional details refer to www.history.illinois.edu/graduate/prospective/.

Medical Scholars Program

The Medical Scholars Program permits highly qualified students to integrate the study of medicine with study for a graduate degree in a second discipline, including History. Students may apply to the Medical Scholars Program prior to beginning graduate school or while in the graduate program. Applicants to the Medical Scholars Program must meet the admissions standards for and be accepted into both the doctoral graduate program and the College of Medicine. Students in the dual degree program must meet the specific requirements for both the medical and graduate degrees. On average, students take eight years to complete both degrees. Further information on this program is available by contacting the Medical Scholars Program, 125 Medical Sciences Building, (217) 333-8146 or at www.med.illinois.edu/msp.

Graduate Teaching Experience

Although teaching is not a general Graduate College requirement, experience in teaching is considered an important part of the graduate experience in this program.

Facilities and Resources

The extraordinary University Library is the department’s main research facility; within it, the History, Philosophy & Newspaper Library, the Rare Book Room, and the area studies libraries (Slavic, Africana, Latin American, Asian Libraries) all serve faculty and students with expert bibliographers and focused collections. Among other special collections much used by historians are Afro-Americana and Women's Studies; the library is also a major repository for government documents.
Financial Aid

Financial aid is almost always awarded on an academic-year basis. Applications by incoming students are considered with admission applications. All fellowships and assistantships include a stipend plus tuition and service fee waiver.

Both University and department endowment fellowships are available to entering students and to advanced doctoral students embarked on their research or the writing of their dissertations. Foreign Language and Area Studies (FLAS) Fellowships may support first- and second-year students who have special interests in foreign area studies. Entering students from underrepresented groups may be awarded one- to three-year Graduate College Fellowships. The Illinois Consortium for Educational Opportunity Program (ICEOP) offers renewable fellowships to underrepresented minority students who are Illinois residents and plan academic careers within the state. Half-time teaching assistantships are the department’s primary form of financial aid for graduate students in the Ph.D. program. Students who progress satisfactorily toward their degrees and demonstrate effective teaching will have their teaching assistantships renewed for a second, and usually a third, year.

Master of Arts in History

Students enrolled in the Ph.D. program can usually petition to earn a Master of Arts in History within three semesters.

## Doctor of Philosophy in History

In certain circumstances, a student in British history may substitute courses in quantitative skills for the second language. For the preliminary examination, the candidate customarily offers three fields in history - one major and two minor fields. At least one of these must be a “geographical/chronological field” and one must be a “comparative/thematic” field. One must involve a period of time before 1815. At least two geographical areas must also be represented by the fields offered for the examination. One of the three fields may be in a specialization outside the Department of History or may be a “constructed” field specially designed by the candidate in consultation with field examiners and the major advisor.

### Entering with approved M.S./M.A. degree

HIST 598 (2 hours per term) is required of candidates who hold teaching assistantships during each semester they hold an appointment; students with research assistantships may enroll for HIST 596 for 2 hours credit per semester during the assistantship.

Degrees offered: M.S.

Graduate Degree Programs

The University of Illinois at Urbana-Champaign has established a Master of Science Program in Human Factors. This program involves a broad and diverse group of faculty and students based in academic units including the Institute of Aviation's Human Factors Division, the Departments of Psychology, Department of Industrial and Enterprise Systems Engineering, Department of Mechanical Science and Engineering, Computer Science, and the Human-Computer Intelligent Interaction Group at the Beckman Institute. The program focuses on a wide variety of cognitive human factors issues within both aviation and non-aviation systems.

Admission

This program is currently not accepting applications.

Major: Human and Community Development
Degrees offered: M.S. and Ph.D.
Graduate Concentrations: Human Development and Family Studies (Ph.D. only)

Graduate Minor: Gender Relations in International Development

Joint Degree Program: Doctor of Philosophy in Human and Community Development and Master of Public Health (p. 620)
Degrees Offered: Ph.D. and M.P.H.

Medical Scholars Program: Doctor of Philosophy (Ph.D.) in Human and Community Development and Doctor of Medicine (M.D.) through the Medical Scholars Program (http://www.med.uiuc.edu/mdphd)

Graduate Degree Programs

The Department of Human and Community Development (HCD) offers one graduate concentration at the doctoral level. Students who enter the doctoral program without a master’s will complete one as the first part of their doctoral requirements.

The doctoral concentration in Human Development and Family Studies (HDFS) focuses on positive development and resilience of diverse children, youth, and families in everyday life contexts. Our doctoral concentration is interdisciplinary, drawing upon the canons of anthropology, economics, education, family studies, human development, psychology, and sociology. Further, we value qualitative, quantitative, and mixed methodologies.

Admission

Admission is based upon both academic record and the applicant's fit with faculty research programs. We examine grade point average (GPA), Graduate Record Examination (GRE, we will accept MCAT scores for Medical Scholar applicants) scores, letters of recommendation, and a personal statement. International applicants from non-English speaking countries must have an official paper Test of English as a Foreign Language (TOEFL) score of at least 103 on the internet based test. We will not admit anyone with a GPA less than 3.0 on a 4.0 scale. All applicants are required to submit official GRE scores (MCAT in the case of Medical Scholar applicants) and to have previous coursework in a relevant area of social or behavioral sciences. GRE, MCAT and TOEFL scores should be taken no more than two years prior to application. Our application deadline is January 15 for possible admission the following fall semester. We admit students for fall enrollment only. Please refer to our department website for further information.

Medical Scholars Program

The Medical Scholars Program permits highly qualified students to integrate the study of medicine with study for a graduate degree in a second discipline, including Human and Community Development. Students may apply to the Medical Scholars Program prior to beginning graduate school or while in the graduate program. Applicants to the Medical Scholars Program must meet the admissions standards for and be accepted into both the doctoral graduate program and the College of Medicine. Students in the dual degree program must meet the specific requirements for both the medical and graduate degrees. On average, students take eight years to complete both degrees. Further information on this program is available by contacting the Medical Scholars Program, 125 Medical Sciences Building, (217) 333-8146 or at www.med.illinois.edu/msp.

Graduate Teaching Experience

We do not require our students to teach but recognize the importance of teacher development for their future marketability. Thus, we make teaching assistantships available and encourage students to pursue a variety of teaching experiences as well as mentorship from experienced instructors. We also encourage our students to utilize the variety of teacher training resources that are available across campus.

Faculty Research Interests

Faculty information is available on our department website at www.hcd.illinois.edu/about/faculty_staff.html

Financial Aid

We are committed to funding all of our students who are making timely progress. The duration and amount of our commitment varies by program. Funding may include fellowships, research assistantships, and/or teaching assistantships. These opportunities typically include stipends and tuition waivers. In some cases, fees are also waived. All applicants are automatically considered for all department funding opportunities; there is no separate application process. Federal and state financial aid is completely separate from the support provided by our department. For information regarding federal and state financial aid, please refer to www.osfa.illinois.edu/

Other Requirements

Other requirements may overlap

Minimum 500-level Hours Required Overall: 12 (8 within the unit)

A doctoral student terminating our program early and without a master's thesis, must complete 36 hours rather than 32.

Minimum GPA: 2.75

For additional details and requirements refer to the department's Graduate Program Information (http://www.hcd.illinois.edu/student_information/graduate/grad_handbook.html) and the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).

Doctor of Philosophy in Human and Community Development, Concentration in Human Development and Family Studies

The HCD doctoral program prepares students to be researchers, educators, policy developers, or professionals who develop, evaluate, and implement programs for children, families, and communities. Those entering the doctoral program without a master's degree will complete one within their first two years of their doctoral program. Requirements for the Ph.D. include 66 graduate hours beyond the M.S. degree, completion of the written qualifying examination, defense of the written dissertation proposal, and a final dissertation defense upon completion of the dissertation. Doctoral students may also complete a supporting program in "applied HDFS." This 16 graduate hour option includes 4 hours in program development or policy studies, 4 hours in program evaluation, and two 4 hour internships. The applied optional supporting program prepares students to enter careers in administration, human services, social policy, international aid agencies, and government, as well as traditional careers in teaching and research.

Information listed in this catalog is current as of 11/2014

Major: Bioinformatics  
Degrees Offered: M.S.  
Graduate Concentrations: Animal Sciences, Bioengineering, Crop Science, Library and Information Science, Chemical and Biomolecular Engineering, Computer Science

Major: Informatics  
Degrees Offered: Ph.D.

Graduate Degree Programs

The Illinois Informatics Institute (I3) at the University of Illinois offers two graduate degrees: a Ph.D. in Informatics, and Masters of Science in Bioinformatics. Both are interdisciplinary programs with many participating departments. Students can earn the Master of Science in Bioinformatics with a concentration in one of the following departments: Animal Sciences, Crop Sciences, Library and Information Science, Chemical and Biomolecular Engineering, Computer Science. The program is overseen by I3, but students are also members of the department of their concentration. Students can earn the Ph.D. in Informatics with concentrations in Bioinformatics; Medical Informatics; Spatial Informatics; Art and Cultural Informatics; Design, Technology, and Society; Data Analytics and Information Visualization; Cognitive Science and Language Processing.

Facilities

University research centers in this area include the Center for Biophysics and Computational Biology (http://www.life.uiuc.edu/biophysics) and an NIH Resource for Macromolecular Modeling and Bioinformatics (http://www.ks.uiuc.edu). The campus also offers state-of-the-art experimental bioinformatics facilities, including those in the Keck Center for Comparative and Functional Genomics (http://www.biotech.uiuc.edu) and the Institute for Genomic Biology (http://www.igb.illinois.edu). The National Center for Supercomputing Applications (http://www.ncsa.uiuc.edu) (NCSA), located at the University, offers opportunities for accessing, developing, and experimenting with state-of-the-art computational facilities for bioinformatics.

Master of Science in Bioinformatics

The M.S. degree can be taken in a thesis or non-thesis format, depending on the department. For either format, the research adviser must be affiliated with the Bioinformatics program. Departments may have requirements in addition to those below. See the departmental entries in this Program of Study for more information.

or CS 473 Fundamental Algorithms
One bioinformatics course from approved list (http://www.informatics.illinois.edu/academics/bioinformatics-ms/bioinformatics-ms-core-courses) 4
Total Hours 36

Other Requirements

Other requirements may overlap
A concentration is required.
Minimum Hours Required Within the Unit: 8
Minimum 500-level Hours Required Overall: 12
Non-thesis programs must require students to participate in a research experience supervised by a faculty member.

1 For additional details and requirements refer to the degree requirements (http://www.informatics.illinois.edu/academics/bioinformatics-ms), the appropriate department's graduate handbook, and the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).

Admission

Applicants must hold a bachelor's degree equivalent to that granted by the University of Illinois at Urbana-Champaign. The recommended background for graduate students entering the Bioinformatics degree program is a bachelor's or master's degree in life sciences, computer and mathematical sciences, or engineering, with a minimum of five hours of molecular and cell biology, six hours of general chemistry, nineteen hours of mathematics and statistics, and three hours of introduction to computing. Prerequisites vary somewhat for the different departmental concentrations. Students should view the web page of the specific department they wish to apply to for detailed information about admission criteria and degree requirements. Those links are below:

- Department of Animal Sciences (http://www.ansci.illinois.edu)
- Department of Bioengineering (http://bioengineering.illinois.edu)
- Department of Chemical and Biomolecular Engineering (http://chbe.illinois.edu)
- Department of Computer Science (http://cs.illinois.edu)
- Department of Crop Sciences (http://www.cropsci.illinois.edu)
- Graduate School of Library and Information Science (http://www.lis.illinois.edu)

Financial Aid

Fellowships, research assistantships, and teaching assistantships (all of which include tuition and partial fee waivers) are awarded on a competitive basis by the admitting department. All applicants, regardless of U.S. citizenship, whose native language is not English and who wish to be considered for teaching assistantships (the most common form of financial aid for new graduate students in the department) must submit a score of at least 50 on the Test of Spoken English (TSE) (http://www.grad.illinois.edu/admissions/taengprof.htm).

Doctor of Philosophy in Informatics

The Chair of the Governing Committee of the Informatics Ph.D. Program will appoint the supervising committee to approve each student's program of study, which will be called the Advisory Committee (first half of studies) and then the Dissertation Committee (second half of studies). The membership of these committees should remain constant for each half of the student's studies, except in unusual circumstances, but may typically change when it is constituted for the dissertation. In any case, changes to the supervising committees must be approved by the Governing Committee. This Committee must contain faculty with expertise in both the Applications area and the Foundations area chosen by the student, including at least four faculty members affiliated with the Informatics Program. The supervising committee will provide each student with a review of his or her progress at the end of each academic year.
Entering with approved M.S. degree

INFO 500 Orientation Seminar (taken twice: once for 0 hours, once for 1 hour) 1
Research Practicum (4 hrs., two semesters) 8

Electives 7
INFO 599 Thesis Research (32 min applied toward degree) 32
Total Hours 96

Masters Degree - Students entering without a Masters degree approved by their Advisory Committee with be required to take 32 additional credit hours in 400 and 500 level courses approved by their committee.

Other Requirements

Other requirements may overlap
Qualifying Exam Required Yes
Preliminary Exam Required Yes
Final Exam/Dissertation Defense Required Yes
Dissertation Deposit Required Yes
Minimum GPA: 2.75

1 For additional details and requirements refer to the degree requirements (http://www.informatics.illinois.edu/academics/admission), the appropriate department's graduate handbook, and the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).

Admission

The admissions process will consist of a formal application, specifying experiences, courses, interests, and letters of recommendation. The Informatics PhD Program will admit graduate students who are approved by the Governing committee in conjunction with representatives of the Areas. With the approval of the appropriate committees, students may be admitted to the program with only a Bachelor's degree. They will work with their Advisory Committee to define appropriate courses to fulfill the 32 hours of Masters-level work. If they wish to receive a Masters degree, they will need to apply to a relevant department and meet the departments existing Masters degree requirements. If they already hold a Masters degree approved by the IPP Governing Committee, they will receive graduate credit for 32 hours. All applicants whose native language is not English must submit a minimum TOEFL score of 100 (IBT), 250 (CBT), or 600 (PBT); or minimum International English Language Testing System (IELTS) academic exam scores of 6.5 overall and 6.0 in all subsections. For those taking the TOEFL or IELTS, full admission status is granted for scores greater than 102 (TOEFL iBT), 253 (TOEFL CBT), 610 (TOEFL PBT), or 6.5 (IELTS). Limited status is granted for lesser scores and requires enrollment in English as a Second Language (ESL) courses based on an ESL Placement Test (EPT) taken upon arrival to campus.
Financial Aid

Fellowships, research assistantships, and teaching assistantships (all of which include tuition and partial fee waivers) are awarded on a competitive basis. All applicants, regardless of U.S. citizenship, whose native language is not English and who wish to be considered for teaching assistantships must demonstrate spoken English language proficiency by achieving a minimum score of 50 on the Test of Spoken English (TSE), 24 on the speaking subsection of the TOEFL iBT, or 8 on the speaking subsection of the IELTS. For students who are unable to take the TSE, iBT, or IELTS, a minimum score of 50 is required on the SPEAK test, offered on campus. All new teaching assistants are required to participate in the Graduate Academy for College Teaching conducted prior to the start of the semester.

Degrees Offered: M.S., Ph.D.

Joint Degree Program: Master of Science in Industrial Engineering or Systems and Entrepreneurial Engineering and Master of Business Administration (p. 581)
Degrees Offered: M.S. and M.B.A.

Medical Scholars Program: Doctor of Philosophy (Ph.D.) in Industrial Engineering or Systems and Entrepreneurial Engineering and Doctor of Medicine (M.D.) through the Medical Scholars Program (https://www.med.illinois.edu/mdphd)

Graduate Degree Programs

The Department of Industrial and Enterprise Systems Engineering (ISE) offers graduate study leading to master's and doctoral degrees in Industrial Engineering (IE) and Systems and Entrepreneurial Engineering (SEE). The program offers an approach to industrial engineering and systems engineering, engineering design, and entrepreneurial engineering that crosses disciplinary lines. The IE program is based in advanced studies that focus on operations research, optimization, supply chain management, financial engineering, quality and reliability engineering and production management, with the aim to advance modeling, simulation, analysis and decision making for complex engineering and economic systems. The SEE program is founded on the premise of dual competency in both traditional engineering and in the business side of engineering. The SEE program offers flexibility by permitting the student to select from a menu of advanced courses and take a wide range of electives to meet individual career goals. Graduates of these programs are prepared to enter academic and professional engineering positions in universities, industry, government, and private practice. Opportunity also exists for specializing in:

1. computational science and engineering and
2. energy and sustainability engineering within the department's graduate programs via the Computational Science and Engineering (CSE) Option (http://cse.illinois.edu/students/graduate-program) and the Energy and Sustainability Engineering (EaSE) Option (http://ease.illinois.edu).

The Medical Scholars Program (https://www.med.illinois.edu/mdphd) permits highly qualified students to integrate the study of medicine with study for a graduate degree in a second discipline, including Industrial Engineering or Systems and Entrepreneurial Engineering. The Department is a joint sponsor with the Department of Finance for the M.S. degree in Financial Engineering (p. 710).

Admission

Applicants who have completed degree requirements in an accredited engineering program or its equivalent are eligible to apply for admission. A minimum grade point average of 3.25 (A = 4.00) for the last two years of undergraduate study is required.

Scores on the Graduate Record Examination (GRE) (http://www.ets.org) general test are required of all applicants. Based upon the previous preparation of the student for either program, prerequisite courses may be specified by the advisor, but the credit may not be applied toward a degree.

All applicants whose native language is not English must submit a minimum TOEFL (http://www.toefl.org) score of 103 (iBT), or 613 (PBT); or minimum International English Language Testing System (IELTS) (http://www.ielts.org) academic exam scores of 7.0 overall and 6.0 in all subsections. Applicants may be exempt from the TOEFL if certain criteria (http://grad.illinois.edu/admissions/instructions/04c) are met. Full admission status is granted for those meeting the minimum requirements and having taken the TOEFL or IELTS since the scores required for admission to ISE are above the minimum scores demonstrating an acceptable level of English language proficiency.

Applicants to the joint M.B.A. degree program must meet the admissions standards for both programs and be accepted by both programs.

Students may apply to the Medical Scholars Program prior to beginning graduate school or while in the graduate program. Applicants to the Medical Scholars Program must meet the admissions standards for and be accepted into both Industrial and Enterprise Systems Engineering and the College of Medicine. The application to the Medical Scholars Program will also serve as the application to the Industrial and Enterprise Systems Engineering.
graduate program. Further information on this program is available by contacting the Medical Scholars Program (125 Medical Sciences Building, (217)-333-8146, mspo@illinois.edu).

**Joint Degree Programs**

Current requirements for the joint Master of Science in Industrial Engineering and Master of Business Administration or the joint Master of Science in Systems and Entrepreneurial Engineering and Master of Business Administration are that students must complete all of the requirements for the engineering M.S. degree with a thesis as prescribed above, plus 60 graduate hours for the M.B.A. degree (http://www.mba.illinois.edu/academics/joint-degrees.aspx), including 40 hours of M.B.A. core course work; and 20 hours of M.B.A. elective course work to fulfill the requirements of a concentration.

**Medical Scholars Program**

Students in the Medical Scholars program must meet the specific requirements for both the medical (https://www.med.illinois.edu/mdphd) and graduate degrees. On average, students take eight years to complete both degrees. The first year of the combined program is typically spent meeting requirements of the Industrial or Systems and Entrepreneurial Engineering graduate degree.

**Faculty Research Interests**

Faculty research by Systems and Entrepreneurial Engineering faculty is pursued in the following fields:

- computer-aided design
- optimization
- design systems
- manufacturing systems
- nondestructive testing and evaluation
- system dynamics and simulation
- control
- robotics
- real-time decision making
- reliability
- entrepreneurial engineering
- operations research/management science
- biomechanics

In Industrial Engineering, research is conducted in operations research, production engineering, quality and reliability engineering, and supply chain and logistics, transportation, financial engineering, and business analytics. Study in the areas of cognitive engineering, computer-aided manufacturing, ergonomics, facilities planning, human-machine interaction, large-scale systems analysis, machine tool systems design, mathematical programming and optimization, production planning and control, and project management is aimed at improving the design and implementation of integrated systems of persons, materials, planning, and equipment.

**Facilities and Resources**

Members of the ISE Department have access to a wide range of excellent research facilities. These laboratories support a wide range of activity and are described at the department's research laboratories Web site (http://ise.illinois.edu/research/ise-labs.html).

**Financial Aid**

Qualified students may compete for financial assistance in the form of teaching/graduate/research assistantships, fellowships, grants, and tuition waiver scholarships. Under certain conditions, fellowships may be augmented by part-time assistantships. All applicants, regardless of U.S. citizenship, whose native language is not English and who wish to be considered for teaching assistantships must demonstrate spoken English language proficiency (http://grad.illinois.edu/admissions/taengprof.htm) by achieving a minimum score of 24 on the speaking subsection of the TOEFL iBT or 8 on the speaking subsection of the IELTS. For students who are unable to take the iBT or IELTS, a minimum score of 4CP is required on the English Proficiency Interview (http://cte.illinois.edu/testing/oral_eng/epi_overview.html) (EPI), offered on campus. All new teaching assistants are required to participate in the Graduate Academy for College Teaching (http://cte.illinois.edu/programs/ta_train.html) conducted prior to the start of the semester.

- Master of Science in Industrial Engineering (p. 752)
- Master of Science in Systems and Entrepreneurial Engineering (p. 754)
- Doctor of Philosophy in Industrial Engineering (p. 750)
- Doctor of Philosophy in Systems and Entrepreneurial Engineering (p. 751)
Joint M.B.A. Program

Students in this unit may choose to earn their major degree and simultaneously complete an M.B.A., with 12 fewer required hours than when pursuing both degrees independently. Students must be enrolled in the M.B.A. program for three terms and complete all the requirements of their primary degree. Interested students should see the joint program requirements (p. 584) and contact the M.B.A. program and their major department office for more information.

Doctor of Philosophy in Industrial Engineering

A Master's degree is not required for admission to the Direct Ph.D. program.

The 96 graduate hours of credit may be divided into three stages of 32 hours each, consisting of 32 hours generally represented by an M.S. degree or equivalent (Stage I), 32 hours of course work beyond the M.S. degree (Stage II), and 32 hours of thesis work for the doctoral thesis (Stage III). Stage I requirements are satisfied by completion of an M.S. degree in the Department or in a related engineering or technical discipline from the University of Illinois or other accredited university. A non-technical M.S. or MBA would normally not count toward the completion of Stage I. Such students would be required to enroll in one of the Master of Science Programs in the Department and satisfy the requirements therein in order to satisfy Stage I of the Ph.D. degree.

To advance to Stage II all students must pass the Qualifying Examination. To advance from Stage II to Stage III the student must pass the Preliminary Exam. Stage III is comprised of a minimum of 32 hours of GE 599 (Thesis Research) credit and a written dissertation followed by a final oral dissertation defense.

The Preliminary Examination is taken after the Qualifying Examination. A minimum of six months should elapse between the successful completion of the doctoral Preliminary Examination and the doctoral final examination (oral dissertation defense).

Entering with approved M.S./M.A. degree

Other Requirements and Conditions

Other Requirements and Conditions may overlap

Minimum 500-level Hours Required Overall: 24

For the thesis option, a maximum of 4 hours of IE 597 (or other approved independent study) may be applied toward the elective course work requirement.

4 hours of the elective courses must be from a College of Engineering department, including ABE and CHBE.

A maximum of 4 CR-graded credit hours in non-IE courses may be applied toward the degree.

Ph.D. exam and dissertation requirements:

Qualifying exam: Qualifying examinations should be taken no later than the fifth semester for those entering with approved B.S. or B.A. degree.

Preliminary exam

Final exam or dissertation defense

Dissertation deposit

Minimum GPA: 3.0

1 For additional details and requirements refer to the department's Graduate Programs Web site (http://ise.illinois.edu/graduate/graduate-programs) and the Graduate College Handbook (http://grad.illinois.edu/gradhandbook).

2 Qualifying Exam Information (http://ise.illinois.edu/graduate/qualifying-prelim-final-exams)

Doctor of Philosophy in Systems and Entrepreneurial Engineering

A Master's degree is not required for admission to the Ph.D. program.

Students in the SEE master's program must take the Qualifying Examination before obtaining the M.S. degree; students entering the program with a master's degree earned elsewhere must pass the Qualifying Examination before or during their third semester in the Ph.D. program.

The 96 graduate hours of credit may be divided into three stages of 32 hours each, consisting of 32 hours generally represented by an M.S. degree or equivalent (Stage I), 32 hours of course work beyond the M.S. degree (Stage II), and 32 hours of thesis work for the doctoral thesis (Stage III). Stage I requirements are satisfied by completion of an M.S. degree in the Department or in a related engineering or technical discipline from the University of Illinois or other accredited university. A non-technical M.S. or MBA would normally not count toward the completion of Stage I. Such students would be required to enroll in one of the Master of Science Programs in the Department and satisfy the requirements therein in order to satisfy Stage I of the Ph.D. degree.

To advance to Stage II all students must pass the Qualifying Examination. To advance from Stage II to Stage III the student must pass the Preliminary Exam. Stage III is comprised of a minimum of 32 hours of GE 599 credit and a written dissertation followed by a final oral thesis defense.

The Preliminary Examination is taken after the Qualifying Examination. A minimum of six months should elapse between the successful completion of the doctoral Preliminary Examination and the doctoral final examination (oral dissertation defense).

Institute of Communications Research

www.media.illinois.edu/icr/

Interim Director: Dr. William E. Berry
Director of Graduate Studies: James Hay
228 Gregory Hall
810 South Wright Street
Urbana, IL 61801
(217) 333-1549
E-mail: icr@illinois.edu

Major: Communications and Media
Degrees Offered: Ph.D.

Medical Scholars Program: Doctor of Philosophy (Ph.D.) in Communications and Media and Doctor of Medicine (M.D.) through the Medical Scholars Program (http://www.med.illinois.edu/mdphd)

Graduate Degree Programs

Please note: The ICR no longer has information regarding our programs of study available in hard copy format. All information can be found via the Web.

On the graduate level, the Institute of Communications Research offers a doctoral degree in Communications and Media; students wishing to study for a master's degree do so in related fields outside the Institute.

The Institute cooperates with the University of Illinois' College of Medicine in offering the combined M.D. and Ph.D. degrees. The Medical Scholars Program (http://www.med.illinois.edu/msp) is the largest and broadest program of its kind in the world, with more than 150 students enrolled in fifty graduate programs. Equipped with an excellent medical education and Ph.D. training, graduates of the Medical Scholars Program have the credentials to assume leadership roles in academic medicine, medical research, and health policy.

The Institute's faculty and graduate students are also active in the Department of Advertising (http://www.comm.uiuc.edu/Advertising), the Department of African American Studies (http://www.afro.illinois.edu), the Asian American Studies Program (http://www.aasp.illinois.edu), the Unit for Cinema Studies (http://www.cinema.uiuc.edu), the Unit for Criticism and Interpretive Theory (http://criticism.english.uiuc.edu), the Gender and Women's Studies Program (http://www.gws.uiuc.edu), the Illinois Program for Research in the Humanities (http://www.iprh.uiuc.edu), the Campus Informatics Initiative (http://www.cii.uiuc.edu/about.php?link=2), the Department of Journalism (http://www.comm.uiuc.edu/journalism), the Latino/a Studies Program (http://www.lls.uiuc.edu), the Center for Latin American and Caribbean Studies (http://www.clacs.uiuc.edu), and the Program in Media Studies (http://media.illinois.edu/macs).

Admission

Any student with a bachelor's or master's degree and with a substantial background in the humanities, social sciences, or physical sciences is eligible to apply to the doctoral program. It is suggested but not required that students have or will have a master's degree. All candidates for admission must submit an application for admission along with the application fee, official transcripts of all undergraduate and graduate courses taken and grades earned, three letters of recommendation, and Graduate Record Examination scores.

Our application process is now conducted primarily via the World Wide Web, using the University of Illinois' web-based application for admission called ApplyYourself (http://www.grad.illinois.edu/admissions/apply). We encourage you to apply electronically using the web application. If applying on the web is inconvenient for you, please print out a paper copy of the application and send it (by first class or air mail) to our mailing address listed above.

Foreign students from non-English-speaking countries are required to take the Test of English as a Foreign Language (TOEFL) before they come to the University. Depending on the results, they may be required to take further instruction in English after their arrival.

Students are normally admitted to start the program only during the fall term. Only under exceptional circumstances are they allowed to begin it in the spring or summer term. All material for fall admission should be submitted by January 15.

Medical Scholars Program

The Medical Scholars Program permits highly qualified students to integrate the study of medicine with study for a graduate degree in a second discipline, including Communications and Media. Students may apply to the Medical Scholars Program prior to beginning graduate school or while in the graduate program. Applicants to the Medical Scholars Program must meet the admissions standards for and be accepted into both the doctoral graduate program and the College of Medicine. Students in the dual degree program must meet the specific requirements for both the medical and graduate degrees. On average, students take eight years to complete both degrees. Further information on this program is available by contacting the Medical Scholars Program, 125 Medical Sciences Building, (217) 333-8146 or at www.med.illinois.edu/msp.
Graduate Teaching Experience

The ICR feels strongly about the teaching component and tries very hard to afford students the opportunities to teach courses relevant to communication studies.

Faculty Research Interests

www.media.illinois.edu/faculty/icr.html

Financial Aid

Financial aid is available in the form of assistantships, fellowships, and tuition and fee waivers. Students of color underrepresented in communications research are eligible for University fellowships. Most Institute students receive financial support. The application for admission includes a section to be completed if you wish to be considered for financial aid. Insofar as possible, the Institute makes financial aid and admission decisions simultaneously.

Teaching assignments are also periodically available in other University departments or programs - for example, Advertising, Journalism, Speech, English, Business and Technical Writing, Unit for Cinema Studies, and Agricultural Communications - and in the communications program at Parkland College. Students with editing, writing, computer programming, tutoring, or other skills often can find support in other units of the University. Usually these positions must be obtained once you are on campus and can arrange interviews. A few students also find part-time employment with the local media.

See also UIUC Graduate College Financial Aid (http://www.grad.illinois.edu/funding-jobs) and Fellowship Office (http://www.grad.illinois.edu/fellowships).

Doctor of Philosophy in Communications and Media

Coursework: ICR requires 64 credits of coursework, of which 16 may have been earned in previous graduate work. Students are responsible for designing their own programs of coursework, which are submitted for approval by the Institute's Program Evaluation Committee. Although students are given the broadest latitude in designing interdisciplinary programs, they must include courses that fill certain requirements.

Because students are admitted from diverse backgrounds, the Proseminar first introduces them to the history of communication research. The second semester revolves around the current debates in the field of communications research. While gaining an overview of the central issues and learning a common language, students in the Proseminar are also able to locate their own interests more precisely within the field of communications research in its historical and contemporary forms.

Other Requirements

- Qualifying Exam Required: No
- Preliminary Exam Required: Yes
- Final Exam/Dissertation Defense Required: Yes
- Dissertation Deposit Required: Yes
- Minimum GPA: 3.0

Overview Courses

While flexibility is the hallmark of ICR's program, students are strongly urged to take two or more overview courses that augment their area of specialization. Such courses, systematically extending proseminar material, give a broad overview of a significant body of scholarship in established areas of communications research, enable students to locate their own interests within the field as a whole, and provide solid preparation for courses that many students are likely to teach. Overview courses ensure breadth of knowledge within an interdisciplinary program such as the Institute's, where students have great latitude in designing their programs and are encouraged to take courses outside the field of communications research.

A number of currently available courses accomplish these goals. Specific examples are listed below, and the list is periodically updated to reflect developments in the field and available faculty resources. Though these courses are not formal requirements for obtaining the Ph.D., students are expected to include at least two of them in their proposed program of study for the Program Evaluation Committee. In preparing proposals, students should consult with their faculty advisors; they are welcome to seek additional help from other experienced faculty, including members of the Program Evaluation Committee.
MDIA 560  Feminist Media Studies  4
MDIA 568  Political Economy of Comm  4
MDIA 570  Popular Culture  4
MDIA 573  Freedom of Expression  4
MDIA 575  Cult Studies and Crit Interp  4
MDIA 577  Philosophy of Technology  4
MDIA 578  Communication Ethics  4
MDIA 580  Advanced Interpretive Methods  4
MDIA 590  Special Topics (Many courses listed as MDIA 590 also qualify as overview courses. Recent examples include International Communications, US Media History, and New Media Theory.)  2-8

Research Methods
Students must complete at least 8 hours in research methods. In order to provide a competent background for constructively understanding the field's wide-ranging literature, students are required to take one quantitative and one qualitative course.

In addition to methodology courses taught by the College of Media faculty, students are encouraged to consider relevant courses in quantitative or non-quantitative methods elsewhere on campus. Listings of such courses are available in the ICR office.

Preliminary Exams
Students, in consultation with their chosen advisors, select a committee of four faculty members for their preliminary exams. Upon completion of coursework, students undertake preparing written examinations. Upon completing written answers for each examiner, along with a dissertation proposal, students undergo a 2-hour oral examination. Upon passing the preliminary examination, students proceed with work on their dissertations.

Dissertation
Because the Doctor of Philosophy degree is primarily a research degree, candidates are required to demonstrate a capacity for independent research by producing an original dissertation on a topic within the general area of communications research.

Final Examination
After students distribute polished drafts of their dissertations, they take final oral examinations administered by their chosen committees. The student is required to support and interpret the dissertation to the committee's satisfaction, as well as to show an adequate grasp of the selected area of concentration that it represents.

1 For additional details and requirements students should request an e-mail copy of ICR Abbreviated Graduate Handbook for further, detailed information on program requirements, and refer to the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).

Joint M.B.A. Program
Students in this unit may choose to earn their major degree and simultaneously complete an M.B.A., with 12 fewer required hours than when pursuing both degrees independently. Students must be enrolled in the M.B.A. program for three terms and complete all the requirements of their primary degree. Interested students should see the joint program requirements (p. 583) and contact the M.B.A. program and their major department office for more information.
Journalism

Rich Martin
23 Gregory Hall
810 S. Wright Street, Urbana, IL, 217-333-0709
www.media.illinois.edu/journalism/

Nancy Benson, Director of Graduate Studies in Journalism
nbenson@illinois.edu

Major: Journalism
Degrees Offered: M.S.

Joint Degree Program: the Master of Science in Journalism can be earned jointly with the following Degrees Offered:
J.D. in Law (p. 775)
M.B.A. in Business Administration (p. 581)

Graduate Degree Program

The Department of Journalism offers a graduate program leading to the Master of Science degree. The department does not offer a Ph.D. degree. For the program leading to the Doctor of Philosophy in Communications, see Communications and Media (p. 611).

Admission

Applicants must have a bachelor's degree from an accredited U.S. institution or one of recognized standing abroad. A grade point average of 3.0 (A = 4.0) is the minimum requirement for admission to the Graduate College, with exceptions by petition only. Because the master’s program has an enrollment ceiling, some applicants with grade point averages of 3.0 or higher may not be admitted. The program places a strong emphasis on journalism, and candidates who are accepted are most often those with a demonstrated interest in practicing journalism. It is imperative that all applicants supply writing samples. Letters of recommendation and the Graduate Record Examination (GRE) are required. An interview with the head of the department or director of graduate studies is also helpful but not required. A minimum score of 600 is required on the paper-based Test of English as a Foreign Language (TOEFL) (250 on the computer-based test). IELTS scores must be 6.5 and 6 or higher on any/all sub-sections. Students are typically admitted in the fall semester.

Financial Aid

Most assistantships (teaching or research) are awarded on a quarter-time basis and carry a waiver of tuition, service fee, AFMFA fee, Library/Technology fee, health service fee, and partial payment of the student health insurance fee. To be considered for financial aid, applications, including transcripts and three letters of recommendation, must be received no later than January 15. Students with journalism degrees or professional experience may become candidates for part-time positions in other units of the University that require journalistic skills in writing, editing, and/or photography and graphics.

Master of Science in Journalism

Candidates without undergraduate work in Journalism or equivalent professional experience are required to complete either the standard news-editorial sequence or the standard broadcast journalism sequence.

Minimum of four JOUR 400- or 500-level electives. (Students without an approved baccalaureate degree in Journalism must take JOUR 501 to satisfy four elective hours.)

Total Hours: 32

Other Requirements

Other requirements may overlap

Minimum 500-level Hours Required Overall: 12
Minimum GPA: 3.0

Information listed in this catalog is current as of 11/2014
In order to be considered for the joint degree program in Journalism, students must apply to and be accepted by both programs. Students graduate from both programs simultaneously, upon meeting all the requirements.

- Master of Science in Journalism and Master of Business Administration (p. 759)
- Master of Science in Journalism and Juris Doctor in Law (p. 759)

**M.S. Journalism and J.D.**

| Requirements for the J.D. in Law (up to 15 hours of which may be fulfilled by Journalism coursework) | 90 |
| Journalism M.S. requirements (4-16 hours may be satisfied with Law coursework depending on Journalism experience) | 32 |
| **Total Hours** | 91 |

**Other Requirements**

1. Minimum 500-level Hours Required Overall in both programs: 75
2. Minimum GPA: 3.0

**M.S. Journalism and M.B.A.**

Students in this unit may choose to earn their major degree and simultaneously complete an MBA, with 12 fewer required hours than when pursuing both degrees independently. Students must be enrolled in the MBA program for three terms and complete all the requirements of their primary degree. Interested students should see the joint program requirements (p. 583) and contact the MBA program and their major department office for more information.
Kinesiology

www.kch.illinois.edu

Head of Department: Wojtek Chodzko-Zajko
Director of Graduate Studies: Steven J. Petruzzello
113 Freer Hall
906 South Goodwin Avenue
Urbana, IL 61801
(217) 333-1083
E-mail: jjenkns@illinois.edu

Major: Kinesiology
Degrees Offered: M.S., Ph.D.

Joint Degree Program: Doctor of Philosophy in Kinesiology and Master of Public Health (p. 617)
Degrees Offered: Ph.D. and M.P.H.

Medical Scholars Program: Doctor of Philosophy (Ph.D.) in Kinesiology and Doctor of Medicine (M.D.) through the Medical Scholars Program (http://www.med.uiuc.edu/mdphd)

Graduate Degree Programs

The Kinesiology Program in the Department of Kinesiology and Community Health offers graduate programs leading to the Master of Science and the Doctor of Philosophy degrees. Major areas of specialization at both the master's and doctoral degree levels include:

- Biobehavioral Kinesiology (the study of biomechanics, exercise and sport psychology, kinesmetrics, motor control and learning, and motor development)
- Cultural Pedagogical & Interpretive Studies (the study of the interaction between physical activity and the individual from a variety of cultural, sociological and pedagogical perspectives)
- Exercise Physiology (the study of exercise stress on body systems).

Admission

Students may apply to either the M.S. or the Ph.D. program. Applications for Fall admission are due on January 15. Applications for Spring semester are also considered (due October 1).

Admission to the M.S. degree program requires a baccalaureate degree from an accredited institution of higher education, a minimum grade point average of 3.0 (A = 4.0) for the last two years of undergraduate study and any graduate work completed, Graduate Record Examination (GRE) test scores, a statement of interest, and three letters of recommendation.

Admission to the Ph.D. degree program requires a minimum of a baccalaureate degree from an accredited institution of higher education with a minimum grade point average of 3.5 (A = 4.0) for the last two years of undergraduate study. Applicants who have a master’s degree should have a grade point average of 3.5 for previous graduate-level work. All applicants are required to submit Graduate Record Examination (GRE) test scores, a statement of interest, and three letters of recommendation.

International students whose native language is not English, must also score a minimum of 580 on the paper-based TOEFL test, 237 on the computer-based test, or 92 on the internet-based test (iBT). Applicants whose native language is not English and who are seeking a teaching assistantship must provide evidence of spoken English language proficiency by meeting minimum score requirements specified by the University (see www.grad.illinois.edu/admissions/taengprof.htm).

Medical Scholars Program

The Medical Scholars Program permits highly qualified students to integrate the study of medicine with study for a graduate degree in a second discipline, including Kinesiology. Students may apply to the Medical Scholars Program prior to beginning graduate school or while in the graduate program. Applicants to the Medical Scholars Program must meet the admissions standards for and be accepted into both the doctoral graduate program and the College of Medicine. Students in the dual degree program must meet the specific requirements for both the medical and graduate degrees. On average, students take eight years to complete both degrees. Further information on this program is available by contacting the Medical Scholars Program, 125 Medical Sciences Building, (217) 333-8146 or at https://www.med.illinois.edu/mdphd/.

Information listed in this catalog is current as of 11/2014
Graduate Teaching Experience

Although teaching is not a general Graduate College requirement, experience in teaching is considered an important part of the graduate experience in this program.

Faculty Research Interests

Kinesiology faculty conduct research and supervise graduate research in the following areas:

- Physical activity and aging
- Immune function
- Psychological, physical and cognitive function
- Fitness and health
- Psychophysiology
- Motor development
- Teacher education
- Teacher effectiveness
- Sport in society and culture
- Motor control

Facilities and Resources

The department facilities include laboratories for research in biomechanics, bone and body composition, cardiovascular function, exercise immunology, exercise psychology, exercise neuroscience, neurocognitive kinesiology, motor control, gait and balance, kinesmetrics, motor behavior, muscle physiology and pedagogical technology.

Financial Aid

A number of teaching assistantships are available in the department's instructional programs. A limited number of research assistantships are available to support the departmental research activities. Assistantships usually provide a stipend for services performed as well as a tuition and partial fee waiver.

Master of Science in Kinesiology

It is possible for a full-time student to complete this degree program in one academic year plus one summer session.

Labor and Employment Relations

www.ler.illinois.edu

Dean: Fritz Drasgow
504 East Armory Avenue
Champaign, IL 61820
(217) 333-1482
Contact: Becky Barker
E-mail: ebarker@illinois.edu

Major: Human Resources and Industrial Relations
Degrees Offered: M.H.R.I.R., Ph.D.

Joint Degree Program: The Master of Human Resources and Industrial Relations can be earned jointly with the following Degrees Offered:
Law, J.D. (p. 766)
Business Administration, M.B.A. (p. 767)

Graduate Degree Programs

The School of Labor and Employment Relations offers graduate work leading to both a master's and a doctoral degree. Graduate study in Human Resources and Industrial Relations (HRIR) is based on a multidisciplinary approach to human resources/industrial relations problems and a flexible curriculum. To achieve this, the School has joint faculty appointments or course cross-listings with economics, psychology, law, business administration, history, and finance.

Admission

Students must meet the general admission requirements of the Graduate College, as well as the specific requirements of the School. Admission to the master's program in either the fall or spring semester is based on an applicant's undergraduate record, letters of reference, Graduate Record Examination (GRE) or Graduate Management Aptitude Test (GMAT) scores, and a statement of interest and career goals. The minimum requirements for admission are a course in statistics and an average grade of B in the last two years of a four year undergraduate program. A deficiency in statistics may be made up by taking the required course without graduate credit during the first semester of graduate study. International applicants must provide Test of English as Foreign Language (TOEFL) test results with a recommended minimum score of 590 on the paper-based test (243 on the computer-based test and 96 on iBT) or IELTS with minimum overall score of 6.5 with 6.0 minimum in each subsection.

Students with outstanding academic credentials, with or without a master's degree, are encouraged to apply to the Ph.D. program. Applicants to the doctoral program must submit evidence of research ability, such as a master's thesis, an undergraduate thesis, special reports, or published articles. This is in addition to the other required application materials as indicated for the master's program. Admission to the doctoral program is made for the fall semester only. An exception is made for HRIR master's degree students, who may submit an internal application in the spring.

Graduate Teaching Experience

Although the School has no teaching requirement, doctoral students are encouraged to gain teaching experience in this program.

Financial Aid

The School offers research assistantships, scholarships, and fellowships to graduate students with superior academic credentials. A School research/teaching assistant receives a stipend plus waiver of resident or non-resident tuition and some fees (http://www.grad.illinois.edu/gradhandbook/chapterVII/section04). The Graduate College also awards minority fellowships that carry stipends plus tuition and service fee waivers. The School seeks reimbursement from appointing units of the value of the tuition waivers associated with assistantship appointments made to HRIR master's students in other campus units. However, this restriction does not apply to students in the doctoral program.

Master of Human Resources and Industrial Relations

The master's program can lead to a professional, terminal master's degree, or it can prepare students to continue their graduate study toward a Ph.D. or other doctoral degrees in law and other professional areas.

The master's degree requires 48 graduate hours of courses and usually takes three semesters to complete. The master's degree program has core requirements in human resources/industrial relations systems, and quantitative methods, and a subject distribution requirement.

Doctor of Philosophy in Human Resources and Industrial Relations

The Ph.D. is an interdisciplinary degree, which typically leads to a career in teaching and research, especially at business schools or industrial relations schools. Research-oriented careers outside the academic world are also available. The program can be completed in five years beyond the baccalaureate degree or four years beyond the master's degree. Doctoral students are required to complete 96 graduate hours of credit beyond the baccalaureate degree. Coursework is usually completed in two years. There is a second year paper requirement, one examination that focuses on the candidate's selected area of specialization, and the preliminary and final exams. Examples of areas of specialization include the effects of technological change on the human resource function; motivation, morale, and job satisfaction; labor-management relations in the public sector; labor markets and employment; and international comparative labor problems. Each student's program of study is chosen in consultation with the Ph.D. Advisory Committee at the School.

Landscape Architecture

www.landarch.illinois.edu

Interim Head of the Department: Nan Goggin
Coordinator: David Hays (M.L.A.), J. Stallmeyer, Lynne Dearborn (Ph.D.)
101 Temple Hoyne Buell Hall
611 East Taft Drive
Champaign, IL 61820
(217) 333-0176
E-mail: LADept@illinois.edu

Major: Landscape Architecture
Degrees Offered: M.L.A., Ph.D.
Graduate Concentrations: Medieval Studies (p. 811) (available to all degrees)

Joint Degree Program: Master of Landscape Architecture and Master of Urban Planning
Degrees offered: M.L.A. and M.U.P.

Graduate Degree Programs

The Department of Landscape Architecture offers work leading to the Master of Landscape Architecture (M.L.A.) degree and the Ph.D. The programs enable students to gain fresh insights and to conduct new research pertaining to land and its use by people. Courses and faculty research activities range from on-site to regional scales, and include environmental planning and design as well as community design, cultural heritage, and history. The M.L.A. is an accredited first professional degree. Students develop a specialization that reflects their interests and career aspirations. Such specializations include ecological design, community and urban design, and cultural heritage history and design. A joint M.L.A./M.U.P program is available. The Ph.D. program is jointly administered with the School of Architecture and emphasizes both interdisciplinary study and cross-disciplinary inquiry. Areas of concentration include history and theory; technology and environment; and behavioral and cultural factors in design. Before submitting an application, students should consult the department website for information regarding the specific areas of study and the time needed to complete the requirements.

Several faculty members in the department also participate in the doctoral program administered by the Department of Urban and Regional Planning. See the program description under the Department of Urban and Regional Planning for more information.

Admission

The Graduate College admission requirements apply, except that higher Test of English as a Foreign Language (TOEFL) scores are required for international students. All students are required to take the Graduate Record Examination (GRE) general test. Students are admitted on an individual basis according to a review of their prior accomplishments with an emphasis on academic achievement. MLA candidates from undergraduate design programs must submit portfolios with applications to the M.L.A. program. Candidates without undergraduate preparation in landscape architecture will be admitted on limited status and must complete undergraduate prerequisite courses in addition to graduate work. The doctoral program prefers candidates with master’s degrees: M.L.A., M.Arch., or related fields such as art history, ecology, geography, or planning. All graduate students must begin their studies in the fall semester.

Graduate Teaching Experience

Although teaching is not a general Graduate College requirement, experience in teaching is considered an important part of the graduate experience in this program.

Financial Aid

Students compete for fellowships, tuition and service fee waivers, and assistantships. Selection is based on the academic achievement and qualifications of the student.

Master of Landscape Architecture

Specific courses to be taken are determined in consultation with an adviser. These courses culminate in a master's thesis (LA 599) that permits the student, under the approval and supervision of a faculty committee, to pursue independently an in-depth work of particular relevance for landscape architecture.

LA 470          Social/Cultural Design Issues  3
LA 501          Landscape Arch Theory & Pract  2

Minimum 500-level Hours Required Overall: 18
Minimum GPA: 3.0

1 For additional details and requirements refer to the department’s Graduate Handbook (http://www.landarch.illinois.edu) and the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).

Doctor of Philosophy in Landscape Architecture

Elective coursework in major field 28
ARCH 589 PhD Colloquium (twice) 2
Outside study (courses outside of Landscape Architecture and Architecture) 8
Language Requirement: Required for all students in the History/Theory option and for some Social and Cultural Factors students
LA 599 Thesis Research (max applied toward degree) 32
Total Hours 64

Other Requirements 1
Other requirements may overlap
All students are required to enroll in the PhD colloquium during the fall of their first year of course work.
Minimum 500-level Hours Required Overall: 24 (not including 599)
Masters Degree Required for Admission to PhD? No, but Masters level requirements must be met (32 hours min)
Qualifying Exam Required: Yes
Preliminary Exam Required: Yes
Final Exam/Dissertation Defense Required: Yes
Dissertation Deposit Required: Yes
Minimum GPA: 3.0

1 For additional details and requirements refer to the department’s Program Curriculum (http://www.landarch.illinois.edu) and the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).

Master of Landscape Architecture and Master of Urban Planning

For the joint program, at least 40 hours must be in Urban Planning, including all core courses and capstone requirements. The two programs must total a minimum of the sum of 40 Urban Planning hours plus the required number of hours for the Master of Landscape Architecture, 48. (However, Landscape Architecture may at its discretion count up to 8 hours of Urban Planning courses as electives in meeting its degree requirements as long as students are required to take no fewer than 40 additional hours in Landscape Architecture.) The MUP capstone requirement may be waived for a thesis completed in Landscape Architecture provided faculty from both programs participate on the thesis committee.

Urban Planning core capstone and area requirements 40
LA 470 Social/Cultural Design Issues 3
LA 501 Landscape Arch Theory & Prac 2
Specialization area coursework 27-35
Internship
Additional undergraduate coursework will be required of students without a BLA. These prerequisites do not count toward the graduate degree.
LA 599 Thesis Research (min/max applied toward degree) 8
Total Hours 80-88
Other Requirements

Other requirements may overlap

M.B.A. and Master of Landscape Architecture

Students in this unit may choose to earn their major degree and simultaneously complete an M.B.A., with 12 fewer required hours than when pursuing both degrees independently. Students must be enrolled in the M.B.A. program for three terms and complete all the requirements of their primary degree. Interested students should see the joint program requirements and contact the M.B.A. program and their major department office for more information.
Latin American and Caribbean Studies

www.clacs.illinois.edu

(including classroom and online courses in Quechua, the most spoken native language in the American continent)

Director: Dara Goldman
Associate Director and Academic Programs Coordinator: Angelina Cotler
201 International Studies Building
910 South Fifth Street
Champaign, IL 61820
E-mail: clacs@illinois.edu

Major: Latin American Studies
Degrees Offered: M.A.

Graduate Minor: Latin American and Caribbean Studies

Graduate Program
The Center for Latin American and Caribbean Studies administers a program of language and area courses leading to an interdisciplinary Master of Arts degree. The master's program facilitates studies in the languages, cultures, and affairs of the region for three constituencies of students: those seeking to match area expertise with professional training; those proceeding to disciplinary-based doctoral work; and those for whom the degree would stand on its own. The center also administers graduate specializations in Latin American and Caribbean Studies with various departments.

Language Instruction
The Center offers 3 levels of Quechua, the most spoken language in the American continent, with approximately 13 million of speakers in 6 countries. The Center also offers Quechua online courses and free access to the publication Correo de Linguistica Andina and free exercises on Quechua. Visit www.clacs.illinois.edu/quechua/.

Other languages in the University that fulfill the M.A. requirements are Spanish and Portuguese, both offered at the School Literatures, Cultures, and Linguistics.

Faculty Research Interests
More than 100 faculty throughout the University are currently affiliated with the Center. The Center's faculty devote all or a portion of their teaching and research to Latin American subjects, from agriculture to politics, culture and linguistics. Their expertise spans every important discipline and sub-region of Latin America and the Caribbean, with particular strength in the Andean countries, the Caribbean, lowland South America, Mexico, and Brazil.

For a complete list of our affiliated faculty and their research and teaching interests check our people page at www.clacs.illinois.edu/people/.

Facilities and Resources
Latin American Library Collection (LALC)
The Center assist the Latin American Collection (http://www.library.illinois.edu/lat) at the University Library in purchasing teaching and research materials to develop a strong collection that supports teaching and research in those programs sponsored and coordinated by the Center as well as interdisciplinary courses with Latin American subject matter offered by other departments.

The LALC collection ranks among the six largest in the country and is the largest collection in the Midwest region in purchasing teaching and research materials to develop a strong collection that supports teaching and research in those programs sponsored and coordinated by the Center as well as interdisciplinary courses with Latin American subject matter offered by other departments. It is located in the third floor of the main UIUC library in room 324 and while the Library itself does not house a circulating collection, our knowledgeable staff is available to help locate relevant materials, answer reference questions, and assist you in developing effective searching strategies.

The Latin American and Caribbean Library collection includes:

- More than 400,000 monograph titles;
- Newspapers and magazines from over 20 Latin American and Caribbean countries;
- A strong collection of journals in the humanities and social sciences, as well as publications of professional associations, government agencies, central banks, and non-governmental organizations;
- Access to HAPI Online (http://www.library.uiuc.edu/proxy/go.asp?url=http://hapi.gseis.ucla.edu) (Hispanic American Periodicals Index), the Handbook of Latin American Studies (http://lcweb2.loc.gov/hlas), and other online databases;
• An extensive collection of videos available at the Media Center in the Undergraduate Library;
• over 32,000 maps of Latin America (housed in the Map and Geography Library);
• comprehensive holdings of Brazilian and Andean materials;
• Extensive holdings by and about Gabriel Garcia Marquez;
• Publications from the Archivo General de la Nacion de Mexico; and
• A comprehensive Latin American music collection.

List-serv
The Center administers a listserv with more than 500 subscribers. Weekly mass messages "CALCS this Week" contain information on activities in campus related to Latin America and the Caribbean region (conferences, workshops, movies), new courses and job positions as well as future conferences in other Universities. To subscribe contact: Angelina Cotler (cotler@illinois.edu).

CLACS Brownbags
Every Thursday at Noon in Room 101 International Studies Building (910 S. Fifth Street in Champaign) CLACS presents a lecture offered by a faculty, graduate student or outside faculty on topics relevant to the region. These are open and free brownbag lectures. For complete list of presentations during the semester visit our website on the events section.

Opportunities and Events
The Center keeps update a complete list of jobs, grants, conferences, and fellowships in the U.S. and abroad for graduate students and faculty. Check it at www.clacs.illinois.edu/news/opportunities/.

Outreach Program
One of the goals of our mission is to increase knowledge and awareness of Latin America and the Caribbean in the educational community and the general public by promoting language and area studies in their broadest sense. Outreach at CLACS is a service-oriented program funded through a Title VI Federal Area Studies grant. It is designed to increase public knowledge about Latin America and the Caribbean and Latin American and Caribbean peoples and cultures. All our services are free!

Services include
• Speakers Bureau (http://www.clacs.illinois.edu/outreach/speakers/default.aspx) composed by graduate students and faculty for presentations in schools on Latin American topics.
• Outreach Library (http://www.clacs.illinois.edu/outreach/library/default.aspx) for k-14 teachers and instructors that includes books and DVDs.
• Collaborates with the Illinois International Review (http://www.ilint.uiuc.edu), the University of Illinois' new international publication; produces CLACS this Week (cotler@uiuc.edu), a weekly Calendar of Events; and an annual newsletter on Quechua instruction, Correo de Linguistica Andina (http://www.clacs.uiuc.edu/quechua/correo).
• Publishes several curriculum development workbooks (http://www.clacs.illinois.edu/outreach/publications/default.aspx) including: Columbus: Beyond the Myth, A Teacher's Workbook on Tropical Rain Forests, and Historia Oral: The Latina/o Experience in the United States.
• Organizes the Latin American Brownbag Colloquium (http://illinois.edu/calendar/Calendar?calId=623), a weekly series of noon seminars in which faculty, students, and visiting scholars present current research and speak on topics of special interest. Additionally, the Center sponsors many cultural events, such as Latin American music and dance ensembles, and art exhibitions.
• Maintains links to Web based curriculum-related materials (http://www.clacs.illinois.edu/outreach/teachingresources/default.aspx) on its outreach Web pages as a means of facilitating access to curriculum resources and research materials on Latin America and the Caribbean.

For more information visit http://www.clacs.illinois.edu/outreach/default.aspx.

Links
Links to local museums, units and clubs that offer Latin American and Caribbean services as well as external links to institutions abroad and in the U.S. www.clacs.illinois.edu/resources/.

Financial Aid
The Center is a recipient of Federal Government Title VI Foreign Language and Area Studies (FLAS) Fellowships for Graduate Studies in any discipline that includes a specialization in Latin American Studies and an intensive program of language instruction. Academic year language courses and summer fellowships for intensive language courses abroad or in the United States are available. Information on how to apply, requirements and datelines are posted in www.clacs.illinois.edu/academics/undergrad/default.aspx.

The Center offers Tinker Summer Fellowship Research Grants for graduate students in any department wishing to do research during the summer in Latin America, the Caribbean and the Iberian Peninsula. Both these programs depend on outside funding and thus cannot be guaranteed in any given year. Information on how to apply, requirements and datelines are posted in www.clacs.illinois.edu/academics/undergrad/default.aspx.
The Center holds an annual Graduate Research Paper Prize in Latin American and Caribbean Studies. The Center awards one prize of $500 for a research paper completed by a graduate student from any college at U of I. For information on criteria, requirements, and datelines contact the department.

**Master of Arts in Latin American Studies**

Specializations in Latin American and Caribbean Studies are administered by the director of the Center for Latin American and Caribbean Studies.

Candidates for the master’s degree who elect a specialization in Latin American and Caribbean Studies must complete 8 graduate hours from the courses prescribed by the center. Doctoral candidates who elect a specialization in this area must complete 16 graduate hours for one specialization or 8 graduate hours for a split specialization. Courses must be taken in at least two departments; a list of courses fulfilling the specialization is available from the center. A specialization in agricultural economics and foreign areas studies (in this case, Latin American and Caribbean Studies) is also available. A high level of proficiency in one or more languages of the region (Spanish, Portuguese, and Amerindian Indian languages) is required. For course information, requirements, and methods used to establish the level of proficiency, contact the center’s academic programs coordinator.

Students in technical and professional colleges and schools of the University of Illinois at Urbana-Champaign who seek knowledge of the Latin American and Caribbean region and languages are invited to consult with the director of the center or with their adviser in order to develop programs suited to their individual needs. Such a program may often be adopted as a specialization under existing regulations if the student so desires. These courses are of particular value to students who intend to undertake technical or professional work in the Latin American and Caribbean area for government, private business, publishing, or religious organizations.

Core interdisciplinary seminar (LAST 550 or different if indicated) 4
Graduate hours in 400-500 level courses in theory or research methods appropriate to the student's objectives and primary discipline 4-8
Area Courses that focus on Latin America or the Caribbean, of which at least 8 graduate hours must be taken in one (primary) discipline 20-24
Language Requirement: Demonstration that a communicative competence in Spanish, Portuguese, or other language indigenous to the area (excluding English) equivalent to six semesters’ (undergraduate) work has been achieved.
LAST 599 Thesis Research (min/max applied toward degree) 8
Total Hours 40

**Other Requirements**

Other requirements may overlap
A thesis is required.

Minimum 500-level Hours Required Overall: 12
Minimum GPA: 3.25

1 For additional details and requirements refer to the department's graduate program (http://www.clacs.illinois.edu/academics/graduate.aspx) and the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).

**Graduate Minor in Latin American and Caribbean Studies**

The interdisciplinary graduate minor in Latin American and Caribbean Studies promotes training for Master’s and Doctoral students in other disciplines interested in complementing their degree program with an interdisciplinary perspective on Latin America and the Caribbean region. There are no prerequisites for the graduate minor. The Center will provide an online admission form to be submitted to the student’s advisor for review. The form will require the student's graduate advisor and program director approval. Applicants must be in good standing in a graduate program at the University of Illinois and should demonstrate an interest in Latin American Studies.

Note: Students within the major cannot minor in the same program.

Area Courses: 400-/500-level courses from two different departments from a list approved by CLACS every semester and posted in our website and announced through our listserv 8
Language coursework taken on this campus in either Portuguese, Spanish or Native American Language or Haitian Creole, OR the language course could also be selected from the area courses offered in these languages, i.e. literature class taught in any of these languages. 4
The chosen language course must be at the 400-or 500 level to count towards the required 12 hours for Graduate Minor.
Total Hours 12

**Other Requirements**

If the student's master's thesis or doctoral dissertation deals with Latin America and the Caribbean, students are strongly recommended that a faculty member from the Center be a formal member of their committee.
In addition to the minor requirements, students must also complete the requirements of their major degree. Hours counted toward completion of a minor may not also be applied toward any other transcripted credential.

For additional details and requirements refer to the department's graduate program information online (http://www.clacs.illinois.edu/academics/graduate.aspx) and the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).
Law

www.law.illinois.edu

Interim Dean of the College: John Colombo
Assistant Dean and Director of Graduate and International Legal Studies: Charlotte Ku
Correspondence and Admission Information: Christine Renshaw, Office of Graduate and International Legal Studies
244 Law Building
504 East Pennsylvania Avenue
Champaign, IL 61820
(217) 333-6066
E-mail: law-lim@illinois.edu

Major: Law
Degrees offered: LL.M., J.S.D., J.D., M.S.L.

Joint Degree Program: the J.D. in Law can be earned jointly with the following
Graduate Degrees Offered:
Accountancy, M.A.S. (p. 501)
Business Administration, M.B.A. (p. 581)
Chemistry, M.S. (p. 597)
Computer Science, M.C.S. (p. 627)
Human Resources and Industrial Relations, M.H.R.I.R. (p. 766)
Journalism, M.S. (p. 759)
Natural Resources and Environmental Sciences, M.S. (p. 838)
Philosophy, Ph.D. (p. 853)
Political Science, Ph.D. (p. 865)
Urban Planning, M.U.P. (p. 939)

Medical Scholars Program: Juris Doctor (J.D.) in Law and Doctor of Medicine (M.D.) through the Medical Scholars Program (https://www.med.illinois.edu/medphd)

Graduate Degree Programs

The LL.M. and J.S.D. programs of graduate study in law are designed for foreign law graduates who wish to pursue advanced study and conduct independent research under the direction of the College of Law faculty. Two advanced degrees are conferred by the College of Law: the Master of Laws (LL.M.) degree and the Doctor of Science of Law (J.S.D.). Overall coordination of the graduate program is the responsibility of the Office of Graduate and International Legal Studies, and individual inquiries should be addressed to this office. The M.S.L. is a one-year, nonprofessional, terminal degree program designed for those who have had no legal training and who do not desire a professional law degree.

Admission

The Graduate College admission requirements (http://www.grad.illinois.edu/admissions/apply) and English language proficiency requirements (http://www.grad.illinois.edu/admissions/instructions/04c) apply. In addition, the Test of English as a Foreign Language (TOEFL) requirement is 79 internet-based. Students are not required to take the general Graduate Record Examination (GRE). Students are admitted on an individual basis according to a review of their prior accomplishments with an emphasis on academic achievement. Admission is made for the fall semester only. Applications are not being accepted for the M.S.L. program at this time.

Financial Aid

Applicants to the College of Law graduate programs are welcome to apply for scholarship assistance. Scholarships typically are awarded to applicants with a combination of excellent academic and professional credentials and proven financial need. Awards usually provide part of tuition and do not cover living expenses. There are always more qualified applicants than there are funds available. Therefore, applicants are strongly encouraged to explore alternative sources of funding.

- Master of Laws (p. 776)
- Master of Studies in Law (p. 777)

Doctor of the Science of Law

The Doctor of the Science of Law (J.S.D.) degree provides students who primarily intend to pursue an academic career an opportunity for extended study, research, and scholarly writing. Those admitted to the program must have demonstrated analytic and research ability, possess outstanding academic credentials, and have completed the LL.M. or other law degree from the University of Illinois or other accredited American law school. In
exceptional cases, consideration will be given to applicants who have completed programs of study in common law countries. All candidates must provide evidence of excellent reading and writing skills in English. The J.S.D. program normally takes a minimum of three years, including two semesters of course work. J.S.D. candidates are assigned a primary faculty advisor with expertise in the student's research area and an additional three faculty members, who form the student's doctoral committee. Each student must pass an oral examination demonstrating general proficiency in the student's field of study and a preliminary examination on the research proposal. The student's faculty committee then will assess the student's thesis research and writing progress, make recommendations, and conduct an oral examination on the final draft of the dissertation. The final dissertation will then be completed and deposited with the Graduate College.

Hours of residence credit 64
LAW 599 Thesis Research (min/max applied toward degree (16 min) 16
Total Hours 96

Other Requirements

Other requirements may overlap
A J.D. or LL.M. is required for admission
Qualifying Exam Required Yes
Preliminary Exam Required Yes
Final Exam/Dissertation Defense Required Yes
Dissertation Deposit Required Yes
Minimum GPA: 2.75

For additional details and requirements refer to the College of Law's graduate degree requirements (http://www.law.illinois.edu/admissions/llm-program-overview) and the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).

The professional J.D. in Law can be earned jointly with the following graduate degrees:
Business Administration, M.B.A. (p. 581)
Chemistry, M.S. (p. 597)
Computer Science, M.C.S. (p. 627)
Human Resources and Industrial Relations, M.H.R.I.R. (p. 766)
Journalism, M.S. (p. 759)
Natural Resources and Environmental Sciences, M.S. (p. 838)
Philosophy, Ph.D. (p. 854)
Political Science, M.A. with Civic Leadership Concentration (p. 867)
Political Science, Ph.D. (p. 867)
Urban Planning, M.U.P. (p. 942)

Medical Scholars Program: Juris Doctor (J.D.) in Law and Doctor of Medicine (M.D.) through the Medical Scholars Program (https://www.med.illinois.edu/mdphd)

Master of Laws

The Master of Laws (LL.M.) degree is designed to introduce foreign law students to the U.S. legal system. Applicants are eligible for admission if they have met the requirements to practice law in their home country.

The LL.M. degree requires the completion of at least 32 graduate hours of credit and is normally completed in one academic year. All candidates are required to pass Introduction to U.S. Law (Law 501), a four hour graduate course and LL.M. Legal Research and Writing (LAW 500) a two hour graduate course. The remaining graduate hours are selected from any College of Law course.

LAW 500 LLM Legal Writing and Research 2
LAW 501 4
Total Hours 32

Other Requirements

Other requirements may overlap
Minimum 500-level (or higher) Hours Required Overall: 12
One academic year in residence
Minimum GPA: 2.75
Master of Studies in Law

A bachelor’s degree is required for admission, and admission will be granted to a limited number of students on a competitive application basis.

The elective hours can be any graduate-level Law course offered by the College of Law, pursuant to a plan of study formulated in consultation with the college’s academic advisors. Law credits earned in the M.S.L. program will not count toward the minimum credit hours required for the J.D. degree.

Degrees Offered: M.S., C.A.S., Ph.D.
Graduate Concentrations: Digital Libraries (C.A.S. only), Writing Studies (p. 954) (Ph.D. only)

Major: Bioinformatics
Degrees Offered: M.S.
Graduate Concentration: Library and Information Science

Online Programs: Library and Information Science
Degrees Offered: M.S., C.A.S.
Graduate Concentrations: Digital Libraries (C.A.S. only)

Joint Degree Program: Library and Information Science and African Studies
Degrees offered: M.S. and M.A.

Graduate Degree Programs

The Graduate School of Library and Information Science (GSLIS) offers programs of study leading to the Master of Science (M.S.), the Certificate of Advanced Study (CAS), and the Doctor of Philosophy degrees. Two Master of Science (M.S.) degree scheduling options are available. The M.S. in library and information science (L.I.S.) prepares students for professional careers in all types of information organizations, including libraries. The GSLIS concentration of the campus-wide M.S. in bioinformatics program emphasizes multidisciplinary skills that are required for a career developing and managing information systems for the biological community. The C.A.S. program provides the opportunity

1. to study an aspect of library and information science in greater depth than is possible in the M.S. program,
2. to refresh and upgrade one's professional training several years after completing the M.S. program, or
3. to redirect one's career into a different area of library and information science.

K-12 Library Information Specialist Licensure is available in conjunction with both the M.S. in L.I.S. and C.A.S. The Ph.D. is a research degree program.

Admission

Applicants are admitted in the fall, spring, and summer semesters. The general admission requirements of the Graduate College apply. Consideration is also given to language study and computer skills, relevant work experience, letters of reference, and evidence of leadership. International students must score at least 620 on the paper-based Test of English as a Foreign Language (TOEFL) (260 on the computer-based test; 104 on the iBT version); or 7 on each section of the IELTS. The M.S. in bioinformatics requires a strong background in information science including undergraduate-level computing and mathematics. The C.A.S. requires a master's degree in library and information science and a grade point average of at least 3.0 (A = 4.0) in the master's program. K-12 admission requires admissions into the M.S. program and a passing score on the Illinois Test of Academic Proficiency.

K-12 Library Information Specialist Licensure

The K-12 Certification option allows students to meet the requirements for the M.S. or C.A.S in L.I.S. while also pursuing the courses and training needed for state teacher licensure. Courses in library and information science as well as education, practicum, and student teaching are required for licensure. The requirements for the Library Information Specialist licensure were approved by the Illinois State Board of Education (ISBE) in 2001. K-12 licensure may be pursued on-campus or via the LEEP online scheduling option.

Graduate Teaching Experience

Although teaching is not a general Graduate College requirement, experience in teaching is considered an important part of the graduate experience in the Ph.D. program for those interested in faculty careers.

Facilities and Resources

Among the major areas of faculty research are:
• community informatics
• data curation
• digital libraries
• information retrieval
• information organization
• information history, economics, and policy
• librarianship and literature for youth
• special collections

The School’s Center for Informatics Research in Science and Scholarship (CIRSS) conducts research on information problems that impact scientific and scholarly inquiry. The Center for Children’s Books (CCB) provides a review and research collection of the newest literature for children and young adults. The Center for Digital Inclusion fosters inclusive and sustainable societies through research, teaching, and public engagement about information and communication technologies (ICT) and their impacts on communities, organizations, and governments. The Communications Office publishes the refereed journal, Library Trends, as well as The Bulletin of the Center for Children’s books. The staff of each of these units is available to students and faculty for consultation and guidance. A computer network with Internet connectivity is integral to teaching and learning activities. The University Library provides a vast reservoir of resources for all types of study and research in library and information science.

The School maintains an ongoing commitment to continuing education through conferences, institutes, workshops, and course offerings.

Financial Aid

Financial aid may be available from the School, the University Library, and elsewhere in the University in the form of graduate assistantships, teaching assistantships, research assistantships, and hourly paid work. Area libraries may provide preprofessional or hourly positions. Also, the School offers a limited number of fellowships for which doctoral students tend to be favored over C.A.S. and master’s degree students. Students in the joint program that do not hold a FLAS fellowship are eligible for, but not guaranteed, fellowship or assistantship support in the semesters in which they are enrolled in GSLIS. Any assistantship awarded to these students provides a waiver of the base in-state tuition and service fee as well as a stipend. Non-Illinois residents must pay the difference between in- and out-of-state tuition.

• Master of Science in Library and Information Science (p. 783)
• Master of Science in Bioinformatics, Library and Information Science Concentration (p. 783)

Doctor of Philosophy in Library and Information Science

The Ph.D. program consists of the following components:

1. a history and foundation of LIS seminar (4 graduate hours);
2. research methods (8 or more graduate hours);
3. electives (36 graduate hours);
4. field exam; and
5. thesis (32 or more graduate hours).

Thus, a minimum of 48 graduate hours of coursework plus 32 graduate hours of thesis credit are required.

Entering with approved M.S./M.A. degree

**M.S. Library and Information Science and M.S. African Studies**

This joint master’s degree includes a program of language and area studies courses leading to an interdisciplinary Master of Arts degree in African Studies as well as a program of study leading to the Master of Science in Library and Information Science. The joint degree matches area expertise with professional education, and prepares students for professional careers in all types of information organizations, including libraries. Students should enroll in LIS first and then contact the African Studies program for their application instructions.

Certificate of Advanced Study in Library and Information Science

The University of Illinois at Urbana-Champaign's Graduate School of Library and Information Science complies with the U.S. Department of Education's Gainful Employment requirements by disclosing information to applicants regarding our Certificate of Advanced Study program. Required information can be found here (http://illinois.dev6.leepfrog.com/2014/fall/programs/graduate/CAS_LIS/Gedt.html).

Students and faculty advisers work closely together in selecting appropriate courses of study to meet individual needs. Areas of concentration include digital libraries, management, and youth services. The C.A.S. may be completed on-campus or through the LEEP online scheduling option.

Students admitted to the C.A.S. program may optionally pursue a Concentration in Digital Libraries.

Master of Science in Bioinformatics, Library and Information Science
Concentration

A typical student will thus take 6 required courses (24 hours) 1 Biology, 1 Computer Science, 1 Fundamental Bioinformatics, and 3 GSLIS. The student must then choose 3 courses (12 hours) of electives to complete the degree. It is strongly encouraged that up to 2 courses of these electives (8 hours) are thesis. Our expectation is that each student will arrange a custom program of study, suitable for the information management of their particular biological informatics application. Currently, this program requires students to be in residence in Champaign-Urbana.

Thesis Option

One course in three of the following areas from the department approved list: Information Organization and Knowledge Representation; Information Resources, Uses and Users; Information Systems; and Disciplinary Focus

Master of Science in Library and Information Science

The M.S. in L.I.S. is accredited by the American Library Association (ALA). Two scheduling options are available to students pursuing the M.S. degree. The on-campus option serves students who are in residence at Urbana-Champaign, as well as part-time, commuting students. The LEEP scheduling option serves students who are in residence at Urbana-Champaign, as well as part-time, commuting students.

Information listed in this catalog is current as of 11/2014
option is an online education option that combines brief periods of on-campus instruction with instruction using the Internet and other information technologies for delivery. The LEEP option only begins in the summer or spring semester, starting with a seven-day campus orientation. During this seven-day stay, students take one of the required core courses, LIS 502: Libraries, Information, and Society. Students work closely with their adviser to plan an appropriate course of study. A thesis is not required but is available as an option. Students prepare for careers in all types of information organizations. Examples of the professional positions graduates hold include: Internet trainer, webmaster, and knowledge manager, as well as work in reference, automated systems, cataloging, youth services, school media, and other positions in public, academic, school, and special libraries.

Major: Linguistics
Degrees Offered: M.A., Ph.D.
Graduate Concentration: Romance Linguistics (p. 885) (Ph.D.), Second Language Acquisition and Teacher Education (p. 891) (Ph.D. only)

Major: Teaching of English as a Second Language
Degrees Offered: M.A.

Dual Degree Program: Doctor of Philosophy (Ph.D.) in Linguistics and Doctor of Medicine (M.D.) through the Medical Scholars Program (http://www.med.uiuc.edu/mdphd)

Graduate Degree Programs

The Department of Linguistics offers graduate programs leading to the Master of Arts in Linguistics, Master of Arts in Teaching English as a Second Language, and Doctor of Philosophy in Linguistics. More detailed information on departmental programs, offerings, admission, degree requirements, and financial aid, may be found at: www.linguistics.illinois.edu.

The Master of Arts in the Teaching of English as a Second Language (MATESL) formerly offered by the Division of English as an International Language is now offered through the Department of Linguistics.

Admission

Applicants to the M.A. in Linguistics, MATESL, and Ph.D. programs in Linguistics must have completed a bachelor’s degree.

For the M.A. and Ph.D. programs in Linguistics, undergraduate preparation should include the study of at least one foreign language; courses equivalent to LING 400 on this campus; and a broad background in the humanities, social sciences, or mathematics.

For the MATESL program, an undergraduate major in linguistics, English, a foreign language, or education is generally recommended, though other majors are also acceptable. Applicants must present a grade point average of at least 3.0 (A = 4.0) for the last 60 hours of undergraduate work. Two years of coursework in a foreign language or the equivalent are also required.

Student intending to pursue a Ph.D. in Linguistics should apply to the M.A. program in Linguistics unless they expect to have already completed a master’s degree in Linguistics, Teaching English in a Second Language, or a related field by the time of entry into the program. Students who will have completed a master’s degree in one of these fields may be considered for direct admission to the Ph.D. program. Applicants for direct admission must have a GPA of 3.5 or better in the required courses for the M.A. in Linguistics or MATESL at the University of Illinois, or comparable evidence of achievement in a master’s program at another university. Recommended preparation includes courses comparable to LING 501, 502, either 425 or 450, and at least one of 507, 509, 551. Students admitted without such preparation are required to take these courses immediately on entry into the program; the courses will not count toward the 64 hours required for the PhD.

Applicants to all Linguistics graduate programs should apply online (www.grad.illinois.edu/admissions/apply/) and submit a statement of purpose, three letters of recommendation and a writing sample of 10-20 pages in length. Original transcripts (with English translations if applicable) showing all undergraduate and graduate work completed should be sent to:

SLCL Graduate Student Services
3070 Foreign Languages Bldg.
707 S. Mathews Ave.
Urbana, IL 61801
Graduate Record Examination (GRE) scores are required. The applicant should ask the ETS to submit scores to institution 1836. Applicants whose native language is not English are required to take the Test of English as a Foreign Language (TOEFL) and must score at least 88 (100 preferred) on the internet-based test (iBT); they must also pass the speaking sub-section of the iBT with a minimum score of 24 (see www.grad.illinois.edu/admissions/instructions/04c). Applications are accepted for fall admission only. Application questions may be directed to SLCL Graduate Student Services at slcgradservices@illinois.edu.

Medical Scholars Program

The Medical Scholars Program permits highly qualified students to integrate the study of medicine with study for a graduate degree in a second discipline, including the Department of Linguistics. Students may apply to the Medical Scholars Program prior to beginning graduate school or while in the graduate program. Applicants to the Medical Scholars Program must meet the admissions standards for and be accepted into both the [name of department] and the College of Medicine. Students in the combined program must meet the specific requirements for both the medical and graduate degrees. On average, students take eight years to complete both degrees. Further information on this program is available by contacting the Medical Scholars Program, 125 Medical Sciences Building, (217) 333-8146 or at www.med.illinois.edu/msp.

Financial Aid

The Linguistics department aims to provide financial aid for all graduate students in the M.A. and Ph.D. programs in Linguistics for up to five years, in the form of fellowships, teaching assistantships, research assistantships, or departmental assistantships. To hold a teaching assistantship non-native English speakers must first pass a test of their oral English ability (see www.grad.illinois.edu/admissions/taengprof.htm). Some students receive aid through other units in the University. New applicants receive automatic consideration for financial aid within the department, including teaching assistantships for the non-Western languages taught in its programs. For details and applications, write to the above address.

For students in the MATESL program, financial assistance is offered to as many qualified applicants as possible, but cannot be awarded to all. A record of extensive experience in teaching English as a second language enhances a candidate’s chance of receiving financial assistance during one’s first semester. A limited number of University fellowships are available for exceptionally qualified candidates. Teaching assistants (www.grad.illinois.edu/admissions/instructions/04c) teach students in the Division’s ESL program and in the Intensive English Institute.

- Master of Arts in Linguistics (p. 787)
- Master of Arts in the Teaching of English as a Second Language (p. 788)

Admission to candidacy for the Ph.D. requires a grade point average of 3.5 or better in the required M.A. courses (not counting the electives) a minimum grade point average of 2.75 over all graduate work in linguistics, and distinction in passing the qualifying examination. In deciding whether students will be admitted to the Ph.D. program, the Student Examination and Evaluation Committee considers their performance in meeting these requirements, as well as their general potential for successfully conducting advanced linguistic research.

Students are encouraged to attend at least one summer session of the Linguistic Institute of the Linguistic Society of America. Up to 8 graduate hours of credit granted under this program may be transferred, with Graduate College approval. Candidates are required to take the preliminary examinations (written and oral) after completion of 32 graduate hours beyond the master’s level and to present a research paper at a meeting of the Linguistics Seminar.

Doctor of Philosophy in Linguistics

LING 504 Practicum (and at least 2 hours of LING 590) 4
Courses as required in the area of specialization, or a combination of such courses across specializations upon the approval of the advisor varies
First-year exam: Students must submit a substantial research paper, and present and defend it in an oral examination
Research/Project/Independent Study Hours: 12
Language Requirement: Students must demonstrate knowledge of the structure of a language that is neither their native tongue nor the same language that satisfied the foreign language requirement for the M.A. degree
LING 599 Thesis Research (min/max applied toward degree) 32
Total Hours 64

Other Requirements 1

Other requirements may overlap
Master's Degree Required for Admission to PhD? Yes
Qualifying Exam Required: No
Preliminary Exam Required: Yes
Final Exam/Dissertation Defense Required: Yes
Master of Arts in Linguistics

The aim of the master’s program is to instruct students in the major areas of linguistic theory and the methods of linguistic analysis. Candidates for this degree must earn at least 40 graduate hours with a minimum grade point average of 3.0 (A = 4.0) and satisfy other department and Graduate College requirements.

**Master of Arts in the Teaching of English as a Second Language**

The MATESL program offers two separate curricula or tracks. One track is designed for candidates whose principal interests are in language pedagogy and related research. The other track encourages candidates to concentrate more heavily on applied research in various aspects of English studies. A detailed description of the two tracks is available at www.linguistics.illinois.edu/students/grad/matesl/documents/2009-curriculum_and_cohort_system.pdf. Usually candidates can meet all degree requirements in two years.

**Thesis Option**

Thesis option is required for students in the research track, optional for students in the pedagogical track.

Joint Degree Program: Master of Science or Doctor of Philosophy in Materials Science and Engineering and the Master of Business Administration (p. 581)
Degrees Offered: M.S. and M.B.A. or Ph.D. and M.B.A.

Medical Scholars Program: Doctor of Philosophy (Ph.D.) in Materials Science and Engineering and Doctor of Medicine (M.D.) through the Medical Scholars Program (https://www.med.illinois.edu/mdphd)

Graduate Degree Programs

The Department of Materials Science and Engineering (MatSE) offers graduate study leading to master's and doctoral degrees. The department is consistently ranked in the top three programs in the nation (undergraduate and graduate) by U.S. News and World Report. It offers opportunities to specialize in ceramics, electronic materials, metals, polymers, biomaterials, and/or computational materials science, with strong research programs in all of the areas. The M.Eng degree in Materials Engineering is designed for students having obtained a B.S. degree in MatSE or a related field to enhance their experience in the engineering aspects of materials and broaden their knowledge of various types of materials beyond that possible in the standard four year curriculum. The department offers two combined degree programs, a B.S./M.S. and a B.S./M.Eng that permits current undergraduate students to broaden their materials knowledge base. The B.S./M.Eng., in addition, gives the students the opportunity to improve their communication skills, obtain a foundation in business, technology management, and/or entrepreneurship, and gain practical engineering experience.

Opportunity also exists for specializing in:

1. computational science and engineering
2. energy and sustainability engineering within the department's graduate programs via the Computational Science and Engineering (CSE) Option (http://cse.illinois.edu/students/graduate-program) and the Energy and Sustainability Engineering (EaSE) Option (http://ease.illinois.edu).

The Medical Scholars Program (https://www.med.illinois.edu/mdphd) permits highly qualified students to integrate the study of medicine with study for a graduate degree in a second discipline, including Materials Science and Engineering.

Admission

Students with bachelor's or master's degrees in the natural sciences or engineering will be considered for admission if they have a grade point average of at least 3.00 (A = 4.00) for the last two years of undergraduate study. The general test of the Graduate Record Examination (GRE) (http://www.ets.org) is required. Admission is possible for the spring semester, but most admissions are for the fall semester. Full details of admission requirements are on the department's graduate admissions Web site (http://mse.illinois.edu/academics/grad/admission.html).

All applicants whose native language is not English must submit a minimum TOEFL (http://www.toefl.org) score of 104 (iBT), 257 (CBT), or 613 (PBT); or minimum International English Language Testing System (IELTS) (http://www.ielts.org) academic exam scores of 7.5 overall and 6.0 in all subsections. Applicants may be exempt from the TOEFL if certain criteria (http://grad.illinois.edu/admissions/instructions/04c) are met. Full admission status (http://grad.illinois.edu/admissions/instructions/04c) is granted for those taking the TOEFL or IELTS since the scores required for admission to MatSE are above the minimum scores demonstrating an acceptable level of English language proficiency.

For the M.Eng. degree program students must have had a B.S. degree in MatSE or a related field (e.g., B.S. degrees in Metallurgy, Polymers or Ceramics, or with concentrations in Materials Chemistry, Condensed Matter Physics, etc.). Students in the program are not expected to continue in and do not have automatic admission to the Ph.D. program in MatSE. The M.Eng. degree is a professional degree.
Applicants to the joint M.B.A. degree program must meet the admissions standards for both programs and be accepted by both programs.

Students may apply to the Medical Scholars Program prior to beginning graduate school or while in the graduate program. Applicants to the Medical Scholars Program must meet the admissions standards for both programs and be accepted into both MatSE and the College of Medicine. An application to the Medical Scholars Program will also serve as the application to the MatSE graduate program. Further information on this program is available by contacting the Medical Scholars Program (125 Medical Sciences Building, (217)-333-8146, mspo@illinois.edu).

**Medical Scholars Program**

Students in the Medical Scholars program must meet the specific requirements for both the medical (https://www.med.illinois.edu/mdphd) and graduate degrees. On average, students take eight years to complete both degrees. The first year of the combined program is typically spent meeting requirements of the Materials Science and Engineering graduate degree.

**Faculty Research Interests**

The backgrounds of faculty members vary widely within the broad areas of ceramics, electronic materials, metals, polymers, biomaterials, and computational materials science. In addition, research collaborations with other faculty outside the department are frequent. For a detailed list of faculty research interests and publications, view the MatSE department's faculty biographies (http://www.matse.illinois.edu/faculty.html).

**Facilities and Resources**

The MatSE department has an outstanding array of facilities available for materials research. These facilities, in addition to laboratories in the department's buildings, include, among others, the Materials Research Laboratory, Center for Microanalysis of Materials, Beckman Institute for Advanced Science and Technology, and Micro and Nanotechnology Laboratory. The National Center for Supercomputing Applications and the MRL Center for Computation are readily available. Information about these facilities may be found at the MatSE department's facilities information Web site (http://mse.illinois.edu/home/facilities.html).

**Financial Aid**

Financial aid is available in the form of research assistantships, teaching assistantships, and partial fellowships for students in the M.S. and Ph.D. programs. Students in the M.Eng. program are eligible for teaching assistantships, and partial fellowships in MatSE (only). All applicants, regardless of U.S. citizenship, whose native language is not English and who wish to be considered for teaching assistantships must demonstrate spoken English language proficiency (http://grad.illinois.edu/admissions/taengprof.htm) by achieving a minimum score of 50 on the Test of Spoken English (TSE), 24 on the speaking subsection of the TOEFL IBT, or 8 on the speaking subsection of the IELTS. For students who are unable to take the TSE, IBT, or IELTS, a minimum score of 4CP is required on the EPI test (http://cte.illinois.edu/testing/oral_eng/epi_overview.html), offered on campus. All new teaching assistants are required to participate in the Graduate Academy for College Teaching (http://cte.illinois.edu/programs/ta_train.html) conducted prior to the start of the semester.

MSE course work hours: 10

500-level credit hours applied toward the degree: 10

MSE 595 (0 or 1 hour) must be taken every semester in the first two years of residence. A maximum of 4 hours may be applied toward the degree. MSE 529 or MSE 559 (0 or 1 hours) must be taken every semester. A maximum of 8 hours may be applied toward the degree.

These students may earn a Master of Science degree during the Ph.D. program.

Ph.D. exam and dissertation requirements:

Qualifying exam:

Preliminary exam

Final exam or dissertation defense

Dissertation deposit

Minimum GPA: 3.0

For additional details and requirements, please refer to the department’s Graduate Degree Requirements Handbook (http://mse.illinois.edu/academics/grad/handbook.html) and the Graduate College Handbook (http://grad.illinois.edu/gradhandbook).

Qualifying Exam Information (http://www.matse.illinois.edu/qualexams/qualexams.html)

Joint M.B.A. Program

Students in this unit may choose to earn their major degree and simultaneously complete an M.B.A., with 12 fewer required hours than when pursuing both degrees independently. Students must be enrolled in the M.B.A. program for three terms and complete all the requirements of their primary degree. Interested students should see the joint program requirements (p. 584) and contact the M.B.A. program and their major department office for more information.

Two MSE area specialty courses in the student’s chosen area of specialization.

Information listed in this catalog is current as of 11/2014
MSE area specialty courses in one area outside the student’s chosen area of specialization (subject to Other Requirements and Conditions below) 3-6

Technical elective course - Chosen from list appropriate for the student’s area of specialization 3

Elective courses – At least 10 hours of these elective courses shall be College of Engineering courses in one or more of the areas of business, technology management, and entrepreneurship as listed on an approved list available from the department. There is the possibility of obtaining one of the Technology Entrepreneur Center Certificates. 13-20

Total Hours 36

Other Requirements and Conditions 2

Other Requirements and Conditions may overlap

Minimum hours of MSE course work 11

Minimum of 500-level credit hours overall applied toward the degree. 12

MSE 595 (0 or 1 hour) must be taken every semester in the first two years of residence. A maximum of 2 hours may be applied toward the degree.

A maximum of 2 hours of MSE 529 or MSE 559 in combination may be applied toward the degree:3

Ceramics, Electronic Materials, and Metallurgy area majors take MSE 529 every semester in residence; Polymer and Biomaterials area majors take MSE 559 every semester in residence

One or two MSE area specialty courses in one area outside the student’s chosen area of specialization are required (two if one was not taken as part of the B.S. program)

Minimum GPA: 3.0

1 Students find internship companies and positions with the help of the departmental and College Placement offices. The MSE 585 internship requires approval by the departmental Director of Graduate Studies to insure that it matches the student’s individual career objectives and meets the learning goals of the program. Students taking an internship as part of their undergraduate B.S program should also check with the Director of Graduate Studies; his/her approval is required if the student is already accepted in the combined B.S./M.Eng. Program. Students returning to the university after having had materials engineering employment experience, if it is deemed appropriate, may use that as their internship and base their report on that experience.

2 For additional details and requirements, please refer to the department’s Graduate Degree Requirements Handbook (http://mse.illinois.edu/academics/grad/handbook.html) and the Graduate College Handbook (http://grad.illinois.edu/gradhandbook).

3 Students will be expected to present an oral report on their internship in either MSE 529 or MSE 559, as appropriate, the semester following completion of the internship.

Master of Science in Materials Science and Engineering

Thesis Option

MSE 599 Thesis Research (min-max applied toward the degree) 8

MSE 492 Lab Safety Fundamentals (credit does not apply toward the degree) 0

MSE 595 Materials Colloquium 0-2

Advisor group meetings (MSE 590) and area seminars (MSE 529, MSE 559) (subject to Other Requirements and Conditions below) 0-4

Elective courses – chosen in consultation with advisor (subject to Other Requirements and Conditions below) 18-24

Total Hours 32

Other Requirements and Conditions 1

Other Requirements and Conditions may overlap

Minimum hours of MSE course work 10

Minimum of 500-level credit hours overall applied toward the degree. 14

MSE 595 (0 or 1 hour) must be taken every semester in the first two years of residence. A maximum of 2 hours may be applied toward the degree.

MSE 529 or MSE 559 (0 or 1 hour) must be taken every semester. A maximum of 4 hours may be applied toward the degree.
The completed master's thesis must be approved by the advisor and the department head.

Minimum GPA: 3.0

For additional details and requirements, please refer to the department's Graduate Degree Requirements Handbook (http://mse.illinois.edu/academics/grad/handbook.html) and the Graduate College Handbook (http://grad.illinois.edu/gradhandbook).

Degrees Offered: M.S., Ph.D.

Major: Teaching of Mathematics  
Degrees Offered: M.S.

Medical Scholars Program: Doctor of Philosophy (Ph.D.) in Mathematics and Doctor of Medicine (M.D.) through the Medical Scholars Program (http://www.med.uiuc.edu/mdphd)

**Graduate Degree Programs**

The department offers graduate study leading to the Master of Science in Mathematics, the Doctor of Philosophy in Mathematics, the Master of Science in Applied Mathematics, and the Master of Science in the Teaching of Mathematics. Opportunity also exists for specializing in computational science and engineering within the department's graduate programs via the Computational Science and Engineering (CSE) Option (http://cse.illinois.edu).

**Admission**

In addition to the University requirements for admission to the Graduate College, there are a number of requirements that are specific to the Department of Mathematics.

GRE (Graduate Record Examination) scores are required by the Department of Mathematics, both the general test and the subject test in mathematics, for admission from all applicants to the PhD program who live in the United States or Canada. The tests are not required from other applicants, but students’ chances of admission and of receiving financial aid will be better if they submit these test scores. GRE scores are also required for all fellowship applications.

All students admitted to the PhD program must have full financial support, either from the Department of Mathematics (teaching assistantship or fellowship) or from another source (minimum 5 years).

For students whose native language is not English the University admission requirements include proof of proficiency in English, as measured by the TOEFL (Test of English as a Foreign Language) or IELTS (International English Language Testing System). For more information on these requirements for admission see www.grad.illinois.edu/admissions/taengprof.htm.

In addition, a minimum TOEFL iBT speak score of 22 (or IELTS 7.0) is required to be considered for the Math Ph.D. program at Illinois. A minimum TOEFL iBT score of 20 (IELTS 7.0) is required to be considered for the Math M.S. programs at Illinois. The only exceptions will be for those applicants exempt from the English requirement for admission, (see www.grad.uiuc.edu/admissions/instructions/04c (http://www.grad.uiuc.edu/admissions/instructions/04c)).

In addition, International Teaching Assistants must demonstrate proficiency in spoken English, as measured by the Internet Based TOEFL (iBT), the IELTS, the TSE (Test of Spoken English), or the university-administered EPI (English Proficiency Interview) test. For more information on these requirements for appointment as an International TA see cte.illinois.edu/testing/oral_eng/main.html. Students who do not satisfy these requirements are not eligible to receive appointments as Teaching Assistants in the classroom.

International students who have studied in the United States may be exempt from the English admission requirement, but must still submit the TOEFL or equivalent to qualify as a teaching assistant.

The submission deadline for applications for Fall Semester that include a request for financial aid is January 7. The deadline for supplemental materials (including letters of recommendation and transcripts) is January 7. Only applications which are complete will be reviewed. Applications for admission to
M.S. programs without funding can be considered up to March 1. The deadline for all applications for spring semester is the preceding October 1. The Department of Mathematics reserves the right to close the acceptance of applications at any time.

**Medical Scholars Program**

The Medical Scholars Program permits highly qualified students to integrate the study of medicine with study for a graduate degree in a second discipline, including mathematics. Students may apply to the Medical Scholars Program prior to beginning graduate school or while in the graduate program. Applicants to the Medical Scholars Program must meet the admissions standards for and be accepted into both the doctoral graduate program and the College of Medicine. Students in the dual degree program must meet the specific requirements for both the medical and graduate degrees. On average, students take eight years to complete both degrees. Further information on this program is available by contacting the Medical Scholars Program, 125 Medical Sciences Building, (217) 333-8146 or at www.med.illinois.edu/msp.

**Graduate Teaching Experience**

Although teaching is not a general Graduate College requirement, experience in teaching is considered an important part of the graduate experience in this program.

**Financial Aid**

Financial aid is available in the form of teaching assistantships, research assistantships, and fellowships. The same application is used for decisions on admission, assistantships, and fellowships. The deadline for equal consideration for fellowships and assistantships is January 7, but later applications for assistantships will be considered if positions are available.

The master's degree programs can be completed in one-and-one-half years of full-time study by students entering without deficiencies.

- Master of Science in Applied Mathematics, Actuarial Science Concentration (p. 797)
- Master of Science in Applied Mathematics, Applications to the Sciences option (p. 797)
- Master of Science in Applied Mathematics, Computational Science and Engineering option (p. 798)
- Master of Science in Applied Mathematics, Optimization and Algorithms option (p. 799)
- Master of Science in Mathematics (p. 800)
- Master of Science in Teaching of Mathematics (p. 800)

**Doctor of Philosophy in Mathematics**

Students working toward a Ph.D. degree usually require from four to six years to complete the requirements. Each student must pass the comprehensive examinations (testing the student’s knowledge of basic graduate-level mathematics in algebra, analysis, and other areas) and the preliminary examination (testing the student's ability to begin or continue research in a chosen field). Students must also write and defend a research thesis in their field of mathematics.

Students must demonstrate competence in five core courses. Two of these are required to be MATH 500 (Abstract Algebra) and MATH 540 (Real Analysis). Students must also demonstrate proficiency in undergraduate complex analysis.

Mechanical Science and Engineering

mechse.illinois.edu

Head of the Department: Placid M. Ferreira
Associate Head for Graduate Programs: Harley Johnson
168 Mechanical Engineering Building
1206 West Green Street
Urbana, IL 61801
(217) 244-3416
E-mail: mechse-grad@illinois.edu

Associate Head for Mechanics Programs: Ken Christensen
154 Mechanical Engineering Building
1206 West Green Street
Urbana, IL 61801
(217) 333-4388
E-mail: mechse-mechanics@illinois.edu

Major: Mechanical Engineering
Degrees Offered: M.S., Ph.D.

Major: Theoretical and Applied Mechanics
Degrees Offered: M.S., Ph.D.

Off-Campus Program: Mechanical Engineering
Degree offered: M.S.

Medical Scholar Program: Doctor of Philosophy (Ph.D.) in Mechanical Engineering or Theoretical and Applied Mechanics and Doctor of Medicine (M.D.) through the Medical Scholars Program (https://www.med.illinois.edu/mdphd)

Graduate Degree Programs

Building upon the longstanding strengths of programs in mechanical engineering and in mechanics, the Department of Mechanical Science and Engineering (MechSE) at the University of Illinois at Urbana-Champaign is taking a bold, new approach to research and education that will enable it to address some of the most pressing problems facing the nation and the world. A new paradigm in research is being created in the department by integrating basic sciences such as biology, chemistry, applied mathematics, and applied physics with the traditional mechanical engineering and engineering mechanics disciplines of fluid mechanics-thermal science, solid mechanics-materials, and controls-dynamics. This integration is fostering new directions and discoveries in nanomechanics, nanomanufacturing, biomechanics and computational science and engineering.

The goal of all research in the department is to address critical societal problems in the areas of health, security-defense, energy-environment, manufacturing, and transportation. While the basic function of departmental research is generation of new knowledge, a growing number of projects are prompted by current needs of the State of Illinois and of the nation.

The department offers graduate programs leading to master's and doctoral degrees with exciting research opportunities as described in the Faculty Research Interests section below. Opportunity also exists for specializing in:

1. computational science and engineering and
2. energy and sustainability engineering within the department's graduate programs via the Computational Science and Engineering (CSE) Option (http://cse.illinois.edu/students/graduate-program) and the Energy and Sustainability Engineering (EaSE) Option (http://ease.illinois.edu).

The Medical Scholars Program (https://www.med.illinois.edu/mdphd) permits highly qualified students to integrate the study of medicine with study for a graduate degree in a second discipline, including Mechanical Engineering and Theoretical and Applied Mechanics.

Admission

An applicant for admission to the Department of Mechanical Science and Engineering must:

1. Be a graduate of an institution awarding a baccalaureate degree equivalent to that granted by the University of Illinois at Urbana-Champaign;
2. be adequately prepared for advanced study as demonstrated by his or her previous program of study and scholastic record; and
3. be recommended for admission by the Department of Mechanical Science and Engineering. A minimum grade point average of 3.25 (A = 4.00) for the last two years of undergraduate study is required and a 3.50 for any previous graduate work completed.

Information listed in this catalog is current as of 11/2014
Scores on the Graduate Record Examination (GRE) (http://www.ets.org) general test are required of all applicants. Based upon the previous preparation of the student, prerequisite courses may be specified by the advisor, but the credit may not be applied toward a degree.

All applicants whose native language is not English must submit a minimum TOEFL (http://www.toefl.org) score of 103 (iBT), 257 (CBT), or 613 (PBT); or minimum International English Language Testing System (IELTS) (http://www.ielts.org) academic exam scores of 7.0 overall and 6.0 in all subsections. Applicants may be exempt from the TOEFL if certain criteria (http://grad.illinois.edu/admissions/instructions/04c) are met. Full admission status (http://grad.illinois.edu/admissions/instructions/04c) is granted for those meeting the minimum requirements and having taken the TOEFL or IELTS since the scores required for admission to MechSE are above the minimum scores demonstrating an acceptable level of English language proficiency.

Students may apply to the Medical Scholars Program prior to beginning graduate school or while in the graduate program. Applicants to the Medical Scholars Program must meet the admissions standards for and be accepted into both Mechanical Science and Engineering and the College of Medicine. An application to the Medical Scholars Program will also serve as the application to the Mechanical Science and Engineering graduate programs. Further information on this program is available by contacting the Medical Scholars Program, (125 Medical Sciences Building, (217)-333-8146, mspo@illinois.edu).

Students interested in the joint M.S.M.E.-M.B.A. degree program must apply initially to the M.B.A. program. In the term in which 60 hours of the M.B.A. course work prescribed for the joint-degree program is expected to be completed, they become eligible to petition to transfer to the M.S.M.E. degree program and with MechSE approval, may be admitted under the joint M.S.M.E.-M.B.A. program code.

### Off-Campus Programs

The department offers the M.S. in Mechanical Engineering with both a thesis and a non-thesis option as described above.

### Medical Scholars Program

Students in the Medical Scholars program must meet the specific requirements for both the medical (https://www.med.illinois.edu/mdphd) and graduate degrees. On average, students take eight years to complete both degrees. The first year of the combined program is typically spent meeting requirements of the Mechanical Engineering or Theoretical and Applied Mechanics graduate degree.

### Graduate Teaching Experience

Although teaching is not a general Graduate College requirement, experience in teaching is considered an important part of the graduate experience in both the ME and TAM Ph.D. programs. The TAM Ph.D. requires that one semester of teaching assistantship be completed during the program.

### Faculty Research Interests

A new paradigm in research is being created in the department by integrating basic sciences such as biology, chemistry, applied mathematics, and applied physics with the traditional mechanical engineering and engineering mechanics disciplines of fluid mechanics/thermal science, solid mechanics/materials and controls/dynamics. This integration is fostering new directions and discoveries in nanomechanics, nanomanufacturing, biomechanics and computational science and engineering.

The goal of all research in the department is to address critical societal problems in the areas of health, security/defense, energy/environment, manufacturing, and transportation. While the basic function of departmental research is generation of new knowledge, a growing number of projects are prompted by current needs of the state of Illinois and of the nation.

Faculty research interests include the following:

- **Biomechanics** – cell adhesion and motility, biological machines, bio-fluid mechanics, orthopedic biomechanics, musculoskeletal biomechanics, rehabilitation engineering, bone mechanics, composite biological nanomaterials, single-cell mechanics, synthetic biomaterials, failure mechanics of biomaterials, cytoskeletal biomechanics, mechanotransduction, bio-imaging of cytoskeletal structures and stress distribution in living cells, human motion analysis, human-machine systems.
- **Nanomechanics/nanomanufacturing** – micro/nano-fluidics, NEMS and MEMS, photonic metamaterials and devices, 3D micro/nanofabrication, process planning, programmable machines, nanotubes, nano-materials, electronic and photonic materials, metal cutting, micro/meso-machining, agile fixturing, scanning probe microscopy, micro/nano heat and mass transfer, feature-based cost analysis, rapid prototyping, interface surface science and technology, tribology, magnetic storage, friction/vibration characterization, microscale transport, electrokinetic phenomena, nanopositioning, atomic force microscopy, nanoscale actuation and robotics.
- **Controls/dynamics** – autonomous networked vehicle control, nonlinear mechanical systems and phenomena, distributed-parameter systems, wavelet methods, stability theory, piecewise smooth dynamics, multi-body dynamics, control of multi-rate and asynchronous systems, equi-variant (symmetric) dynamical systems, control using methods of stochastic dynamics, experimental and analytical modal analysis, and control theory (non-linear, adaptive, robust, optimal, and distributed) with application to mechanical and electromechanical systems.
- **Fluid mechanics/thermal sciences** – bio-fluids, combustion, propulsion, energy systems and the environment, IC engines, gas turbines, laser diagnostics, energetic materials, combustion synthesis of materials, micro- and nano-scale heat transfer, kinetics of chemical processes, two-phase flow, liquid atomization and spray, air-conditioning and refrigeration systems, micro-fluidics, computational fluid dynamics, compressible flow, fluid-
structure interactions, meshless methods, detonation, deflagration-to-detonation transition, shock propagation, reacting flows, internal ballistics of rockets and guns, continual eddies, turbulent boundary layers, turbulent wakes, stratified turbulence, turbulence simulation, instability modes, vortex dynamics, coating flows, flow separation, three-dimensional foams, direct numerical simulation, large-eddy simulation, and particle-image velocimetry.

Centers, Programs, and Institutes

The following research centers and programs are integral to the MechSE graduate program:

- Air Conditioning and Refrigeration Center (ACRC)
- Center for Intracellular Mechanics
- Center for Nanoscale Chemical-Electrical-Mechanical Manufacturing systems (Nano-CEMMS)
- Continuous Casting Consortium (CCC)
- Cooperative Networked Control of Dynamical Peer-to-Peer Vehicle Systems
- Fracture Control Program
- Manufacturing Research Center
- Midwest Structural Sciences Center
- The Center for Advanced Automotive Bio-Fuel Combustion Engines
- The Center for Process Simulation and Design
- The Center of Advanced Materials for Purification of Water with Systems (The WaterCAMPWS)
- The Global Enterprise for Micro-Mechanics and Molecular Medicine (GEM4)

To learn more about the research centers and programs within the MechSE department, please visit the department’s research center Web site (http://mechanical.illinois.edu/research).

Facilities and Resources

Research facilities include laboratories for advanced automation, air conditioning and refrigeration, combustion, computer-integrated manufacturing, control systems, design for manufacturing, gas dynamics, heat transfer, high-temperature materials, human factors and simulation of human-machine interaction, human dynamics and controls, intracellular mechanics, cell and molecular mechanics, internal-combustion engines, laser diagnostics for combustion, opto-electronic materials, machining and machine tool systems, mechanical behavior of materials, metrology, micromachining, microtribodynamics, polymer and composite materials processing, propulsion, rapid prototyping, robotics, short-pulse laser-ablation technology, thermal processing of materials, thermal radiation, tribology, and vehicle dynamics. Special facilities include a micro-fabrication facility with its own clean room (Class 10 and 1000) for silicon and CMOS-based micro-fabrication, test facilities for refrigeration and air-conditioning systems and components, low- and high-speed wind tunnels, and laboratories for study of combustion, quantitative visualization, complete specimen-scale mechanical testing equipment including an environmental testing chamber, thermomechanical and multiaxial loading capabilities. The department has a machine shop staffed with skilled instrument makers.

Financial Aid

Financial assistance is available to students who are admitted and includes fellowships, research and teaching assistantships, and/or waivers of tuition and fees. Assistantship stipends vary with one’s entry level into the program. All applicants, regardless of U.S. citizenship, whose native language is not English and who wish to be considered for teaching assistantships must demonstrate spoken English language proficiency (http://grad.illinois.edu/admissions/taengprof.htm) by achieving a minimum score of 24 on the speaking subsection of the TOEFL iBT or an 8 on the speaking subsection of the IELTS. For students who are unable to take the iBT or IELTS, a minimum score of 4CP is required on the EPI test (http://cte.illinois.edu/testing/oral_eng/epi_overview.html), offered on campus. All new teaching assistants are required to participate in the Graduate Academy for College Teaching (http://cte.illinois.edu/programs/ta_train.html) conducted prior to the start of the semester.

- Master of Science in Mechanical Engineering (p. 807)
- Master of Science in Theoretical and Applied Mechanics (p. 808)
• Doctor of Philosophy in Mechanical Engineering (p. 805)
• Doctor of Philosophy in Theoretical and Applied Mechanics (p. 806)

The online MSME degree program offers both a thesis (32 credit hours) and non-thesis (36 credit hours) option. (p. 807) Online students have five years to complete the degree requirements. The degree awarded through our online program is the exact same degree awarded to on-campus MSME students. The application process is very similar to our other programs which is described at our Applying to MechSE (http://mechanical.illinois.edu/graduate/applying-mechse) page. Applications for the online program are not required to submit GRE scores; after the application is submitted, our administrators will waive the requirement of the GRE for students applying to the online program.

**Doctor of Philosophy, Mechanical Engineering**

For the Ph.D. program, a preliminary examination is taken after the qualifying examination. A minimum of six months should elapse between the successful completion of the doctoral preliminary examination and the doctoral final examination (oral dissertation defense).

For more details of the degree requirements for both Ph.D. programs, visit the department’s Graduate Program Web (http://mechse.illinois.edu/content/for/graduates/prog_overview.php) site.

**Entering with approved M.S. or M.A. degree**

² Qualifying Exam Information (http://mechanical.illinois.edu/graduate/mechse-graduate-degrees/phd-mechanical-engineering)

### Doctor of Philosophy, Theoretical and Applied Mechanics

Candidates for the Doctor of Philosophy degree are required to complete a minimum of 32 graduate hours of course work beyond the bachelor's degree with a minimum grade point average of 3.0. The course work must include 16 hours of core courses, or equivalent as evaluated by the Associate Head for Mechanics in applied mathematics, fluid mechanics, and solid mechanics taken at the University of Illinois at Urbana-Champaign or elsewhere. In addition, course work is required from each of the following major areas, totaling 16 hrs: 2 courses total from applied mathematics, fluid mechanics, and solid mechanics, 1 course in mechanics of materials, and at least 1 course in either computational mechanics or experimental mechanics.

Acceptance into the doctoral program requires good academic standing and successful completion of a Qualifying Examination, which is the defense of a scholarly work, such as a master's thesis. A student must also pass an oral preliminary examination based on the proposed thesis work.

For more details of the degree requirements for both Ph.D. programs, visit the department's Graduate Program Website (http://mechanical.illinois.edu/graduate/mechse-graduate-degrees).

Total Hours 36

Other Requirements and Conditions ¹

Other Requirements and Conditions may overlap

A minimum of 8 ME or TAM credit hours with 4 at the 500 level.
A minimum of 12 500-level credit hours applied toward the degree.
Departmental approval is required to pursue the non-thesis option.
Minimum GPA: 3.0

¹ For additional details and requirements refer to the department’s graduate program requirements (http://mechanical.illinois.edu/graduate/mechse-graduate-degrees) and the Graduate College Handbook (http://grad.illinois.edu/gradhandbook).

Master of Science, Theoretical and Applied Mechanics

A full-time student can usually complete the program requirements in one academic year of study. A student who has an assistantship can usually complete the requirements in one calendar year.

For more details of the degree requirements for both M.S. programs, visit the department’s Graduate Program Web site (http://mechanical.illinois.edu/graduate/mechse-graduate-degrees.html).

Medieval Studies

www.medieval.illinois.edu

Director: Charles Wright
4080 Foreign Languages Building
707 S. Mathews Avenue
Urbana, Illinois 61801
phone: (217) 265-6254
fax: (217) 244-8430
e-mail: medievalstudies@illinois.edu

Graduate Concentration: Medieval Studies
Participating Programs: Architecture (MARC and PhD only), Art History (all), Classical Philology (Ph.D.), Classics (M.A.), Communication (all), Comparative Literature (all), East Asian Languages and Cultures (Ph.D.), English (all), French (all), German (all), History (all), Landscape Architecture (all), Musicology (Ph.D.), Philosophy (all), Spanish, Italian and Portuguese (all)

Graduate Degree Program

The Program in Medieval Studies offers a graduate concentration in Medieval Studies. Students who are admitted to graduate programs in departments with medieval studies faculty may apply to the concentration by meeting to express interest and to discuss the concentration with the Director of the Program in Medieval Studies. The program offers a flexible curriculum requiring a minimum of 24 hours of graduate-level coursework including advanced training both in the various disciplines of medieval studies and in foundational languages and technical skills appropriate to the field. For complete information about the program and its offerings, see the program's web site: www.medieval.illinois.edu.

Admission

Students who are admitted to graduate programs in departments with medieval studies faculty are eligible to enroll in the graduate concentration in Medieval Studies after meeting to express interest and to discuss the concentration with the Director of the Program in Medieval Studies.

Faculty Research Interests

The research interests of our faculty often overlap disciplinary boundaries. Thus faculty in English and History share interest in medieval drama, performance practices, and the emergence of regional and national identities. Faculty in English, History, and Art History work on the development of historical consciousness and the representation of history in illuminated manuscripts. Faculty in Italian, History, English and French share an interest in gender studies: the history of women and gender; gender and nationalism; the development of gendered subjectivities; conduct literature and mirrors for princes. Another focus is manuscript studies (Art History, Classics, French, English, History, Library Science): history of the book; illuminated manuscripts of the 13th-15th centuries; late medieval manuscript culture; and reading practices. The program has a strength in Late Antiquity and Early Medieval, which draws together faculty in History, Classics, Religious Studies, Speech Communication; themes of particular interest are the society, culture and religion of this period; the social and cultural history of the Roman and Byzantine empires; Byzantine rhetoric; the impact of Barbarian settlements on Medieval Europe; and the survival of the Classical tradition. There is also a growing interest in Mediterranean studies shared by faculty in the History of Architecture, History, Italian, and Classics): art and built environment of the Islamic Mediterranean; the Italian baptistery; and medieval civic squares. Illinois has the strongest program in medieval English in the Big Ten, with particular strengths in Old English; Old and Middle Irish; the theory, practice and teaching of rhetoric; the oral tradition. In addition, our faculty edit the following major journals: Early Medieval Europe, Illinois Classical Studies, and the Journal of English and Germanic Philology. For more information, visit our faculty listings: www.medieval.illinois.edu/people/index.html.

Centers, Programs, and Institutes

Each Spring we offer an interdisciplinary graduate seminar (one of the requirements of the Certificate) on a topic of broad interest. These seminars are led by one faculty medievalist but are collaborative, drawing on the expertise of faculty in the Program and also visiting scholars from around the world.

Facilities and Resources

The Program is affiliated with the Worldwide Universities Network (www.wun.ac.uk (http://www.wun.ac.uk)), which connects us to Medieval Studies programs at six UK universities (Bristol, Leeds, Manchester, Southampton, Sheffield, York), three on the continent (Bergen, Oslo, Utrecht), and three American universities (Wisconsin-Madison, Penn State, UC-San Diego).

The library at the University of Illinois contains world class research collections in Medieval Studies. It is the largest academic library at a public university with more than 10 million volumes.
Financial Aid

The Program awards fellowships to help affiliated units recruit top ranked applicants. In addition, financial aid in the form of fellowships and teaching assistantships are available through the individual units cooperating in the Program in Medieval Studies.

Graduate Concentration in Medieval Studies

Two graduate courses at the 400- or 500-level in Medieval Studies selected by the student and approved by the Advisory Board of Medieval Studies 6-8

</tr>
</tbody>
</table>

Reading knowledge of a major international medieval language essential to the student’s field of specialization, as determined by the student in consultation with a faculty supervisor and with the approval of the Director, as demonstrated by completion of a college-level course with a grade of B or better. Note: Students who fulfill this requirement by taking courses at the 200- or 300-level may be required to take additional coursework at the 400- and 500-level to meet the requirement of 24 hours of graduate-level coursework.

Reading knowledge of a medieval language with a minimum grade of B, or completion of a one-semester introductory course in a medieval language (such as FR 531 or ENGL 507) with a minimum grade of B, or an equivalent approved by the Medieval Studies Advisory Committee. 4

Thesis Hours Required (min/max applied toward degree) 6-8

Total Hours 24

Other Requirements

Other requirements may overlap

A dissertation or thesis in the area of Medieval Studies.

A member of one of the cooperating departments external to the student's home department will be a member of the student's dissertation or thesis committee.

In addition to the graduate concentration requirements, students must also complete the requirements of their major degree.

1 For additional details and requirements refer to the department’s graduate concentration program (http://www.medieval.illinois.edu/education/grad) and the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).
Microbiology

www.life.illinois.edu/micro

Head of the Department: John E. Cronan, Jr.
Directors of Graduate Studies: Peter Orlean, Joanna Shisler, and Richard Tapping
B103 Chemical and Life Sciences Laboratory
601 South Goodwin Avenue
Urbana, IL 61801
(217) 333-1736
E-mail: gradinfo@mcb.illinois.edu

Major: Microbiology
Degrees Offered: M.S., Ph.D.

Medical Scholars Program: Doctor of Philosophy (Ph.D.) in Neuroscience and Doctor of Medicine (M.D.) through the Medical Scholars Program (https://www.med.illinois.edu/mdphd)

Graduate Degree Programs

The Department of Microbiology at Illinois offers unique opportunities for graduate students to become skilled and creative microbiologists. Our graduate program of study leads to the doctor of philosophy degree (Ph.D.). We have outstanding resources in our internationally recognized faculty, graduate students, and research facilities. This exposes our students to the latest research techniques and fosters their development as independent scientists. The program has particular strengths in the areas of microbial physiology, metabolism, genetics, evolution, and pathogenesis. For an application and departmental materials that provide greater detail on programs, offerings, admission, degree requirements, and financial aid, visit our website at www.mcb.illinois.edu/departments/microbiology/index.html.

Graduates from the Department of Microbiology are employed in colleges and universities, industry, and government. Scientific advances in genetic engineering and biotechnology provide many opportunities in pharmaceutical, chemical, and genetic engineering companies.

The Department of Microbiology is a part of the School of Molecular and Cellular Biology (MCB), which also includes the Departments of Biochemistry, Cell and Developmental Biology, and Molecular and Integrative Physiology. The Department is part of an umbrella program in MCB that encompasses over 70 different research laboratories. Students admitted into any of these departmental graduate programs can select faculty thesis advisors from these active research laboratories in the School. Close ties are also maintained with the School of Integrative Biology, the School of Chemical Sciences, the College of Medicine, and the College of Veterinary Medicine.

Admission

Students interested in this program must apply directly to the School of Molecular and Cellular Biology (mcb.illinois.edu/graduate/gradprospect.html). During the first semester, students perform three laboratory rotations, choosing from any laboratory in the School. Students select a laboratory for their thesis research in December and formally join the appropriate graduate program/department at that time.

Students electing microbiology as a major for an advanced degree should have had a total of at least 15 credit hours of physical or biological sciences, including general biology or microbiology, chemistry through organic chemistry and biochemistry, and mathematics through calculus. Admission requirements include: a bachelor's degree with course work in biological sciences, chemistry, and physics; Graduate Record Examination (GRE) scores. In addition to the above requirements, international students must attain a minimum paper-based Test of English as a Foreign Language (TOEFL) score of 590 (243 on the computer-based test). A score of 96 on the internet-based test (iBT), with a score of 24 on the speaking section, is also accepted. The department does not admit students into the M.S. program.

Medical Scholars Program

The Medical Scholars Program permits highly qualified students to integrate the study of medicine with study for a graduate degree in a second discipline, including Microbiology. Students may apply to the Medical Scholars Program prior to beginning graduate school or while in the graduate program. Applicants to the Medical Scholars Program must meet the admissions standards for and be accepted into both the doctoral graduate program and the College of Medicine. Students in the dual degree program must meet the specific requirements for both the medical and graduate degrees. On average, students take eight years to complete both degrees. Further information on this program is available by contacting the Medical Scholars Program, 125 Medical Sciences Building, (217) 333-8146 or at www.med.illinois.edu/msp.

Graduate Teaching Experience

Experience in teaching is considered to be a vital part of the graduate program and is required as part of the academic work of all Ph.D. degree candidates. For the Department of Microbiology, a minimum of two semesters of teaching experience is a degree requirement.
Faculty Research Interests

Major areas of research interest are gene expression and regulation in prokaryotes and eukaryotes; viral function and development including virus host-cell interactions; membrane biogenesis, including protein insertion; fatty acid, phospholipid, and glycosphospholipid synthesis in bacteria and yeast; cell wall biogenesis; bacterial pathogenesis and bacteria-host interactions; DNA replication, recombination, and repair; anaerobic microbiology; the biochemistry and physiology of methane formation; mechanisms of oxygen toxicity; prokaryote phylogeny, genomics, and evolution; and archaea. For further details, please consult the Department of Microbiology’s website (www.mcb.illinois.edu/departments/microbiology).

Facilities and Resources

The Microbiology Department is located in the modern Chemical and Life Sciences Laboratory (CLSL). Central to main campus, the CLSL houses all of the major equipment and expertise necessary for research in microbiology, cell biology, molecular biology, and biochemistry.

The University of Illinois has excellent core facilities to aid in scientific research, many of which are located in buildings adjacent to CLSL. Each core facility has full-time salaried support staff for training and support. The William Keck Center for Comparative and Functional Genomics provides sequencing and oligonucleotide synthesis, DNA microarray facilities, and bioinformatics specialists. The Protein Sciences Facility aids researchers in protein sequence analysis, peptide synthesis, and 2D gel electrophoresis. Services offered by the Immunological Resources Center include the creation, purification, and immunochemical labeling of antibodies. In addition to a state-of-the-art cell sorter, the Flow Cytometry Facility maintains several satellite flow cytometry machines throughout campus. The Center for Microscopic Imaging is a campus-wide service center for electron, confocal, and light microscopy. The Laboratory for Fluorescence Dynamics uses microscopy and spectroscopy to study protein interactions and kinetics. The University of Illinois has the top academic NMR laboratory in the country for all modern methods of organic mass spectrometry. The Transgenic Animal Facility produces transgenic lines by microinjection technology. The X-ray diffraction laboratories allow for detailed X-ray analysis of materials.

Several services are available to graduate students for support outside of the classroom and laboratory. The University of Illinois library is the nation’s third largest university library, allowing access to reference books and on-line scientific journals. The Writer’s Workshop offers free, personal writing assistance for class assignments, scientific manuscripts, and theses. Graduate students also have access to laboratory computers, which are connected via the network maintained by the Office of Information Technology. Please visit the School of Molecular and Cellular Biology (http://www.mcb.uiuc.edu) to learn about these and other resources available to graduate students.

Financial Aid

All students admitted into the Ph.D. program receive financial support throughout their graduate training. Incoming graduate students are supported by the School of Molecular and Cellular Biology. Several University Fellowships are awarded to outstanding applicants on a competitive basis. Financial support is usually in the form of a research assistantship, teaching assistantship, and/or fellowship. In addition to this stipend, we offer a tuition and service fee waiver. A health insurance fee and other miscellaneous fees, must be paid by the student.

Master of Science in Microbiology

Students are not admitted to the M.S. program; these requirements are completed as part of the Ph.D. program.

Thesis Option

Coursework (not including MICR 590) 8
Research/Project Hours (4 min applied toward degree) 4
MICR 599 Thesis Research (0 min applied toward degree) 0

Molecular and Integrative Physiology

www.life.uiuc.edu/physiology (http://www.life.uiuc.edu/physiology)

Head of the Department: Milan Bagchi
524 Burrill Hall
407 South Goodwin Avenue
Urbana, IL 61801
(217) 333-1735
E-mail: mcbinfo@life.uiuc.edu

Major: Molecular and Integrative Physiology
Degrees Offered: M.S., Ph.D.

Medical Scholars Program: Doctor of Philosophy (Ph.D.) in Molecular and Integrative Physiology and Doctor of Medicine (M.D.) through the Medical Scholars Program (http://www.med.uiuc.edu/mdphd)

Graduate Degree Program

The graduate program in molecular and integrative physiology is designed to provide individualized training in preparation for research and teaching careers in molecular, cellular, and integrative physiology. The objective of the training is to produce scientists who are technically competent and broadly educated. The program offers a Ph.D. in Molecular and Integrative Physiology and a joint M.D./Ph.D. degree in conjunction with the College of Medicine. Please note: Students interested in this program must apply directly to the School of Molecular and Cellular Biology (http://mcb.illinois.edu). The Department of Molecular & Integrative Physiology does not accept applications for the master's degree. During the first semester, students perform three laboratory rotations, choosing from any laboratory in the School. Students select a laboratory for their thesis research in December and formally join the appropriate graduate program at that time.

Admission

Candidates for admission must meet the minimum standards established by the Graduate College for graduate study at the University of Illinois at Urbana-Champaign, but final selection of students who enter the molecular and integrative physiology program each fall is determined by an admissions committee. Admission beginning in the spring semester is rarely allowed except under extraordinary circumstances. Students should have strong undergraduate training in science. To be admitted, students should have a grade point average between an A and a B and three letters of recommendation that indicate ability to perform graduate work. All applicants are required to submit scores of the Graduate Record Examination (GRE) or similar examinations. Applicants whose native language is not English are required to submit the results of the Test of English as a Foreign Language (TOEFL). The department requires a minimum score of 590 on the paper-based TOEFL (243 on the computer-based test), the Graduate College requirement. For admission purposes, TOEFL scores are valid for only two years before the proposed term of entry.

Medical Scholars Program

The Medical Scholars Program permits highly qualified students to integrate the study of medicine with study for a graduate degree in a second discipline, including Molecular and Integrative Physiology. Students may apply to the Medical Scholars Program prior to beginning graduate school or while in the graduate program. Applicants to the Medical Scholars Program must meet the admissions standards for and be accepted into both the doctoral graduate program and the College of Medicine. Students in the dual degree program must meet the specific requirements for both the medical and graduate degrees. On average, students take eight years to complete both degrees. Further information on this program is available by contacting the Medical Scholars Program, 125 Medical Sciences Building, (217) 333-8146 or at www.med.illinois.edu/msp.

Graduate Teaching Experience

Experience in teaching is considered a vital part of the graduate program and is required as part of the academic work of all Ph.D. candidates in this program. Minimum teaching requirement is 50% for one semester. However, it is strongly recommended that students gain experience equivalent to 50% for at least two semesters.

Financial Aid

Financial support is guaranteed for all students who remain in good academic standing.

Master of Science in Molecular and Integrative Physiology

The M.S. is earned in route to the Ph.D. degree. Students are not admitted to the M.S. program.

MCB 401
& MCB 402

Cell & Membrane Physiology
and Sys & Integrative Physiology (College of Medicine M1 Physiology, both semesters, or equivalent, or proficiency exam.)
Doctor of Philosophy in Molecular and Integrative Physiology

The doctoral program uses a flexible approach to curriculum requirements. Students are required to take two core courses, three laboratory rotations (five weeks each), and electives. The students in consultation with a faculty advisory committee choose additional courses in chemistry, biochemistry, immunology, molecular biology, mathematics, and cell biology. Students are encouraged to begin research as soon as they identify an area of research interest. The department has a particularly strong focus in cell physiology, comparative physiology, computational biology, neurophysiology, and endocrinology. Courses and lab research are supplemented by a weekly seminar series. Toward the end of the second year, students must submit a report describing their initial research and pass an oral qualifying examination in order to continue in the Ph.D. program. One year after their qualifying examinations, and no later than the end of their eighth semester in the program, students are expected to take their preliminary examinations in which they present their thesis topic and preliminary research to a faculty committee. Finally, a thesis, which is based on original work in one area of physiology and which demonstrates a thorough knowledge of underlying theories and experimental approaches, must be defended at the final examination. Most students complete their Ph.D. training in four to five years.

Major: Music Education
Degrees Offered: M.M.E., Ph.D.

Major: Musicology
Degrees Offered: Ph.D.
Graduate Concentration: Medieval Studies (p. 810)

Graduate Degree Programs

The School of Music offers graduate study leading to the Master of Music, Artist Diploma in Music, Doctor of Musical Arts, Doctor of Philosophy in Musicology, Master of Music in Music Education, Doctor of Philosophy in Music Education. Complete details of these programs may be found on the School of Music’s website: www.music.illinois.edu. The School of Music has been an accredited member of the National Association of Schools of Music since 1933.

Admission

For all degree programs, consult the admission requirements stated on the School of Music’s website: www.music.illinois.edu/admissions.

Requirements for admission to the Master of Music (MM) programs are a Bachelor of Music degree from the University of Illinois at Urbana-Champaign or an equivalent degree from another accredited institution. Students holding other degrees may be admitted but will be expected to make up any deficiencies in addition to fulfilling all requirements for the graduate degree.

Applicants to the MM in musicology are generally expected to have a minimum grade point average of 3.25 (A = 4.0).

Applicants to instrumental conducting (band or orchestra), jazz performance, piano pedagogy, performance and literature, and vocal accompanying and coaching must pass a qualifying audition for their major division or submit satisfactory recordings. Applicants in musicology, theory, and composition must present writings or other evidence of their ability to pursue work at the graduate level. The Graduate Record Examination (GRE) is not required but is strongly recommended for MM applicants in musicology.

The School of Music requires all new MM students to complete entrance examinations in music theory and aural skills; all new MM students, except those in musicology, complete a musicology entrance exam as well. These exams take place the week before the fall term begins. See the School of Music’s Graduate Resource (http://go.illinois.edu/GradResources) page for more information.

Prerequisite for admission to the Artist Diploma is a master's degree in music performance.

International applicants to the MM and the Artist Diploma (AD) whose native language is not English must present an iBT score of 79 for admission to the Artist Diploma (AD), 90 for the Master of Music (MM), excluding Musicology; MM in Musicology requires an iBT score of 96. A TOEFL iBT of 102
or higher is required for Full Status Admission to the University of Illinois Graduate College and School of Music. Fall admission only; other terms of entry by departmental petition approval only.

Requirements for admission to the Master of Music in Education (MME) are:

1. Undergraduate degree in music education from an accredited institution;
2. An overall grade average for the last 60 credit hours of undergraduate work of at least 3.0 (on a 4.0 scale). The grade average for Music Education and Education courses, when averaged separately, must also be at least 3.0 (on a 4.0 scale);
3. Recommendations from three individuals who can discuss the applicant’s musicianship, ability to undertake graduate level study, and teaching ability/potential.
4. The Graduate Record Exam (GRE) is not required for application to the MME, nor do MME students take placement tests in music theory or music history.

For MME applicants with public school experience:

1. recommendation from a principal or supervisor who speaks primarily to the quality of the applicant's teaching experience;
2. recommendation from an individual who speaks primarily to the quality of the applicant's musicianship;
3. recommendation from an individual who speaks primarily to the applicant's potential for completion of graduate level study;
4. applicants who wish to be considered for a Teaching Assistantship should ensure that at least one of their references provides specific comments on their potential to engage in university level teaching duties associated with such an appointment.

For MME applicants without public school experience:

1. recommendation from a music education professor;
2. recommendation from an applied or ensemble music professor;
3. recommendation from an individual who can speak to the applicant's potential for completion of graduate study.

Applicants seeking admission to the MME + Certification program, should review the requirements found online at: http://music.illinois.edu/auditions/12?audition_type=graduate

International applicants to the MME whose native language is not English must present an iBT score of 90 for the Master of Music Education (MME). A TOEFL iBT of 102 or higher is required for Full Status Admission to the University of Illinois Graduate College and School of Music.

The School of Music offers an academic year program and a Summers-only MME. For academic year applications, the School of Music offers Fall admission only; spring term of entry by departmental petition approval only.

Requirements for admission to the Doctor of Musical Arts and the Doctor of Philosophy in Musicology programs are the Master of Music degree from the University of Illinois at Urbana-Champaign or an equivalent degree from another accredited institution.

Applicants to the Doctor of Musical Arts programs must have:

1. a high level of proficiency in composition, conducting, or performance - candidates in composition must submit original scores for review, and candidates in performance and literature must pass a qualifying audition or submit satisfactory recordings; and
2. appropriate experience in ensemble performance and/or score reading. Candidates in voice and vocal accompanying and coaching must have fulfilled all foreign language requirements considered prerequisites for the Master of Music degree, including 1 year of college-level study in Italian, French, and German.

The School of Music requires all new DMA students to complete entrance examinations in musicology, music theory, and aural skills. These exams take place the week before the fall term begins. See the School of Music's Graduate Resource (http://go.illinois.edu/GradResources) page for more information.

International applicants to the DMA or PhD whose native language is not English must submit an iBT score of 96. A TOEFL iBT of 102 or higher is required for Full Status Admission to the University of Illinois Graduate College and School of Music.

Fall admission only; other terms of entry by departmental petition approval only.

Admission to the PhD in Music Education requires the following:

The quality and clarity of all application materials are important aspects of the application process. Please be sure materials represent your readiness in the best way possible.

1. Three letters of recommendation from professors familiar with the applicant’s academic and professional suitability to engage in PhD study. Recommendations written by colleagues (i.e. fellow teachers and school principals) are not considered suitable for evaluating the applicant’s fitness for the academic rigors of a research-oriented doctoral program.
2. Digital recording of one complete teaching and learning sequence (lesson or rehearsal) in your music education area of specialization (winds/percussion, choral, general, or strings) at the elementary, middle, or secondary level along with written documentation (plan and reflection). Recordings must be uploaded to the School of Music Dropbox by December 1.

3. Official scores for the Graduate Record Examination [GRE], obtained within the last five years, must be mailed from Educational Testing Service [ETS] to the University of Illinois at the time of application. The University of Illinois at Urbana-Champaign Institution code is 1836.

4. A completed master’s degree of at least 24 graduate credits with a GPA of at least 3.25 [on a 4.0 grading system] is generally required, however, it is possible to be admitted under extraordinary circumstances for the doctoral program without entering or finishing a master’s degree in music education. Contact the Music Education graduate program coordinator, Dr. Janet Barrett, if you have questions about your academic background.

5. An undergraduate grade-point average of at least 3.00 [on a 4.0 grading system] on the last 60 semester credits of baccalaureate music education study is required.

6. Applicants are required to submit a resume or CV that includes educational background, accomplishments and an employment record that includes a minimum of three years of full-time music teaching experience, preferably two consecutive years in the same setting and school.

7. Each applicant is required to submit a detailed essay for doctoral study in music education. This statement of 3-5 paragraphs in length should identify the applicant’s primary area of interest, professional activities, career goals, and why the applicant is interested in pursuing a Ph.D. in Music Education at the University of Illinois. This information will be used to determine the compatibility and suitability of the applicant’s program goals in relation to the music education division’s mission and to identify a faculty member potentially to serve as an academic advisor. It is important that this statement be detailed, well-written, and composed with cognizance of the specific areas of specialization held by music education faculty members. If an applicant was encouraged by a specific professor to apply as a prospective doctoral advisee of that professor, this should be acknowledged in the letter.

8. Completion of an interview, on campus or by phone, will be scheduled by the graduate program coordinator upon review of application materials.

9. Completion of a Master’s Thesis or Research Project from an accredited institution, or evidence of sufficient background to undertake a research project that is significant and substantial (e.g., domain research project/s, action research study, or field research study). It is up to each applicant to provide evidence with the initial application of prior research experience and potential for undertaking a major PhD dissertation.

For more information on the Music Education program, please refer to the Music Education Graduate Programs Advising site (http://camil.music.illinois.edu/%7Ebergonzi/gradadvising).

**International applicants to PhD in Music Education** whose native language is not English must submit an iBT score of 96. A TOEFL iBT of 102 or higher is required for Full Status Admission to the University of Illinois Graduate College and School of Music. Fall admission only; other terms of entry by departmental petition approval only.

**Language Requirements**

For the Master of Music program, applicants in voice and vocal accompanying and coaching are required to have had at least one year each of college-level French, German, and Italian or the equivalent. Applicants in other applied music areas, composition, conducting, musicology, and theory are required to have had one year of any language at the college level or the equivalent.

All Doctor of Musical Arts candidates will be required to demonstrate proficiency in at least one language other than English. Each division may specify which language is required or may require proficiency in more than one language. Please review the current Graduate Music Handbook (http://go.illinois.edu/GradResources) for more details.

Proficiency is required in two languages, depending on the proposed field of specialization, for candidates in the Doctor of Philosophy in Musicology program. This may be demonstrated through two years of undergraduate study in each language.

**For all Graduate Degrees:**

For those students who do not meet the language requirement at the time of entrance, it may be satisfied by evidence of two years of undergraduate study or the equivalent, or by completion of a two-semester, 500-level reading course sequence at UIUC with a grade of at least B-, or by satisfactory test scores. For up-to-date information regarding language requirements of the School of Music, please see the Graduate Music Handbook (http://go.illinois.edu/GradResources).

**Graduate Teaching Experience**

Although teaching is not a general Graduate College requirement, experience in teaching is considered an important part of the graduate experience.

**Financial Aid**

Fellowships, teaching, graduate, and research assistantships are awarded on a one-year basis with continuation dependent upon success in the program. Specific information on application procedures is available from the Music Admissions Office, (217) 244-7899; musicadmissions@illinois.edu.

*Information listed in this catalog is current as of 11/2014*
Master of Music in Music

The fields of concentration for the Master of Music degree are choral music, instrumental conducting (band), instrumental conducting (orchestra), jazz performance, music composition, musicology, music theory, performance and literature, piano pedagogy, and vocal coaching and accompanying.

- Choral Music Concentration (p. 829)
- Instrumental Conducting - Band Concentration (p. 830)
- Instrumental Conducting - Orchestra Concentration (p. 830)
- Jazz Performance Concentration (p. 830)
- Music Composition Concentration (p. 831)
- Music Theory Concentration (p. 831)
- Musicology Concentration (p. 832)
- Performance and Literature Concentration (p. 833)
- Piano Pedagogy Concentration (p. 833)
- Vocal Coaching and Accompanying Concentration (p. 833)

Master of Music Education in Music Education

- Master of Music Education (p. 829)
- Doctor of Musical Arts in Music (p. 823)
- Doctor of Philosophy in Music Education (p. 827)
- Doctor of Philosophy in Musicology (p. 828)

Artist Diploma in Music

The fields of specialization for the Artist Diploma are keyboard, voice, and orchestra/band instruments. The degree is intended only for musicians at the highest level of artistic accomplishment and potential, and the entrance auditions must reflect this exceptional standard. Upon completion of the Artist Diploma, students are expected to be ready for entrance into the music profession as a solo artist, member of an orchestra or chamber or jazz ensemble, or as an apprentice in an opera company, and should be prepared to compete effectively in international competition.

The University of Illinois at Urbana-Champaign's School of Music complies with the U.S. Department of Education's Gainful Employment requirements by disclosing information to applicants regarding our Artist Diploma program. Required information can be found here (http://provost.illinois.edu/ProgramsOfStudy/2014/fall/programs/graduate/CAS_AD/Gedt.html).

MUS 578- MUS 585, Applied music/ performance studies | 20
MUS 450/ MUS 499, ensemble participation, both in large and chamber/small groups | 8
MUS 500, performances, including solo and chamber music | 4

Joint M.B.A. Program

Students in this unit may choose to earn their major degree and simultaneously complete an M.B.A., with 12 fewer required hours than when pursuing both degrees independently. Students must be enrolled in the M.B.A. program for three terms and complete all the requirements of their primary degree. Interested students should see the joint program requirements (p. 583) and contact the M.B.A. program and their major department office for more information.

2 To be selected in consultation with the student’s advisor.
3 Students pursuing the Doctor of Musical Arts in Performance and Literature whose primary instruments are woodwinds, brass, percussion, or strings will have a curricular requirement of four semesters of approved ensemble participation.
4 For additional details and requirements refer to the department's Graduate Handbook (http://music.illinois.edu/resources/graduate-resources/handbooks) and the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).

Doctor of Philosophy in Music Education

The doctoral program in music education consists of the Doctor of Philosophy in Music Education. The Ph.D. is tailored to meet the varying needs and interests of individuals seeking a terminal degree in Music Education. The Ph.D. is appropriate for those students who possess a strong background and interest in research. The Ph.D. places emphasis on research and research methodology training. Students entering the Ph.D. must have already
completed a substantial thesis or research project as part of their master's degree. For more information about this degree, please visit the Music Education Advising website (http://camil.music.illinois.edu/%7Ebergonzi/gradadvising).

- Masters Degree Required for Admission to PhD: Yes
- Qualifying Exam Required: Yes
- Preliminary Exam Required: Yes
- Final Exam/Dissertation Defense Required: Yes
- Dissertation Deposit Required: Yes
- Minimum GPA: 3.0

1. Local students must register every semester. Credit is earned only for one semester.
2. Minimum of 6 hours of electives from music education; or, with approval of the Music Education Graduate Coordinator, courses in other Colleges. (e.g., MUS 529, MUS 530, MUS 531, MUS 532, MUS 533, MUS 537, MUS 538, MUS 539, MUS 541, MUS 542, MUS 543)
3. MUS 531 or MUS 543 may be counted as one EPSY course.
4. To partially fulfill the EPS requirement, a student may take courses in the College of Education or one of the following: MUS 537, MUS 539, or MUS 543.
5. A student must take 12 hours of College of Education Research Specialization Methodology courses, unless exceptions are approved by the Music Education Graduate Coordinator. In addition, MUS 534 earns four credits, bringing the total Research Methodology credits to 16.
6. For additional details and requirements refer to the department's Graduate Handbook (http://music.illinois.edu/resources/graduate-resources/handbooks) and the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).

**Doctor of Philosophy in Musicology**

The Ph.D. in Musicology is intended for those whose interests lie in research in the history of music, systematic musicology, or ethno-musicology.

**Master of Music Education**

The Master of Music Education degree program is designed to meet the needs and interests of individuals who are already certified to teach music and who seek to continue their careers as public school music educators or music administrators. It is also possible to structure a program that will enable individuals interested in seeking careers in education-related fields or as a step in preparation for eventual college teaching.

Although prior teaching experience is not a requirement for entrance into this degree program, graduate study will be more meaningful if teaching experience in the field has first been gained. Therefore, individuals considering pursuit of the MME are urged to plan to teach one to three years prior to initial enrollment or before completing the degree. Students interested in gaining certification to teach music as part of the MME should refer to the MME+Certification website for information about the MME+Certification Program.

Major: Natural Resources and Environmental Sciences
Degrees Offered: M.S., Ph.D.

Online Program: Natural Resources and Environmental Sciences
Degrees Offered: M.S.

Joint Degree Program: Master of Science in Natural Resources and Environmental Sciences and Juris Doctor in Law
Degrees Offered: M.S. and J.D.

Medical Scholars Program: Doctor of Philosophy (Ph.D.) in Natural Resources and Environmental Sciences and Doctor of Medicine (M.D.) through the Medical Scholars Program (http://www.med.illinois.edu/mdphd)

Graduate Degree Program

The Department of Natural Resources and Environmental Sciences is a broad and diverse department offering flexible M.S. and Ph.D. degrees. The mission of the department is to establish and implement research and educational programs that enhance environmental stewardship in the management and use of natural, agricultural, and urban systems in a socially responsible manner. The department is composed of approximately 24 faculty, 60 affiliates, and 160 graduate students. Offering education and research in a variety of disciplines, the department provides a systems-level perspective that few other departments can offer. Further illustrating the breadth of natural resources and environmental sciences, research areas include but are not limited to:

- agronomy/agroecology
- aquatic chemistry
- ecosystem science
- environmental education
- humans and the environment
- landscape ecology
- microbial ecosystems
- natural resource economics
- plant ecology
- physiology and genetics
- restoration ecology
- quantitative and spatial analysis
- soil science and conservation
- sustainability
- wildlife ecology

Admission

NRES graduate advisers are seeking students with strong letters of reference, evident motivation to undertake graduate study, relevant experience, and good preparation in prerequisite courses. Graduate applicants must have an undergraduate grade point average (GPA) of 3.0 (A = 4.0) calculated on the last 2 years of undergraduate coursework to be admitted with full status. Ph.D. applicants must have earned an M.S. (or expect to be awarded the degree before beginning the NRES program) with a grade point average of at least 3.5. Applicants should have adequate preparation in the fundamental sciences and courses appropriate to their proposed field of study (applicants should talk with prospective advisers about the background they expect). Those without the necessary prerequisites may be accepted conditionally, and the undergraduate courses must be completed before the degree will be awarded. The Graduate Record Examination (GRE) is required of all students applying to the campus M.S. or Ph.D. program. There is no minimum score for admission, and the results will be examined along with GPA, letters of recommendation, statement of purpose, research experience, and other information in the application package. However, successful applicants typically have a combined quantitative/verbal/analytical GRE percentile of at
least 70%. Students whose native language is not English are required to submit the results of the TOEFL or IELTS as evidence of English proficiency. Official scores are required to be submitted directly from TOEFL/ETS or IELTS to the University. Minimum English test scores and other information for international applicants can be found at: www.grad.illinois.edu/admissions/apply/begin/international. Applicants who are not U.S. citizens must also submit evidence that they have sufficient financial support for their program of study. Prospective graduate students are urged to apply for admission to the degree program as early as possible, preferably six to ten months before the beginning of the semester in which they expect to enroll. Prospective students must review important application information available at http://nres.illinois.edu/graduate/prospective. Applicants to the campus programs wishing to be considered for a fellowship must apply for admission to the fall semester by January 15th.

Medical Scholars Program

The Medical Scholars Program permits highly qualified students to integrate the study of medicine with study for a graduate degree in a second discipline, including Natural Resources and Environmental Sciences. Students may apply to the Medical Scholars Program prior to beginning graduate school or while in the graduate program. Applicants to the Medical Scholars Program must meet the admissions standards for and be accepted into both the doctoral graduate program and the College of Medicine. Students in the dual degree program must meet the specific requirements for both the medical and graduate degrees. On average, students take eight years to complete both degrees. Further information on this program is available by contacting the Medical Scholars Program, 125 Medical Sciences Building, (217) 333-8146 or at www.med.illinois.edu/msp.

Graduate Teaching Experience

Although teaching is not a Graduate College requirement, experience in teaching is considered an important part of this graduate program, particularly for Ph.D. students.

Faculty Research Interests

Graduate degree programs in NRES are informed by the major areas of faculty research, which include:

- agronomy/agroecology
- ecology
- ecosystem science
- fish and wildlife
- forest resources and management
- global environmental change
- human dimensions of natural resources and ecology
- landscape ecology
- microbial ecosystems
- plant ecology
- physiology and genetics
- quantitative and spatial methods
- restoration ecology
- soil science and conservation
- sustainability
- water/biogeochemistry

Students in NRES can participate in affiliated programs like those listed below.

Program in Environmental and Resource Economics: Students involved in the program in Environmental and Resource Economics (pERE) explore the complex relationships between natural resource allocation, environmental quality and economic prosperity. Students and faculty from five other University departments in addition to NRES are using economics to analyze policy toward some of today's most critical environmental and natural resource issues.

Human Dimensions of Environmental Systems: NRES graduate students may participate in HDES, an interdisciplinary program comprised of faculty from six colleges at Illinois. Participants are united in the study of connections between humans and the environment. The program is built on the premise that the best insights are not limited to the domain of a single discipline and is interdisciplinary in all its pursuits.

Financial Aid

Several sources of financial aid are available within the department:

- research assistantships, supported by federal and grant funds made available to the natural resources and environmental sciences faculty
- teaching assistantships
- departmental fellowships

Information listed in this catalog is current as of 11/2014
• University fellowships
• College of Agricultural, Consumer and Environmental Sciences Jonathan Baldwin Turner Fellowships
• waivers of tuition and fees

Most NRES graduate students with financial support have a research assistantship provided by the adviser. Appointments as research and teaching assistants and fellows provide a stipend and waive tuition and some fees.

Financial aid is granted on a competitive basis. Applicants are judged for academic potential based on past performance, experience, motivation, dedication to the designated area of interest and, where applicable, the potential to satisfy the objectives of a donor. Fellowships have minimum GPA and GRE score requirements. Information about the current availability of financial aid can be obtained from the graduate coordinator or, in the case of research assistantships, directly from faculty members working in the area of interest.

Master of Science in Natural Resources and Environmental Sciences

Two options are open to students who wish to pursue a Master of Science degree in the Department of Natural Resources and Environmental Sciences. The M.S. Thesis Option program helps students develop into researchers. Coursework is no longer the primary focus, and students learn how to create, plan, and carry out independent research. The M.S. Non-Thesis Option program guides students in the acquisition of professional expertise beyond the undergraduate degree. The program requires a culminating/capstone experience, which may be satisfied in one of three ways: an individual investigative project, a collaborative, possibly interdisciplinary, group project, or a professional internship experience. The Non-Thesis Option may also be appropriate in special cases where a student executes a major special project which is equivalent to a M.S. thesis, but which does not lend itself to the thesis format. Students on campus are admitted into the thesis option and, under certain conditions, may be allowed to transfer into the non-thesis option by petitioning the Department. In contrast, all students in the online M.S. program are admitted into the non-thesis option unless they have identified a thesis advisor before being admitted.

The thesis option requires that the student satisfactorily complete a minimum of 32 hours of graduate coursework, of which a minimum of 12 graduate hours are 500-level courses. This coursework shall include Professional Orientation (594) and 4 to 12 graduate hours of Thesis Research (599), which culminates in the completion and oral defense of a thesis.

A non-thesis option student must satisfactorily complete a minimum of 32 hours of graduate coursework, of which a minimum of 12 graduate hours are 500-level courses, Professional Orientation (594), and 3 to 8 hours of capstone experience in the form of a Capstone Research Project (503), Capstone Internship Experience (505), or Capstone Group Research Project (507). The student must prepare and submit a report analyzing the capstone learning experience and perform satisfactorily on written and oral final examinations.

Doctor of Philosophy in Natural Resources and Environmental Sciences

The Ph.D. program prepares students to be an expert in their fields. Earning a Ph.D. involves mastering a field of study and increasing the knowledge and understanding in that field through the completion of a dissertation that makes a contribution to existing research. Students working toward the Ph.D. degree are required to demonstrate competency in at least three content areas by passing a general examination (the preliminary examination) before admission to candidacy for the doctoral degree. Students consult with their advisors to identify their competency content areas and the courses they will take, which are recorded on the Doctoral Plan of Study. To earn the doctorate, students must successfully complete a final oral examination (thesis defense). In most cases, students earn a M.S. before starting work on a Ph.D. However, in certain cases, it is possible to take the coursework required for the M.S. as part of a Ph.D. program. Details of the B.S. to Ph.D. program are available from the graduate coordinator.

M.S. in Natural Resources and Environmental Sciences and J.D. in Law

Prospective students interested in specializing in environmental or natural resource law are invited to explore our joint degree program. This unique program is offered through collaboration between the College of Law and the Department of Natural Resources and Environmental Sciences. Many law schools have responded to public concern about the environment by offering more courses in natural resources and environmental law. The University of Illinois at Urbana-Champaign goes one step further, however, allowing students to supplement a law program with training in a related scientific field.

Online M. S. Program

The online M. S. graduate program in NRES enables students to continue their education in disciplines related to natural resources and environmental sciences through part-time study at locations away from the Urbana-Champaign campus. This program meets the needs of persons currently working or wanting to work in the areas of conservation, ecology, restoration ecology, soil science, sustainable development, urban ecology, urban forestry, urban wildlife management, and water resources management. Students can enroll in individual courses for professional and/or academic advancement, or apply for admission to the M.S. degree program. Application deadlines and other important information are available at nres.illinois.edu/future_online/apply.
The thesis option requires that the student satisfactorily complete a minimum of 32 hours of graduate coursework, of which a minimum of 12 graduate hours are 500-level courses. This coursework shall include Professional Orientation (594) and 4 to 12 graduate hours of Thesis Research (599), which culminates in the completion and oral defense of a thesis.

A non-thesis option student must satisfactorily complete a minimum of 32 hours of graduate coursework, of which a minimum of 12 graduate hours are 500-level courses, Professional Orientation (594), and 3 to 8 hours of capstone experience in the form of a Capstone Research Project (503), Capstone Internship Experience (505), or Capstone Group Research Project (507). The student must prepare and submit a report summarizing the capstone learning experience and perform satisfactorily on a final examination.
Neuroscience

neuroscience.illinois.edu

Program Director: Susan Schantz
Program Coordinator: Samuel Beshers
1624 Beckman Institute
405 North Mathews Avenue
Urbana, IL 61801
(217) 333-4971
E-mail: nsp@life.illinois.edu

Major: Neuroscience
Degrees Offered: Ph.D.

Medical Scholars Program: Doctor of Philosophy (Ph.D.) in Neuroscience and Doctor of Medicine (M.D.) through the Medical Scholars Program (https://www.med.illinois.edu/mdphd)

Graduate Degree Program

The Neuroscience Program is an interdisciplinary and highly individualized Ph.D. program. Students have varied backgrounds but typically have undergraduate degrees in psychology, biology, electrical engineering, or computer science. The Neuroscience Program guides students to become productive, scholarly neuroscientists with access to careers in academic research, medicine, industry or non-research careers such as law, policy, or journalism. A joint M.D./Ph.D. program is available. The faculty have broad and diverse research interests; areas of particular strength include aging, brain plasticity, cognitive functions, neurogenomics, molecular bases of development and disease, and neuroengineering. Integrative and collaborative studies that bridge two or more labs are encouraged.

Admission

Applications are considered individually by the admissions committee, usually for the fall semester. Graduate Record Examination (GRE) scores are required. International applicants must meet the minimum Test of English as a Foreign Language (TOEFL) requirement set by the Graduate College. Admission and financial aid are considered together.

Medical Scholars Program

The Medical Scholars Program permits highly qualified students to integrate the study of medicine with study for a graduate degree in a second discipline, including Neuroscience. Students may apply to the Medical Scholars Program prior to beginning graduate school or while in the graduate program. Applicants to the Medical Scholars Program must meet the admissions standards for and be accepted into both the doctoral graduate program and the College of Medicine. Students in the dual degree program must meet the specific requirements for both the medical and graduate degrees. On average, students take eight years to complete both degrees. Further information on this program is available by contacting the Medical Scholars Program, 125 Medical Sciences Building, (217) 333-8146 or at www.med.illinois.edu/msp.

Financial Aid

The Neuroscience Program generally supports all students in good standing with a stipend and tuition and partial fee waivers throughout their tenure in the program. Support may come in the form of fellowships, traineeships, research assistantships, or teaching assistantships according to the student's qualifications.

Doctor of Philosophy in Neuroscience

Because of the breadth of the fields in this program, the coursework is tailored to the student's fields of interest as declared by a major and at least two minor areas of concentration from among those listed above. A faculty committee of representatives from the major and minor areas will then meet regularly with the student to plan coursework and research experience. The goal of this plan is to allow maximum flexibility while providing students with close guidance. Courses and laboratory research experience are supplemented by weekly seminars in neuroscience.

Major: Nuclear, Plasma, and Radiological Engineering
Degrees Offered: M.S., Ph.D.

Major: Engineering
Degrees Offered: M.Eng.
Graduate Concentration: Energy Systems

Medical Scholars Program: Doctor of Philosophy (Ph.D.) in Nuclear, Plasma, and Radiological Engineering and Doctor of Medicine (M.D.) through the Medical Scholars Program (https://www.med.illinois.edu/mdphd).

Graduate Degree Programs

The Department of Nuclear, Plasma, and Radiological Engineering (NPRE) offers programs leading to Master of Science and Doctor of Philosophy degrees in Nuclear, Plasma, and Radiological Engineering. The Master of Science and Doctor of Philosophy degree programs are centered around three theme areas:

• nuclear power engineering
• fusion and plasma science and engineering
• radiological engineering and medical physics

Advanced course work and active research programs are offered in all of these areas.

The NPRE department also administers for the College of Engineering a Master of Engineering degree program with a Concentration in Energy Systems.

The Faculty of the Department are internationally recognized experts in these areas of nuclear science and engineering, radiation processes and transport, materials science, thermal sciences, systems engineering, energy conversion processes and systems, plasma sciences and processing, radiation-based medical imaging and therapy, dosimetry and radiation protection, systems control and risk analysis, energy systems, and international security. Graduate students in the Department are active participants and contributors to these areas of education and research and typically pursue careers in one of these areas. Graduate students in the Department are also encouraged to take part in course work and research activities in other engineering and science departments to complement their professional development in the nuclear engineering field. Opportunity also exists for specializing in:

1. computational science and engineering and
2. energy and sustainability engineering within the department's graduate programs via the Computational Science and Engineering (CSE) Option (http://cse.illinois.edu/students/graduate-program) and the Energy and Sustainability Engineering (EaSE) Option (http://ease.illinois.edu).

The Medical Scholars Program (https://www.med.illinois.edu/mdphd) permits highly qualified students to integrate the study of medicine with study for a graduate degree in a second discipline, including Nuclear, Plasma, and Radiological Engineering.

Admission

Application for admissions to the master’s and doctoral degree programs is open to all graduates in engineering, mathematics, and the physical sciences with a grade point average of at least 3.00 (A = 4.00) for the last two years of undergraduate work and any graduate work completed. Prerequisites for admission include a course in ordinary differential equations plus one other mathematics course beyond calculus; an intermediate course in atomic and nuclear physics or interaction of radiation with matter; a course in electrical circuit theory; a course in thermodynamics; a course in fluid mechanics or continuum mechanics; and a course introducing nuclear engineering. A student may be admitted before completion of these prerequisites, but he or she must allow additional time to make up for these deficiencies; courses taken to make up such deficiencies will not count toward the number of units required for the graduate degree. Transcripts and letters of recommendation are required. The Graduate Record Exam (GRE) (http://www.ets.org) is required. Information such as undergraduate class rank is recommended.
For full consideration of fall admission with financial aid, application receipt deadline is January 15. Students who wish to enter in the spring term should contact the Department before applying.

All applicants whose native language is not English are required to have a minimum TOEFL (http://www.toefl.org) score of 79 (iBT), 213 (CBT), or 550 (PBT); or minimum International English Language Testing System (IELTS) (http://www.ielts.org) academic exam scores of 6.5 overall and 6.0 in all subsections. Applicants may be exempt from the TOEFL if certain criteria (http://grad.illinois.edu/admissions/instructions/04c) are met. For those taking the TOEFL or IELTS, full admission status (http://grad.illinois.edu/admissions/instructions/04c) is granted for scores greater than 102 (TOEFL iBT), 253 (TOEFL CBT), 610 (TOEFL PBT), or 6.5 (IELTS). Limited status (http://grad.illinois.edu/admissions/instructions/04c) is granted for lesser scores and requires enrollment in English as a Second Language (ESL) courses (http://linguistics.illinois.edu/students/esl/guidelines) based on an ESL Placement Test (EPT) taken upon arrival to campus.

Applicants to the joint M.B.A. degree program must meet the admissions standards for both programs and be accepted by both programs.

Students may apply to the Medical Scholars Program prior to beginning graduate school or while in the graduate program. Applicants to the Medical Scholars Program must meet the admissions standards for and be accepted into both Nuclear, Plasma, and Radiological Engineering and the College of Medicine. An application to the Medical Scholars Program will also serve as the application to the Nuclear, Plasma, and Radiological Engineering graduate program. Further information on this program is available by contacting the Medical Scholars Program (125 Medical Sciences Building, (217)-333-8146, mspo@illinois.edu).

Medical Scholars Program

Students in the Medical Scholars program must meet the specific requirements for both the medical (https://www.med.illinois.edu/mdphd) and graduate degrees. On average, students take eight years to complete both degrees. The first year of the combined program is typically spent meeting requirements of the Nuclear, Plasma, and Radiological Engineering graduate degree.

Faculty Research Interests

Faculty research interests cover a wide range including, but not limited to, those listed above under the Master of Science section. Faculty in other related fields are available to supervise research for students through formal “affiliate faculty” appointments.

Facilities and Resources

A wide range of major research resources are available for nuclear engineering research. A dense plasma focus fusion-related device for high-temperature plasma studies and an ultrahigh-vacuum laboratory for plasma-material interaction studies are available. Graduate students often perform interdisciplinary research work in the Materials Research Laboratory, Micro and Nanotechnology Laboratory, Coordinated Science Laboratory, National Center for Supercomputing Applications, and Beckman Institute for Advanced Science and Technology. The mechanical behavior program provides a variety of facilities for studies of nuclear materials, including the Advanced Materials Testing and Evaluation Laboratory. Other radiological laboratories are also available for environmental studies and nuclear spectroscopy, health physics and radiation studies, nuclear-waste management, thermal hydraulics and reactor safety, reactor physics and reactor kinetics, controlled nuclear fusion, direct energy conversion and lasers and plasma physics. The Department is a participant in the Computational Science and Engineering Program on campus. In addition, a wide array of microcomputers and workstations are available.

Financial Aid

Most graduate students receive some form of financial aid. Fellowships are available to support the best applicants. Other students are supported as graduate research, teaching, or general assistants. Financial aid includes federally sponsored traineeships and fellowships and University and industry fellowships. The University is approved for several fellowships including those from the Department of Energy, Nuclear Regulatory Commission, the National Science Foundation, Hertz, and the Institute for Nuclear Power Operations. Part- and full-time assistantships include exemption from tuition and partial fees. All applicants, regardless of U.S. citizenship, whose native language is not English and who wish to be considered for teaching assistantships must demonstrate spoken English language proficiency (http://grad.illinois.edu/admissions/taengprof.htm) by achieving a minimum score of 24 on the speaking subsection of the TOEFL iBT or 8 on the speaking subsection of the IELTS. For students who are unable to take the IBT or IELTS, a minimum score of 4CP is required on the EPI test (http://cte.illinois.edu/testing/oral_eng/epi_overview.html), offered on campus. All new teaching assistants are required to participate in the Graduate Academy for College Teaching (http://cte.illinois.edu/programs/ta_train.html) conducted prior to the start of the semester.

- Master of Engineering in Engineering, Energy Systems Concentration (p. 845)
- Master of Science in Nuclear, Plasma, and Radiological Engineering (p. 846)

Doctor of Philosophy in Nuclear, Plasma, and Radiological Engineering

Course requirements for the Ph.D. degree include at least 32 graduate hours of course credit beyond that required for the M.S. degree. In addition, 32 or more graduate hours of doctoral thesis credit are required and typically take two or more additional years to complete. Students desiring to work toward the Ph.D. degree must pass the departmental qualifying examination to be admitted to doctoral study. The doctoral candidate must complete course work, pass a preliminary doctoral examination, write a doctoral thesis, and successfully defend the thesis at a final examination before a doctoral faculty
A doctoral student typically takes several courses in nuclear engineering plus additional courses that support a specialized research area and provide background in mathematics and science and that satisfy a minor in a related discipline. Under exceptional circumstances and by approved petition, doctoral research may be undertaken off campus.

Other Requirements and Conditions may overlap

ENG 572 or ENG 573 may be taken for variable credit up to a maximum of 8 credit hours subject to advisor approval. Additional credit hours exceeding the 4 credit hour requirement may be applied toward the Primary Field course work requirement or the Elective course work requirement.

A minimum of 16 500-level credit hours applied toward the concentration, 8 of which must be in ENG or courses in the primary field

A maximum of one 1-credit-hour course may be applied toward the minimum 16 500-level credit-hour requirement.

Minimum GPA: 3.0

1 For additional details and requirements refer to the department’s printed handbook and the Graduate College Handbook (http://grad.illinois.edu/gradhandbook).

---

**Master of Science in Nuclear, Plasma, and Radiological Engineering**

The M.S. degree takes at least two semesters and a summer session to complete and normally takes three semesters and a summer session. The curriculum requires courses covering the fundamentals of nuclear engineering and radiation interaction with matter, plus two or more courses in an area of concentration chosen by the student in consultation with an advisor. Typical areas are:

- fission engineering including reactor physics, radiation transport, thermal hydraulics and reactor safety, fuel cycles, shielding and radiation effects and radioactive waste management and site remediation
- fusion engineering and technology
- plasma engineering and processing
- nuclear materials, corrosion, and irradiation damage
- neutron scattering
- neutron activation analysis
- nuclear nonproliferation and public policy issues
- MRI applications, radiation protection, radiation-based therapy, biomedical imaging and health physics
- computational methods including Lie Group, integral-differential equation, Monte Carlo, and fuzzy logic applications.

Nutritional Science

www.nutritionalsciences.illinois.edu

Director of the Division and of Graduate Studies: Rodney W. Johnson
Assistant Director: Jessica L. Hartke
449 Bevier Hall
905 South Goodwin Avenue
Urbana, IL 61801
(217) 333-4177
Fax: (217) 333-9368
nutritionalsciences@illinois.edu

Major: Nutritional Science
Degrees Offered: M.S. and Ph.D.

Joint Degree Program: Doctor of Philosophy in Nutritional Science and Master of Public Health (p. 617)
Degrees Offered: Ph.D. and M.P.H.

Medical Scholars Program: Doctor of Philosophy (Ph.D.) in Nutritional Science and Doctor of Medicine (M.D.) through the Medical Scholars Program (http://www.med.uiuc.edu/mdphd)

Graduate Degree Programs

The Division of Nutritional Sciences is the interdisciplinary program for graduate education in nutrition at the University of Illinois at Urbana-Champaign. More than 60 faculty, representing 18 different departments in eight colleges on the Urbana and Chicago campuses, are members of the Division. The Division is a comprehensive program of study leading to the M.S. and Ph.D. degrees, alone or in combination with either the M.D. or M.P.H. degrees or the registration in dietetics (R.D.). Flexible graduate programs of study enable students to individualize their coursework and professional training. In addition, extensive research opportunities are available that address the spectrum from research at the level of the genome and proteome to clinical and population-based intervention studies. Specialties are classified into six broad theme areas in which our faculty and students are most active (see Research Interests (http://nutrsci.illinois.edu/research)). These themes best reflect the areas of nutrition research for which the Division is recognized both nationally and internationally.

Admission

Applicants are expected to have an admission grade point average of 3.0 (A = 4.0) for the last two years of coursework and basic courses in chemistry, biology and mathematics. Deficiencies in these subjects must be removed during the first year of graduate study. The Graduate Record Examination (GRE) is required. Applicants whose native language is not English must achieve a minimum paper-based Test of English as a Foreign Language (TOEFL) score of 550, 213 on the computer-based test or 79 on the iBT TOEFL. Admission in the fall, spring or summer will be considered.

Internship in Dietetics

Students in the Division of Nutritional Sciences can participate in an Academy of Nutrition and Dietetics (AND) accredited graduate dietetic internship program administered through the Department of Food Science and Human Nutrition. The program includes defined graduate course requirements and a six-month dietetic clinical internship. In order to be eligible for the graduate internship program, students must complete all undergraduate course competencies required by the AND for the Registration in Dietetics (R.D.). Students are accepted into the internship by computer matching through the standard dietetic internship application process. More information on the graduate dietetic internship program can be obtained at fshn.illinois.edu/graduate/dietetic-internship/prospective or from the Department of Food Science and Human Nutrition (260 Bevier Hall; (217)-244-4498).

Medical Scholars Program

The Medical Scholars Program permits highly qualified students to integrate the study of medicine with study for a graduate degree in a second discipline, including Nutritional Science. Students may apply to the Medical Scholars Program prior to beginning graduate school or while in the graduate program. Applicants to the Medical Scholars Program must meet the admissions standards for and be accepted into both the doctoral graduate program and the College of Medicine. Students in the dual degree program must meet the specific requirements for both the medical and graduate degrees. On average, students take eight years to complete both degrees. Further information on this program is available by contacting the Medical Scholars Program, 125 Medical Sciences Building, (217) 333-8146 or at www.med.illinois.edu/msp.

Graduate Teaching Experience

Although teaching is not a general Graduate College requirement, experience in teaching is considered an important part of the graduate experience in this program.
Faculty Research Interests

The Division is composed of faculty whose research interests cover many disciplines within nutrition. Descriptions of faculty research interests and a listing of recent publications are available at the Division website. Six broad theme areas are:

- Animal Nutrition
- Biochemical and Molecular Nutrition
- Community Nutrition, Nutrition Education and Consumer Acceptance
- Dietary Bioactive Components
- Food Safety and Toxicology
- Human and Clinical Nutrition

Facilities and Resources

The Division (http://www.nutrsci.illinois.edu) office is located in room 449 Bevier Hall. Office and research laboratory facilities utilized by graduate students in Nutritional Sciences are administered by the home department of the student’s adviser.

Financial Aid

Financial assistance is available in the form of assistantships, scholarships and fellowships. Applicants seeking fall admission and expecting to be considered for financial assistance should file their applications before the preceding December 15th. Later applications may be considered, depending on the space and support available.

Master of Science in Nutritional Science

Additional courses are available in:

- human and animal nutrition
- biochemistry
- physiology
- immunology
- endocrinology
- food science
- education
- anthropology
- psychology
- sociology
- statistics
- agricultural economics

The non-thesis degree also requires an oral final exam. Students are not admitted directly into the non-thesis program.

Doctor of Philosophy in Nutritional Science

In addition to maintaining a 3.0 average in formal coursework, Ph.D. students are required to take a qualifying examination, an oral preliminary examination and a final thesis examination. There is no foreign language requirement, but students whose native language is not English are required to demonstrate competence in English.

NUTR 500 Nutritional Sciences Seminar (enrollment each semester and one presentation during program) 1
Select one or both of the following, unless taken during M.S. degree (max 4):
FShN 593 Seminar in Foods and Nutrition
NUTR 590 Disciplinary Seminar
NUTR 510 Topics in Nutrition Research 5-9
or NUTR 561 Advanced Clinical Nutrition
NUTR 511 Regulation of Metabolism 4
Two additional courses in general nutrition 6-8
Research/Project/Independent Study Hours (2 max applied toward degree) 2
NUTR 599 Thesis Research (min/max applied toward degree) 40 or 48

Total Hours 64

Other Requirements 1

Other requirements may overlap

Coursework total: with M.S. degree in Nutritional Science (16) or with MS in other field (24)

Masters Degree Required for Admission to PhD? No, but Masters level requirements must be met (32 additional hours min)
Qualifying Exam Required Yes
Preliminary Exam Required Yes
Final Exam/Dissertation Defense Required Yes
Final Exam/Dissertation Defense Required Yes
Minimum GPA: 3.0

Philosophy

www.philosophy.illinois.edu/

Chair of the Department: Kirk Sanders
105 Gregory Hall
810 South Wright Street
Urbana, IL 61801
(217) 333-2889
phildept@illinois.edu

Major: Philosophy
Degrees Offered: M.A. and Ph.D.
Graduate Concentration: Medieval Studies (p. 811) (available to all degrees)

Joint Degree Program: Doctor of Philosophy (Ph.D.) in Philosophy and Juris Doctor (J.D.) in Law (p. 775) through joint Law and Philosophy program (http://www.philosophy.illinois.edu/graduate/prospective/jd)

Joint Degree Program: Doctor of Philosophy (Ph.D.) in Philosophy and Doctor of Medicine (M.D.) through the Medical Scholars Program (https://www.med.illinois.edu/mdphd)

Graduate Programs

The normal program of graduate study in philosophy is directed toward the Ph.D. The M.A. degree is awarded after completing Stage One. Only under exceptional circumstances and without any commitment of financial aid, students may be allowed to seek only the Master of Arts degree. This happens only rarely. Students seeking solely an M.A. degree are encouraged to apply elsewhere.

Admission

The Graduate College admission requirements apply. Applicants should have had a course in symbolic logic and general courses in the history of ancient and early modern philosophy. Students deficient in these areas may be admitted, but they are required to remedy their deficiencies by taking such courses in their first year. Applicants should also have done some coursework in such central areas of philosophical inquiry as ethics and the theory of knowledge. All applications for admission must be supported by three letters of recommendation from persons qualified to comment on the applicant's aptitude for graduate study in philosophy. All applicants are also required to take the general aptitude portion of the Graduate Record Examination (GRE) and to submit their scores. They are further required to submit a sample of their written work in philosophy (10-20 pages).

International applicants whose native language is not English must take the Test of English as a Foreign Language (TOEFL) and submit their scores; a score of at least 600 on the paper-based test (115 on the computer-based test) is required for regular admission. In addition, these students must demonstrate competence in oral English before they will be allowed to assist as preceptors for the department, as described in the information for teaching assistants. (http://cte.illinois.edu/testing/oral_eng/main.html)

The deadline for applications is January 1 for admission in the following fall semester. Students are not normally permitted to start the program in the spring semester. For additional information see the department's information for prospective graduate students (http://www.philosophy.illinois.edu/graduate/prospective).

Language Requirement

Every student must demonstrate competence in one of the four basic philosophical languages (French, German, Latin, or Greek) or else satisfy an alternative requirement (as described below), before advancing to the Third Stage of the program. In the case of French this may be done by passing FR 501 with a grade of B or better or by passing an examination administered by the Department of French. In the case of German this may be done by passing GER 501 with a grade of B or better or by passing an examination administered by the Department of German. In the case of Latin this may be done by passing with a grade of B or better any LAT course at the 300-, 400-, or 500-level (with the exception of LAT 471, LAT 475, and LAT 478). In the case of Greek this may be done by passing with a grade of B or better any GRK course at the 400- or 500-level (with the exception of GRK 403 and GRK 404). Alternatively students may pass a proficiency examination in Latin or Greek administered by the Department of the Classics, the form of which must be approved by the Director of Graduate Studies.

To substitute a language other than one of the basic four, a student must first obtain approval of his or her adviser and of the Graduate Program Committee. Such approval normally will be granted only where the language is directly relevant to the student’s work in philosophy.

The student may petition the Graduate Program Committee to replace the language requirement by an approved program of study in her or his area of research. This petition must include a written justification by the student or the advisor. If written by the student, the justification must be approved by the student’s advisor. This program of study should be deemed more useful to the student’s research than a study of one the philosophical languages. It may, for example, involve intensive study of specific methods that will greatly enhance the student’s research, such as scientific, mathematical, or...
statistical methods, or it may involve obtaining crucial knowledge of some field outside of philosophy, such as concentrated studies in law, psychology, or religion.

**Medical Scholars Program**

Students in the Medical Scholars Program (https://www.med.illinois.edu/mdphd) are expected to fulfill all the degree requirements of both the College of Medicine and the second discipline. At their discretion, some Ph.D. programs allow a limited number of medical school classes (up to 12 hours) to count toward completion of the graduate degree. Faculty advisors from the medical school and from the graduate units help students set realistic long-term study plans that integrate the two curricula. Students enrolled in the Ph.D.-M.D. program take an average of eight years, including summers, to complete both degrees. The first year of the program is typically spent meeting requirements of the Philosophy degree.

**Graduate Teaching Experience**

Although teaching is not a general Graduate College requirement, experience in teaching is considered an important part of the graduate experience in this program.

**Financial Aid**

Students admitted to the Ph.D. program are offered financial aid, in the form of fellowships or assistantships, which cover living expenses and include a waiver of tuition and service fees. This aid will usually be continued for up to five years provided the student is making normal progress. Further details are qualifications are given in the department’s graduate regulations (http://www.philosophy.illinois.edu/graduate/current/regulations).

**Master of Arts in Philosophy**

The M.A. degree is awarded after completing Stage I. Students may not apply to the M.A. degree program. Students qualify for the M.A. degree by earning at least 32 hours of graduate credit with at least a 3.25 grade point average (A = 4.0), as specified below.

| Hours in regularly scheduled courses (excluding PHIL 583 and PHIL 590) | 24-32 |
| PHIL 590 Directed Research | 0-8 |
| or PHIL 583 Individual Topics |  |
| Total Hours | 32 |

**Other Requirements**

Other requirements may overlap

| Minimum Number of 500-level Hours Required Overall (excluding 583 and 590) | 12 |
| Minimum GPA: | 3.25 |

For additional details and requirements refer to the department’s Graduate Program Regulations (http://www.philosophy.illinois.edu/grad) and the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).

**Doctor of Philosophy in Philosophy**

A course distribution requirement: Two graduate-level courses must be taken in each of the department’s main areas of concentration: value theory, history of philosophy, and metaphysics-epistemology-philosophy of mind. (Some hours may be completed during Stage I)

Students must demonstrate competence in symbolic logic, either by passing an approved course in the subject or by passing a proficiency examination administered by the department.

| Regular Seminars (Some hours may be completed during Stage I) | 12-24 |
| Minor area outside of Philosophy (max hours allowed 8, unless an extra-departmental minor is declared and fulfilled, then max 16) Amounts over 8 require approval | 0-16 |
| Language Requirement: Students must demonstrate competence in one of the four basic philosophical languages: German, French, Greek, or Latin. See the department for details. | 0 |

| PHIL 599 Thesis Research (16 min applied toward degree) | 16 |
| Total Hours | 64 |
Other Requirements

Other requirements may overlap

Minimum Hours Required Within the Unit: 48
The max. limit of PHIL 583 (Independent Study) hours that can be used to satisfy Ph.D. requirements: 12
Participation in a dissertation seminar is required each term in the Third Stage, as is participation in one regular seminar per year.
Masters Degree Required for Admission to PhD? No, but Masters level requirements must be met (32 hours)
Qualifying Exam Required No
Preliminary Exam Required Yes
Final Exam/Dissertation Defense Required Yes
Dissertation Deposit Required Yes
Minimum GPA: 3.25

1 For additional details and requirements refer to the department’s Graduate Program Regulations (http://www.philosophy.illinois.edu/grad) and the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).

The Ph.D. program has three stages. The first stage is completed when a student has earned 32 hours of graduate credit, or it may be deemed completed if the student has received a master's degree in philosophy elsewhere. The second stage is completed when the student has earned 32 additional hours (or, having received a master's degree previously, has earned and has been allowed transfer credit for a total of 64 hours) and has satisfied the preliminary examination requirement, a course distribution requirement, a foreign language requirement, and a logic requirement. Of the 64 hours required for the Ph.D. (beyond the MA level requirements), only 12 can be in Independent Study courses (PHIL 583), and at least 20 must be earned in regular seminars. The third stage is completed when the student has earned another 32 hours of graduate credit (usually in seminars and thesis research) and has satisfied the thesis and doctoral oral examination requirements (see below). Also required in the Third Stage is participation in a dissertation-writing seminar each term and participation in one regular seminar per year. Third-stage regular seminar participation is typically for 2 hours credit, thus totaling 4 hours beyond the 20 hours (min) of seminars required for Stage 2. A minimum grade point average of 3.25 (A = 4.0) is required for the Ph.D. degree. Candidates must also satisfy the Graduate College residence requirement.

Candidates need not take work in a minor field outside the department. In cases in which advanced study in philosophy would be enhanced by study in a related discipline, students may use such related coursework to satisfy the credit requirements for the degree, limited to 8 hours. If a student wishes the work to count as an extra-departmental minor, the minimum number of hours accepted is 8 and the maximum is 16.

After satisfying these requirements, a candidate for the Ph.D. must submit an acceptable dissertation and pass a final, oral examination on the thesis. The acceptability of the thesis is judged and the final examination administered by the candidate's doctoral committee.

Ph.D. candidates who wish simultaneously to pursue advanced degrees in other disciplines (e.g., medicine or law) are permitted to do so.

Joint Degree Program

For the Ph.D.-J.D. joint degree program (http://www.philosophy.illinois.edu/graduate/prospective/jd), the specific requirements of both Philosophy and Law programs must be met. But 16 hours of Law courses can be counted toward the Philosophy, and 16 hours of Philosophy courses can be counted toward the Law degree. Students enrolled in the Ph.D.-J.D. program take an average of seven years to complete both degrees. This program allows an exception to the simultaneous conferral rule in that the J.D. may be conferred prior to completion of the Ph.D. degree. The first year of the program is typically spent meeting requirements of the Philosophy degree.
Physics

physics.illinois.edu

Head of the Department: Dale Van Harlingen
Associate Head for Graduate Programs: Lance Cooper
227 Loomis Laboratory
1110 West Green Street
Urbana, IL 61801-3080

E-mail: grad@physics.illinois.edu

Major: Physics
Degrees offered: M.S. and Ph.D.

Major: Teaching of Physics
Degrees offered: M.S.

Medical Scholars Program: Doctor of Philosophy in Physics (Ph.D.) and Doctor of Medicine (M.D.) through the Medical Scholars Program (https://www.med.illinois.edu/mdphd)

Graduate Degree Programs

The Department of Physics is actively developing a new paradigm for graduate physics education and research for the 21st century, aimed at enhancing interdisciplinary interactions and creating an integrated approach to educational and research training. Advanced degrees offered in physics are the Master of Science and the Doctor of Philosophy. Outstanding graduate research opportunities are available in many subdisciplines of physics, including:

- condensed matter physics
- high energy and nuclear physics
- astrophysics
- atomic
- molecular and optical physics
- complex systems
- quantum information
- biological physics

Students may select experimental, theoretical, or computational thesis projects. Multidisciplinary projects are especially encouraged, and, with the consent of other departments, students may earn master's degrees in areas such as materials science and engineering, or computer science, simultaneously with their Ph.D. degrees in physics. Opportunity also exists for specializing in:

1. computational science and engineering and
2. energy and sustainability engineering within the department's graduate programs via the Computational Science and Engineering (CSE) Option (http://cse.illinois.edu/students/graduate-program) and the Energy and Sustainability Engineering (EaSE) Option (http://ease.illinois.edu).

The Medical Scholars Program (https://www.med.illinois.edu/mdphd) permits highly qualified students to integrate the study of medicine with study for a graduate degree in a second discipline, including Physics.

Admission

Admission to the physics graduate program requires an outstanding record of accomplishment in an undergraduate physics program and clear evidence of considerable academic promise, as judged by test scores, letters of recommendation, and strong intellectual achievements. A bachelor's degree or its equivalent from an accredited college or university in the U.S. or an approved institution of higher learning abroad, with at least 20 semester hours (30 quarter hours) of intermediate and advanced undergraduate physics course work, is required for admission. Course preparation in electricity and magnetism, optics, mechanics, atomic and nuclear physics, quantum mechanics, mathematical physics, differential equations, and analysis is essential. Any deficiency in these areas may delay degree completion by as much as a year. (Students are expected to make up deficiencies during the first graduate year.)

A minimum GPA of 3.00 (A = 4.00) for the last two years of undergraduate work is required; however, because of space limitations, applicants with GPAs below 3.50 are rarely admitted. Students with prior graduate course work must have a minimum GPA of 3.50 for those courses. All applicants must provide test scores from both the general and the physics tests of the Graduate Record Examination (GRE) (http://www.ets.org).
Graduates of curricula in the physical and biological sciences, mathematics, or computer science may be admitted with limited standing if they are judged to have the necessary aptitudes to profit from graduate work in physics. Such students are admitted to full standing after completing course work to remove deficiencies in physics preparation.

All applicants whose native language is not English must submit a minimum TOEFL (http://www.toefl.org) score of 79 (iBT), 213 (CBT), or 550 (PBT); or minimum International English Language Testing System (IELTS) (http://www.ielts.org) academic exam scores of 6.5 overall and 6.0 in all subsections. Applicants may be exempt from the TOEFL if certain criteria (http://grad.illinois.edu/admissions/instructions/04c) are met. For those taking the TOEFL or IELTS, full admission status (http://grad.illinois.edu/admissions/instructions/04c) is granted for scores greater than 102 (TOEFL iBT), 253 (TOEFL CBT), 610 (TOEFL PBT), or 6.5 (IELTS). Limited status (http://grad.illinois.edu/admissions/instructions/04c) is granted for lesser scores and requires enrollment in English as a Second Language (ESL) courses (http://linguistics.illinois.edu/students/esl/guidelines) based on an ESL Placement Test (EPT) taken upon arrival to campus.

A few applicants may be admitted for the spring semester, in addition to the customary fall semester admissions. See the Physics graduate admissions Web site (http://physics.illinois.edu/grad/apply.asp) for lists of deadlines and application materials.

Students may apply to the Medical Scholars Program prior to beginning graduate school or while in the graduate program. Applicants to the Medical Scholars Program must meet the admissions standards for and be accepted into both Physics and the College of Medicine. An application to the Medical Scholars Program will also serve as the application to the Physics graduate program. Further information on this program is available by contacting the Medical Scholars Program (125 Medical Sciences Building, (217)-333-8146, mspo@illinois.edu).

**Medical Scholars Program**

Students in the Medical Scholars program must meet the specific requirements for both the medical (https://www.med.illinois.edu/mdphd) and graduate degrees. On average, students take eight years to complete both degrees. The first year of the combined program is typically spent meeting requirements of the Physics graduate degree.

**Faculty Research Interests**

The research specialties of Physics faculty fall into the broad categories described in the graduate programs section of this document. Details of each individual's specific interests are available at the department's faculty research Web site. (http://physics.illinois.edu/research) Included are faculty whose primary appointments are in other departments but who supervise Physics students.

**Facilities and Resources**

The Department of Physics offers world-class research facilities in traditional areas of physics, including condensed matter, nuclear, particle, and optical physics, as well as state-of-the-art instruments for quantum information, nanoscale science and engineering, and biological physics. For a complete description of physics facilities, please consult the department's facilities Web site (http://physics.illinois.edu/research/shops.asp).

**Financial Aid**

Fellowships, research assistantships, and teaching assistantships (all of which include waivers of tuition and some fees) are available for the majority of admitted students. All applicants, regardless of U.S. citizenship, whose native language is not English and who wish to be considered for teaching assistantships must demonstrate spoken English language proficiency (http://grad.illinois.edu/admissions/taengprof.htm) by achieving a minimum score of 24 on the speaking subsection of the TOEFL iBT or 8 on the speaking subsection of the IELTS. For students who are unable to take the iBT or IELTS, a minimum score of 4CP is required on the EPI test (http://cte.illinois.edu/testing/oral_eng/epi_overview.html), offered on campus. All new teaching assistants are required to participate in the Graduate Academy for College Teaching (http://cte.illinois.edu/programs/ta_train.html) conducted prior to the start of the semester.

- Master of Science in Physics (p. 858)
- Master of Science in Teaching of Physics (p. 859)

**Doctor of Philosophy in Physics**

Admission to Ph.D. candidacy is based on the faculty's evaluation of a student's potential to carry out independent research, scholastic competence as evidenced by grades and class ranks, and satisfactory performance on the qualifying examination. Although there is no formal Ph.D. core curriculum, all candidates are expected to complete courses necessary for their research, which may include advanced courses in:

- mechanics
- electromagnetism
- light
- atomic physics and quantum mechanics
- nuclear and particle physics
- condensed matter physics
• mathematical or computational methods for physics

In addition to the required course work for the Ph.D., a candidate must also:

1. pass the qualifying examination, an in-depth test of classical mechanics, electricity and magnetism, statistical physics, and quantum mechanics (in recent years, the overall success rate on the qualifying examination has averaged 88 percent);
2. pass a preliminary examination, which consists of a brief paper on the proposed thesis topic and an oral examination that tests familiarity with the background literature and understanding of the physics underlying the thesis project;
3. complete a thesis that demonstrates the capability to produce independent research on an original topic; and
4. pass a final oral examination by a faculty committee on the results of the research project. Proficiency in a language other than English is not required.

Frequently, PHYS 597, taken prior to the preliminary exam, marks the beginning of a research relationship with a faculty member which can be formally continued as PHYS 599.

Major: Plant Biology
Degrees Offered: M.S., Ph.D.

Major: Plant Biotechnology
Degrees Offered: M.S.
Graduate Concentration: Professional Science Master's (p. 869) (M.S. only)

Graduate Degree Programs

The Department of Plant Biology offers three graduate programs leading to the Master of Science degrees (the traditional thesis option, the non-thesis option, and the non-thesis Plant Biotechnology M.S. with Professional Science Master’s (PSM) concentration), and a Doctor of Philosophy degree. It also participates in an interdepartmental program leading to a doctoral degree: the Program in Ecology, Evolution and Conservation Biology (http://sib.illinois.edu/peec). In addition, students can participate, during their degree programs, in several non-degree granting interdepartmental programs and interest groups, such as the Cell and Molecular Biology Training Program (http://www.life.illinois.edu/cmbtg/Program) and the Systematics and Biodiversity Group (http://www.life.illinois.edu/programs/SBE).

The Department teaches and conducts research in basic plant biology. Its focus is integrative:

- biological processes are investigated at multiple levels of organization using molecular
- biochemical
- physiological
- ecological approaches

Areas of specialization within the department include:

- biochemistry
- biodiversity
- bioinformatics
- cell biology
- conservation biology
- development
- ecology
- environmental physiology
- evolution
- genetics
- genomics
- modeling
- molecular biology
- mycology
- paleoecology
- photosynthesis
- phytochemistry
- population biology
- biotechnology
- systems biology
- systematics
Graduate students acquire reasonable breadth in their overall biological and professional training as well as expert-level depth in their areas of specialization. Students in the Illinois PSM in Plant Biotechnology program emphasize plant-related disciplines that support biotechnological areas, including genetics, genomics, biochemistry, physiology and cell and molecular biology.

The Plant Biology Departmental website (http://www.life.illinois.edu/plantbio) provides additional information about the department, its admissions procedures, degree requirements, facilities, and the research interests of its faculty. The Professional Science Master's in Plant Biotechnology website (http://www.life.uiuc.edu/plantbio/psm) provides information about the PSM requirements and industry linkages.

**Admission**

Prospective students for thesis-option graduate studies in Plant Biology are encouraged to identify faculty member(s) whose research specialty(ies) most closely coincide(s) with their interests and to correspond directly with them. Acceptance for thesis degrees is based on the applicant's academic achievement and research potential. Acceptance for the non-thesis option in Plant Biology is based on the applicant's academic achievement. Admission into the Plant Biotechnology PSM concentration is based on the applicant's academic achievement and expressed interest in non-academic careers that blend science and business. While departmental requirements do not specify particular courses as prerequisites for admission, applicants should have had an undergraduate degree in biology or related sciences. Admission to the graduate program requires an undergraduate grade point average of at least 3.0 (A = 4.0). Graduate Record Examination (GRE) scores (or approved equivalent) are required; however no minimum scores are specified for admission. An advanced subject test is recommended. International students should have a Test of English as a Foreign Language (TOEFL) score of 600 or above on the paper-based test, or 250 or above on the computer-based test (cBT) or 102 or above on the internet-based test (iBT).

**Facilities and Resources**

The Plant Biology Department's diverse state-of-the-art research laboratories are located in Morrill Hall, Edward R. Madigan laboratory and the Institute for Genomic Biology. In addition, the Department maintains extensive plant growth-chamber facilities, environmentally controlled greenhouses, a conservatory with live teaching and research collections, herbaria, a center for paleobotanical collections and diverse local and remote field sites including SoyFACE (http://soyface.illinois.edu). The University also offers exceptional research support services including the Roy J. Carver Biotechnology Center (http://www.biotech.illinois.edu), service laboratories in the Institute for Genomic Biology (http://www.igb.illinois.edu/facilities-services) and the Beckman Institute (http://www.beckman.illinois.edu) and the University Library (http://www.library.illinois.edu), one of the world's largest.

**Financial Aid**

Fellowships, teaching assistantships, and research assistantships are available for qualified MS and PhD students in Plant Biology. Fellowships in these programs are awarded on a competitive basis. Illinois PSM students may not hold assistantships or other tuition and fee waiver-generating appointments; statutory waivers and tuition scholarships are accepted.

- Master of Science in Plant Biotechnology, Professional Science Master's Concentration (p. 863)
- Master of Science in Plant Biology (p. 862)

**Doctor of Philosophy in Plant Biology**

Candidates for the Ph.D. are expected to complete a minimum of 96 hours of graduate coursework and research. A formal evaluation (the Two-Year Review) of the student's academic progress is made prior to the end of the second year of study (end of Stage I). Departmental approval must be obtained at this juncture in order to continue in the graduate program. A Preliminary Examination is taken during the second year (if the student entered with an M.S. degree) or the third year (if the student entered with a B.S. degree) (end of Stage 2). This consists of an oral examination of general knowledge in three of nine broadly-defined areas of plant biology and defense of a written research proposal on the thesis research topic prepared by the student. Experience in teaching is considered a vital part of the graduate program and is required as part of the academic work of all Ph.D. candidates. The final stage (Stage 3) of the program consists of preparing an acceptable thesis based on independent research designed in consultation with a faculty advisor and approved by a graduate faculty thesis committee. A final oral examination, in which the student defends the thesis, a public seminar, and deposit of an approved thesis complete the program. The Ph.D. degree program is expected to be completed within five years. See the Plant Biology Department's online Graduate Student Handbook (http://www.life.illinois.edu/plantbio/gradhandbook.htm) for a detailed description of the Stages and Requirements of the Ph.D. program.

Other Requirements

Other requirements may overlap

Teaching: at least the equivalent of one semester as a half-time teaching assistant
Masters Degree Required or Admission to PhD? No, but Masters level requirements (32 hours minimum) must be met in order to enter State 2 of Ph.D. program.
Preliminary Exam Required: Yes, at the end of State 2, in order to enter Stage 3
Final Exam/Dissertation Defense Required: Yes, at end of Stage 3
Dissertation Deposit Required: Yes, at end of Stage 3
Minimum GPA: 3.0

For additional details and requirements, please refer to the Plant Biology Department's online Graduate Handbook (http://www.life.illinois.edu/plantbio/gradhandbook.htm) and the University's Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).

Master of Science in Plant Biology

Thesis Option

Plant Biology Thesis option: The requirement of a thesis for the M.S. degree in Plant Biology is determined in consultation with the candidate's adviser. The program is normally completed within two years. Candidates are expected to complete at least 32 semester hours of graduate coursework and research agreed upon with a faculty adviser.

Course hours distributed among three of the following areas: anatomy, biochemistry, development, ecology, evolution, genetics, molecular biology, physiology, and systematics (4 of these hours must be outside the immediate research interests of the student) 12
Electives in consultation with and by permission of advisor 12-20
PBIO 599 Thesis Research (8 max applied toward degree) 8

Total Hours 32

Other Requirements

Master of Science in Plant Biotechnology, Professional Science Master's Concentration

Students in the Plant Biotechnology PSM typically complete the program in 16 months, consisting of 3 full-time, on-campus semesters and a summer internship. The 42 credit hour curriculum requires a minimum of 32 semester hours of approved science coursework determined in consultation with the candidate’s Plant Biology adviser. As a result of approved non-thesis research and team industry projects, students may apply a maximum of 6 semester hours of IB 590 Individual Topics credit toward their science coursework. The PSM concentration requires 10 semester hours of business courses approved by the Illinois PSM Program. PSM 555, PSM 501, PSM 502, and PSM 503 are required and may be taken for 0 or 1 credit hour, but cannot be applied to the required hours for either the science or business curriculum. Enrollment in PSM 555 is required in the summer term during which the internship is completed; PSM specific summer tuition is assessed. Students must enroll full-time in the fall and spring terms (12 or more hours).

Major: Political Science
Degrees Offered: M.A., Ph.D.
Graduate Concentrations: Civic Leadership (M.A. only), African American Studies (p. 511) (available to all)

Major: Public Administration
Degrees Offered: M.A.

Joint Degree Program: Political Science and Law (p. 775)
Degrees Offered: M.A. with Civic Leadership concentration and J.D.

Joint Degree Program: Political Science and Law (p. 775)
Degrees Offered: Ph.D. and J.D.

Medical Scholars Program: Doctor of Philosophy (Ph.D.) in Political Science and Doctor of Medicine (M.D.) through the Medical Scholars Program (https://www.med.illinois.edu/mdphd)

Graduate Degree Programs

The Department of Political Science offers graduate programs leading to the degrees of Master of Arts and Doctor of Philosophy. Students are not admitted to the master's degree program in Political Science, except for the Civic Leadership concentration. The department is not accepting applications to the Public Administration program.

Admission

Admission to the Ph.D. Program

The Graduate College admission requirements apply. The student should have a minimum of 20 hours of undergraduate work in political science and cognate disciplines such as economics, psychology, finance, sociology, or history. All applicants are required to submit Graduate Record Examination (GRE) scores, a personal statement, and an example of written work. Applicants whose native language is not English must submit the TOEFL iBT or IELTS score. The Ph.D. program typically admits students for the fall semester. Application deadline is January 1.

Admission to the Master of Arts with Concentration in Civic Leadership

Admission is restricted to students who were accepted to the Civic Leadership Program as undergraduates at the University of Illinois. Application deadline is January 1. Applicants who wish to obtain a joint MA-JD degree program must apply separately for admission to the Law School.

Medical Scholars Program

The Medical Scholars Program permits highly qualified students to integrate the study of medicine with study for a graduate degree in a second discipline, including Political Science. Students may apply to the Medical Scholars Program prior to beginning graduate school or while in the graduate program. Applicants to the Medical Scholars Program must meet the admissions standards for and be accepted into both the doctoral graduate program and the College of Medicine. Students in the dual degree program must meet the specific requirements for both the medical and graduate degrees. On average, students take eight years to complete both degrees. Further information on this program is available by contacting the Medical Scholars Program, 125 Medical Sciences Building, (217) 333-8146 or at www.med.illinois.edu/msp.

Graduate Teaching Experience

Although teaching is not a general Graduate College requirement, experience in teaching is considered an important part of the graduate experience in this program and is essential for students whose career goals include college teaching.
Financial Aid

Students accepted into the department's Ph.D. program are eligible to apply for financial aid. Most incoming students with good credentials and continuing students demonstrating satisfactory progress will receive some type of financial aid, but the type and amount will vary. The Department of Political Science provides, on a competitive basis, aid packages up to $22,000, plus waivers of tuition and some fees. Financial aid is usually a combination of fellowship money and assistantships. Limited amounts of aid are also available for dissertation field research, internships, and the presentation of papers at professional meetings.

- Master of Arts in Political Science (p. 867)
- Master of Arts in Political Science, Civic Leadership Concentration (p. 868)

Doctor of Philosophy in Political Science

The course of study leading to a Ph.D. in Political Science requires a minimum of three years of full-time study, culminating in the successful defense of a doctoral dissertation. A minimum of 96 graduate hours of academic credit is required, 32 of which may be graduate hours of dissertation research. At least 64 of the 96 graduate hours must be taken in residence. A grade of B or better is required in all courses.

In addition to meeting Graduate College requirements, the Department of Political Science requires that students complete a “scope and methods” sequence, acquire proficiency in analytic skills, and demonstrate expertise in several subfields within the discipline. The progress of doctoral candidates is monitored at various points in the program. In addition to an interim evaluation, students must pass a set of qualifying examinations and present a dissertation proposal. Once the doctoral dissertation is completed, the candidate must successfully complete an oral final defense.

Entering with approved M.S./M.A. degree

Tools of Inquiry: two-course sequence in statistical methods, three additional courses in statistical methods, formal theory or qualitative methods (PS 523 may be taken in partial fulfillment of the Tools of Inquiry requirement, providing it is not also used to satisfy the Scope and Methods requirement).

### Joint J.D. in Law and Ph.D. in Political Science

A joint J.D. and Ph.D. in International Relations is an option for students. Students must be admitted separately to each program as a joint degree candidate. To receive the joint J.D./Ph.D. in International Relations, students must satisfy all existing requirements for the Ph.D. in Political Science, including major and minor field course requirements, scope and methods sequence, tools, qualifying examinations, dissertation design seminar, and dissertation project. Joint degree students would be allowed to count 16 hours of law credit toward their Ph.D. Joint degree students would elect International Relations as their major area, and up to 8 hours of law school course credit would count toward this area. In addition, joint degree students will be permitted to select “Law” as their minor field, using 8 hours of law credit to satisfy minimum course requirements, provided such credit is from a course outside the international law subfield (e.g., American constitutional law); this presents a new option for international relations students who otherwise would have to select American politics, comparative politics, or political theory as a minor field. This program allows an exception to the simultaneous conferral rule in that the J.D. may be conferred prior to completion of the Ph.D. degree.

### Joint J.D. in Law and M.A. in Political Science, Civic Leadership Concentration

The M.A./J.D. joint degree program is a track in the Civic Leadership Program that provides qualified students with the opportunity to complete both degrees in just three years of post-baccalaureate study. Illinois students who have been named Civic Leadership Fellows in the fall of their junior year of undergraduate study, and who have taken the LSAT by the time they are selected as a fellow, are eligible for early admission into the College of Law. Students must fulfill the requirements for the M.A. in Political Science with a concentration in Civic Leadership as detailed above. The College of Law will recognize up to 12 hours of credit taken in fulfillment of the Civic Leadership Program M.A. requirements. In addition, a minimum of 78 hours of Law courses will be required to meet the 90 hours required for the J.D. degree. For information contact the Director, Civic Leadership Program, Department of Political Science.

### Master of Arts in Political Science

Students enrolled in the Ph.D. program can usually earn a Master of Arts in Political Science within three semesters. It entails the completion of 32 graduate hours and the achievement of a 3.0 GPA in all courses taken. A master's paper is required.

**Thesis Option**

Master of Arts in Political Science, Civic Leadership Concentration

Students who have completed undergraduate coursework in the Civic Leadership Program and are admitted into the Graduate College can usually earn a Master of Arts in Political Science, with a Concentration in Civic Leadership within one year. It entails the completion of 32 graduate hours and the achievement of a 3.0 GPA in all courses taken. A master's paper is required, which is fulfilled by the completion of a collaborative project undertaken as part of the Practicum in Civic Leadership.

Only UIUC students who have participated in the undergraduate portion of the Civic Leadership Program are eligible for admission in the graduate concentration in Civic Leadership. For information contact the Director, Civic Leadership Program, Department of Political Science.

Email: PSMdegree@illinois.edu

Graduate Concentration: Professional Science Master's

Graduate Degree Program

The concentration in Professional Science Master's (PSM) provides masters students with a unique learning experience by combining traditional science, technology, or mathematics disciplines with an integrated professional curriculum focusing on core business knowledge and skills. Traditional depth in the disciplinary field coupled with business-related workplace skills and internship experience prepares graduates for careers in business, government, and not-for-profits. Programs are full-time, non-thesis, cohort-based and are designed to be completed in 16 months.

The Professional Science Master's concentration is available in:

- M.S. in Agricultural Production (p. 519)
- M.S. in Bioenergy (p. 560)
- M.S. in Food Science and Human Nutrition (p. 718)
- M.S. in Plant Biotechnology (p. 861)
- M.S. in Technical Systems Management (p. 863)

Admission

Candidates for admission to the concentration and associated Illinois M.S. degree must have a bachelor's degree from an accredited institution equivalent to those from the University of Illinois at Urbana-Champaign. Minimum requirements include a grade point average of 3.0 or higher (A = 4.0) for the last 60 hours of undergraduate work and for any graduate study. Graduate Record Examination (GRE) scores are required of all applicants. Test of English as a Foreign Language (TOEFL) scores vary by program. Admission to one of the eligible degree programs listed above is required, and their admission requirements vary by program and may be more rigorous than the minimums presented here. Transfer credit may not be applied to this program due to the cohort nature of this program.

Financial Aid

Financial assistance in the form of full or partial waiver of tuition and fees – is rarely available to Illinois PSM students (except for statutory waivers). Departments providing assistance that includes waivers must pay Illinois PSM tuition and fees on students’ behalf. Illinois PSM students may be eligible for student loans.

Graduate Concentration in Professional Science Master’s

Specific requirements vary by major degree program, but all programs require a minimum total of 42 graduate hours of work in three areas: a scientific discipline (may include related interdisciplinary fields), business, and an internship.

| Credit within the disciplinary major, as indicated by the specific program | 32 |
| Business curriculum (common across all Illinois PSM Programs) | 10 |
| Industry Seminar Series: | 0 |
| PSM 501 | PSM Industry Seminar I |
| PSM 502 | PSM Industry Seminar II |
| PSM 503 | PSM Industry Seminar III |
| PSM 555 | PSM Internship |
| Total Hours | 42 |

Other Requirements

Other requirements may overlap

Students are not eligible to transfer graduate credit into these programs.
See individual program pages for specific details of disciplinary requirements.

Full-time enrollment (12 credit hours or higher) is required in fall and spring semesters; summer enrollment is required for the internship.

1 The 10 semester hour business curriculum is delivered in partnership with the College of Business, typically in two credit-hour courses. All Illinois PSM students take business courses together as a cohort. To remain responsive, specific courses will vary from year-to-year but are built around themes:
   • Finance
   • Management and marketing
   • Project management
   • Science and regulatory policy
   • Teamwork and leadership

2 For additional details and requirements refer to the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).
Program in Ecology, Evolution and Conservation Biology

sib.illinois.edu/peec/

See School of Integrative Biology (http://sib.illinois.edu)

Director of the Program: C.E. Cáceres
Correspondence and Information: Lisa Smith

Urbana, IL 61801
(217) 333-8208
Fax: (217) 244-1224
E-mail: ljsmith1@illinois.edu

Major: Ecology, Evolution and Conservation Biology
Degrees Offered: M.S., Ph.D.

Graduate Degree Programs

The Program in Ecology, Evolution and Conservation Biology (PEEC) is an interdepartmental program designed to provide individualized training in preparation for careers in these disciplines. Because of the breadth of fields covered by this program, there will be no fixed course requirements other than attendance at the program's seminar series and annual graduate student symposium. Courses taken by a student and the student’s Advisory Committee generally will come from multiple departments. The goal of the program’s regulations is to allow maximum flexibility while providing close supervision, with the outcome of producing scientists who are broadly educated and technically competent in ecology, evolutionary biology and associated disciplines. The program offers M.S. and Ph.D. degrees.

Admission

Prospective candidates must meet the requirements for admission set by the Graduate College of the University of Illinois at Urbana-Champaign. Only applicants who have graduated from an accredited college or university and who hold or will be granted a baccalaureate degree (or its equivalent) comparable in content and completed credit hours to that granted by the University of Illinois will be considered. Applicants must have a minimum grade-point average of 3.0 (A = 4.0) computed from the last two years of undergraduate (and any graduate) work completed. The program will give preference to candidates who hold a degree in biology or a closely related discipline and show promise of excellence in research and teaching. Typically, only students with strong letters of recommendation, high scores on the Graduate Record Examinations and a GPA well above the minimum stated above will be admitted. Demonstration of academic excellence by other means (e.g., extensive field or laboratory research experience) will also be considered. The Graduate Committee will make decisions concerning admission. For students whose native language is not English, the Program requires a minimum paper-based TOEFL score of 613 (257 on the computer-based test or 103-104 on the web-based test).

Financial Aid

Students admitted to the Program are typically offered two years of support for the M.S. degree and five years of support for the Ph.D. Support consists of fellowships, teaching assistantships or research assistantships. Such support typically comes with waiver of tuition, service fees, or both. Continued offers of assistantships or fellowships each academic year will depend on an evaluation of satisfactory progress by the Graduate Committee. Students who require more than two years to complete the M.S. degree or five years to complete the Ph.D. degree must submit a written petition to the Graduate Committee, supported by their Advisor, to be considered for an additional year of support.

Master of Science in Ecology, Evolution and Conservation

All students must register for and attend the weekly PEEC seminar series (IB 546A) each semester in residence. An orientation seminar (IB 546B) must be taken the first fall semester in residence. Excuses because of conflicts must be approved by the Director of the Program. Graduation requires the completion of a thesis or report that is defended. In lieu of a formal thesis and defense, master's students have the option of submitting a research report, which must be approved by the advisor and one other member of the program faculty. Student research will be guided and approved by an Advisory Committee of three faculty from at least two departments, including the Major Advisor who will serve as chair. The director of the program must approve membership of the Masters Advisory Committee.

Course work in three core areas with grades no lower than B or S.

Minimum 500-level Hours Required Overall: 12
Minimum GPA: 3.0

For additional details and requirements refer to the Program's graduate handbook (http://sib.illinois.edu/peec/current) and the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).

Doctor of Philosophy in Ecology, Evolution and Conservation

All students must attend the weekly PEEC seminar series (IB 546). The Director of the Program must approve excuses because of conflicts. An orientation seminar (IB 546B) must be taken the first fall semester in residence.

No later than their second semester in the program, the student in consultation with their Advisor will select members of the student's Advisory Committee, which will meet annually with the student to plan coursework and research and to review and facilitate progress toward the degree. Students will prepare a short written report of their activities during the previous year for consideration by the Advisory Committee. The Advisory Committee will thoroughly consider all aspects of the student's activities, after which the Advisor will provide a written report of progress to the Graduate Committee.

The faculty constituting a student's Advisory Committee must come from two or more departments, comprise a minimum of four members (including the Major Advisor), be familiar with the student's area of research interest, and be approved by the Director of the Program. The chair of the Advisory Committee is typically the Advisor, provided that the advisor is both a member of the University's Graduate Faculty and the Program in Ecology, Evolutionary and Conservation Biology. If this is not the case, the Director of the Program will appoint a chairperson who fulfills these requirements from among the committee membership. The Advisory Committee will be responsible for administering the necessary examinations. No later than their sixth semester in the program, and preferably in their fifth semester before the deadline for submission of a proposal for an NSF Dissertation Improvement Grant (typically, the third Friday in November), doctoral students must take a Preliminary Examination. For this exam, a member of the Advisory Committee other than the major advisor will be appointed chair by the Director of the Program. The first part of the three-hour oral exam will be general and cover the student's three core areas of emphasis. The second part of the exam will be a defense of the research proposal. Two weeks prior to the exam, the student must present to the Advisory Committee a proposal prepared in the format of a proposal for an NSF Dissertation Improvement Grant. It should describe the objectives of the research project, the experimental plan and rationale, the results of pilot studies, a budget, and a tentative timetable for its completion. The student will present evidence of feasibility and significance of the proposal, but the main research for the dissertation shall not have been performed prior to the Preliminary Examination. A detailed report of the exam and a copy of the research proposal shall be submitted to the Graduate Committee. A passing grade qualifies the student as a Ph.D. candidate. A failing grade will require the student to conduct additional research and to repeat the Preliminary Examination no later than the following semester. A second failure will result in dismissal from the program.

Upon completion of a dissertation and the other requirements of the program, the student shall be subject to a Final Examination, which shall consist of a defense of the dissertation. Copies of the completed dissertation, approved by the Advisor, should be submitted to the Advisory Committee at least two weeks prior to the Final Examination. The thesis will be judged in relation to published scholarly work in the field, and students will be encouraged to begin publishing their results before taking their Final Examination. Passing this exam and presentation of the dissertation by the student at a public seminar sponsored by the program qualify the student for the Ph.D. degree. Failure will require the student to conduct additional research and to repeat the Final Examination.

Information listed in this catalog is current as of 11/2014

Psychology

www.psychology.illinois.edu

Head of the Department: David E. Irwin
Director of Graduate Studies: Ranxiao Wang
Admissions Information: Ashley Ramm
309 Psychology Building
603 East Daniel Street
Champaign, IL 61820
(217) 333-2169
E-mail: gradstdy@psych.illinois.edu

Major: Psychology

Degrees offered: M.A., M.S., Ph.D.
Graduate Concentration: Second Language Acquisition and Teacher Education (p. 891) (Ph.D. only)

Medical Scholars Program: Doctor of Philosophy (Ph.D.) in Psychology and Doctor of Medicine (M.D.) through the Medical Scholars Program (http://www.med.illinois.edu/mdphd)

Graduate Degree Programs

The Department of Psychology offers graduate programs leading to the degrees of Master of Science and Doctor of Philosophy. Doctor of Philosophy programs are offered in the following areas of psychology:

- behavioral neuroscience
- cognitive neuroscience
- clinical/community
- cognitive
- developmental
- quantitative
- social-personality
- industrial-organizational
- visual cognition and human performance

A Master of Arts degree is awarded to students in the doctoral program as an intermediate degree. Master of Science programs are offered as terminal degrees in only two areas: personnel psychology and measurement psychology.

Admission

The Graduate College admission requirements apply for all programs. All candidates for admission must have a minimum grade point average of 3.0 (or B) on a 4.0 scale in courses representing the last 60 hours of work completed for the bachelor’s degree. The candidate for admission to the graduate program should ordinarily have the following preparation: a minimum of 15 semester hours in psychology, a laboratory research methods course in psychology, and a course in statistics. Departmental committees also consider Graduate Record Examination (GRE) scores and letters of recommendation. Preference is given to students who have taken mathematics beyond college algebra and to those who have some research experience. Applications for admission to part-time study are usually not approved. Students are accepted only for fall admission. The application deadline is December 10.

In addition to the aforementioned criteria, applicants are evaluated on their supporting documents, career goals, career promise, and research interests. Substantial additional weight is given to the quality and extent of prior research and other relevant experience.

All applicants whose native language is not English or who are from any country other than the US, the United Kingdom, Canada, Australia, or New Zealand (even if they are native English speakers) are required by the University to submit the results of an English language proficiency test. The university will accept the Test of English as a Foreign Language (TOEFL) or the International English Language Testing System (IELTS) to determine admission eligibility.

- The minimum total TOEFL iBT score for admission (including all four sections): 79
- Minimum total TOEFL iBT score for exemption from the English as a Second Language Placement Test (EPT) for admission (including all four sections): 103
- Minimum total IELTS score for admission: 6.5, including a minimum subscore of 6 on all four modules. Students receiving scores below 7 will be required to take the EPT for placement in English as Second Language courses.
In addition to the general requirement for English proficiency testing described above, the University of Illinois is also required by state law and University policy to give teaching appointments only to international graduate students who have more specifically passed an English language SPEAKING proficiency test. Applicants have the following options to satisfy this requirement:

- Minimum score of 24 on the speaking section of the TOEFL iBT
- Minimum score of 8 on the speaking section of the IELTS
- Minimum score of 50 on the TSE
- Minimum score of 5 on the EPI (English Proficiency Interview) test.

International applicants must present documentation for one of the above-listed tests of spoken English at the time of application to the Psychology Department. The University offers an English Proficiency Interview (EPI) for international applicants who do not already have a passing score on one of the other tests of spoken English listed above. The EPI can be administered long-distance via the web. To arrange an EPI session, contact Ashley Ramm at the email address or phone number above.

Refer to www.psychology.illinois.edu (Graduate Program) for additional information about the Department of Psychology’s admission requirements.

Medical Scholars Program

The Medical Scholars Program permits highly qualified students to integrate the study of medicine with study for a graduate degree in a second discipline, including Psychology. Students may apply to the Medical Scholars Program prior to beginning graduate school or while in the graduate program. Applicants to the Medical Scholars Program must meet the admissions standards for and be accepted into both the Department of Psychology and the College of Medicine. Students in the combined program must meet the specific requirements for both the medical and graduate degrees. On average, students take eight years to complete both degrees. Further information on this program is available by contacting the Medical Scholars Program, 125 Medical Sciences Building, (217) 333-8146 or at www.med.illinois.edu/mdphd.

Graduate Teaching Experience

The department requires Ph.D. candidates to gain teaching experience as part of their academic work. Such experience is considered a vital part of the graduate program and usually takes the form of a teaching assistantship. Students have the option of teaching two class sections (50% TA) for one semester or one class section (25% TA) for two semesters in order to meet the requirement.

Faculty Research Interests

The program is designed to prepare students for academic and research-oriented careers. Students become actively involved in research during their first semester, devoting an increasing percent of time toward independent research throughout their graduate careers.

For the most part, we view graduate education as an apprenticeship. Our task is to provide an environment where mature young scholars can gain experience in research as they collaborate with faculty and with other graduate students. The program encourages interdisciplinary study both within psychology and between psychology and other fields. Faculty research interests can be reviewed at: www.psychology.illinois.edu.

Facilities and Resources

Students have everything they need, including personal office space and full access to research, library, and computing services, as well as to a large pool of research participants. The excellent cooperation between divisions in the department and with other units in the University provides access to expertise and methodology in a variety of areas including but not limited to:

- the Psychological Services Center
- the Counseling Center
- the Beckman Institute for Advanced Science and Technology
- the Center for the Study of Reading
- the Institute of Communications Research
- the School of Labor and Employee Relations
- the Family Resiliency Program
- the Neuroscience Program
- the Institute for Genomic Biology
- the Departments of Computer Science
- Educational Psychology
- Linguistics
- Molecular and Cellular Biology and Statistics
- the Colleges of Law and Medicine
Financial Aid
Students generally complete the doctoral degree in 4-6 years, and the Psychology Department makes financial support available to all students in good standing for up to 6 years. The University application form and supplemental application materials provide all the information that is required by the committees administering various funding sources, which include teaching assistantships, research assistantships, and fellowships.

- Master of Arts in Psychology (p. 877)
- Master of Science in Psychology (p. 877)

Doctor of Philosophy in Psychology
The Doctor of Philosophy degree is awarded to candidates who complete an approved program in their area of specialization and meet departmental and Graduate College requirements for the degree. These must include at least 64 or 96 graduate hours of graduate work; satisfactory performance in courses or examinations dealing with quantitative methods and chosen areas of specialization; a master's thesis or equivalent; appropriate advanced courses and seminars in the area of specialization and in related and supporting areas; satisfactory performance on a doctoral qualifying examination; satisfactory performance on an oral preliminary examination; completion of an acceptable Ph.D. thesis; and satisfactory performance on an oral examination in defense of the thesis.

Master of Arts in Psychology

The thesis is expected to be a report of original empirical or library research. The Master of Arts is not designed to prepare a student for a professional position. It is, rather, a step toward the Ph.D. Note that the department does not require that students obtain a master's degree, but a master's-level research report must be submitted to the department as part of the Ph.D. program.

Major: Recreation, Sport & Tourism
Degrees Offered: M.S., Ph.D.

Online Program: Recreation, Sport & Tourism
Degrees Offered: M.S.

Graduate Degree Programs

The Department of Recreation, Sport & Tourism offers programs of study leading to the Master of Science and the Doctor of Philosophy degrees. The Master of Science program educates students about leisure behavior, public parks and recreation systems, sport and tourism, in various private and semipublic settings providing leisure services. The M.S. degree may be undertaken as a terminal professional track program or serve as the first step toward the Ph.D. program. The Ph.D. program is, in general, designed to develop educators and research personnel in the study of leisure behavior, the management of recreation, tourism, and sport systems that provide leisure services, or both.

Admission

The Graduate College admission requirements apply. Specifically, the admission requirements are a minimum grade point average of 3.0 (A = 4.0) for the last two years of undergraduate work and any graduate work completed. The Graduate Record Examination (GRE) is required for all graduate degrees. A minimum score of 610 is required on the paper-based Test of English as a Foreign Language (TOEFL) (253 on the computer-based test). Students are also required to provide a statement of purpose outlining their area of study, and three letters of reference. Preference is given to applicants who will be full-time students and active degree candidates. Students may be admitted for the fall, spring, or summer semesters.

Teaching Experience

Although teaching is not a general Graduate College requirement, experience in teaching is considered an important part of the graduate experience in this program. It is also anticipated that doctoral students will engage in research activities and scholarly communication under the guidance of their Advisor.

Financial Aid

The department offers quarter-time and half-time assistantships in teaching, administration, and research, as well as tuition and fee waivers and the opportunity to apply for fellowships.

Master of Science in Recreation, Sports and Tourism

A candidate for the M.S. degree must spend at least one semester on campus. A full-time student can complete the program in three or four semesters.

Graduate Major: Religion
Degrees Offered: M.A.
Graduate Minor: Religion

Graduate Degree Programs

The Department of Religion offers a Master of Arts in Religion.

Admission

The Graduate College admission requirements apply. Applicants need not have an undergraduate major in the study of religion. But they must demonstrate a capacity to undertake advanced study in this area of inquiry. All applications for admission must be supported by three letters of recommendation from persons qualified to comment on the applicant’s aptitude for graduate study in religion. Applicants are required to submit a sample of their written work. The Graduate Record Examination (GRE) is required. International applicants whose native language is not English must take the IELTS or the Test of English as a Foreign Language (TOEFL) and have their scores submitted to Institution Code #1836, Dept. #00. A score of at least 600 on the paper-based test (PBT), or 250 on the computer-based test (CBT), or 100 on the internet-based test (iBT) is required for admission to this program.

Graduate Teaching Experience

Although teaching is not a general Graduate College requirement, experience in teaching is considered an important part of the graduate experience in this program.

Facilities and Resources

The extraordinary University Library is the department’s main research facility; within it, the History, Philosophy & Newspaper Library, the Rare Book Room, and the area studies libraries (Slavic, Africana, Latin American, Asian Libraries) all serve faculty and students with expert bibliographers and focused collections. Among other special collections that are likely to be useful to our students are Afro-Americana and Women’s Studies; the library is also a major repository for government documents.

Financial Aid

Financial aid is available to many students in the form of fellowships or assistantships. More information is available on the Graduate College web site, http://www.grad.illinois.edu/fellowship/finaid.

Graduate Minor in Religion

The graduate minor in Religion is designed for graduate or professional students in other disciplines who desire to complement their degree program with a study of Religion. The Minor will consist of any coherent set of at least 12 graduate hours of courses that is approved by the Director of Graduate Studies in the Department of Religion. It will include at least one graduate seminar in the Department of Religion. The successful completion of a minor is noted on the student’s transcript. For admission to the program contact the department.

Any graduate seminar in Religion 4
Graduate electives in Religion at the 400 level or above 8

Total Hours 12
Other Requirements

Minimum 500-level Hours Required Overall: 8
In addition to the minor requirements, students must also complete the requirements of their major degree.
Hours counted toward completion of a minor may not also be applied toward any other transcripted credential.

e-mail: jihualde@illinois.edu

Graduate Concentration: Romance Linguistics
Participating Programs: French (Ph.D.), Italian (Ph.D.), Linguistics (Ph.D.), Portuguese (Ph.D.), Spanish (Ph.D.)

Graduate Degree Program

The concentration in Romance Linguistic requires a minimum of 24 hours of graduate-level coursework and it is open to PhD students in the participating Departments.

Admission

Ph.D. students in any of the participating Departments within the School of Literatures, Cultures and Linguistics are admitted into the program with the consent of their advisor and the director of the program.

Graduate Concentration in Romance Linguistics

<td></td>
<td>Two 400- or 500-level courses in the linguistics of other Romance languages and/or in general linguistics, as approved by the student’s advisor</td>
<td>8</td>
</tr>
</tbody>
</table>

Language Requirement:
Reading knowledge or completion of two semester language courses with a minimum grade of B in two Romance languages other than the student’s major language, or an equivalent approved by the Romance Linguistics Advisory Committee. (Language courses taken to satisfy this requirement do not count towards the total number of hours.)

Total Hours 24

Other Requirements

A dissertation or thesis in the area of Romance Linguistics. It must include significant research on at least 2 Romance languages. Whether this requirement is satisfied is determined by the Romance Linguistics Advisory Committee. We expect that a member of one of the cooperating departments external to the student’s home department will normally be a member of the student’s dissertation committee.

In addition to the graduate concentration requirements, students must also complete the requirements of their major degree. All hours taken to complete the Concentration in Romance Linguistics count toward the Ph.D.s in Linguistics, Spanish, Italian or Portuguese. Sixteen of the proposed twenty-four concentration hours will count towards coursework for the Ph.D. in French.

1 For additional details and requirements refer to the department’s graduate concentration program (http://www.medieval.illinois.edu/education) and the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).
Russian, East European, and Eurasian Center

(217) 333-1244
Fax: (217) 333-1582
E-mail: reec@illinois.edu

Major: Russian, East European, and Eurasian Studies
Degrees offered: M.A.
Graduate Minors: Russian, East European, and Eurasian Studies; Balkan Studies

Graduate Degree Programs

The Russian, East European, and Eurasian Center offers a two-year program of language and area studies courses leading to an interdisciplinary Master of Arts degree. The program is designed to meet the needs of students proceeding to disciplinary-based doctoral work and those planning non-academic professional careers with area expertise.

Admission

Prospective graduate students should have completed at least two years of Russian or another language of Eastern Europe or Eurasia. Applicants must submit the Graduate College application for admission, certified transcripts of all undergraduate and graduate work, Graduate Record Examination (GRE) scores (verbal, quantitative, and written), three letters of reference, and a writing sample. International students must submit Test of English as a Foreign Language (TOEFL) scores. All applicants must meet the requirements of the Graduate College. Admission is ordinarily in the fall semester, but occasional exceptions are made for spring and summer admission.

Faculty Research Interests

The faculty (http://www.reeec.illinois.edu/people/faculty) affiliated with the Center represent a broad range of interests and methodological approaches in the social sciences and the humanities, as well as the professional schools.

Facilities and Resources

The Russian, East European, and Eurasian Center was founded in 1959 and designated a National Resource Center by the U.S. Department of Education. It serves as an intellectual and institutional hub for the university community and the public through conferences, lectures, colloquia, visiting scholars, study groups, exhibits, films, and other activities.

The annual Summer Research Laboratory on Russia, Eastern Europe, and Eurasia features special workshops, seminars, lectures, films, and other events, most of which are free and open to the public.

The International and Area Studies Library (http://www.library.uiuc.edu/spx) at the University of Illinois has one of the country’s three outstanding Slavic library collections. The Slavic Reference Service (http://www.library.illinois.edu/spx/srs.html) serves all faculty and students with expert bibliographers.

Language training is provided by the Department of Slavic Languages and Literature (http://www.slavic.illinois.edu) in:

- Bulgarian
- Czech
- Polish
- Russian
- Serbian or Croatian
- Ukrainian
- Old Church Slavonic
Financial Aid

Financial aid is awarded on an academic year basis. All fellowships and assistantships include a stipend plus tuition and service fee waiver. Qualified incoming students who are U.S. citizens or permanent residents are proposed for U.S. Department of Education Foreign Language and Area Studies (FLAS) fellowships.

Qualified students may also be eligible to compete for other fellowships at the campus level. A limited number of graduate assistantships, which include a tuition and fee waiver, are also available to outstanding students. The Center offers a 50 percent graduate assistantship in the area of outreach; research assistantships are sometimes available through the Slavic and East European Library. Information on need-based financial aid may be obtained from the Graduate College Fellowships Office.

Master of Arts in Russian, East European, and Eurasian Studies

Electives outside of Russian, East European, and Eurasian Studies should complement the student's core courses, research, and professional interests. A master's thesis or major research paper is required, to be based on research using primary sources, including sources in the language used to meet the competency requirement.

Other Requirements 1

Other requirements may overlap

Minimum 500-level Hours Required Overall: 12
Minimum GPA: 3.25

1 For additional details and requirements refer to the department’s Graduate Programs (http://www.reeec.illinois.edu/students/grad) and the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).

- Russian, East European, and Eurasian Studies Minor (p. 889)
- Balkan Studies Minor (p. 889)
Students within the REEES M.A. program cannot also pursue a graduate minor in the same field. For additional details and requirements refer to the department's Graduate Programs (http://www.reeec.illinois.edu/students/minors) and the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).
Graduate Minor in Balkan Studies

The Balkan Studies graduate minor is designed for M.A. or Ph.D. students in other disciplines who desire to complement their degree program with interdisciplinary study of the Balkans. Students interested in pursuing the minor must have a minimum of two years of college-level study of a language of the region (e.g., Albanian, Bulgarian, modern Greek, Hungarian, Macedonian, Romani, Romanian, Serbian or Croatian, Slovene, Turkish, Yiddish). A program of study can be tailored to the needs and interests of the individual student in consultation with Center staff; for admission to the program contact the Center.

| LIS 530 | Info Needs of Part Communities | 4 |
| or REES 550 | Seminar in REEE Studies | |

Electives (4 hours at the 500 level) At least 8 graduate hours that relate to the Balkans chosen from a list maintained by REEEC and taken outside of the student's enrolling department.

Language Requirement: A minimum of two years college-level study of a language of the area or equivalent, including but not limited to Albanian, Bulgarian, modern Greek, Hungarian, Macedonian, Romani, Romanian, Serbian or Croatian, Slovene, Turkish, and Yiddish. For professional work in the region or scholarly research on area topics at least three years of relevant language study are recommended.

Students must also submit a research paper primarily on the region.

Total Hours 12

Other Requirements

Other requirements may overlap

For additional details and requirements refer to the department's Graduate Programs (http://www.reeec.illinois.edu/students/grad) and the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).

Graduate Minor in Russian, East European, and Eurasian Studies

The Russian, East European, and Eurasian Studies graduate minor is designed for M.A. or Ph.D. students in other disciplines who desire to complement their degree program with interdisciplinary study of Russia, Eastern Europe, and Eurasia. A program of study can be tailored to the needs and interests of the individual student in consultation with Center staff; for admission to the program contact the Center.

Second Language Acquisition and Teacher Education (SLATE)

www.slate.illinois.edu/

Director: Professor Melissa Bowles
4080 Foreign Languages Building
707 S. Mathews Avenue
Urbana, Illinois 61801
Phone: (217) 333-3390
Fax: (217) 244-8430
E-mail: bowlesm@illinois.edu

Graduate Concentration: Second Language Acquisition and Teacher Education
Participating Programs: Anthropology (Ph.D.), Communication (Ph.D.), Curriculum and Instruction (Ph.D.), East Asian Languages and Cultures (Ph.D.), Educational Psychology (Ph.D.), French (Ph.D.), German (Ph.D.), Italian (Ph.D.), Linguistics (Ph.D.), Portuguese (Ph.D.), Psychology (Ph.D.), Spanish (Ph.D.), Speech and Hearing Science (Ph.D.)

Graduate Degree Program
The concentration in SLATE requires a minimum of 28 hours of graduate-level coursework and is open to PhD students in the participating Departments.

Admission
PhD students in any of the participating Departments are admitted into the program with the consent of their advisor and the Director of the SLATE program. A coursework prerequisite (LING 400 - Introduction to Language Structure) is required, and either it or an equivalent course must be completed prior to admission. If a student believes s/he has completed an equivalent (or more advanced) course than the prerequisite, s/he may submit a petition to the Director of SLATE requesting that course to be substituted for LING 400. Petition forms and instructions, as well as an admission form, are located on the SLATE website, at www.slate.illinois.edu/students/forms/.

</tr>
<tr>
<td>SOC 582</td>
<td>Survey Research Methods II</td>
</tr>
</tbody>
</table>

And other courses as approved by the Director and the SLATE Executive Committee

**Language Requirement**
In order to earn a SLATE concentration, students must demonstrate competence in a second language. For native English speakers, a "second language" can be the second language of research/teaching, or, for those concentrating on ESL as the subject of research and teaching, any second language. For non-native speakers, the proficiency in English that is required for admission is considered more than adequate to fulfill this requirement. This requirement is designed to ensure the full appreciation and understanding of what it means to experience the learning of a second language. Second language competence is assessed in a variety of ways, to be determined by the student's advisor.

**Total Hours** 28
Other Requirements 4

Other requirements may overlap

Courses applying toward fulfillment of the SLATE course requirements must be taken for a minimum of 3 graduate credit hours.

Of the courses required for the SLATE concentration, at least four (4) must be at the 500-level.

A single course may count toward only one requirement. For instance, LING 550: Sociolinguistics II could fulfill either the Psycholinguistics/Sociolinguistics requirement OR be counted as one of the courses toward the Linguistics/Language Structure requirement, but not both.

In addition to the graduate concentration requirements, students must also complete the requirements of their major degree.

In order to earn a SLATE concentration, the student's dissertation topic must be related to one or more aspects of second language studies. The SLATE Executive Committee verifies that the content qualifies.

1 For courses marked with a 1, only some sections satisfy SLATE requirements. Prior to early registration each semester, the SLATE Executive Committee will issue a list of the specific sections being offered the following semester that will count toward satisfying SLATE course requirements. Current and historic lists are maintained on the SLATE website: www.slate.illinois.edu/students/courses/.

2 A student may petition the SLATE Executive Committee to have courses taken elsewhere accepted as equivalents for any of the UIUC courses on the list. Before filing such a petition, students are advised to contact the SLATE Director. At least 5 of the required courses must be taken in residence at UIUC. Instructions for the petition may be found here (http://www.slate.illinois.edu/students/forms/petition).

3 A student may fill out a petition if s/he believes that a course s/he has taken that is not included in the list for a given category could be substituted for one that is on the list. Instructions for the petition may be found here (http://www.slate.illinois.edu/students/forms/petition).

4 For additional details and requirements refer to the department's concentration requirements (http://www.slate.illinois.edu/students/requirements) and the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).

Major: Slavic Languages and Literatures
Degrees Offered: M.A., Ph.D.

Graduate Degree Programs

The Department of Slavic Languages and Literatures offers graduate work leading to the degrees of Master of Arts and Doctor of Philosophy in Slavic Languages and Literatures. Scope of the department includes Bulgarian, Czech, Old Church Slavonic, Polish, Russian, Bosnian/Serbian/ Croatian, Yiddish and Ukrainian.

Admission

Prospective graduate students of Slavic languages and literatures should have had the equivalent of at least three years of college study in the language of their proposed specialization and advanced coursework in that literature. Applicants should apply online (www.grad.illinois.edu/admissions/apply/) and submit a statement of purpose, three letters of recommendation and a writing sample. Original transcripts (with English translations if applicable) showing all undergraduate and graduate work completed should be sent to:

SLCL Graduate Student Services
3070 Foreign Languages Bldg.
707 S. Mathews Ave.
Urbana, IL 61801

Graduate Record Examination (GRE) scores are required for all students. The applicant should ask the ETS to submit scores to institution 1836. Applicants whose native language is not English are required to take the Test of English as a Foreign Language (TOEFL) and must score at least 79 on the internet-based test (iBT); they must also pass the speaking sub-section of the iBT with a minimum score of 24 (see www.grad.illinois.edu/Admissions/instructions/04c).

Graduate Teaching Experience

Experience in teaching is considered a vital part of the graduate program and is expected as part of the academic work of all Ph.D. candidates in this program. Non-native English speakers must first pass a test of their oral English ability (see www.grad.illinois.edu/admissions/taengprof.htm).

Faculty Research Interests

Graduate courses are offered in:

- Bulgarian
- Czech
- Old Church Slavonic
- Polish
- Russian
- Bosnian/Serbian/Croatian
- Yiddish
- Ukrainian languages and literatures

The faculty represent a broad range of interests and methodological approaches, including:

- the intersections of literature and law, medicine, and psychoanalysis
- Russian-Jewish Studies
- intellectual history
- gender, sexuality, and the body
• Stalinist culture
• film history and theory
• Czech revival culture
• nationalism and literature
• Polish modernism, postmodernism, and visual culture
• exilic and emigre literature
• East European pop culture

Facilities and Resources
The University of Illinois at Urbana-Champaign has one of the country’s three outstanding Slavic library collections (http://www.library.illinois.edu/spx). The Illinois Summer Research Laboratory on Russia and Eastern Europe brings to the campus more than one hundred postdoctoral researchers from all over the country every year to take advantage of the Slavic library resources.

Centers, Programs and Institutes
The federally-funded Russian, East European, and Eurasian Center (http://www.reeec.illinois.edu) (established in 1959) is an important funding source for our graduate students and hosts a variety of conferences and speakers every year.

Financial Aid
Students may receive various forms of financial assistance, including University fellowships, Foreign Language and Area Studies (FLAS) Fellowships, teaching assistantships, and research assistantships. There are also opportunities for part-time related work in the Slavic and East European Division of the University Library and elsewhere on the campus. Most students are awarded multiple-year support packages that include a mixture of teaching and fellowship, conditional on satisfactory progress through the program (see www.grad.illinois.edu/admissions/taengprof.htm).

Master of Arts in Slavic Languages and Literature
In addition to fulfilling the requirements of the Graduate College, candidates must pass a written examination. All students must complete 32 graduate hours of advanced courses including at least 20 in Slavic Languages and Literatures. No master's thesis is required.

Other Requirements
Other requirements may overlap

- Minimum Hours Required Within the Unit: 20
- Minimum Number of 500-level Hours Required Overall in Program: 12
- Candidates must pass a written examination
- Minimum GPA: 2.75

1 For additional details and requirements refer to the department's Graduate Programs Web pages (http://www.slavic.uiuc.edu/graduate) and the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).

Doctor of Philosophy in Slavic Languages and Literature
All candidates for the Ph.D. degree must fulfill the general requirements of the Graduate College and must have a reading knowledge of at least one non-Slavic, research related language, most often French or German. A student entering the program with a Master of Arts degree from another department or university must complete SLAV 576. In consultation with the graduate advisor, the Ph.D. student designs an individualized program of study that includes a major field in one Slavic-area literature (any national literature currently offered by the department), study in a second Slavic-area
language, and a minor field. A Ph.D. preliminary examination, consisting of written and oral portions on both major and minor fields, is required. A thesis is required for the degree of Doctor of Philosophy.

Graduate-level courses in a minor field (three courses in a single area, or two courses each in two distinct areas) and may be completed outside the department.

Head of the School: Dean Wynne Korr
1010 W. Nevada St.
Urbana, IL 61801
(217) 333-2261
E-mail: socialwork@illinois.edu

Director of Graduate Studies: Associate Dean Barry Ackerson

Major: Social Work

Degrees Offered: M.S.W., Ph.D.

Graduate Concentrations: Advocacy, Leadership, and Social Change (M.S.W. only), Children, Youth and Family Services (M.S.W. only), Health Care (M.S.W. only), Mental Health (M.S.W. only), School Social Work (M.S.W. only)

Off-Campus Program: Social Work

Degree Offered: M.S.W.

Graduate Concentrations: Children, Youth and Family Services (M.S.W. only), Health Care (M.S.W. only), Mental Health (M.S.W. only), School Social Work (M.S.W. only)

Joint Degree Program: Doctor of Philosophy in Social Work and Master of Public Health (p. 618)

Degrees Offered: Ph.D. and M.P.H.

Joint Degree Program: Master of Social Work and Ph.D. in Social Work

Degrees Offered: M.S.W. and Ph.D.

Graduate Degree Programs

The School of Social Work offers programs leading to the Master of Social Work (MSW) and the Doctor of Philosophy (Ph.D.) degrees. The MSW program is accredited by the Council on Social Work Education (CSWE). The MSW program offers courses on the Urbana campus and off-campus through its MSW Outreach program.

Admission

For the MSW program, applicants must meet the following minimum requirements:

1. a baccalaureate degree from an accredited college or university in the United States or from a recognized institution of higher learning abroad;
2. a grade point average of 3.0 (A = 4.0) or greater for the last 60 semester hours of undergraduate work;
3. 20 hours of completed coursework in a liberal arts core consisting of social and behavioral sciences, the humanities, and biological sciences
4. evidence of personal attributes that are suitable for the profession of social work;
5. a score of 580 or above on the paper-based Test of English as a Foreign Language (TOEFL) (237 or above on the computer-based test) for any applicant whose native language is not English; and
6. provision of a written supplementary statement.

For the Advanced Standing MSW program applicants must meet all the requirements above, and in addition have earned a Bachelor of Social Work (BSW) degree from a CSWE accredited program in the past 7 years.

The Ph.D. program is open to students who demonstrate a potential for research and other scholarly work, who have aptitude for leadership in the field of social work and allied professions, and who have had education in social work or in related professions or disciplines. Admission requirements for the M.S.W. also apply.

MSW Outreach Program

Designed for the working professional who cannot attend a graduate program on the University of Illinois campus, the MSW Outreach Program allows students to remain in their home community while pursuing a graduate degree. The School offers a three-year program of study through its MSW Outreach Program. This program is offered on a rotating basis in various communities across the state. Classes meet in the evening and are taught in traditional as well as on-line/distance learning formats for the first two years. In their third year students come on campus for one semester to complete concentration courses and then complete their two-semester internship back in their home communities. Students complete the same course requirements as students in the on-campus MSW program (see above). Outreach students who qualify may complete a shorter two-year course of study under the Advanced Standing program (see above).
Post-MSW Certification Program

The School offers a post-MSW certification program in School Social Work. Individuals with an MSW from an accredited School of Social Work are eligible to apply for the certification program. Individuals enrolled in the post-MSW certification program take two School Social Work courses and complete a one semester internship in a public school. Upon completion of the program they are eligible for a Type 73 certificate as a School Social Worker from the Illinois State Board of Education (ISBE).

Centers, Programs, and Institutes

The school operates the Children and Family Research Center (CFRC) which has offices on the Urbana campus and in Chicago. The CFRC is dedicated to supporting and conducting research that contributes to keeping children safe, assuring permanent homes for children, and supporting child and family well-being. The CFRC is an independent research center created in 1996 at the School of Social Work by the University of Illinois at Urbana-Champaign and the Illinois Department of Children and Family Services. The Center's mission is to:

1. Study the needs of children and families in their social contexts
2. Monitor the achievement of child welfare outcomes
3. Evaluate service demonstrations and system reforms
4. Audit programs to ensure service quality and efficiency
5. Provide training and consultation to advance best practice
6. Disseminate knowledge on research-based practice

Master of Social Work in Social Work

The master's degree provides specialized study for advanced social work practice. Students take foundation and advanced courses in social work methods, organization and services, research, human behavior and the social environment. A two-semester field placement/internship (minimum 900 hours) in a social service agency is required. A total of 64-72 hours of graduate coursework is required for the M.S.W. degree. The determination of the number of hours needed within the range is determined on a case-by-case basis after considering each student's prior coursework and experience. The curriculum may be completed in 16 to 24 months of full-time study.

Students choose from one of the five concentrations listed below. Students in the ALSC concentration prepare for advanced macro practice which focuses on communities and organizations rather than work with individuals and families. In the ALSC concentration students are prepared to work in either leadership/administration or advocacy/policy. Students in the other four concentrations prepare for clinical practice with individuals, families and groups, and the focus of their clinical practice is in one of the specialized fields of practice (concentrations) below.

   • The ALSC concentration is focused exclusively on macro practice and is not for students interested in direct service.
3. Master of Social Work, Health Care Concentration (p. 906)
4. Master of Social Work, Mental Health Concentration (p. 907)
   • The school social work concentration only has a direct practice option and is not approved for macro practice. Students specializing in school social work must also satisfy Type 73 certification requirements of the Council on Teacher Education and the Illinois State Board of Education.

Advanced Standing MSW

Students with a Bachelors degree in Social Work (BSW) within the past seven years from a social work program accredited by the Council on Social Work Education (CSWE) are eligible for the advanced standing program. This is a three semester/44 hour program that may be completed in 12 months by most students. Students with a concentration in school social work participate in a one semester internship during their second Fall semester for a 3 semester/44 hour program completed in 16 months.

- Advanced Standing MSW, Advocacy, Leadership & Social Change Concentration (p. 900)
- Advanced Standing MSW, Children, Youth and Family Services Concentration (p. 900)
- Advanced Standing MSW, Health Care Concentration (p. 900)
- Advanced Standing MSW, Mental Health Concentration (p. 901)

Course of Study - ALSC, CYFS, Health Care, Mental Health
Fall: 4 advanced social work classes
Spring: 2 concentration classes, 2 advanced social work classes
Summer: field internship 5 days/week (35-36 hours/week), field seminar

Information listed in this catalog is current as of 11/2014
• Advanced Standing MSW, School Social Work Concentration (p. 901)

Course of Study - School Social Work
Fall: 4 advanced social work classes
Spring: 2 concentration classes; 2 advanced social work classes
Fall: field internship 4 days/week (30-32 hours/week), field seminar

Doctor of Philosophy in Social Work

The Ph.D. program is typically a 64 graduate hour program for students who enter with an MSW or other master's degree. The program is interdisciplinary and has a strong research emphasis. The Ph.D. program is organized around five curricular components: (1) seminars in social welfare policy, social work practice theories, and research; (2) research methodology and statistics; (3) an interdisciplinary area of study; (4) qualifying examinations; and (5) the dissertation. While the curriculum focuses on issues of relevance to social work and social welfare policy, students select courses not just in the School of Social Work but also from the full range of graduate courses offered, notably those in educational psychology, human and community development, sociology, labor and industrial relations, and anthropology. Candidates prepare for leadership in teaching, research, policy analysis, development, and implementation.

Major: Sociology

Degrees Offered: M.A., Ph.D.

Graduate Concentration: African American Studies (p. 511) (available to all degrees)

Medical Scholars Program: Doctor of Philosophy (Ph.D.) in Sociology and Doctor of Medicine (M.D.) through the Medical Scholars Program (https://www.med.illinois.edu/mdphd)

Graduate Degree Programs

The Department of Sociology offers graduate programs leading to the Doctor of Philosophy degree.

Admission

The Graduate College admission requirements apply. Students applying for admission should have a background in one of the social sciences, preferably sociology. Applicants must submit Graduate Record Examination (GRE) scores on the tests of verbal ability, quantitative ability, and analytical ability. The advanced test in sociology is optional. A writing sample is required. Non-native English speakers must also submit Teaching of English as a Foreign Language (TOEFL) scores and the Test of Spoken English (TSE) scores. The department does not accept applications to the M.A. program.

Medical Scholars Program

The Medical Scholars Program permits highly qualified students to integrate the study of medicine with study for a graduate degree in a second discipline, including Sociology. Students may apply to the Medical Scholars Program prior to beginning graduate school or while in the graduate program. Applicants to the Medical Scholars Program must meet the admissions standards for and be accepted into both the doctoral graduate program and the College of Medicine. Students in the dual degree program must meet the specific requirements for both the medical and graduate degrees.

On average, students take eight years to complete both degrees. Further information on this program is available by contacting the Medical Scholars Program, 125 Medical Sciences Building, (217) 333-8146 or at www.med.illinois.edu/msp.

Graduate Teaching Experience

Although teaching is not a general Graduate College requirement, experience in teaching is considered an important part of the graduate experience in this program.

Financial Aid

Financial support is provided for most graduate students through teaching assistantships, research assistantships, tuition and fee waivers, fellowships, and other University and external financial support.

Master of Arts in Sociology

The master's degree is granted as an intermediate step on the way to the Ph.D. Students should ordinarily complete the requirements during their second year of residence.

For additional details and requirements refer to the department's graduate handbook (http://www.sociology.illinois.edu/grad/current) and the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).

**Doctor of Philosophy in Sociology**

The graduate program is small and cohesive with a high faculty-student ratio. All students are required to take a small core of required courses in theory and methods. Each term that students are in residence, they participate in at least one of a series of professional development workshops. Doctoral candidates must pass specialty examinations and write and defend a dissertation proposal and final dissertation.

South Asian and Middle Eastern Studies

www.csames.illinois.edu

Director: Valerie Hoffman
Associate Director: Angela Williams
221 International Studies Building
Phone: (217)-244-7331
E-mail: csames@illinois.edu

Major: South Asian and Middle Eastern Studies
Degrees offered: M.A.

Graduate Degree Programs
The Center for South Asian and Middle Eastern Studies offers academic language and area training in the humanities and social science pertinent to South Asia and/or the Middle East, leading to a Master of Arts in South Asian and Middle Eastern Studies.

Admission
Applicants to the graduate program must submit an application for admission online (www.grad.illinois.edu/admissions/apply) and submit a statement of purpose, three letters of reference completed by teachers, advisers, or recent employers, and a 10-20 page writing sample. Original transcripts (with English translations if applicable) showing all undergraduate and graduate work completed. Applicants are expected to have a strong background in at least one South Asian or Middle Eastern language; normally, this means a minimum of two years of formal study. Graduate Record Examination (GRE) scores are required and should be submitted to institution code 1836. Applicants whose native language is not English are required to take the Test of English as a Foreign Language (TOEFL) and must score at least 103 on the internet-based test (iBT) for admission with full standing; they must also pass the speaking sub-section of the iBT with a minimum score of 24 (see www.grad.illinois.edu/Admissions/instructions/04c). Students with a B.A. or B.S. only should apply to the M.A. Applications are accepted for fall admission only.

Financial Aid
The Center makes every effort to assist graduate students in securing financial aid. Financial aid packages usually combine some form of fellowship support with teaching or research assistantships in a manner that allows for both teaching experience and timely completion of the degree. Financial aid may include: University Fellowships, Foreign Language and Area Studies (FLAS) Fellowships, Minority Academic Partnership Plan (MAPP) Fellowships, teaching assistantships, and research assistantships. All awards of financial aid are made following competitive application.

Major: Spanish
Degrees Offered: M.A., Ph.D.
Graduate Concentrations: Medieval Studies (available to all), Romance Linguistics (Ph.D.), Spanish Linguistics (M.A. only), Spanish Literatures and Cultures (M.A. only), Second Language Acquisition and Teacher Education (Ph.D. only)

Medical Scholars Program: Doctor of Philosophy (Ph.D.) in Spanish or Portuguese and Doctor of Medicine (M.D.) through the Medical Scholars Program (https://www.med.illinois.edu/mdphd)

Graduate Degree Programs

The Department of Spanish and Portuguese offers work leading to the Master of Arts and Doctor of Philosophy in Spanish, and in Portuguese, and to a Concentration in Second Language Acquisition and Teacher Education (SLATE) in Spanish, or Portuguese. Fields of specialization are:

- Spanish linguistics
- Romance linguistics
- Spanish literature and cultural studies
- Latin American literature and cultural studies
- Luso-Brazilian literature and cultural studies

A graduate course in Catalan literature is available. Also, the department is affiliated with the Latina/Latino Studies Program. Students in the area of Latina/Latino studies may be able to work with experts in the other disciplines in Latina/Latino studies such as anthropology, history, political science, sociology, and so forth in order to design and complete a program of studies in a particular area.

Admission

The normal prerequisite for a graduate major is an undergraduate major in the corresponding Romance language or consent of the department. Students doing graduate work for any advanced degree in Spanish or Portuguese must possess a command of the language. Applicants should apply online (www.grad.illinois.edu/admissions/apply) and submit a statement of purpose, three letters of recommendation and a writing sample of approximately 10-20 pages in the form of one or two papers, at least one of which must be written in Spanish. Original transcripts (with English translations if applicable) showing all undergraduate and graduate work completed should also be uploaded. Graduate Record Examination (GRE) scores are required of all domestic applicants and should be submitted to institution code 1836. International applicants who have taken the GRE are encouraged to submit their scores as well. Applicants whose native language is not English are required to take the Test of English as a Foreign Language (TOEFL) and must score at least 88 on the internet-based test (iBT); they must also pass the speaking sub-section of the iBT with a minimum score of 24 (see www.grad.illinois.edu/Admissions/instructions/04c). Applications are accepted for fall admission only. Application questions may be directed to SLCL Graduate Student Services at slclgradservices@illinois.edu.

Medical Scholars Program

The Medical Scholars Program permits highly qualified students to integrate the study of medicine with study for a graduate degree in a second discipline, including Spanish and Portuguese. Students may apply to the Medical Scholars Program prior to beginning graduate school or while in the graduate program. Applicants to the Medical Scholars Program must meet the admissions standards for and be accepted into both the doctoral graduate program and the College of Medicine. Students in the dual degree program must meet the specific requirements for both the medical and graduate degrees. On average, students take eight years to complete both degrees. Further information on this program is available by contacting the Medical Scholars Program, 125 Medical Sciences Building, (217) 333-8146 or at www.med.illinois.edu/msp.
Centers, Programs, and Institutes

The option to pursue a concentration in SLATE (Second Language Acquisition and Teacher Education) is available to doctoral students in the department’s programs in linguistics. Candidates selecting this option are required to complete courses in linguistics, psycholinguistics/sociolinguistics, second language studies, theories of second language acquisition, and research methodology in addition to advanced study in linguistics of the particular language. For information about SLATE go to www.slate.illinois.edu.

 Graduate Teaching Experience

Although teaching is not a general Graduate College requirement, this department requires degree candidates to teach as part of their academic work. Such experience is considered a vital part of the graduate program. Non-native English speakers must first pass a test of their oral English ability (see www.grad.illinois.edu/admissions/taengprof.htm).

Financial Aid

The department offers fellowships to outstanding students in the graduate program and regularly provides a large number of teaching assistantships and research assistantships. Graduate College fellowships are available on a competitive basis to qualified candidates; they include dissertation research and travel grants, summer fellowships, and other types of awards. Additional fellowships and grants are available through the Center for Latin American and Caribbean Studies.

Master of Arts

In addition to fulfilling the general requirements of the Graduate College, candidates must pass a comprehensive examination based on coursework and a general reading list.

All students enrolled in the Spanish M.A. program must choose one of two concentrations: Spanish with concentration in Spanish Linguistics; or Spanish with concentration in Spanish Literatures and Cultures.

Areas of specialization offered in Portuguese are Luso-Brazilian literature and cultural studies. Detailed statements of the requirements for each specialization may be obtained from the department.

- Master of Arts in Spanish, Spanish Literatures and Cultures Concentration (p. 915)
- Master of Arts in Spanish, Spanish Linguistics Concentration (p. 914)

Areas of specialization offered in Spanish are:

- Medieval
- Early Modern
- Modern and Contemporary Spanish (Iberian) Studies
• Latin American colonial studies and modern and contemporary Latin American studies
• Spanish linguistics (with various subfield specializations)
• Romance linguistics (with various subfield specializations)

Areas of specialization offered in Portuguese are:
• Luso-Brazilian literary and cultural studies
• Romance linguistics.

We also teach Catalan and Basque.

¹ For additional details and requirements refer to the department’s guidelines for graduate students (http://www.sip.illinois.edu/graduate/guidelines) and the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).

Master of Arts in Portuguese

The M.A. in Portuguese is administered through the Department of Spanish, Italian and Portuguese. Its goal is to provide breadth in the various areas of Luso-Brazilian Literature as well as develop the student’s ability to interpret and analyze literature. It requires a minimum of 32 graduate hours. Students must also successfully complete exams in four areas of Luso-Brazilian literature/cultural studies, chosen in consultation with their advisor.

Course work in Luso-Brazilian literature/cultural studies selected in consultation with advisor. 32

Graduate Degree Programs

www.education.illinois.edu/sped/programs/

The Department of Special Education offers several master's program areas of emphasis and licensure: Infancy and Early Childhood Special Education, Learning and Behavior Specialist I (LBS-I), Learning and Behavior Specialist II (LBS-II), General Master's in Special Education, and Research Practitioner in Special Education. LBS-I is the master's program that prepares teachers for their initial teaching licensure. The other master's programs are available for practicing teachers and other professionals interested in graduate studies. Several of these programs can be completed on a full or part-time basis. In most cases, full-time students take two years to complete their program of studies.

The Department also offers a terminal degree called the Certificate of Advanced Study (C.A.S.) in Special Education. The Certificate of Advanced Studies program is intended for students who desire a planned course of study beyond the master's degree, but do not wish to pursue the type of scholarly work typically expected in a doctoral program.

The Doctor of Philosophy (Ph.D.) degree is a research focused degree and is tailored to the individual. Each candidate works closely with an adviser to develop an integrated course of study reflecting his or her goals in the area of special education. All doctoral students have the opportunity to be involved in research, university teaching, and service to the field of special education during their doctoral studies. Doctoral students typically complete the program in four to five years of full-time resident study. Please see the Department of Special Education www.education.illinois.edu/sped/programs/DocProgram.html for more information about requirements and to view the Department of Special Education Doctoral Advisement Manual.

Admission

www.education.illinois.edu/sped/admissions.html

Applicants must submit a complete application for admission. The application is located on the Graduate College Web site. (http://www.grad.illinois.edu/admissions/applicant.htm) The applicant must submit three letters of reference and transcripts of all previous undergraduate and graduate work. A 3.0 grade point average (A = 4.0) for the last two years of the undergraduate program and for any previous graduate work is a minimum requirement for admission. The applicant must also submit a goal statement indicating his/her interests, experiences, and goals for pursuing graduate study in special education. In addition to the above items, international students must submit a Test of English as a Foreign Language (TOEFL) score (taken within two years of the start of the semester for which the student is requesting admission). International students must have a total iBT score greater than 102 (72nd-79th percentile). The minimum speaking score is 24 (79th percentile). Master's applicants should also submit a Master's Degree Program Special Education Form (http://www.education.illinois.edu/sped/AdmissionsMasters.html). Doctoral program applicants are required to submit a writing sample in addition to their goal statement.

Off-Campus Program

The Department of Special Education offers master's degree programs off-campus in coordination with Federal Personnel Preparation Grant awards. The focus of the off-campus program changes depending on the type of grant award. For example, past emphases have been on behavior intervention and multiple disabilities. For degree requirements, see the Master of Education chart above.

Information listed in this catalog is current as of 11/2014
Medical Scholars Program

The Medical Scholars Program permits highly qualified students to integrate the study of medicine with study for a graduate degree in a second discipline, including Special Education. Students may apply to the Medical Scholars Program prior to beginning graduate school or while in the graduate program. Applicants to the Medical Scholars Program must meet the admissions standards for and be accepted into both the doctoral graduate program and the College of Medicine. Students in the dual degree program must meet the specific requirements for both the medical and graduate degrees. On average, students take eight years to complete both degrees. Further information on this program is available by contacting the Medical Scholars Program, 125 Medical Sciences Building, (217) 333-8146 or at www.med.illinois.edu/msp.

Licensure

The Council on Teacher Education functions as the all-University governance system for licensure. Graduate students who wish to qualify for the council's recommendation for a teaching or administrative license must complete the appropriate graduate program. The Department of Special Education offers graduate-level licensure programs in Learning and Behavior Specialist I (LBS-I), and Learning and Behavior Specialist II (LBS-II). Early Childhood Special Education master’s students who already hold a Professional Educator License who went through an Early Childhood approved program qualify for the Illinois ECSE approval. Students completing the Director of Special Education focus are eligible for the State of Illinois Director of Special Education Endorsement. For specific information about licensure requirements, call the Council on Teacher Education (217-333-7195) or go to www.cote.illinois.edu.

Faculty Research Interests

The Department of Special Education faculty have a variety of research interests. There are multiple opportunities for graduate students to engage in research activities with faculty. For information about specific faculty research interests, current grants, and publications, please visit the Faculty Research Profiles web site education.illinois.edu/sped/Research-Teaching-and-Service.

Facilities and Resources

The College of Education has many resources to assist graduate students through their academic career. The Bureau of Educational Research works with students to secure research funding. The Council on Teacher Education entitles candidates seeking a Professional Educator License and provides accreditation of professional education programs. Each student completing a degree program is assigned a graduate adviser, who is available to assist the student with planning the program of study and determining degree requirements, courses and timelines for degree completion.

Information on University resources can be found at www.grad.illinois.edu/campus-resources.

Financial Aid

Students engaged in graduate study and research at the University of Illinois at Urbana-Champaign find an environment where collaboration among faculty members and students is nurtured and rewarded and where the students’ contributions are recognized and valued. In many cases, this recognition comes in the form of financial awards that enable students to devote concentrated attention to their studies. Virtually all doctoral candidates receive assistantships/ traineeships. Traineeships are grant funded and are available for full-time students pursuing initial teacher licensure and leadership preparation in specific areas. Other financial aid opportunities (e.g., fellowships and assistantships) are available to part-time and other master’s degree students on a competitive basis. Students receiving traineeships, assistantships, and fellowships are exempt from payment of tuition and some fees.

There are opportunities available through the department (http://www.ed.illinois.edu/sped/financialaid.html), the College of Education (http://education.illinois.edu), and the Bureau of Educational Research (http://www.ed.illinois.edu/ber/fundingresources.html). Please note: Graduate students employed as Staff by the University of Illinois at Urbana-Champaign are not eligible for a College of Education Award or Scholarship. Campus opportunities can be found at the Graduate College (http://www.grad.illinois.edu/funding-jobs) and the Office of Student Financial Aid (http://www.osfa.illinois.edu).

- Master of Education in Special Education (p. 919)
- Master of Science in Special Education (p. 920)

Please refer to the departmental website for typical course sequences and licensure requirements (http://www.education.illinois.edu/sped/programs) for specific program emphases.

Doctor of Philosophy in Special Education

Competence in one of four research specialization areas. These courses are required, but hours do not count toward the degree. (The number of hours needed varies.)

Elective Hours: 60

| 500-Level Hours Required: 12 hours (Independent Study included) |
| Minimum Hours Required in Education: 32 hours |

Information listed in this catalog is current as of 11/2014

**Other Requirements**

- Minimum GPA 3.0
- Masters Degree Required for Admission to PhD
- Residency: Maintain continuous full time (12 hours) enrollment until the student takes the preliminary examination and during the graduating semester. Zero hours are required for all other semesters.
- Early Research Requirement
- Qualifying Exams
- Human Subjects Approval
- Preliminary Exam
- Final Exam/Dissertation Defense
- Dissertation Deposit

For additional details and requirements refer to the department's Web site [here](http://www.education.illinois.edu/sped), the College of Education Graduate Programs Handbook [here](http://education.illinois.edu/students/grad_handbook), and the Graduate College Handbook [here](http://www.grad.illinois.edu/gradhandbook).

**Certificate of Advanced Study in Special Education**

The University of Illinois at Urbana-Champaign's College of Education complies with the U.S. Department of Education's Gainful Employment requirements by disclosing information to applicants regarding our Certificate of Advanced Study program. Required information can be found here [here](http://provost.illinois.edu/ProgramsOfStudy/2014/fall/programs/graduate/CAS_SPED/Gedt.html).

If the student does not have a Masters degree from the University of Illinois at Urbana-Champaign, Foundations Courses must be completed:

- Psychological Foundations Courses in Educational Psychology
  - Select one of the following: 4
    - EPSY 400 Psyc of Learning in Education
    - EPSY 401 Child Language and Education
    - EPSY 402 Sociocultural Infl on Learning
    - EPSY 405 Personality and Soc Dev
    - EPSY 406 Psyc of Classroom Management
    - EPSY 407 Adult Learning and Development
    - EPSY 408 Learn and Human Dev wi Ed Tech
    - EPSY 430 Early Adolescent Development
    - EPSY 490 Developments in Educ Psyc
    - OR EPSY 485 for 2 hours plus 2 hours of a previously named EPSY course

- Philosophical and Social Foundations Courses in Educational Policy Studies
  - Select one of the following: 4
    - EPS 400 History of American Education
    - EPS 401 History of Educational Ideas
    - EPS 402 Asian American Education
    - EPS 403 European Education to 1600
    - EPS 404 European Education since 1600
    - EPS 405 Historical & Social Barriers
    - EPS 410 Philosophy of Education
    - EPS 411 School and Society
    - EPS 412 Critical Thinking for Teachers
    - EPS 415 Technology &Educational Reform

Speech and Hearing Science

www.shs.illinois.edu

Department Head: Karen Iler Kirk, Ph.D.
901 South Sixth Street
Champaign, IL 61820
(217) 333-2230
E-mail: shs@illinois.edu

Major: Audiology
Degrees Offered: Au.D.

Major: Speech and Hearing Science
Degrees Offered: M.A., Ph.D.
Graduate Concentration: Second Language Acquisition and Teacher Education (p. 891) (Ph.D. only)

Medical Scholars Program: Doctor of Philosophy (Ph.D.) in Speech and Hearing Science and Doctor of Medicine (M.D.) through the Medical Scholars Program (http://www.med.illinois.edu/mdphd)

Graduate Degree Programs

The department offers programs leading to the Master of Arts, Doctor of Audiology, and Doctor of Philosophy degrees, with specialization in various aspects of audiology and speech-language pathology.

Admission

In addition to the Graduate College requirements, the general (aptitude) portion of the Graduate Record Examination (GRE) is required for all curricula. For international students, a minimum score of 550 on the paper-based Test of English as a Foreign Language (TOEFL) (213 on the computer-based test) is required. International students seeking clinical training must also take the Test of Spoken English (TSE). A score of 60 on the TSE is required for international students whose program will include a clinical practicum. International students who score 50 to 55 on the TSE must pass an exam of oral proficiency in English given in our department before being allowed in a clinical practicum. International students who score below 50 on the TSE will not be accepted for programs that involve clinical practica.

Although a B.S. in the field is not required for admission, recommended background includes undergraduate credit in the following areas or their equivalents: phonetics, anatomy and physiology of the speech and hearing mechanism, hearing science, speech science, speech pathology, audiology, and aural rehabilitation. The Master of Arts program begins in the summer semester. All other programs begin in the fall only.

Medical Scholars Program

The Medical Scholars Program permits highly qualified students to integrate the study of medicine with study for a graduate degree in a second discipline, including Speech and Hearing Science. Students may apply to the Medical Scholars Program prior to beginning graduate school or while in the graduate program. Applicants to the Medical Scholars Program must meet the admissions standards for and be accepted into both the doctoral graduate program and the College of Medicine. Students in the dual degree program must meet the specific requirements for both the medical and graduate degrees. On average, students take eight years to complete both degrees. Further information on this program is available by contacting the Medical Scholars Program, 125 Medical Sciences Building, (217) 333-8146 or at www.med.illinois.edu/msp.

Graduate Teaching Experience

Although teaching is not a general Graduate College requirement, experience in teaching is considered an important part of the graduate experience in this program.

Master of Arts in Speech and Hearing Science

In the Master of Arts degree program, students learn about speech-language pathology in medical and educational settings, as well as speech, language and hearing science. This degree may be taken as either a terminal degree or as preparation for further graduate study, including a doctoral degree.

For students seeking a terminal degree, the Master of Arts program may be designed with or without clinical practicum experience. The clinical program ensures clinical competence in speech-language pathology necessary for employment in a healthcare and educational settings, private practice, or industry. Successful completion of this program ensures that the student has met the academic and clinical requirements for the American Speech-Language-Hearing Association (ASHA) certification and can choose to pursue the Illinois state certification required for speech-language pathology in
the public schools. The program is accredited by the Council on Academic Accreditation in Speech-Language Pathology and Audiology. The clinical MA program requires a minimum of 60 graduate hours. All students in the clinical program are required to take the following courses:

<table>

</tr>
</tbody>
</table>

The non-clinical MA program may prepare the student for employment in industry or for a doctoral program. This program requires 40 graduate hours. SHS 592 is required and the student must build a logical and coherent series of approved courses.

For a student seeking a non-terminal degree, the Master of Arts program enables the student to undertake fundamental coursework that will be an integral part of an overall doctoral program.

The student's program for the Master of Arts degree will be determined on an individual basis, taking into consideration the Graduate College and departmental requirements. A master's thesis should be part of the pre-doctoral student's plan of study, but students seeking the Master of Arts as a terminal degree are encouraged to write a thesis as educational enrichment.

- Doctor of Philosophy in Speech and Hearing Science (p. 925)
- Doctor of Audiology (p. 924)

Doctor of Audiology in Audiology

The Doctor of Audiology (Au.D.) is a four-year post-baccalaureate degree that emphasizes the application of basic science and technology and provides advanced professional training for the diagnosis and habilitation/rehabilitation of hearing disorders and related communication and educational disorders, as well as the scholarly study of professional practice-centered problems. The first two years of the program have more didactic courses than clinical practicum. The Comprehensive Examination (a written qualifying exam) is typically taken after one and a half years of the program, with the Preliminary Examination (defense of the prospectus for the Doctoral Research Project) taken at the beginning of the third year. The third year typically involves didactic coursework and clinical practicum, as well as completion of the Doctoral Research Project. The fourth year usually involves full-time clinical practicum. The Final Examination (defense of the Doctoral Research Project) should be completed by the end of the fourth year. The program is accredited by the Council on Academic Accreditation in Speech-Language Pathology and Audiology.

Electives/specialty emphasis 12-16
Clinical practica 30-36

Masters Degree Required for Admission to AuD? No
Qualifying Exam Required: Yes
Preliminary Exam Required: Yes
Final Exam/Dissertation Defense Required: Yes
Dissertation Deposit Required: No
Minimum GPA: 3.0

1  For additional details and requirements refer to the department’s graduate programs (http://www.shs.illinois.edu/Graduates) and the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).
Doctor of Philosophy in Speech and Hearing Science

Admission to the doctoral program requires completion of a bachelor's degree. The doctoral program is divided into three stages: Stage I, which includes the master's degree or its equivalent; Stage II, which is advanced course work and completion of all departmental requirements, with the exception of the dissertation defense and deposit; and Stage III, which is the conduct of the dissertation, its defense and deposit.

The program may be planned with specialization in many areas of audiology, speech-language pathology, and speech, language or hearing science. Individual programs of study will be tailored to the student's area of scholarly and research interests and are planned by the student and the advisor. The minimum academic course requirements for this degree are 40 graduate hours of course work beyond those required for a master's degree or equivalent, a qualifying exam, and a dissertation.

The first two to four years of the doctoral program are typically devoted to course work, including the completion of an Early Research Project (ERP), in the area of concentration selected by the student. For students entering with a M.A./M.S., the ERP occurs early in Stage II and must be completed before the Qualifying Exam. For students entering the PhD program directly from a B.A./B.S. degree, the ERP may be undertaken and completed in Stage I or Stage II. In the middle of Stage II, students will take a Qualifying Exam. Successful completion of the Qualifying Exam provides evidence of the student's satisfactory progress toward scholarly independence and indicates the student is then qualified to begin the planning stages of a dissertation proposal. A preliminary exam on the dissertation proposal occurs at the end of Stage II and marks the transition to Stage III. The doctoral program culminations with a Final Exam/Dissertation Defense, and oral examination over a written document.

Entering with approved M.A. degree

1. Restricted elective courses, requiring approval by the mentor with input from the advising committee, are identified to support students’ individualized areas of study within the broad field of communication sciences and disorders. If minimum credits are completed in SHS 592/SHS 594, then the maximum of restricted electives are required. If maximum credits are taken in SHS 592/SHS 594, then the minimum of restricted electives are required.

2. For additional details and requirements refer to the department’s graduate programs (http://www.shs.illinois.edu/Graduates) and the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).

Major: Statistics
Degrees Offered: M.S., Ph.D.
Graduate Concentrations: Analytics (M.S. only), Applied Statistics (M.S. only)

Medical Scholars Program: Doctor of Philosophy (Ph.D.) in Statistics and Doctor of Medicine (M.D.) through the Medical Scholars Program (https://www.med.illinois.edu/mdphd)

Graduate Degree Programs

The Department of Statistics offers graduate study leading to the Master of Science in Statistics, the Master of Science in Statistics with specialization in various areas of application, and the Doctor of Philosophy in Statistics.

Admission

Graduate College admission requirements apply. Students are expected to have a strong undergraduate mathematics background, but need not have an undergraduate statistics or mathematics degree. Students may be admitted with deficiencies, which are to be removed during the first year of graduate work. A minimum Test of English as a Foreign Language (TOEFL) score of 590 for the paper-based test or 243 for the computer-based test is required for students whose native language is not English. The Graduate Record Examination (GRE) is required. The department offers Ph.D. admissions for the fall only.

Medical Scholars Program

The Medical Scholars Program permits highly qualified students to integrate the study of medicine with study for a graduate degree in a second discipline, including Statistics. Students may apply to the Medical Scholars Program prior to beginning graduate school or while in the graduate program. Applicants to the Medical Scholars Program must meet the admissions standards for and be accepted into both the doctoral graduate program and the College of Medicine. Students in the dual degree program must meet the specific requirements for both the medical and graduate degrees. On average, students take eight years to complete both degrees. Further information on this program is available by contacting the Medical Scholars Program, 125 Medical Sciences Building, (217) 333-8146 or at www.med.illinois.edu/msp.

Graduate Teaching Experience

Although teaching is not a general Graduate College requirement, experience in teaching is considered an important part of the graduate experience in this program.

Financial Aid

Financial aid is available primarily in the form of teaching assistantships, research assistantships, and fellowships. For further information write to the Graduate Admissions Committee, Department of Statistics.

Master of Science in Statistics, Applied Statistics Concentration

The Department of Statistics offers the Master of Science in Statistics with specialization in a variety of areas of application. The degree program consists of a core of statistics courses covering statistical theory, linear models, and statistical consulting, and further coursework in the field of application and in statistics. The program offers an additional degree for students earning an advanced degree in the area of application.

To be eligible for this program, students must be pursuing an advanced degree in a department other than Statistics at the Urbana-Champaign campus. Students interested in economic statistics should apply for the applied concentration. Full statements of degree requirements are available from the head of the unit offering a specialization or from the Graduate Advisor of the Department of Statistics.

Five graduate courses must be completed in your primary field, in an area relevant to the field of Statistics. 20

Major: Teaching of Biological Science
Degrees Offered: M.S.

Online Program: Teaching of Biological Science
Degrees Offered: M.S.

Graduate Degree Program

The Master of Science in the Teaching of Biological Sciences (M.S.) degree program is designed for graduate students in a biological discipline who wish to earn teacher certification while completing the MS Degree in Biology. Individuals who are already certified to teach biology in Illinois public schools may enter the program to earn the MS degree while taking graduate courses in both biology and education.

Admission

The application requirements vary depending on whether or not the applicant is certified to teach in Illinois. Applicants holding an Illinois Teaching Certificate need only meet the application requirements for the Biology MS Program. Applicants who are seeking teacher certification in conjunction with the Biology MS program must meet additional application requirements for the College of Education to be admitted to the teacher certification program.

The program will offer its first online course July, 2011 (Term 3). Students who wish to take the course during Term 3 will have a program admission deadline of April 1, 2011. Students who wish to take courses starting Term 4 (Fall, 2011), Term 1 (Spring 1, 2012) or Term 2 (Spring 2, 2012) will have admission deadlines of July 1, 2011. After these initial terms (beyond 2012 Term 2) students will have an admission deadline of March 1st.

All Applicants must hold a baccalaureate degree (or equivalent) comparable in content and number of credit hours with that granted by the University of Illinois at Urbana-Champaign. Applicants must have an overall grade-point average of 3.0 (A=4.0) for the last 2 years of undergraduate study. Applicants must have completed a biology undergraduate majors program of study equal to or approximating that offered by the School of Integrative Biology or the School of Molecular and Cellular Biology. Applicants must either have proof of Illinois state teacher certification in Science: Biology or complete the Science: Biology teacher certification requirements while in the MS program.

Applicants who are not certified to teach biology must also apply to the Department of Curriculum and Instruction, College of Education for admission to the teacher certification program. This dual application has another set of admission requirements. Applicants must have an undergraduate grade point average of 3.0 (A=4.0) or better. Applicants must demonstrate high-level written communication (quality of writing, thoughtfulness about education, reflective thinking). Applicants must provide evidence of formal or informal experience working with children or youth comparable to the age-level of students served in the program for which application is made. All applicants must pass the Illinois Certification Testing System Tests of Basic Skills AND Science: Biology prior to the application deadline. Graduate Record Examination (GRE) Scores are required by the College of Education prior to the application deadline. The institution number is 1836 and the GRE program code is 00 or 0203. Applicants must agree to a Criminal Background Check and fingerprinting.

Applicants whose native language is not English are required to submit TOEFL scores. International applicants must have a TOEFL score of at least 613 (paper-based test), 257 (computer-based test), or 103-104 (internet-based test) to be considered for admission. The TOEFL must be taken within two years of the proposed term of entry; older scores are not valid. The Test of Spoken English (TSE) is required; applicants must receive a score of at least 60. Request that official TOEFL and TSE scores be sent directly to the University of Illinois at Urbana-Champaign. The institution number is 1836 and the program code is 00 or 35.

See the Biology MS Program Web Site (http://www.life.illinois.edu/programs/BMP/MST%20in%20Biology.htm) for application deadlines, procedures, and more detailed application guidelines.

Financial Aid

Financial assistance in the form of full or partial waiver of tuition and fees is not available to online M.S. students (except statutory waivers). For all on-campus students (M.S.); fellowships, teaching assistantships and research assistantships are available for qualified students. Fellowships are awarded
on a competitive basis. Students registering for only 4 credit hours their final year will fall below the minimum required credit hours to be eligible for financial aid and may wish to register for an elective.

**Master of Science in Teaching of Biological Science**

Applicants may or may not be previously certified to teach in the State of Illinois.

**Applicant Previously Certified**

While specific courses are not required, previously certified candidates must complete a minimum of 8 hours of graduate level courses offered by departments in the College of Education. (These courses would be selected in consultation with the Biology advisor based on the student’s interests)

| Elective hours selected from either biology or education | 8 |
| Research/Project Hours (min/max applied toward degree) | 0-4 |
| **Total Hours** | 16 |

**Other Requirements**

Other requirements may overlap

Courses taken "credit/no credit" may not be used toward degree requirements.

Deficiencies in undergraduate courses needed to satisfy the certification requirement must also be taken; these courses normally do not count toward the 32 or 51 graduate hours needed to complete the degree. Deficiencies are determined by an audit of transcripts conducted by the Teacher Certification Officer.

Conferral of the MS degree is contingent upon the completion of all teacher certification requirements.

Qualification for teacher certification is contingent upon the completion of all MS degree requirements.

Minimum GPA: 3.0

1. For additional details and requirements refer to the program requirements (http://www.life.illinois.edu/programs/BMP/MST%20Degree.htm) and the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).

**Applicant NOT Previously Certified**

Students Without Previous Certification must complete the 4-semester sequence of professional education courses, including one semester of student teaching, required for teacher certification. (29 graduate hours plus 2 undergraduate hours) Some of the graduate level courses are counted toward the basic requirement of 16 graduate hours of Education courses required for the MS degree.

| One 4 hour, 500-level Curriculum and Instruction course | 4 |
| One 2 hour, 400-level Education Policy Studies course (These are selected from a list of approved courses in consultation with the Biology advisor based on the student’s interests) | 2 |
| Research/Project Hours (min/max applied toward degree) | 0-4 |
| **Total Undergraduate Hours** | 2 |
| **Total Graduate Hours** | 35 |

**Other Requirements**

Theatre

www.theatre.illinois.edu

Head of the Department and Director of Graduate Studies: Robert Graves
4-122 Krannert Center for the Performing Arts
500 South Goodwin Avenue
Urbana, IL 61801
(217) 333-2371
theatre@illinois.edu

Major: Theatre
Degrees Offered: M.A., M.F.A., Ph.D.
Graduate Concentrations: Acting (M.F.A. only), Design and Technology (M.F.A. only)

Admission

Candidates should apply to one of the ten graduate areas offered: Master of Fine Arts in Theatre with specialization in acting, costume design, costume technology, lighting design, scenic design, sound design and technology, stage management, or scenic technology; the Master of Arts in Theatre with specialization in theatre history; or the Doctor of Philosophy in Theatre with specialization in theatre history. All applicants should present transcripts documenting undergraduate or graduate study of theatre practice, dramatic literature, and theatre history with a cumulative grade point average in these subjects of at least 3.0 (A = 4.0). Applicants whose first language is not English must submit recent Test of English as a Foreign Language (TOEFL) scores; the current minimum score for consideration is 550 on the paper-based test (213 on the computer-based version).

Candidates for the M.F.A. degree must demonstrate talent in theatrical performance or production by audition or by the presentation of a portfolio of their work to an admissions committee of the faculty, either on campus or at one of the regional University/Resident Theatre Association (U/RTA) audition sites. M.F.A. candidates are admitted in the fall term only. The M.F.A. acting program accepts applications only every three years; the next academic years in which applications will be accepted are 2011-2012 for Fall 2012 admission.

Master’s and doctoral candidates should present records of at least a 3.0 grade point average in all subjects studied at the undergraduate and graduate levels, supply samples of their scholarly writing, and submit recent Graduate Record Examination (GRE) scores. In addition to the Test of English as a Foreign Language (TOEFL) scores required of all foreign students, master’s and doctoral candidates whose first language is not English are encouraged to submit scores of the Test of Written English (TWE). Ph.D. candidates should hold a master’s degree in theatre or in a related field. Master’s and doctoral candidates are normally admitted in the fall term.

Graduate Teaching Experience

Although teaching is not a general Graduate College requirement, experience in teaching is considered an important part of the graduate experience in this program.

- Master of Arts in Theatre (p. 935)
- Master of Fine Arts in Theatre, Acting Concentration (p. 935)
- Master of Fine Arts in Theatre, Design and Technology Concentration (p. 936)

Doctor of Philosophy in Theatre

A comprehensive oral and written examination; an oral or written special-field examination; and defense of the dissertation before a committee of the graduate faculty is required. The program can be completed in two to three years beyond the master’s degree.

Translation and Interpreting

www.translation.illinois.edu/

Center for Translation Studies
Director: Elizabeth Lowe
4080 Foreign Languages Building
707 South Mathews Avenue
Urbana, IL 61801

Major: Translation and Interpreting
Degrees Offered: M.A.

Online Program: Translation and Interpreting
Degrees Offered: M.A.

Graduate Degree Programs

The Center for Translation Studies in the School of Literatures, Cultures and Linguistics offers a graduate program leading to the Master of Arts in Translation and Interpreting. Candidates for the master's degree may specialize in Translation for the Professions, Literary and Applied Literary Translation, or Conference and Community Interpreting. Campus-based and online programs are available.

Admission

To be considered for admission to the Master's Program in Translation and Interpreting, the candidate should have an undergraduate major in languages, linguistics, international studies, area studies, or a related field. Applicants must have command of one or preferably two languages in addition to English and must meet the minimum admissions requirements of the Graduate College.

Language Requirement

Students must have native or near-native proficiency in English and at least one other language supported by the program. Preference will be given to applications with two other languages in addition to English. Language A (native language) should be at ILR5; Language B should be at or above ILR 3-4; language C should be at or above ILR 2-3. Definitions of ILR levels can be found at: www.govtir.org

Application Procedure

Applicants should apply online (www.grad.illinois.edu/admissions/apply) and submit:

• A 500 word written statement of purpose in English that describes your background, your language and cross-cultural experience and your professional goals. We are interested in details about you that relate to your goal of becoming a translator or interpreter.
• Three letters of recommendation.
• Resume or CV.
• Transcripts (with English translations, if applicable) showing all undergraduate and graduate courses taken and grades received. Transcripts received from foreign institutions should be accompanied by a Certificate of Degree or Diploma.
• All applicants whose native language is not English are required to submit the score report of their TOEFL IBT or IELTS as evidence of their English proficiency. Applicants should have ETS send TOEFL score reports to institution code #1836. IELTS score reports can be uploaded directly to the online application. Scores required for admission to this program are at least 103 total on the TOEFL with a speaking sub-section minimum score of 24 or scores greater than 6.5 total and 6 or higher in all sub-sections on the IELTS with a speaking sub-section minimum score of 8. (See www.grad.illinois.edu/Admissions/instructions/04C).
• A 5-7 minute oral statement of purpose (audio-file) in the student's second language. International students whose primary language is not English should submit two oral statements: one in English and one in the language for which they are applying. (Send an mp3 or wma file-50 mb or smaller- as an email attachment to slclgradservices@illinois.edu.)
• An online test of language and translation proficiency. The test will be administered by the University of Illinois through its Online and Continuing Education Secure Online Testing System. Details will be provided to applicants once their file is complete.

Financial Aid

Since this is a self-supporting program, no financial aid that provides tuition waivers, such as Assistantships or Fellowships, is available from the Center or the University. Students may seek funding from FAFSA and personal loans, student employment, outside grants, and employers.
Master of Arts in Translation and Interpreting

Campus-Based Program

Students on campus must take a minimum of 12 credit hours per semester (3 courses); 2 of which should be Translation Studies required courses, to maintain full-time status. The required courses must be taken in the order in which they are offered to complete degree requirements. Campus based courses follow the 16-week calendar.

All students must follow a four-semester (Fall and Spring) schedule to complete this program. It is not possible to accelerate the program. Students who request a leave of absence from the program must apply to the department for re-entry.

Core requirements

<table>

<td>Translation Theory &amp; Practice</td>
<td>4</td>
</tr>
<tr>
<td>TRST 407</td>
<td>Terminology and CAT</td>
<td>4</td>
</tr>
</tbody>
</table>

Specialization: Students must complete 8 hours in one specialization:

- Translation for the Professions (TRST 405, TRST 406)
- Literary and Applied Literary Translation (TRST 501, TRST 502)
- Conference and Community Interpreting (TRST 541, TRST 542)

See Center for Translation Studies webpage for a list of appropriate courses for each specialization.

Elective courses: See Center for Translation Studies webpage for a list of appropriate courses.

Total Hours: 32

Other Requirements

Other requirements may overlap

Minimum 500-level Hours Required Overall: 12
Minimum GPA: 2.75

For additional details and requirements refer to the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).

Online Program

Students working online will take two 4-credit hour courses per semester that will be offered sequentially, for eight weeks each. The courses will be asynchronous. Interaction with the instructor and other students will be required and facilitated through the state-of-the-art course delivery platform. Online students are required to keep pace with the course schedule. The requirements are the same (p. 937) as for the campus-based program.
Urban and Regional Planning

www.urban.illinois.edu

Department Head: Rob Olshansky
Director of the M.U.P. Program: Mary Edwards
M.U.P. Admissions Director: Bumsoo Lee
Director of the Ph.D. Program: Rob Olshansky
111 Temple Buell Hall
611 Taft Drive
Champaign, IL 61820
(217) 333-3890

Major: Urban Planning
Degrees Offered: M.U.P.

Major: Regional Planning
Degrees Offered: Ph.D.

Joint Degree Programs: The M.U.P. in Urban Planning can be earned jointly with the J.D. in Law (p. 775), M.Arch in Architecture, M.L.A. in Landscape Architecture, or any Illinois master's degree in a related field.

Graduate Degree Programs

The Department of Urban and Regional Planning offers graduate programs leading to the degrees of Master of Urban Planning and Doctor of Philosophy in Regional Planning. Students can also apply to obtain a joint degree with another graduate degree simultaneously. The most popular joint degrees are with Architecture, Landscape Architecture, Law and Agricultural and Applied Economics. Joint degrees with any related field are possible. In addition, a small number of the department's Bachelor of Arts in Urban Planning (B.A.U.P.) students participate in the highly selective 4+1 program (http://www.urban.illinois.edu/academic-programs/mup/mup_41.html) to complete the B.A.U.P. and M.U.P. in five years.

Admission

We welcome applications from men and women from a wide variety of backgrounds who have demonstrated potential for extraordinary professional achievement. Students seeking a graduate degree in planning come from a diverse range of academic backgrounds. The most frequent are sociology, economics, political science, geography, environmental sciences, architecture, engineering, public administration, urban planning, and public policy, but the natural sciences, humanities, and other fields also provide excellent foundations for graduate study in planning. Prospective students must have a grade point average (GPA) of at least 3.0 computed from the last 60 hours of undergraduate work and any subsequent graduate study, but the average GPA of admitted students is considerably higher. All applicants must submit Graduate Record Examination (GRE) scores for the tests of verbal, quantitative, and analytical ability. International applicants must meet additional minimum requirements (http://www.grad.illinois.edu/admissions/countries) based on their country of origin, including the Test of English as a Foreign Language (TOEFL).

We place particular emphasis on each applicant's statement of purpose. Applicants should use the statement to convey information about their backgrounds, professional and personal experience, and intellectual perspectives, in the context of articulating why a Master's in Urban Planning or Ph.D. in Regional Planning from the University of Illinois will help them achieve their professional goals. We seek an applicant pool that represents a mix of racial and ethnic populations, a range of social and economic backgrounds, different philosophies and perspectives, and a variety of life experiences. We are especially interested in applicants with professional experience, though that experience need not be in planning or closely related fields.

Applicants to the Ph.D. program are admitted when they meet the standards of the Department and a faculty member prepared to serve as their mentor and, if necessary, primary source of financial support. Students interested in pursuing a Ph.D. in Regional Planning should communicate with the Director of the Ph.D. Program and faculty most closely aligned with their interests, in addition to completing the formal application process.

Consult the M.U.P. admissions (http://www.urban.illinois.edu/admissions/mup_admissions.html) and Ph.D. admissions (http://www.urban.illinois.edu/admissions/phd_admissions.html) web pages for more information.

Medical Scholars Program

The Medical Scholars Program (http://www.med.illinois.edu/msp) permits highly qualified students to integrate the study of medicine with study for a graduate degree in a second discipline, including Regional Planning. Students may apply to the Medical Scholars Program prior to beginning graduate school or while in the graduate program. Applicants to the Medical Scholars Program must meet the admissions standards for and be accepted into both the doctoral graduate program and the College of Medicine. Students in the dual degree program must meet the specific requirements for both the medical and graduate degrees. On average, students take eight years to complete both degrees. Further information on this program is available by contacting the Medical Scholars Program, 125 Medical Sciences Building, (217) 333-8146 www.med.illinois.edu/mdphd/.
Graduate Teaching Experience

Although teaching is not a general Graduate College requirement, experience in teaching is considered an important part of the doctoral experience in this program and is strongly encouraged for those intending to pursue an academic career.

Faculty Research Interests

The mission of the Department of Urban and Regional Planning is to teach and conduct research to improve understanding of human settlements and of planning situations. The department’s faculty studies the ecological, economic, social, and institutional aspects of urban and regional development, and the theory and practice of planning processes. Planning is viewed as the achievement of outcomes based on interrelated actions over time and space, and close communication and collaboration with a wide range of disciplines and professions is inherent in the department’s approach. The basis of that collaboration is a faculty whose academic training and degrees are in architecture, economics, geography, history, law, political science, regional science, and zoology, in addition to planning. Planning faculty and doctoral students pursue interdisciplinary research and make scholarly contributions to planning and fields closely allied with planning.

Facilities and Resources

The Department of Urban and Regional Planning shares Temple Hoyne Buell Hall (TBH) with the Department of Landscape Architecture and the School of Architecture. The majority of urban planning classes are held in TBH. The department has a 24-hour instructional computing laboratory. Research project and doctoral student workspace is provided in Noble Hall.

The City Planning and Landscape Architecture Reference and Resource Center is located in Funk Library (http://www.library.uiuc.edu/agx). The planning collection is one of the finest in the world, with books and reports gathered since the collection started over eighty years ago.

Financial Aid

Students compete for departmental and Graduate College fellowships and departmental teaching and research assistantships. Selection is based on the academic achievement and qualifications of the student.

Master of Urban Planning in Urban Planning

The professionally accredited M.U.P. program prepares students for careers in planning practice. Such careers involve public service at all levels of government, in private consulting practice, in the nonprofit sector, and in a wide variety of organizations in need of planning services. The program also prepares students for advanced work leading to the Ph.D. degree and a career in teaching and research.

The M.U.P. curriculum consists of a focused set of core courses required of all students, concentration/elective courses, applied workshops, a recommended internship (reduces the hours needed to graduate by 4), and a capstone requirement. The program is purposely flexible so that students may design a program that builds their expertise in a concentration area of practice such as land use and environmental planning, transportation planning, community development for social justice, housing, sustainable design and development, local and regional economic development, and geographic information systems and analysis. The department also has an active international program designed to expose students to planning practices and challenges in Europe, Africa, Latin America, and Asia.

If a student has an undergraduate professional degree in urban planning, up to 16 hours may be waived by petition, and the student must take at least 30 hours of urban and regional planning courses at Illinois.

Please consult the department's website (http://www.urban.illinois.edu/academic-programs/mup/mup_overview.html) for additional information about the M.U.P. requirements.

**Doctor of Philosophy in Regional Planning**

Students, together with their faculty advisor and program committee, select theory, methods, and specialization courses to meet the Ph.D. requirements and prepare for a successful career of advanced research and teaching.

A successful dissertation in planning reports original research on a subject appropriate to the field, the results of which produce significant advances in knowledge. Each student takes a Preliminary Examination, which is an oral examination based on the dissertation proposal and is administered by the student's dissertation committee. Upon approval of the dissertation proposal, the candidate can proceed with the research, written analysis, and findings. When the candidate and the supervisor agree that the research and writing are complete, the candidate is ready for the final examination, which is a defense of the dissertation before the committee.

Please consult the department's website (http://www.urban.illinois.edu/academic-programs/phd/phd_overview.html) for additional information about doctoral requirements.

Joint Degree Programs

Joint degree programs provide the opportunity to complete two degrees in a compressed time frame.

Master of Urban Planning and Juris Doctor in Law
Candidates admitted to the joint Master of Urban Planning and Juris Doctor must complete a minimum of 32 hours in urban planning, including core courses and capstone, plus the requirements of the law degree.

Master of Urban Planning and Master of Architecture
Candidates admitted to the Master of Urban Planning and Master of Architecture must complete a minimum of 32 hours in urban planning, including core courses and capstone, plus the requirements of the Architecture degree.

Master of Urban Planning and any other approved Master's degree
Candidates may propose joint programs combining the M.U.P. with other UIUC master's degrees (for example, but not limited to, African Studies, Agriculture and Applied Economics, Civil and Environmental Engineering, Public Health (p. 617), Economics, Landscape Architecture (p. 769), Latin
American Studies, Library and Information Sciences, Natural Resources and Environmental Sciences, and Recreation, Sports and Tourism). For joint programs, at least 40 hours must be in Urban Planning, including all core courses and capstone requirements. The two programs must total a minimum of (a) 80 hours, or (b) the sum of 40 Urban Planning hours plus the required number of hours for the second degree, whichever is greater. (In the latter case, the other program may at its discretion count up to 8 hours of Urban Planning courses as electives in meeting its degree requirements as long as students are required to take no fewer than 40 additional hours in that program.) The MUP capstone requirement may be waived for a thesis completed in another program provided faculty from both programs participate on the thesis committee. Students must be in residence in Urban Planning for at least two semesters.

Consult the department's M.U.P. joint degree (http://www.urban.illinois.edu/academic-programs/mup/mup_joint.html) web page for more information about the admissions process and joint degree requirements. For additional guidance, please contact the Director of the M.U.P. Program.

Graduate Degree Programs

The Department of Comparative Biosciences offers graduate work leading to the degrees of Master of Science and Doctor of Philosophy. Areas of specialization include physiology, pharmacology, and toxicology. Each area has a core of required courses supplemented by other courses within the Department of Comparative Biosciences and from other departments of the Graduate College. Adequate laboratory and animal holding space to conduct the research of the faculty and graduate students is provided in the Basic Sciences Building, Veterinary Teaching Hospitals, and the Veterinary Research Farm.
Admission

Applicants for graduate study in comparative biosciences must have a minimum grade point average of 3.0 (A = 4.0). Grade point averages will be calculated on the last 60 hours of undergraduate studies for those without the D.V.M. degree and on the entire professional curriculum for those with the D.V.M., or equivalent, degree. Applicants with a graduate degree or with some graduate coursework will be evaluated on the basis of their graduate work as well as their undergraduate or professional records. Qualifications of students must be approved by the department’s Graduate Studies Committee.

The Graduate Record Examination (GRE) is required and must have been taken within the last five years prior to application. Candidates must score an average in the 80th percentile or higher on each of the three portions of the GRE to be eligible for consideration.

International applicants whose native language is not English must take the Test of English as a Foreign Language (TOEFL). A score of at least 600 on the paper-based test, or 250 on the computer-based test, is required. Those applicants who gain admission on the basis of their academic credentials, but score below 600 on the TOEFL, will be admitted on limited status and required to take the English Placement Test (EPT) upon their arrival. Students are exempt from the TOEFL requirement if they have completed at least two academic years of full-time study at an institution where the language of instruction is English during the five-year period prior to the proposed date of enrollment. Students also need to take the Test of Spoken English (TSE) oral exam and score at least 50. We are not accepting applications for the M.S./D.V.M. program at this time.

Joint Degree Programs

Students accepted into the Veterinary Medical Scholars Program (http://www.vetmed.illinois.edu/asa/vmsp.html) can complete a D.V.M. and Ph.D. simultaneously.

Students accepted into the Medical Scholars Program (https://www.med.illinois.edu/mdphd) can complete a M.D. and Ph.D. simultaneously.

Graduate Teaching Experience

Experience in teaching is considered a vital part of the graduate program and is required as part of the academic work of all M.S. and Ph.D. candidates in this program.

Faculty Research Interests

Experimental models range from stem cells to rodent models to domestic animals, wildlife, and human patients. Exciting research is being conducted by CB faculty in the areas of:

- endocrine/reproductive biology and toxicology
- environmental and ecological toxicology
- uterine and placental biology
- aortic mesangial stem cells
- stem cells for assessment of small molecule and nanoparticle pharmacology and toxicology
- nanodisks as platforms for the study of membrane proteins
- mouse and frog models of development
- the impact of environmental and dietary compounds on neurodevelopment and on addictive potential of substances of abuse
- circadian rhythms in animal models of shift work and jet lag
- immunopharmacology and drug allergy
- obesity and diabetes mellitus
- cancer chemotherapy
- the interplay between infectious agents and contaminants with wildlife populations
- comparative drug disposition and pharmacokinetics

Research techniques range from micro-RNA to animal and human patient epidemiology to ecological assessments.

Training Programs, Centers and Institutes

Our faculty provide graduate instruction in stem cell research, molecular genetics, pharmacology and toxicology. They also participate in interdisciplinary training programs including the NIEHS-funded Environmental Toxicology Training Program (http://vetmed.illinois.edu/cb/nih/tox), the Interdisciplinary Environmental Toxicology Training Program (http://vetmed.illinois.edu/ietp), the Reproductive Biology Program (http://mcb.illinois.edu/repro), the Neuroscience Program (http://neuroscience.illinois.edu), the Nutritional Sciences Division (http://www.nutsc.illinois.edu), Beckman Institute (http://www.beckman.uiuc.edu), and the Institute for Genomic Biology (http://www.igb.illinois.edu). CB faculty also lead the Veterinary Clinical Pharmacology Residency Program (http://vetmed.illinois.edu/cb/vcpharm.html), which prepares graduate veterinarians for the certifying examination of the American College of Veterinary Clinical Pharmacology (ACVCP). In addition, together with the Animal Poison Control Center in Urbana, we jointly offer a
Veterinary Clinical Toxicology residency (http://vetmed.illinois.edu/cb/toxres.html) to prepare veterinarians for board certification by the American Board of Veterinary Toxicology (ABVT) and the American Board of Toxicology (ABT).

Financial Aid

A limited number of research and teaching assistantships or associate positions are available.

¹ For additional details and requirements refer to the department’s graduate degree requirements [here](http://www.vetmed.illinois.edu/vb/ms_phd.html) and the Graduate College Handbook [here](http://www.grad.illinois.edu/gradhandbook).

### M.B.A. Joint Degree Program

Students in this unit may choose to earn their major degree and simultaneously complete an M.B.A., with 12 fewer required hours than when pursuing both degrees independently. Students must be enrolled in the M.B.A. program for three terms and complete all the requirements of their primary degree. Interested students should see the joint program requirements [here](http://www.vetmed.illinois.edu/vb/ms_phd.html) and contact the M.B.A. program and their major department office for more information.

### D.V.M. and Ph.D. in Veterinary Medical Science – Comparative Biosciences

Students accepted into the Veterinary Medical Scholars Program [here](http://www.vetmed.illinois.edu/asa/vmsp.html) can complete a D.V.M. and Ph.D. simultaneously.

### Pathobiology

[www.vetmed.illinois.edu/path/](http://www.vetmed.illinois.edu/path/)

Dean of the College of Veterinary Medicine: Peter D. Constable
Interim Head of the Department: Mark S. Kuhlenschmidt
Director of Graduate Studies: Mariangela Segre
2522 Veterinary Medicine Basic Sciences Building
2001 South Lincoln Avenue
Urbana, IL 61802
(217) 333-2449
Julie Thomas jathomas@illinois.edu (pkm@uiuc.edu)

Major: Veterinary Medical Science - Pathobiology
Degrees Offered: M.S., Ph.D.

Joint Degree Program: Veterinary Medical Scholars Program
Degrees Offered: D.V.M. and Ph.D.

Medical Scholars Program: Doctor of Philosophy (Ph.D.) in Pathobiology and Doctor of Medicine (M.D.) through the Medical Scholars Program [here](https://www.med.illinois.edu/mdphd).
Graduate Degree Programs

The Department of Pathobiology offers graduate programs leading to the degrees of Master of Science and Doctor of Philosophy. Areas of specialization include:

- epidemiology
- infectious diseases
- immunology
- microbiology
- parasitology
- anatomic pathology
- clinical pathology
- toxicologic pathology

Each specialty area has a core of required courses supplemented by other courses within the Department of Pathobiology and from other departments of the Graduate College.

Admission

Applicants for graduate study in pathobiology must have a minimum grade point average of 3.0 (A = 4.0). Applicants with a grade point average between 2.75 and 3.0 may be considered for admission on a probationary status on the basis of individual merit. Grade point averages will be calculated on the last 60 hours of undergraduate studies for those without the D.V.M. degree or on the entire professional curriculum for those with the D.V.M. degree. Applicants with a graduate degree or with some graduate coursework will be evaluated on the basis of their graduate work as well as their undergraduate or professional record. The Test of English as a Foreign Language (TOEFL) minimum is 243 on the computer-based test, the Test of Spoken English (TSE) is also required. Admission for spring semester is possible. Qualifications of students must be approved by the department’s committee on admission of graduate students. We are not accepting applications for the M.S./D.V.M. program at this time.

Specialization in Infectious Diseases

The Department of Pathobiology offers an area of specialization in infectious diseases. The program is flexible and provides the student with proficiency in several areas of microbiology, parasitology, epidemiology, immunology, and molecular pathogenesis of infectious disease and ecology of infectious diseases. Students electing this area should have completed coursework in basic genetics, biochemistry, and microbiology. The program of study for each student in the specialization is decided individually. Interested students should direct inquiries and applications to the department.

Specialization in Toxicologic Pathology

The Department of Pathobiology offers an area of specialization in toxicologic pathology. This program is an integration of pathology and toxicology, which can range from animal models to biochemical toxicology in an experimental setting. Veterinarians entering this specialization will be specifically trained in toxicologic pathology so they can function as competent and innovative professionals and assume leadership roles in academia, government, and industry. Students electing this area should have completed coursework in the D.V.M. curriculum. The program of study for each student in the specialization is decided individually. Interested students should direct inquiries and applications to the department. Students completing the specialization will be qualified to take the ACVP Board examinations during the program.

Joint Degree Programs

Students accepted into the Veterinary Medical Scholars Program (http://www.vetmed.illinois.edu/asa/vmsp.html) can complete a D.V.M. and Ph.D. simultaneously.

Students accepted into the Medical Scholars Program (https://www.med.illinois.edu/mdphd) can complete a M.D. and Ph.D. simultaneously.

Graduate Teaching Experience

Experience in teaching is considered a vital part of the graduate program and is required as part of the academic work of all Ph.D. candidates in this program.

Financial Aid

A limited number of teaching and research assistantships or associate positions are available.

Joint Degree Program

D.V.M. and Ph.D. in Veterinary Medical Science – Pathobiology

Students accepted into the Veterinary Medical Scholars Program (http://www.vetmed.illinois.edu/asa/vmsp.html) can complete a D.V.M. and Ph.D. simultaneously.

Veterinary Clinical Medicine

www.vetmed.illinois.edu/vcm/

Dean of the College of Veterinary Medicine (http://www.vetmed.illinois.edu): Peter D. Constable
Head of the Department: Karen L. Campbell
Director of Graduate Studies: Timothy M. Fan
242 Small Animal Clinic
1008 West Hazelwood Drive
Urbana, IL 61802
(217) 333-5310

Prospective students should contact Theresa Tucker, Program Secretary
(217) 244-7434
Fax: (217) 244-1475

Major: Veterinary Medical Science – Veterinary Clinical Medicine

Degrees offered: M.S., Ph.D.

Joint Degree Program: Veterinary Medical Scholars Program

Degrees Offered: D.V.M and M.S., D.V.M. and Ph.D.

Admission

Admission requirements include a doctor of veterinary medicine (D.V.M.) degree or equivalent. By petition, non-D.V.M.s may be admitted. Applicants for graduate study in veterinary clinical medicine must have a minimum grade point average of 3.0 (A = 4.0). Admission averages are computed from the entire professional curriculum or from the last 60 hours of undergraduate studies for those without the D.V.M. degree. Applicants with a grade point average between 2.5 and 3.0 may be considered for admission on limited status on the basis of individual merit. Applicants who have a prior graduate degree or who have completed some graduate course work will be evaluated on the basis of their graduate work as well as their undergraduate or professional records. Acceptance of students must be approved by the department's Graduate Committee.

International applicants must submit evidence of satisfactory performance on TOEFL or other tests designed to test proficiency in English. International students must also submit evidence of financial support.

We are not accepting applications for the M.S./D.V.M. or the Ph.D/D.V.M. program at this time.

Graduate Degree Programs

The Department of Veterinary Clinical Medicine offers a graduate program leading to the degrees of Master of Science. The primary goal of graduate programs in veterinary clinical medicine is to prepare students for careers involving research and/or teaching in a specialty area. Graduate work in veterinary clinical medicine may be pursued in several areas, including:

• anesthesiology
• equine medicine and surgery
• equine theriogeneology
• farm animal reproduction (theriogenology)
• medicine
• surgery
• imaging/radiation therapy
• small animal medicine (emergency and critical care, internal medicine)
• small animal surgery
• specialty medicine (cardiology, dentistry, dermatology, oncology, ophthalmology)
• zoological medicine

The department, with the teaching hospital, has facilities and equipment for studying the health and diseases of animals.

After completing graduate work, the student will be able to conduct research both independently and as a team member. Adequate training in planning research projects and writing research proposals will give the student the ability to function with teams of scientists from various areas of the biomedical field. Experience in clinical teaching and literature study will form the basis for the student's development of teaching programs within his or her discipline.

A residency program, designed to train a veterinarian for specialty clinical practice, can be combined with the graduate program. While a graduate program can be accomplished in a shorter time period, the duration of combined programs is usually three years, reflecting the time required to satisfy the objective of each program. Details of the residency program can be obtained from the Program Secretary of the Department of Veterinary Clinical Medicine.

Joint Degree Program

Students accepted into the Veterinary Medical Scholars Program (http://www.vetmed.illinois.edu/asa/vmsp.html) can complete a D.V.M. and Ph.D. simultaneously.

Graduate Teaching Experience

Experience in teaching is considered a vital part of the graduate program and is required as part of the academic work of all M.S. candidates in this program.

Financial Aid

A limited number of research associate positions are available.

At this time the Master of Science in VMS Veterinary Clinical Medicine is not accepting applications.

Master of Science in VMS Veterinary Clinical Medicine

The requirements for this degree include completion of a thesis that conforms to the requirements of the Department of Veterinary Clinical Medicine. The non-thesis option requires departmental approval.

The candidate must complete all requirements of the department and the Graduate College and pass the stipulated examinations. The final M.S. examination consists of a presentation of the thesis in the form of a departmental seminar (VCM 590). The seminar is followed by an oral examination administered by the candidate's committee and the department head. The student must demonstrate the ability to design and conduct independent research in order to be granted the M.S. degree.

288 English Building
608 South Wright Street
Urbana, IL 61801
(217) 333-3251
Email: tbertram@illinois.edu

Graduate Concentration: Writing Studies
Participating Programs: Art Education (PhD only), Art History (PhD only), Communication (PhD only), Curriculum & Instruction (PhD only), English (PhD only), Library and Information Science (PhD only)

Graduate Degree Programs

The Center for Writing Studies (CWS) facilitates research and promotes graduate study in the areas of rhetoric, written composition, language, and literacy. CWS offers graduate students pursuing doctoral degrees in participating departments a program leading to a concentration in Writing Studies. Graduate students pursuing the concentration may be enrolled in the participating departments of English, Communication, Art and Design, Curriculum and Instruction, Library and Information Science, or other departments from across campus with the approval of the student's home department.

Graduate students may elect to pursue a concentration in Writing Studies at the PhD level. Students take two foundational courses for the concentration to introduce them to the field, along with two methodology courses to ready them for their research. The first requirement (ENGL 505/CI 563; ENGL 506/CI 564) provides a historical background in Writing Studies while at the same time assuring knowledge of current issues through the reading and analysis of texts that mark the field. The second (ENGL 582/CI 565 and a second approved course) introduces students in depth to strands of writing studies research - historical, empirical, and theoretical. In addition, graduate students take two courses from across the university that focus on the study of writing but that also open up avenues for interdisciplinary inquiry, a key dimension of this area of study. English, Anthropology, Curriculum and Instruction, Library and Information Science, Educational Policy Studies, Sociology, Communication, and Art and Design are among the departments from which students commonly select courses.

Admission

Students are admitted into graduate study through their home departments and the Graduate College. Students may petition to add the concentration at the point of admission or after they have begun graduate study. The petition to add the concentration must be approved by the Center for Writing Studies, the home department, and the Graduate College. (Please note that the Department of English offers separate MA and PhD tracks specializing in Writing Studies; see the Department of English for admission requirements to these degree programs.) Graduate students planning to concentrate in Writing Studies must fulfill the degree requirements of their home department in addition to the Writing Studies’ requirements. In consultation with the home department, students determine whether the Writing Studies’ concentration is appropriate for their plan of study. Students should meet with a faculty advisor in their own department and also set up a meeting to discuss their program of concentration with the Director of the Center for Writing Studies.

Faculty Research Interests

Specific faculty interests include research in literacy studies, digital media, rhetorical studies, globalization and language, disability studies, cultural-historical activity theory, feminist theory and pedagogy, genre theory, technical communication and other areas of study related to the development of language and policy.

Facilities and Resources

CWS is home to the campus’s Writing across the Curriculum Program; the Writers Workshop, a campus-wide tutorial facility; and sponsor of an electronic discussion group on writing across the curriculum. It also houses Computers and Composition, an international journal that explores issues related to digital media and Research in the Teaching of English, a publication of the National Council of Teachers of English. The University of Illinois Writing Project (UIWP), a site of the National Writing Project, is also part of CWS.

Financial Aid

Graduate students may receive assistantships as consultants in the Writers Workshop, as teacher trainers in the Writing Across the Curriculum program, as assistant to the CWS director, and as research assistants to CWS faculty.

</tbody>
</table>

Total Hours 24

Other Requirements

Other requirements may overlap

Students must prepare and deliver a lecture based on their research to faculty and students for the CWS Colloquium Series: Graduate Research Forum.

The dissertation must demonstrably focus on Writing Studies (with a topic approved by the CWS Director) and be guided by CWS-affiliated faculty that serve on the dissertation committee.

For additional details and requirements refer to the department's concentration requirements (http://www.cws.illinois.edu/graduate/phd) and the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).
Joint Degree Programs

Joint degree programs allow students to pursue two graduate degrees simultaneously, where the total time for the two degrees is decreased. A student who wishes to enter a joint degree program must be admitted separately to each program as a joint degree candidate. Find out more about joint degree programs at the Graduate College (http://www.grad.illinois.edu/gradhandbook/chapteriv/section01/#joint).

The degrees listed can be earned jointly with any one listed below it:

**African Studies, M.A.** (p. 513)

Joint Degrees Offered: Medical Scholars Program
Degrees Offered: M.D./Ph.D., M.D./J.D., M.D./M.B.A.

Graduate Degree Programs

The Medical Scholars Program at the Urbana-Champaign campus enables students to combine the study of medicine leading to the M.D. with graduate or professional study in a second field leading to the Ph.D., J.D. or M.B.A. The program seeks to produce leaders uniquely qualified and motivated to address the issues shaping modern medical practice, the health care system, and biomedical research; issues related to the profound advances in science and technology; and those that arise from the pressures of socioeconomic forces.

Admission

To enter the Medical Scholars Program (MSP), applicants must meet the admissions requirements of, and be accepted by, both the College of Medicine and the graduate unit of their choice. Prospective students must demonstrate a potential for creativity and original research, a sense of social awareness and service, academic excellence, competence in leadership and interpersonal relationships, and an appropriate rationale for their interest in combined study. Application is made to the program and to the graduate unit by means of the Medical Scholars Program online application (https://www.med.illinois.edu/msp/application/welcome.asp). Application is made to the University of Illinois College of Medicine through the AMCAS (https://www.aamc.org/students/applying/amcas) application system sponsored by the Association of American Medical Colleges (https://www.aamc.org). The Medical College Admissions Test (MCAT) (https://www.aamc.org/students/applying/mcat) is required for admission to medical school, and examination scores such as those for the GRE (https://www.ets.org/gre), GMAT (http://www.mba.com/us), or LSAT (http://www.lsac.org) are required by some departments. Applicants must arrange to take such examinations and have the scores forwarded to the appropriate academic unit on the Urbana-Champaign campus. Only U.S. citizens and permanent residents are eligible to apply. Sate residency is not a factor. Please contact the MSP Assistant Dean at (217) 333-8146 to find out more about MSP admissions.

Approved Areas of Specialization

The University offers graduate study in more than 100 fields in which MSP applicants may propose combined degree study. Indeed, MSP students can pursue graduate study in any discipline offered on campus. In addition to the traditional biomedical sciences, current students are participating in graduate programs in engineering, the physical sciences, humanities, and social sciences.

Special Features of the Program

The Medical Scholars Program has over 150 joint degree students enrolled (with up to 25 students admitted annually). The Medical Scholars Program stands out from other M.D./Ph.D. programs in the range of second degree disciplines offered (students have enrolled in more than 30 different graduate programs). Located in the heart of the University of Illinois at Urbana-Champaign campus, the MSP offers graduate programs in any discipline within the biological and physical sciences, as well as in the social sciences, humanities, and law.

Financial Aid

Currently, all Medical Scholar M.D./Ph.D. students receive financial support for the duration of both their medical studies and their graduate studies. In general, students are supported by their graduate program at the "half-time level" during the four to five years they spend primarily in graduate work. This support is in the form of a teaching assistantship, research assistantship, or fellowship. During the years they spend primarily pursuing medical studies, students generally supported at the "quarter-time level", (same tuition and fee waiver, one-half the stipend). This is usually in the form of a teaching assistantship or fellowship. There is no commitment to fund M.D./J.D. or M.D./M.B.A. students although most do find such support during their medical school training.

M.D. and Ph.D

Students in the Medical Scholars Program are expected to fulfill all the degree requirements of both the College of Medicine and the second discipline. At their discretion, some Ph.D. programs allow a limited number of medical school classes (up to 12 hours) to count toward completion of the graduate
degree. Faculty advisors from the medical school and from the graduate units help students set realistic long-term study plans that integrate the two curricula.

**M.D. and M.B.A.**

Students in the M.D./M.B.A. program may receive some medical school credit toward the MBA which reduce the required number of hours for the M.B.A. to 60. All requirements for the M.D. degree must be completed.

**M.D. and J.D.**

Students in the M.D./J.D. program may receive up to 12 hours of medical school credit toward the law degree.

Fax: (217) 265-9880

Graduate Minor: American Indian and Indigenous Studies

Graduate Degree Programs

The American Indian Studies Program is an interdisciplinary academic unit housed in the College of Liberal Arts and Sciences. The thinking and intellectual work of Indigenous Peoples -- including American Indians -- is at its center. Thus, our curriculum emphasizes tribal peoples' centuries-long fight for sovereignty, including self-government, economic self-determination, and cultural self-representation. Degree-seeking graduate students pursuing masters or doctoral degrees, and who are in good standing, may complete the Graduate Minor in American Indian and Indigenous Studies. Contact the American Indian Studies Program to obtain an updated list of participating degree programs and an application form.

Admission

Applicants to the Graduate Minor in American Indian and Indigenous Studies must be in good standing in a masters or doctoral program at the University of Illinois at Urbana-Champaign. Applications to the American Indian Studies Program must include a statement of purpose that describes your academic background, career plans, and how the Graduate Minor in American Indian and Indigenous Studies will enhance your program of research, and a letter of recommendation. A student’s intent to pursue the Graduate Minor must be approved by the student’s major advisor and graduate program director in their home department.
Graduate Minor in American Indian and Indigenous Studies

The American Indian Studies Program offers a graduate minor in American Indian and Indigenous Studies. The minor is designed to complement graduate work in a variety of disciplines. Students wishing to take advantage of the minor must be in good standing, and must apply for acceptance into the minor.

AIS 501 Indigenous Critical Theory 4
or AIS 502 Indigenous Decolonial Methods
or AIS 503 Seminar in Indigenous Studies
Elective hours from approved program list, 4 of which must be at the 500 level 8

Other Requirements

In addition to the minor requirements, students must also complete the requirements of their major degree.

Hours counted toward completion of a minor may not also be applied toward any other transcripted credential.

1 For additional details and requirements refer to the department's program information online (http://www.ais.illinois.edu/programs/grad/minor) and the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).

Graduate Minor: Asian American Studies

Graduate Degree Program

The Asian American Studies Program offers a graduate minor in Asian American Studies that is interdisciplinary in nature. The graduate minor is designed to complement the graduate work of the students' area of concentration.

Admission

Students must be in good academic standing in a graduate or professional program at the University of Illinois at Urbana-Champaign and demonstrate an interest in Asian American Studies. Those wishing to apply to the minor must submit a written statement indicating why they wish to pursue the minor, demonstrate successful completion of one course in Asian American Studies at the undergraduate or graduate level, and provide written approval to pursue the minor from their graduate advisor and graduate program director. The written statement should specifically discuss how the student's prior academic training and/or work experiences are related to Asian American Studies, how a graduate minor in Asian American Studies fits in to their major academic program on campus, as well as how the minor would contribute to future professional development. The written statement and other supporting material must be submitted to the Director of the Asian American Studies Program.

Graduate Minor in Asian American Studies

For the Graduate Minor in Asian American Studies to appear on the academic transcript, the student must successfully petition the Graduate College to add the Graduate Minor in Asian American Studies to their academic records.

AAS 501 Theory and Methods in AAS 4
or AAS 561 Race and Cultural Critique
AAS 590 Asian Am Studies Seminar 4
Two graduate courses from an approved list of Asian American Studies courses at either the 400 or 500 level. 8
Total Hours 16

Information listed in this catalog is current as of 11/2014
Other Requirements

In addition to the minor requirements, students must also complete the requirements of their major degree.

Hours counted toward completion of a minor may not also be applied toward any other transcripted credential.

For additional details and requirements refer to the department's Graduate Program's Web page (http://www.asianam.illinois.edu/academics/grad-minor) and the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).

Cinema Studies

media.illinois.edu/macs/

Director of Graduate Study: C.L. Cole
228 Gregory Hall
810S. Wright St.
Urbana, Illinois 61801
Phone: (217) 333-1549

E-mail: ccole@illinois.edu

Graduate Minor: Cinema Studies

The Graduate Minor in Cinema Studies promotes the graduate-level study of cinema and related screen media and their cultural and institutional contexts and offers formal recognition of such work, undertaken alongside and in conjunction with Illinois graduate students' primary fields of study. The Department of Media and Cinema Studies administers the Minor.

Admission

Applicants to the Graduate Minor program must be in residence and in good standing in a qualifying master's or doctoral program at Illinois and must designate Cinema Studies as a field/area of concentration for the master's or the doctoral degree and have that designation formally accepted by the student's home department.

Applications to the Associate Head are accepted on a rolling basis. The Associate Head will monitor students' advancement toward completion of the Minor.

Graduate Minor in Cinema Studies

MACS 503 Historiography of Cinema 4
MACS 504 Theories of Cinema 4
Two graduate courses in cinema or related media, chosen with the prior approval of the Minor Advisor. (One of the two electives may be satisfied by an independent study course or by an approved graduate-level course taken at another institution.) 6-8
Total Hours 14-16

Other Requirements

The student's master's examination (if applicable) or preliminary/qualifying examination must include a Cinema Studies topic.

If the student's master's thesis or doctoral dissertation deals in whole or in part with a Cinema Studies or related screen media topic, a member of the Department of Media and Cinema Studies must be a formal member of the student's committee.

In addition to the minor requirements, students must also complete the requirements of their major degree.

Hours counted toward completion of a minor may not also be applied toward any other transcripted credential.

For additional details and requirements refer to the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).

Gender and Women's Studies

www.gws.illinois.edu
Graduate Degree Programs

The graduate minor in Gender & Women's Studies offers sophisticated training in feminist theory and methodology to graduate students who want to incorporate gender & women's studies into their degree work. Because gender has become a central category of analysis in many disciplines and fields, the graduate minor strengthens students' formal credentials and offers a versatile area of specialization. Please see our website for more information, www.gws.illinois.edu.

The graduate minor in Queer Studies offers students the opportunity to gain expertise in queer theory and methodology as part of their graduate degree work. The graduate minor in queer studies offers students a versatile interdisciplinary framework to complement and strengthen their research and pedagogy in their chosen field of study. Please see our website for more information, www.gws.illinois.edu.

Admission

Applicants must be in good standing in a graduate or professional program at the University of Illinois at Urbana-Champaign. The Department required a formal application, including a personal statement about how the student’s graduate work and/or research interests intersect with gender and women’s studies. Students must also have signed approval of the graduate director of their program.

Graduate Minor: Global Studies

Graduate Program

The Center for Global Studies, with the assistance of an all-campus Faculty Advisory Committee, administers an interdisciplinary and inter-professional Graduate Minor in Global Studies in cooperation with 25 units across 8 colleges as well as the School of Labor and Employment Relations and the Graduate School of Library and Information Science. The Minor develops awareness and knowledge of globalization and the relevance of this process to student degree programs and career objectives. It is intended to serve three constituencies of students: those seeking to integrate their specialized skills within the broader intellectual and public policy demands of a global society; those proceeding to disciplinary or professionally-based doctoral work; and those for whom the Minor enhances their disciplinary and professional credentials in seeking public or private employment for posts relevant to global studies and policy-making.

Graduate Minor in Global Studies

There are no prerequisites for the Graduate Minor. Students must be in good standing as a graduate student and should demonstrate an interest in globalization and the issues that this process poses for the world’s populations. Students must submit an online admission form, indicating the courses that the student proposes to enroll in, the approval of the student’s primary advisor and graduate program director, and a brief statement outlining the relation of the Graduate Minor to the student’s degree and career objectives. For the Graduate Minor in Global Studies, students must first completing the GLBL 500 (4 hours) core course and then completing two additional courses (8 hours) relevant to the student’s proposed minor. There is no language requirement for the Minor, but advanced language competence is strongly encouraged.

E-mail: dfr1@illinois.edu

Graduate Minor: Heritage Studies
Graduate Degree Program

The Heritage Studies Minor (HSM) is pursued at the graduate level in a student’s home department through completion of four courses (4 hours each) plus a culminating project arising out of normal coursework undertaken in consultation with the HSM Committee Head.

Admission

Admission for the Heritage Studies Minor is contingent upon the approval of the home department. Students are admitted to the graduate program of the particular academic department in which they will pursue their Master’s or PhD degree. A student interested in the HSM should clearly indicate this in the application statement to the University and, upon matriculation, should inform the HSM Committee of the intent to pursue the Minor and begin planning how to satisfy the requirements. The HSM Steering Committee reviews student progress in consultation with the student’s academic advisor. Students must be admitted to the graduate program of an academic department in order to participate in the HSM. Students already enrolled in one of the University of Illinois at Urbana-Champaign graduate programs may also apply for admission to the HSM at any time, but are advised to do so in their first year of study.

There are no prerequisites for admission to the HSM other than admission to a university graduate program. The HSM does not require prior practical experience in heritage work for admission. However, the HSM will encourage students to obtain such practical experience during their graduate work at the University of Illinois.

Faculty Research Interests

The HSM courses offer broad coverage of different approaches to heritage theory and practice, including interdisciplinary perspectives from Anthropology, Landscape Architecture, Urban and Regional Planning, Architecture, History, Geography, Education, and other fields. Faculty work collaboratively with each other and across the globe, focusing on a range of cultures and time periods from prehistoric to contemporary.

Financial Aid

The Minor itself does not provide financial aid. Financial aid may be requested from the admitting graduate program of the particular academic department.

Graduate Minor in Heritage Studies

Take two from the following list:

</tr>
</tbody>
</table>

Additional course(s) from an approved list, chosen by the student and the H.S.M. committee head, must also be completed. 4 or 6

Total Hours 12

Other Requirements

A culminating project (fulfilled by a project, paper, or design: choice is determined in consultation with the Minor’s Steering Committee) is required.

In addition to the minor requirements, students must also complete the requirements of their major degree.

Hours counted toward completion of a minor may not also be applied toward any other transcripted credential.

For additional details and requirements refer to the program information online (http://www.landarch.illinois.edu/programs/graduateminor/graduateminor.aspx) and the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).

Latina/Latino Studies

www.lsl.illinois.edu

Department Chair: Jonathan X. Inda
1207 West Oregon
Urbana, IL
Phone: (217) 265-0370
Graduate Minor: Latina/Latino Studies

Graduate Degree Program

The graduate minor offers a comprehensive program of study in Latina/Latino Studies research, theories and methodologies to graduate students who wish to structurally incorporate Latina/Latino Studies into their degree work. As U.S. Latina/os have become a central category of analysis in theories of ethnicity, race, gender, sexuality, and class in many disciplines and fields, the graduate minor strengthens students' formal credentials and offers a versatile area of specialization. The graduate minor provides students with a theoretical and methodological foundation and a firm background in the history and culture of Latinas and Latinos in the United States from the perspective of the humanities, the social sciences, and other fields. The program will allow students to assess how historical and cultural processes affect U.S. Latina/os in contemporary society. Furthermore, the transdisciplinary and transnational nature of the program will provide students, whether or not they focus their graduate studies on Latina/o Studies, with the breadth of research and approaches taken by scholars in the field.

Admission

Applicants must be in good academic standing in a graduate or professional program at the University of Illinois at Urbana-Champaign and demonstrate a proven interest and commitment in Latina/Latino Studies. Interested students must submit an application to the Department of Latina/Latino Studies and receive approval to pursue the minor from their graduate or professional program. Application materials can be obtained at the Latina/Latino Studies Program office and at the Program's website (http://www.lls.illinois.edu).

Courses of Instruction

Accountancy (ACCY)

ACCY Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/ACCY)

Courses

ACCY 199 Undergraduate Open Seminar credit: 1 to 5 Hours.
May be repeated.

ACCY 200 Fundamentals of Accounting credit: 3 Hours.
Survey course in the principles of accounting for students registered in schools and colleges other than the College of Business. Credit is not given for both ACCY 200 and either ACCY 201 or ACCY 202. Prerequisite: Sophomore standing.

ACCY 201 Accounting and Accountancy I credit: 3 Hours.
Introduction to the role of accounting information in establishing organization objectives and goals and identification of strategies to best achieve such objectives and goals. Topics focus on the utility of information necessary for the formation, execution and monitoring of the variety of contracts embedded in organization strategies. Projects facilitate self-discovery of knowledge and development of a variety of professional skills and attitudes. Credit is not given for both ACCY 201 and ACCY 200. Prerequisite: ECON 102, and credit or concurrent enrollment in ECON 103.

ACCY 202 Accounting and Accountancy II credit: 3 Hours.
Continuation of ACCY 201 with focus on strategic management of economic resources, together with acquisition of such resources, and financial and non-financial measures of organizational performance. Credit is not given for both ACCY 202 and ACCY 200. Prerequisite: ACCY 201 or equivalent.

ACCY 290 Prof Internship in Accountancy credit: 0 to 3 Hours.
Formalized learning experience in combination with practice of accounting while engaged in an internship with a public accounting firm, business, or other off-campus organization; prior approval of learning plan and a summary report of learning experience are required. Approved for both letter and S/U grading. May be repeated in the same or subsequent terms to a maximum of 3 hours. Prerequisite: Open only to undergraduate accountancy majors with junior or senior standing; completion of 300-level accountancy courses appropriate to internship learning plan; and consent of department.

ACCY 301 Atg Measurement & Disclosure credit: 3 Hours.
Introduction to measurement and reporting of organizational performance for strategic and operational purposes with a focus on a variety of financial and non-financial performance measures suitable for both internal and external decision-making. Projects, together with a series of practical workshops, facilitate self-discovery of knowledge and development of a variety of professional skills and attitudes. Prerequisite: ACCY 202 or equivalent and concurrent enrollment in ACCY 301 by students majoring in Accountancy (recommended for non-Accountancy majors); or consent of department.

ACCY 302 Decision Making for Atg credit: 3 Hours.
Decision making implications of information provided to organization managers and to external stakeholders such as investors, creditors, customers, and regulators. Concepts from economics, statistics, and psychology emphasize the use of quantitative techniques to comprehend uncertainty and risk. Projects, together with a series of practical workshops, facilitate self-discovery of knowledge and development of a variety of professional skills and attitudes. Prerequisite: ACCY 202 or equivalent; ECON 203 or equivalent or concurrent enrollment; and concurrent enrollment in ACCY 301 by students majoring in Accountancy (recommended for non-Accountancy majors); or consent of department.

ACCY 303 Atg Institutions and Reg credit: 3 Hours.
Regulation theory and practice as applied to accounting information. A general framework for regulation of accounting procedures is developed. This framework is applied to reporting, taxation, and regulated business activities. Projects facilitate self-discovery of knowledge and the development of professional attitudes and skills with emphasis on professional research. Prerequisite: ACCY 301 and ECON 302 and FIN 221; or consent of department.

ACCY 304 Accounting Control Systems credit: 3 Hours.
Broad perspective on accounting and control that considers attainment of all goals of an organization, including those concerned with financial objectives. Topics include the conceptual foundations of control and application of practical, analytical tools to the evaluation of an organization's control environment. Cases, class discussion and field research projects emphasize independent thinking, group processes, and communication. Prerequisite: ACCY 301 and ACCY 302 and BADM 310; or consent of department.

ACCY 312 Principles of Taxation credit: 3 Hours.
Introduction to the United States federal income tax system with an emphasis on income tax determination and the taxation of property transactions. Topics include the tax environment, tax provisions relevant to businesses, employees and business owners. Projects facilitate self-discovery of knowledge and envelopment of a variety of professional skills and attitudes. Prerequisite: ACCY 202 or equivalent.

ACCY 321 Principles of Public Policy credit: 3 Hours.
Same as BADM 303 and PS 321. See PS 321.

ACCY 352 Database Design and Management credit: 3 Hours.
Same as BADM 352. See BADM 352.
ACCY 353 Info Sys Analysis and Design credit: 3 Hours.
Same as BADM 353. See BADM 353.

ACCY 398 Practical Problems in Atg credit: 0 to 10 Hours.
Course covers the professional standards relating to corporate financial reporting, taxation, auditing and public sector reporting. Additional fees may apply. See Class Schedule. Approved for both letter and S/U grading. Credit is not given towards degree requirements. Prerequisite: Concurrent registration in the University's CPA Review course.

ACCY 405 Assurance and Attestation credit: 3 Hours.
Conceptual introduction to diverse means by which assurers improve the quality of information used by third parties for contracting purposes, with emphasis on the credibility- and relevance-enhancement properties of assurers' services. Topics include the economics of assurance and attestation, and concepts including independence, risk, evidence, and control. Projects facilitate self-discovery of knowledge and development of professional skills and attitudes. 3 undergraduate hours. 3 graduate hours. Prerequisite: ACCY 304 or consent of department.

ACCY 410 Advanced Financial Reporting credit: 3 or 4 Hours.
Current authoritative accounting standards and applications to accounting practice. Topics do not represent the full range of financial reporting issues, but are selected based on relevance of the underlying business transaction, complexity of the topic, consistency of applicable standard with underlying reporting concepts, and transferability of the standard to other accounting issues. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: ACCY 303 or consent of department.

ACCY 415 Auditing Stds and Practice credit: 3 Hours.
Framework for understanding and evaluating the professional auditing standards for assurance services. Model of financial reporting provides an overview of the types of information disseminated by companies to external users, and provides the basis for identifying professional standards areas for future standards' development. 3 undergraduate hours. No graduate credit. Credit is not given for both ACCY 415 and ACCY 515. Prerequisite: ACCY 304 or consent of department.

ACCY 451 Advanced Income Tax Problems credit: 3 or 4 Hours.
Practical and theoretical training in the more common and important provisions of the federal income tax, advanced problems, and tax case research and preparation. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: Senior standing and ACCY 312.

ACCY 499 Senior Research credit: 2 to 4 Hours.
Research and readings course for students majoring in accountancy. May be taken by students in the college honors program in partial fulfillment of the honors requirements. 2 to 4 undergraduate hours. No graduate credit. May be repeated to a maximum of 6 hours. Prerequisite: Cumulative grade-point average of 3.0., honors in the junior year, or consent of department; senior standing.

ACCY 500 Atg Measuremnt, Rpting & Cntrl credit: 1 or 4 Hours.
A managerial perspective of the nature and role of accounting in organization measurement, reporting and control processes. Prerequisite: Enrollment in a non-accountancy masters program in business or consent of department.

ACCY 501 Accounting Analysis I credit: 4 Hours.
Uses of accounting information; collection, processing, and communication of accounting information; measurement of assets, liabilities, equities, and income; and accounting system design. Prerequisite: Enrollment in graduate degree program or consent of department.

ACCY 502 Accounting Analysis II credit: 4 Hours.
In-depth study of accounting valuation processes, accounting income measurement, and special reporting problems of multiple-entity organizations. Prerequisite: ACCY 501 or equivalent; enrollment in graduate degree program or consent of department.

ACCY 503 Managerial Accounting credit: 4 Hours.
Introduction to management accounting as part of the firm's information system, in terms of modern cost accounting and budgetary systems for planning and controlling business operations. Prerequisite: Credit or concurrent registration in ACCY 501 or equivalent; enrollment in graduate degree program or consent of department.

ACCY 504 Auditing credit: 4 Hours.
Introduction to conceptual and applied material in the field of auditing. Emphasizes the audit process, reporting, and professional responsibilities. Prerequisite: Credit or concurrent registration in ACCY 502, or equivalent; enrollment in graduate degree program or consent of department.

ACCY 505 Federal Taxation credit: 4 Hours.
Introduction to historical and conceptual as well as applied material in the accounting area of federal taxation; emphasizes the provisions of the tax law relevant to accounting measurement methods. Credit is not given for both ACCY 505 and ACCY 312. Prerequisite: ACCY 501; enrollment in graduate degree program or consent of department.

ACCY 510 Financial Reporting Standards credit: 4 Hours.
Stakeholders' needs for reliable and relevant information about the performance of firms, as well as managers; economic self-interests, influence managers' selection of accounting policies and financial reporting methods. This course selectively surveys both academic research and professional standards to focus on the measurement, classification and disclosure of financial transactions. Cases, class discussion and research projects emphasize independent thinking, group processes, and communication. Prerequisite: ACCY 303, FIN 300 and enrollment in the BS/MS in Accountancy program or consent of department.

Information listed in this catalog is current as of 11/2014
ACCY 511 Risk Measurement/Reporting I credit: 4 Hours.
Application of the concepts of risk and uncertainty to the financial management of organizations in achieving business objectives and strategies, with an emphasis on the role of accounting measurement and reporting in the management of such risks. Focuses on integrating knowledge acquired from behavioral, economic, financial, and accounting perspectives. Prerequisite: ACCY 510 and enrollment in graduate accounting degree program or consent of department.

ACCY 512 Risk Measurement/Reporting II credit: 4 Hours.
Application of the concepts of risk and uncertainty to the operational management of organizations in achieving business objectives and strategies, with an emphasis on the role of accounting measurement and reporting in the management of such risks. Focuses on integrating knowledge acquired from behavioral, economic, organizational, and accounting perspectives. Prerequisite: Enrollment in graduate accounting degree program or consent of department.

ACCY 515 Auditing & Assurance Standards credit: 4 Hours.
Role of professional and ethical standards in the conduct of auditing and assurance services and the role of auditing and assurance services in corporate governance. This course selectively surveys both academic and professional literature to focus on the conduct of auditing and assurance services. Cases, class discussion and research projects emphasize the importance of independent thinking, group processes, and communication for professional accounting practice. Prerequisite: ACCY 405 and enrollment in the BS/MS in Accountancy program or consent of department.

ACCY 517 Financial Statement Analysis credit: 4 Hours.
Examines tools and techniques of financial statement analysis from the perspective of investors and creditors; emphasizes theoretical and empirical properties of financial ratios. Prerequisite: ACCY 501, ACCY 502, ACCY 510 or concurrent enrollment, FIN 520, BADM 572; or equivalent; and enrollment in graduate degree program or consent of department.

ACCY 550 Corporate Income Taxation credit: 4 Hours.
Analyzes the tax treatment, problems, planning techniques, and underlying governmental policies involving corporations and their shareholders; coverage includes formations, operations, distributions, liquidations, reorganizations, and affiliations. Prerequisite: ACCY 451 or equivalent or consent of department.

ACCY 551 Partnership Income Taxation credit: 4 Hours.
Analyzes the tax treatment, problems, planning techniques, and underlying governmental policies involving partnerships and their partners, including Subchapter S corporations and their shareholders. Prerequisite: ACCY 312 or equivalent.

ACCY 552 Selected Topics in Fed Tax credit: 2 to 4 Hours.
Seminar on federal tax topics of current interest in specialized areas; topics include international taxation, deferred compensation, problems of closely-held businesses, estate planning, taxation of trusts, and new developments. May be repeated with the consent of the department. Prerequisite: ACCY 451 or consent of department.

ACCY 553 International Taxation credit: 4 Hours.
This course analyzes the tax treatment, issues, planning techniques and underlying government policies involved in doing business internationally. The course incorporates concepts learned in all of the tax courses as they relate to the impact on cross border transactions, including source of income, inbound and outbound transfers, foreign tax credits, foreign currency transactions, controlled foreign corporations, Subpart F income, foreign taxpayers with US activities, treaties, and transfer pricing.

ACCY 554 Inc Tx Acctg & Multistate Tx credit: 4 Hours.
This course analyzes the underlying concepts for Accounting for Income Taxes and Multistate Taxation. The Accounting for Income Taxes portion of the course covers all aspects of financial statement income tax accounting including ASC 740, contingency reserves, purchase accounting; IFRS, footnote disclosures, and interim reporting. The Multistate portion of the course covers the state and local taxation of business entities including examining issues relating to jurisdiction, nexus, and mergers & acquisitions.

ACCY 555 Tax Research credit: 1 to 4 Hours.
Provides the student with a working knowledge of tax research methodology utilized by accountants in public practice. Aims to develop the student's capacity for either solving or defending his/her position with respect to a particular tax issue. May be repeated with consent of the department. Prerequisite: Graduate standing or consent of department.

ACCY 556 Advanced Topics in Taxation credit: 1 to 4 Hours.
Seminar on federal tax topics of current interest in specialized areas; topics include international taxation, deferred compensation, problems of closely-held businesses, estate planning, taxation of trusts, and new developments. May be repeated with the consent of the department. Prerequisite: ACCY 451 or consent of department.

ACCY 557 Taxation of Closely-Held Bus. credit: 4 Hours.
The course analyzes the taxation and planning opportunities associated with all types of closely-held business entities and their stakeholders, including the tax impact of operating as an S corporation, converting from a C corporation to an S corporation, distributions, redemptions, liquidations, and termination of entities, at risk limitations, compensation vs. dividends, and fringe benefits. It also covers tax-exempt organizations.
ACCY 559 Tax Policy & Procedures credit: 1 to 4 Hours.
A normative analysis of the structure and design of the tax system including the tenets of good tax policy; and the theoretical and empirical analysis of the impact of taxation on the economic system. An in-depth analysis of IRS Procedures including the processes through which tax laws are enacted, interpreted, administered and applied, along with the remedies available to taxpayers within the tax controversy framework of the IRS, Federal government and the court system. May be repeated in the same or separate terms to a maximum of 4 hours if topics vary.

ACCY 560 Information in Value Creation credit: 1 to 4 Hours.
Introduction to the role of information in processes employed by organizations to create value in market settings, including concepts and theories from strategic management, economics of organization, and systems theory and the relevance of such theories to the concepts and practices of accounting and auditing. This course is for graduate accountancy students who did not earn a BSA at University of Illinois at Urbana-Champaign. May be repeated in the same or separate terms to a maximum of 4 hours with consent of the department. Prerequisite: Enrollment in graduate accounting degree program and consent of department.

ACCY 561 Taxes and Business Strategy credit: 4 Hours.
To be a complete tax professional, one must understand both the tax law and how the law interacts with a broad spectrum of factors affecting business decisions. To this end, the course integrates concepts from finance, economics and tax law to develop a complete understanding of the role of taxes in business strategy. It also provides a platform to allow students to explore specific areas of tax law more deeply than a traditional course would permit. Prerequisite: Concurrent enrollment with ACCY 557 or consent of instructor.

ACCY 585 Constructs in Atg Research credit: 4 Hours.
Examines the role of information in economic and behavioral models of decision making under uncertainty; presents major paradigms underlying contemporary accounting research. Interdisciplinary approach; readings drawn from the accounting, behavioral, economics, and finance literature. Prerequisite: MATH 463 and ECON 502.

ACCY 590 Adv Prof Internship in ACCY credit: 0 to 4 Hours.
A formalized learning experience in combination with practice of accounting while engaged in an internship with a public accounting firm, business, or other off-campus organization; prior approval of learning plan and a summary report of learning experience required. Approved for both letter and S/U grading. May be repeated to a maximum of 4 hours. Prerequisite: Open only to accountancy majors enrolled in the department's integrated bachelor/master program or students with graduate standing in accountancy; completion of 300-level accountancy courses appropriate to internship learning plan; and consent of department.

ACCY 592 Intro to ACCY Research credit: 4 Hours.
Comparative study of alternative methodologies and conceptual frameworks and their application to selected current research issues central to the development of accounting thought, both theoretical and empirical. Prerequisite: ACCY 511 and ACCY 512 and courses in behavioral science, mathematics, and economics; or equivalent background and admission to the accountancy Ph.D. program; or consent of department.

ACCY 593 Special Research Problems credit: 1 to 8 Hours.
Individual investigations or research projects selected by the students, subject to approval by the graduate adviser and the executive officer of the Department. May be repeated in the same or separate terms. Prerequisite: Enrollment in graduate accounting degree program or consent of department.

ACCY 594 Doctoral Research Seminar credit: 4 Hours.
Seminars in various accounting areas designed to enhance the research abilities of doctoral students and to assist them in preparing research proposals; these include Behavioral Dimensions, Public Sector, Tax, Auditing, Managerial, and others announced in the Class Schedule. May be repeated. Prerequisite: Credit or concurrent registration in ACCY 592 or consent of department.

ACCY 595 Models of Decision and Choice credit: 4 Hours.
Same as PSYC 534. See PSYC 534.

ACCY 599 Thesis Research credit: 0 to 16 Hours.
Individual direction and guidance in writing theses; seminar discussion of progress made. Approved for S/U grading only. May be repeated.

Advertising (ADV)

ADV Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/ADV)

Courses

ADV 150 Introduction to Advertising credit: 3 Hours.
Introduction to the practice and profession of advertising. Course material covers various functional areas of advertising and integrated brand promotion, including account planning, creative, media, research, consumer behavior, sales promotion and interactive advertising. Topics also include how advertising relates to society in cultural, social, ethical and regulatory contexts. Open to all undergraduate majors. Credit is not given for ADV 150 if credit for ADV 300 has been earned.

ADV 199 Undergraduate Seminar credit: 1 TO 5 Hours.
May be repeated to a maximum of 12 hours in separate semesters, if topics vary.
ADV 281 Advertising Research Methods credit: 3 Hours.
Introduces students to the wide spectrum of qualitative and quantitative research techniques that are commonly used in the advertising industry. In addition to examining the principles, methods and techniques of advertising research, the course will address issues such as when research should and should not be conducted, analyzing data sets, forming meaningful research questions, figuring out how to answer the questions, and presenting the answers to these questions in a clear and compelling manner. Credit is not given for ADV 281 if credit for ADV 481 has been earned. Prerequisite: ADV 150, STAT 100 or equivalent.

ADV 283 Content, Contact, Connections credit: 3 Hours.
Designed to help students acquire brand decision-making skills. Advertising and marketing theories, practical problems and traditional cases will be studied as they learn to build a strong brand strategy that will lead to a strong brand advertising strategy. This encompasses every facet of making advertising decisions for a brand. This involves understanding the content a consumer requires, how the consumer will come in contact with the brand, and what is the goal of the connection between consumer and content/contact. Prerequisite: ADV 150, ADV 281.

ADV 284 Consumer Insight credit: 3 Hours.
Course focuses on methods of eliciting consumer insight. In particular, this class introduces the process and applied outcomes of consumer insight in terms of building brand strategy. Techniques for persuasive presentation of insight will also be introduced. Prerequisite: ADV 281, ADV 283.

ADV 310 Intro to Public Relations credit: 3 Hours.
Introduces the student to the basic elements and principles of public relations.

ADV 312 Advertising History credit: 3 Hours.
Teaches the important events, forces, people, and technologies that helped advertising to become an important institution in America. Credit is not given for ADV 312 if credit for ADV 412 has been earned. Prerequisite: ADV 150.

ADV 315 Emerging Media credit: 3 Hours.
Same as AGCM 315. See AGCM 315.

ADV 350 Writing for Public Relations credit: 3 Hours.
Focuses on the strategy of crafting and delivering PR messages to various audiences with special emphasis on pre-writing, preparation, revision and presentation. Prerequisite: ADV 310.

ADV 390 Content Creation credit: 3 Hours.
Explores theories of creativity; situates creativity and creative practices within the social structure of organizations that develop creative content; examines the relationship between creative strategy, creative concepts and creative executions; exposes students to the practice of creating content for traditional and non-traditional media vehicles. Credit is not given for ADV 390 if credit for ADV 450 has been earned. Prerequisite: ADV 283.

ADV 393 Advertising and Society credit: 3 Hours.
Provides a critical understanding of advertising's role in modern society. Advertising will be studied as a cultural force and social institution. Its role will be examined in relation to communications, economics, and political and legal systems. Credit is not given for ADV 393 if credit for ADV 493 has been earned.

ADV 399 Advertising Study Abroad credit: 1 to 5 Hours.
Provides credit toward undergraduate degree for undertaking study and/or a research project through faculty led programs or from an accredited foreign institution or approved overseas program. Approved for both letter and S/U grading. May be repeated in the same or separate terms to a maximum of 18 hours. Final determination of appropriate credit will be made upon completion of the work done abroad and/or on campus. Prerequisite: One academic year (or one semester in the case of transfer students) in residence at UIUC, good academic standing, completion of at least thirty semester hours toward the bachelor's degree, and prior approval of the Department of Advertising. Some programs have additional requirements.

ADV 400 Special Problems credit: 0 to 3 Hours.
Special projects, research, and independent reading in advertising for students capable of individual work under the guidance of a faculty adviser. 0 to 3 undergraduate hours. No graduate credit. May be repeated in the same or in multiple semesters, if topics vary. Prerequisite: Written research proposal and consent of department.

ADV 410 Advanced Public Relations credit: 3 Hours.
Examines the intersection of public relations strategies and tactical communications used by companies and public institutions to target specific audiences: employees, the news media, the community, the consumer, governmental officials and agencies, stockholders and other relevant groups are included in this group. 3 undergraduate hours. No graduate credit. Prerequisite: ADV 310.

ADV 411 Classic Campaigns credit: 3 Hours.
Examines the advertising campaigns that have been seen as the best examples of this genre during the past century. Includes the writings of famous advertising authors on the rhetorical principles of advertising. 3 undergraduate hours. No graduate credit.

ADV 452 Creative Concepts I credit: 3 or 4 Hours.
Planning and execution of advertising across media, with emphasis on the creation of campaigns 3 undergraduate hours. 4 graduate hours. Prerequisite: ADV 390 and consent of instructor (required).
ADV 454 Creative Concepts II credit: 3 Hours.
This portfolio-oriented course builds upon the core competencies acquired in ADV 452 and applies them to solving real-world advertising problems with integrated creative consumer communications efforts than span traditional and new media. 3 undergraduate hours. 3 graduate hours. Prerequisite: ADV 452.

ADV 460 Innovation in Advertising credit: 3 Hours.
This course is intended to improve creative and critical thinking skill in advertising planning by understanding the core technology and perspective of digital and other innovative media in the context of integrated communication. This will allow students to understand how consumers perceive and process digital advertising messages; to research critical questions in digital consumer behavior; to learn how to utilize digital and non-digital media in the context of integrated communication; to apply knowledge of digital communication technology to the real-world advertising cases. 3 undergraduate hours. 3 graduate hours. Credit is not given for ADV 460 if credit for the Digital Advertising section of ADV 490 has been earned. Prerequisite: ADV 283, ADV 284.

ADV 475 Multicultural Advertising credit: 3 Hours.
Examines the role of multicultural issues upon advertising both as a practice and as an industry. Incorporates historical perspectives to understand the foundational role race, age, and sexual orientation has played in advertising and marketing and will address current issues of racial imagery in advertising, racial diversity in the industry, and a variety of topics related involving multicultural advertising and marketing. 3 undergraduate hours. 3 graduate hours.

ADV 476 Global Advertising credit: 3 Hours.
Explores theories of culture and communication and applies them to advertising issues in the context of globalization. Through case studies and an applied research paper, students will develop strategies for advertising and communicating messages to local and global audiences. 3 undergraduate hours. 3 graduate hours. Prerequisite: ADV 150 or equivalent.

ADV 478 Psychology of Advertising credit: 3 Hours.
Course is designed to familiarize students with theory and research at the intersection of advertising and psychology. Explores issues pertaining to advertising psychology, including: basic research methodology, the emergence of trends, attitudes and persuasion, human and brand personality, cross-cultural advertising, implicit consumer cognition, judgment and decision making, and others. 3 undergraduate hours. No graduate credit. Credit is not given for ADV 478 if credit for the Psychology of Advertising section of ADV 490 has been earned. Prerequisite: ADV 281 or equivalent.

ADV 481 Advertising Research Methods credit: 3 Hours.
Overview of basic concepts of research methodology with particular emphasis on advertising research. Computer analysis and interpretation of actual data sets; measurement with both structured and unstructured techniques; principles of survey and experimental design. 3 undergraduate hours. No graduate credit. Prerequisite: ADV 150 and a specified course in statistical methods.

ADV 482 Qualitative Analysis in Advertising credit: 3 Hours.
Provides students with an understanding of the multiple qualitative methods used in advertising and consumer research; a deeper examination of design and analysis issues are covered with focus on analysis of texts to uncover consumer insights and test advertising strategy. 3 undergraduate hours. No graduate credit. Prerequisite: ADV 150 and ADV 281 or equivalent.

ADV 483 Audience Analysis credit: 3 Hours.
Analyzes audiences and matches consumer insights with strategic ideas for brand communication, contact, and connection. 3 undergraduate hours. No graduate credit. Prerequisites: ADV 281.

ADV 484 Quantitative Research Methods credit: 3 Hours.
Advanced undergraduate course on quantitative research methods in advertising and consumer behavior. In-depth coverage of descriptive research, experimental research, descriptive and inferential statistics, and computer analysis and interpretation of actual data. 3 undergraduate hours. No graduate credit. Prerequisite: ADV 281.

ADV 490 Special Topics in Advertising credit: 1 to 3 Hours.
Covers current issues in various advertising areas not studied extensively in other courses. 1 to 3 undergraduate hours. 1 to 3 graduate hours. May be repeated in the same or separate terms to a maximum of 6 hours. Prerequisite: Announced separately for each topic.

ADV 491 Advertising Management Plan credit: 3 Hours.
Application of analytical planning concepts to advertising planning and decision making; covers all of the decision making areas of advertising. 3 undergraduate hours. No graduate credit. Prerequisite: ADV 290, ADV 483.

ADV 494 Persuasion Consumer Response credit: 3 Hours.
Addresses what makes a mass-mediated message persuasive by reviewing theories of mass communication and persuasion, consumer information-processing, and advertising effectiveness measures. 3 undergraduate hours. No graduate credit. Prerequisite: ADV 281.

ADV 495 Internship Seminar credit: 0 to 1 Hours.
Seminar based on internship experience. Offered for College of Media students who complete an approved professional, industry related internship. 1 undergraduate hour. 1 graduate hour. Approved for S/U grading only. May be repeated in the same term to a maximum of 2 undergraduate hours or 2 graduate hours. May be repeated in subsequent terms to a maximum of 3 undergraduate hours or 3 graduate hours. Prerequisite: Consent of instructor.
ADV 498 The Sandage Project credit: 3 Hours.
This course is named after the founder of the Advertising Department, Charles H. Sandage (known as the "father of advertising education"). His vision of educating the future of the industry was grounded in theoretical and foundational courses emphasizing the "why of advertising" - not just the "how." In this course, students will integrate the concepts, experiences, and skills that have been learned in the curriculum with a service-learning project. 3 undergraduate hours. No graduate credit. Prerequisite: ADV 283, ADV 390 and ADV 460 or consent of instructor.

ADV 550 Foundations of Advertising credit: 3 Hours.
Explores the development of American advertising through the 20th and into the early 21st century. Analyzes and evaluates American advertising through these primary areas: ethics, advertising philosophies, advertising structure, advertising education, its broader social impact, the role of media and technologies, and its place within a global framework. Prerequisite: Consent of department.

ADV 580 Advertising Theory credit: 3 Hours.
Reviews classic and contemporary theories used in advertising research and practice with multidisciplinary emphasis. Through reading, discussion and independent research, students will understand how basic social science and humanities research and advertising scholarship are related; how theories and concepts are applied, adapted, constrained and combined when applied to advertising and other communication issues; and how research evolves over time.

ADV 581 Quantitative Research Methods in Adv credit: 3 Hours.
Provides students with an overview of quantitative research methodology in advertising and consumer behavior. Students will learn appropriate uses and techniques for conducting exploratory (e.g., focus groups, literature searches), descriptive (e.g., observational techniques, surveys), and casual (randomized- and quasi-experiments) research. Ethical considerations in research, and limitations of quantitative research will play an important role throughout the course. Students will learn basic descriptive and inferential statistical analyses to help analyze, and make sense of quantitative data. Prerequisite: Basic statistics course.

ADV 582 Qualitative Research in Advertising credit: 3 Hours.
Treatment of basic research concepts and procedures in the social sciences with emphasis on advertising. Prerequisite: Consent of the department.

ADV 587 Graduate Seminar I credit: 3 Hours.
Provides advertising students and faculty the opportunity to interact on significant topics. It draws on a wide range of perspectives to explore not only foundational theories and research in advertising, but also current issues, contemporary analytical approaches, and emerging trends in advertising scholarship and practice. Prerequisite: Consent of department.

ADV 588 Graduate Seminar II credit: 3 Hours.
Students write research proposals in this course. Prerequisite: The grade of B or better in ADV 587.

ADV 590 Special Topics in Advertising credit: 1 to 4 Hours.
May be repeated in the same or in multiple semesters if topics vary. Prerequisite: Consent of department.

ADV 597 Proseminar in Advertising credit: 1 Hour.
Current topics, cases, and research in advertising are presented in a forum that fosters critical thinking and engagement. Weekly presentation and discussion of current research and cases by faculty, undergraduate/graduate students, visiting scholars and visiting professionals. Approved for S/U grading only. May be repeated up to 4 graduate hours in separate terms.

ADV 598 Professional Project credit: 0 or 6 Hours.
This course serves as a capstone, requiring the student to demonstrate a mastery of knowledge in the primary areas of advertising. Approved for S/U grading only. May be repeated in separate terms to a maximum of 6 hours. Prerequisite: A grade of B or better in ADV 588.

ADV 599 Thesis Research credit: 0 to 6 Hours.
Approved for S/U grading only. May be repeated in separate terms. Prerequisite: ADV 588 and consent of the department.

Aerospace Engineering (AE)

AE Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/AE)

Courses

AE 100 Intro to Aerospace Engineering credit: 2 Hours.
Introduction to the Aerospace Engineering curriculum and career. Typical section topics include aircraft and rocket design and flight. Overviews of the topics are presented along with theory to be experimentally verified.

AE 199 Undergraduate Open Seminar credit: 0 to 5 Hours.
1 to 5 credit hours. May be repeated.

AE 202 Aerospace Flight Mechanics credit: 3 Hours.
Fundamental principles of aerospace flight mechanics applied to spacecraft and aircraft. Orbital mechanics, rocket propulsion, and dynamics and control applied to spacecraft design. Aerodynamics, maneuvering, stability and flight performance applied to aircraft design. MATLAB examples and assignments. Prerequisite: Credit or concurrent registration in TAM 212.
AE 298 Special Topics credit: 1 to 4 Hours.
Lectures and discussions relating to new areas of interest. See class schedule for topics and prerequisites. May be repeated if topics vary.

AE 302 Aerospace Flight Mechanics II credit: 3 Hours.
Fundamentals of aircraft and spacecraft dynamics and orbital mechanics; aircraft performance in various flight attitudes; aircraft stability and control; spacecraft attitude dynamics and control; the two-body problem of orbital mechanics; orbit transfer. Prerequisite: AE 352.

AE 311 Incompressible Flow credit: 3 Hours.
Equations of motion for incompressible flow, both inviscid and viscous; potential flow theory, inviscid airfoil theory: two- and three-dimensional, Navier-Stokes equations, laminar boundary layer and transition to turbulence. Prerequisite: Credit or concurrent registration in AE 202 and MATH 241.

AE 312 Compressible Flow credit: 3 Hours.
Dynamics of compressible fluid; conservation of mass, momentum, and energy; one-dimensional and quasi-one-dimensional flow; oblique shock waves & Prandtl-Meyer expansion fans; unsteady wave motion; linearized theory. Application to nozzles, diffusers, airfoils, shock tubes and other geometries. Prerequisite: AE 202 and MATH 285. Credit or concurrent registration in ME 300.

AE 321 Mechs of Aerospace Structures credit: 3 Hours.
Fundamental concepts in the linear theory of elasticity, including stress, strain, equilibrium, compatibility, material constitution and properties. Failure mechanisms and criteria. Application to plane stress-strain problems, beams in extension and bending, and shafts in torsion. Prerequisite: MATH 285 and TAM 210.

AE 323 Applied Aerospace Structures credit: 3 Hours.

AE 352 Aerospace Dynamical Systems credit: 3 Hours.
Particle kinematics and dynamics; Lagrange's equations; vibration of multiple degree-of-freedom systems; rotational kinematics and dynamics of rigid bodies. Credit is not given for both AE 352 and TAM 412. Prerequisite: MATH 225, MATH 285, and TAM 212.

AE 353 Aerospace Control Systems credit: 3 Hours.
Modeling of linear dynamic systems; Laplace transform techniques; linear feedback control systems; stability criteria; design techniques. Credit is not given for both AE 353 and either GE 320 or ME 340. Prerequisite: MATH 225, MATH 285, and TAM 212.

AE 370 Aerospace Numerical Methods credit: 3 Hours.
Numerical methods used in aerospace engineering. Numerical integration, curve fitting, root finding, numerical solution of ODE, solution of linear systems of equations. Finite difference. Rayleigh-Ritz, and Finite element methods. Applications to simple structural mechanics and aerodynamics problems encountered in aerospace engineering. Prerequisite: Credit or concurrent registration in AE 311 or AE 312; credit or concurrent registration in AE 321 or AE 323.

AE 395 Honors Project credit: 1 to 4 Hours.
Special aerospace engineering project or reading course for James Scholars in engineering. Prerequisite: Consent of instructor.

AE 396 Honors Seminar credit: 1 to 4 Hours.
Special lecture sequences or discussion groups arranged each term to bring James Scholars in engineering into direct contact with the various aspects of engineering practices and philosophy. Prerequisite: Consent of instructor.

AE 397 Independent Study credit: 1 to 3 Hours.
Independent theoretical and experimental projects in aerospace engineering. May be repeated. Prerequisite: Consent of instructor.

AE 398 Special Topics credit: 1 to 4 Hours.
Lectures and discussions relating to new areas of interest. See class schedule for topics and prerequisites. May be repeated if topics vary.

AE 402 Orbital Mechanics credit: 3 or 4 Hours.
Analysis of orbits in an inverse-square gravitational field; elementary rocket dynamics, impulsive orbit transfer and rendezvous, and Lambert's Theorem with applications; patched-conic trajectories, planetary gravity-assist maneuvers, and linearized orbit theory with application to simplified analytical models; perturbations. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: AE 202.

AE 403 Spacecraft Attitude Control credit: 3 or 4 Hours.
Theory and applications of spacecraft attitude dynamics and control; Euler angles, direction cosines, quaternions, and Gibbs-Rodrigues parameters; attitude sensors and control actuators; spin, three-axis active, reaction wheel, control moment gyro, and gravity gradient control systems; environmental effects. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: AE 352 and AE 353.

AE 410 Computational Aerodynamics credit: 3 or 4 Hours.
Computational technologies as solution tools for various aerodynamic problems; modeling and solution of one-and two-dimensional, incompressible and compressible, steady and unsteady inviscid external flow fields. Computational laboratory for practical experience. Same as CSE 461. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: AE 311; credit or concurrent enrollment in AE 312.

AE 412 Viscous Flow & Heat Transfer credit: 4 Hours.
Momentum and thermal transport in wall boundary-layer and free shear flows, solutions to the Navier-Stokes equations for heat conducting laminar and turbulent shear flows; similarity concepts; thermal boundary layers in ducts and high-speed aerodynamic boundary layers. Same as ME 411. 4 undergraduate hours. 4 graduate hours. Prerequisite: AE 311 or ME 310.

Information listed in this catalog is current as of 11/2014
AE 416 Applied Aerodynamics credit: 3 or 4 Hours.
Two-dimensional and finite wing theory with emphasis on the mechanisms of lift and drag generation; Reynolds number and Mach number effects; drag analysis; high-lift wing systems; propeller and rotor aerodynamics; control surface design; application of V/STOL aerodynamics. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: AE 311.

AE 419 Aircraft Flight Mechanics credit: 3 or 4 Hours.
Steady and quasi-steady aircraft flight performance; take-off and landing, climbing and diving, cruise, level turn, and energy methods; longitudinal, directional, and lateral static stability and control; longitudinal and lateral motion and dynamic stability. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: AE 202 and AE 353.

AE 420 Finite Element Analysis credit: 3 or 4 Hours.
Same as CSE 451 and ME 471. See ME 471.

AE 427 Mechanics of Polymers credit: 3 Hours.
Same as MSE 454 and TAM 427. See TAM 427.

AE 428 Mechanics of Composites credit: 3 Hours.
Same as MSE 456 and TAM 428. See MSE 456.

AE 433 Aerospace Propulsion credit: 3 or 4 Hours.
Fundamentals of rocket and airbreathing jet propulsion devices electric propulsion; prediction of thrust, combustion reactions, specific fuel consumption, and operating performance; ramjets; turbojets; turbofans; turboprops; aerothermodynamics of inlets, combustors, and nozzles; compressors, turbines; component matching, fundamentals of electrothermal, electromagnetic elastostatis thrusters, and solar sails. 3 undergraduate hours. 4 graduate hours. Prerequisite: AE 312 and PHYS 212.

AE 434 Rocket Propulsion credit: 3 or 4 Hours.
Basic principles of chemical rocket propulsion and performance, rocket component design, liquid rockets, solid rocket motors, combustion processes, combustion instability. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: AE 312 and AE 433.

AE 435 Electric Propulsion credit: 3 or 4 Hours.
Elements of electric propulsion as applied to near-earth and deep-space missions; impact on spacecraft design; physics of ionized gases; plasmadynamics; electrothermal, electromagnetic, and electrostatic acceleration of gases to high velocity; high-impulse thruster design and performance; the resistojet, arcjet, ion engine, Hall thruster, MPD arc thruster, and plasma gun. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: AE 433.

AE 442 Aerospace Systems Design I credit: 3 Hours.
Principles of systems engineering as they apply to the design process for aerospace flight systems; general design methodology; application of these concepts to the initial sizing of both aircraft and spacecraft systems. Intensive technical writing. 3 undergraduate hours. No graduate credit. AE 442 and AE 443 taken in sequence fulfill the Advanced Composition Requirement. Prerequisite: Credit or concurrent registration in AE 311, AE 323, and AE 352.

AE 443 Systems Dynamics & Control credit: 3 or 4 Hours.
Examination of the common core of dynamics and control theory. Fundamental concepts of Lagrangian dynamics, state space representations, Hamiltonian and modern dynamics, stability theory, and control of dynamical systems. 3 undergraduate hours. 4 graduate hours. Prerequisite: AE 353.

AE 451 Aeroelasticity credit: 3 or 4 Hours.
In-depth examination of aerodynamic and dynamic structural phenomena associated with flexible airplanes and missiles; divergence of linear and nonlinear elastic lifting surfaces; effect of elastic and inelastic deformations on lift distributions and stability; elastic flutter of straight and swept wings; equations of disturbed motion of elastic and inelastic aircraft; dynamic response to forces, gusts, and continuous atmospheric turbulence; creep divergence of lifting surfaces; flutter in the presence of creep; effect of temperature on inelastic divergence and flutter. 3 or 4 undergraduate hours. Prerequisite: AE 352 or TAM 412; TAM 251.

AE 454 Systems Dynamics & Control credit: 3 or 4 Hours.
Examination of the common core of dynamics and control theory. Fundamental concepts of Lagrangian dynamics, state space representations, Hamiltonian and modern dynamics, stability theory, and control of dynamical systems. 3 undergraduate hours. 4 graduate hours. Prerequisite: AE 353.

AE 456 Global Nav Satellite Systems credit: 4 Hours.
Same as ECE 456. See ECE 456.

AE 460 Aerodynamics & Propulsion Lab credit: 2 Hours.
Theory and application of experimental techniques in aerospace engineering with emphasis on fluid dynamic, aerodynamic, thermal, combustion, and propulsion phenomena. 2 undergraduate hours. No graduate credit. Prerequisite: AE 311; credit or concurrent registration in AE 433.

AE 461 Structures & Control Lab credit: 2 Hours.
Theory and application of experimental techniques in aerospace engineering with emphasis on structural mechanics, vibrations, dynamics, and control systems. 2 undergraduate hours. No graduate credit. Prerequisite: AE 321 and AE 352. Credit or concurrent registration in AE 323 and AE 353.
AE 468 Optical Remote Sensing credit: 3 Hours.
Same as ECE 468. See ECE 468.

AE 482 Introduction to Robotics credit: 4 Hours.
Same as ECE 470 and ME 445. See ECE 470.

AE 483 Aerospace Decision Algorithms credit: 3 Hours.
Design, analysis, and application of decision algorithms to modern aerospace systems: global positioning systems, air traffic control systems, unmanned aerial vehicles, imaging and communication satellites, and planetary ground vehicles. 3 undergraduate hours. No graduate credit. Prerequisite: AE 202, AE 352, AE 353, AE 370, IE 300, and PHYS 212.

AE 497 Independent Study credit: 1 to 4 Hours.
Independent theoretical and experimental projects in aerospace engineering. 1 to 4 undergraduate hours. 1 to 4 graduate hours. May be repeated. Prerequisite: Consent of instructor.

AE 498 Special Topics credit: 1 to 4 Hours.
Subject offerings of new and developing areas of knowledge in aerospace engineering intended to augment the existing curriculum. See Class Schedule or department course information for topics and prerequisites. 1 to 4 undergraduate hours. 1 to 4 graduate hours. May be repeated in the same or separate terms if topics vary to a maximum of 9 undergraduate hours or 12 graduate hours.

AE 502 Advanced Orbital Mechanics credit: 4 Hours.
Circular-restricted three-body problem; surfaces of zero velocity, libration points, and halo orbits; perturbed two-body motion; Gauss and Lagrange planetary equations, Hamilton's principle, canonical equations and Delaunay variables; application to artificial Earth satellites; orbit determination. Prerequisite: AE 402.

AE 504 Optimal Aerospace Systems credit: 4 Hours.
Formulation of parameter and functional optimization problems for dynamic systems; applications of optimization principles to the control and performance of aerospace vehicles, including optimal flight paths, trajectories, and feedback control. Prerequisite: AE 352.

AE 508 Optimal Space Trajectories credit: 4 Hours.
Optimal rocket trajectories in inverse-square and linearized gravitational fields; orbital transfer, intercept, and rendezvous; high-thrust (impulsive) and low-thrust (continuous) trajectories; primer vector theory and applications; cooperative rendezvous. Prerequisite: Credit or concurrent registration in AE 504.

AE 510 Advanced Gas Dynamics credit: 4 Hours.
Same as ME 510. See ME 510.

AE 511 Transonic Aerodynamics credit: 4 Hours.
Fundamentals of transonic flows; transonic characteristics and flow modeling, shock wave development, properties of shock wave, transonic similarity, shock-boundary layer interactions, three-dimensional effects, transonic solution techniques, transonic design, and transonic testing. Prerequisite: ME 410.

AE 514 Boundary Layer Theory credit: 4 Hours.
Boundary layer concept at high Reynolds numbers; self-similar solutions of incompressible and compressible boundary layers; stability of parallel and nearly-parallel wall-bounded viscous flows; transition to turbulence; turbulent boundary layers; high-speed boundary layers; strong Reynolds analogy; Morkovin's hypothesis. Prerequisite: AE 412.

AE 515 Wing Theory credit: 4 Hours.
Theoretical analysis of the aerodynamic characteristics of two- and three-dimensional wings and multiple-body systems in subsonic and supersonic flows. Prerequisite: AE 416.

AE 521 Fracture and Fatigue credit: 4 Hours.
Same as CEE 575. See CEE 575.

AE 522 Dynamic Response of Materials credit: 4 Hours.
One-dimensional stress waves; three-dimensional longitudinal and shear waves, reflection and refraction of plane waves; Rayleigh and Love waves; wave guides; spherical waves, inelastic wave propagation and shock waves; dynamic fracture and shear bandings of solids; wave propagation in anisotropic media; experimental techniques; acoustic emission, ultrasounds, split Hopkinson (Kolsky) bar, plate impact experiments, optical techniques in dynamic fracture, and high-speed photography. Prerequisite: TAM 451 or TAM 551.

AE 523 Nanoscale Contact Mechanics credit: 4 Hours.
Short- and long-range dipole and electronic interactions; particle- and surface-force interactions; contact mechanics of rigid and nonrigid media; continuum adhesion models; principles of Atomic Force Microscopy (AFM); artifacts and remedies in AFM imaging; force and scale calibration; dynamics of AC-AFM imaging; force spectroscopy; instrumented nanoindentation. Prerequisite: TAM 451 or TAM 551.

AE 525 Advanced Composite Materials credit: 4 Hours.
An extension of TAM 428. Advanced analysis of composite materials. Anisotropic elasticity; micromechanical theories; behavior of composite plates and beams under bending, buckling, and vibration; advanced elasticity solution techniques; hygrothermal behavior of polymer composites; strength prediction theories and failure mechanisms in composites; processing of metal, ceramic, and polymer composites; analysis of residual stresses. Prerequisite: TAM 428.
AE 526 Composites Manufacturing credit: 4 Hours.
Manufacturing methods for polymer-matrix composite materials; analysis of fiber processing techniques, interfacial treatments, and composites fabrication methods; analytical treatment of process modeling including heat transfer, cure kinetics, resin flow, and residual stresses. Term project. Prerequisite: TAM 428.

AE 528 Nonlinear Continuous Media credit: 4 Hours.
Fundamental concepts of large deformations in nonlinear elasticity and inelasticity with applications: generalized tensors, finite deformations, stress-strain relations in terms of strain energy functions, inverse problems, solutions of tension, shear and bending problems, finite plane strain, theory of successive approximations, fiber-reinforced beams, plates and cylinders, thermodynamics of deformable media, stability considerations, and constituent relations for inelasticity. Prerequisite: AE 321 or TAM 451.

AE 529 Viscoelasticity Theory credit: 4 Hours.
Fundamental concepts of viscoelasticity with applications: elastic-viscoelastic analogies, creep and relaxation functions, Poisson's ratio, thermomechanical reciprocity relations, variational principles, model fitting, shear center motion, thick-walled cylinders under pressure and inertia loads with material annihilation, sandwich plates, propagation of viscoelastic waves, vibration of bars, plates and shells, nonlinear elastic-viscoelastic analogy, properties of nonlinear viscoelastic stress-strain laws, creep rupture, and torsion of nonlinear bars and shells. Same as TAM 529. Prerequisite: AE 321 or TAM 451.

AE 538 Combustion Fundamentals credit: 4 Hours.
Same as ME 501. See ME 501.

AE 542 Aerospace Syst Engineering I credit: 4 Hours.
Aerospace systems engineering principles, processes and practices for the definition of spacecraft, aircraft, launch and associated systems, and the application of the systems approach across the development life cycle. Prerequisite: Any of AE 442, AE 443, ME 470, ECE 445, ECE 411; CS 492, CS 493, or CEE 465.

AE 543 Aerospace Syst Engineering II credit: 4 Hours.
Fundamental aerospace industry methods for control of an engineering development effort of a complex aerospace system typical in development of spacecraft, launch vehicles, aircraft, remotely controlled vehicles, and associated supporting infrastructure system in current acquisition environments. Standards and techniques to control risk, integration of technologies, and exploration of "design-to" process tailoring and systematically make design decisions. Prerequisite: AE 542.

AE 550 Nonlinear Aeroelasticity credit: 4 Hours.
Integrated fundamental treatment of the physical and mathematical aspects of nonlinear aeroelasticity. Fluid-solid interactions of unsteady aerodynamics and flexible structures and their components with applications to air-space-land vehicles, wind mills, solar sails, and gossamer structures. Physical and mathematical modeling; solution protocols to nonlinear problems; self-excited nonlinear oscillators; torsional divergence, loss of stability and control due to structural flexibility; chordwise and un-symmetric bending; viscous and structural damping, motion control; straight and swept-wind flutter; stall divergence and flutter; panel flutter; aerodynamic noise; chaotic motion; gust loads; limit cycles. Prerequisite: AE 452.

AE 554 Dynamical Systems Theory credit: 4 Hours.
Fundamental concepts of nonlinear oscillations, structural stability, local and global bifurcations in the context of ordinary and partial differential equations; dynamic systems, structural stability and Lyapunov-Schmidt Reduction, bifurcations of equilibrium points, limit cycles and tori, the center manifold and Poincare normal forms, co-dimension two and higher order bifurcations, bifurcation theory of maps, the Birkhoff-Smale homoclinic theorem and horseshoes, Melnikov's method and Silnikov phenomena, period doubling, and other routes to chaos. Applications to engineering problems, such as aircraft at high angles of attack, pipes conveying fluid, and panel flutter. Prerequisite: AE 352 or TAM 412.

AE 555 Multivariable Control Design credit: 4 Hours.
Frequency-response design specifications; algebraic and analytic constraints in scalar systems; uncertainty representation; Nyquist stability theory, small gain condition, and multi-input multi-output systems; singular value decomposition; robustness and u-function; linear quadratic regulator based design; recovery of LQ Design properties; Kalman filter; Riccati equations; H-infinity based design; reduction; balanced truncation; Hankel singular values; coprime factor reduction; loop shaping. Same as GE 521. Prerequisite: ECE 515.

AE 556 Robust Control credit: 4 Hours.
Signal and system spaces; stability, robustness, and the small gain theorem; factorization and parameterization of all stabilizing controllers; performance and achievable closed loop maps; model matching; design of optimal single-input single-output systems in H-infinity, H2, L1 senses; extensions to multi-output systems; structured and unstructured uncertainty; robust performance analysis and synthesis; multi-objective control. Prerequisite: ECE 515 and MATH 446.

AE 560 Fracture Mechanics Laboratory credit: 4 Hours.
Experimental and physical aspects of fracture mechanics including elastic crack tip stress field, thermoelectricity, thermoplasticity, optical techniques, J-integral, toughening mechanisms, dynamic fracture, and fatigue. Laboratory experiments illustrate concepts. Prerequisite: TAM 451 or TAM 551.
AE 564 Advanced Aero Propulsion Lab credit: 4 Hours.
Theory and application of advanced diagnostic techniques used in aerodynamics and propulsion research with an emphasis placed on wind tunnel testing and advanced optical and laser-based techniques. Experience with aircraft performance measurement, wind tunnel testing, schlieren/shadowgraph photography, interferometry, spectroscopy, laser Doppler velocimetry, particle and molecular-based scattering, particle image velocimetry, pressure/temperature/shear sensitive paint, and other recently developed techniques provided through lectures and laboratory exercises. Prerequisites: AE 311, AE 312, AE 433, AE 460.

AE 583 Advanced Robotic Planning credit: 4 Hours.
Same as ECE 550. See ECE 550.

AE 590 Seminar credit: 0 Hours.
Presentation by graduate students, staff, and guest lecturers of current topics in aerospace engineering. Approved for S/U grading only.

AE 597 Independent Study credit: 1 to 4 Hours.
Independent theoretical and experimental projects in aerospace engineering. May be repeated. Prerequisite: Consent of instructor.

AE 598 Special Topics credit: 1 to 4 Hours.
Subject offerings of new and developing areas of knowledge in aerospace engineering intended to augment existing formal courses. Topics and prerequisites vary for each section. See Class Schedule or departmental course information for both. May be repeated in the same or separate terms if topics vary to a maximum of 12 hours.

AE 599 Thesis Research credit: 0 to 16 Hours.
Research in the various areas of aerospace engineering. Approved for S/U grading only. May be repeated.

African American Studies (AFRO)

AFRO Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/AFRO)

Courses

AFRO 100 Intro to African American St credit: 3 Hours.
Interdisciplinary introduction to the basic concepts and literature in the disciplines covered by African American studies; surveys the major approaches to the study of African Americans across several academic disciplines including economics, education, psychology, literature, political science, sociology and others. This course satisfies the General Education Criteria for:
UIUC: Social Sciences
UIUC: US Minority Culture(s)

AFRO 101 Black America, 1619-Present credit: 3 Hours.
Sociohistorical survey of African American experiences from the West African background to North America, from the 17th century to the present. Same as HIST 174. This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: US Minority Culture(s)

AFRO 102 Researching the African Am Exp credit: 3 Hours.
Introduction to research and documentation of the African American experience. Approved for both letter and S/U grading.

AFRO 103 Black Women in the Diaspora credit: 3 Hours.
Explores the historical, social, economic, cultural and political realities of black women in the African diaspora with an emphasis on the U.S., Canada, Britain, Africa and the English speaking Caribbean. How macro structures such as slavery, imperialism, colonialism, capitalism, and globalization shaped and continue to circumscribe the lives of black women across various geographic regions. Discussion of the multiple strategies/efforts that black women employ both in the past and present to ensure the survival of the self and the community. Same as AFST 103 and GWS 103. This course satisfies the General Education Criteria for:
UIUC: US Minority Culture(s)

AFRO 105 Black Literature in America credit: 3 Hours.
Survey of the literary work of Black Americans from 1746 to the present. Exploration of the social, cultural, and political contexts that have shaped the Black American literary tradition by analyzing not only poetry, drama, autobiographical narratives, short stories, and novels, but also folktales, spirituals, and contemporary music. Same as ENGL 150. This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: US Minority Culture(s)
AFRO 106 Hist Arch Americas credit: 3 Hours.
Same as ANTH 106. See ANTH 106.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: US Minority Culture(s)

AFRO 199 Undergraduate Open Seminar credit: 1 to 5 Hours.
May be repeated.

AFRO 201 US Racial & Ethnic Politics credit: 3 Hours.
Same as LLS 201 and PS 201. See PS 201.
This course satisfies the General Education Criteria for:
UIUC: Social Sciences
UIUC: US Minority Culture(s)

AFRO 211 Intro to African-American Film credit: 3 Hours.
Same as MACS 211. See MACS 211.
This course satisfies the General Education Criteria for:
UIUC: US Minority Culture(s)

AFRO 212 Intro African American Theat credit: 3 Hours.
Same as THEA 263. See THEA 263.
This course satisfies the General Education Criteria for:
UIUC: US Minority Culture(s)

AFRO 215 US Citizenship Comparatively credit: 3 Hours.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: US Minority Culture(s)

AFRO 220 Intro to Research Methods AfAm credit: 3 Hours.
Introduction to various methodologies to be employed in the interdisciplinary field of African American/Africana studies. Prerequisite: AFRO 100.

AFRO 224 Humanist Persp of Afro-Am Exp credit: 3 Hours.
Presents the Afro-centric world view as it was manifested in traditional African society and in the Afro-American slave community. Shows that this world view merged with European notions of art and humanity, as revealed in modern Afro-American literature, art, and music. Same as CWL 226. Approved for both letter and S/U grading. Prerequisite: AFRO 100 or consent of instructor.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: US Minority Culture(s)

AFRO 225 Race and Ethnicity credit: 3 Hours.
Same as SOC 225. See SOC 225.

AFRO 226 Black Women Contemp US Society credit: 3 Hours.
Sociological perspective of the experience of African American women in the contemporary United States. Specifically, an examination of relationships between the economy, state policy, culture, work and motherhood for this demographic group. Same as GWS 226 and SOC 223.

AFRO 231 Lang Diff Dis: American Persp credit: 3 Hours.
Discusses the interaction of culture, ethnicity/race and language among American minorities. Emphasizes language difference theory as related to social and regional dialects and bilingualism/multilingualism. Distinguishes language differences from language disorders through examination of assessment and treatment approaches for different aged populations. Same as SHS 231.
This course satisfies the General Education Criteria for:
UIUC: US Minority Culture(s)

AFRO 243 Pan Africanism credit: 3 Hours.
Same as AFST 243, PS 243, and SOC 267. See PS 243.
This course satisfies the General Education Criteria for:
UIUC: Non-Western Cultures
UIUC: Social Sciences

AFRO 259 Afro-American Literature I credit: 3 Hours.
Same as CWL 259 and ENGL 259. See ENGL 259.
This course satisfies the General Education Criteria for:
UIUC: US Minority Culture(s)
AFRO 260 Afro-American Literature II credit: 3 Hours.
Same as CWL 260 and ENGL 260. See ENGL 260.
This course satisfies the General Education Criteria for:
UIUC: US Minority Culture(s)

AFRO 261 Intro to the African Diaspora credit: 3 Hours.
Introduction to the origin, development, and maturation of the African diaspora in the Americas and the Caribbean, beginning with the transatlantic slave trade and up to the end of the 20th century. Same as ANTH 261.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: US Minority Culture(s)

AFRO 272 Minority Images in Amer Film credit: 3 Hours.
Same as ENGL 272. See ENGL 272.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: US Minority Culture(s)

AFRO 275 Afro-American History to 1877 credit: 3 Hours.
Same as HIST 275. See HIST 275.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: US Minority Culture(s)

AFRO 276 Afro-American Hist Since 1877 credit: 3 Hours.
Same as HIST 276. See HIST 276.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: US Minority Culture(s)

AFRO 281 Constructing Race in America credit: 3 Hours.
Same as AAS 281, HIST 281, and LLS 281. See HIST 281.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: US Minority Culture(s)

AFRO 287 African-American Women credit: 3 Hours.
Same as GWS 287 and HIST 287. See HIST 287.
This course satisfies the General Education Criteria for:
UIUC: US Minority Culture(s)

AFRO 290 Af Am Urban Hist Since 1917 credit: 3 Hours.
Examination of the changing interaction among black urban communities, the broader urban citizenry, municipal government, the local and national urban-industrial economy, and federal policy over time, giving particular attention to discourses about the black "ghetto" as both a physical space and set of social conditions. Same as HIST 284. Prerequisite: AFRO 101, HIST 276, HIST 172, SOC, 225, or PS 201.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: US Minority Culture(s)

AFRO 298 Spec Topics African-Am Studies credit: 3 Hours.
Seminar on selected topics with particular emphasis on current research trends. May be repeated to a maximum of 6 hours. Prerequisite: AFRO 100 or AFRO 101, or consent of instructor.

AFRO 310 Race and Cultural Diversity credit: 4 Hours.
Same as AAS 310, EPS 310, and LLS 310. See EPS 310.
This course satisfies the General Education Criteria for:
UIUC: Advanced Composition
UIUC: US Minority Culture(s)

AFRO 312 Psychology of Race & Ethnicity credit: 3 Hours.
Same as PSYC 312. See PSYC 312.

AFRO 315 African American Politics credit: 3 Hours.
Same as PS 315. See PS 315.
AFRO 340 Dancing Black Popular Culture credit: 3 Hours.
Same as DANC 340. See DANC 340.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: US Minority Culture(s)

AFRO 342 Black Men and Masculinities credit: 3 Hours.
The sociological study of African American men in the contemporary U.S. Specifically, black manhood and masculinities and the experiences of this demographic group as it relates to the economy, state, policy, and institutions such as family, criminal justice system, and education. Same as SOC 325. Prerequisite: Introductory social science course.

AFRO 372 Class Politics & Blk Community credit: 3 Hours.
Exploration of the complex history of class relations among African Americans during the twentieth century, examining both the internal and external shapers of black class stratification. Considers the historical development of contemporary black "underclass", and the parallel expansion of the black middle class today. Same as HIST 384. Prerequisite: AFRO 101, HIST 276, or SOC 225 or consent of instructor.
This course satisfies the General Education Criteria for:
UIUC: Advanced Composition

AFRO 373 AfAm Cultr Politic Mid20C credit: 3 Hours.
Focusing on African American culture and history from World War II until the early 1960’s, topics include citizenship, migration, urban life, the African Diaspora, Civil Rights Movement, and art forms. Approved for both letter and S/U grading. Prerequisite: AFRO 100 and AFRO 101, AFRO 261, ENGL 260 or HIST 276.

AFRO 378 Race and Revolutions credit: 3 Hours.
Focus on the relationship between race and slavery during the revolutions in American and Haiti, respectively. We will seek to understand how the themes of slavery, revolution and race affected blacks, whites and indigenous Americans. We will learn about life during the Revolutionary era by reading the biographies, political pamphlets and personal letters of former slaves, Revolutionaries and everyday men and women as well as historical scholarship. Same as HIST 389. Prerequisite: One African American Studies or History course at either the 100- or 200-level or the consent of instructor.

AFRO 380 Black Women Hist & Cultures credit: 3 Hours.
Same as GWS 380. See GWS 380.

AFRO 381 Black Women and Film credit: 3 Hours.
An examination of the contribution of Black women film directors to cinema. The study of documentary, experimental, animated, fictional shorts, and feature films will reveal their unique approach to constructions of the intersection of race and gender. Starting from the 1920’s up to the present, the course considers themes, aesthetics, historical contexts, and ideological discourses presented in the films. Same as MACS 381. Prerequisite: College level film course or consent of instructor.

AFRO 382 African Amer Families in Film credit: 3 Hours.
Uses film as case studies to examine the diverse structures, social classes, and internal dynamics among African American families. Critical family processes such as family formation patterns, dating mate selection, parenting, male-female/gender relations, child adolescent, and adult development, family routines and practices, family communication, and family stress and coping will be examined. Also considers how families interact within larger contexts, such as the local neighborhood and key institutions (school, workplace, social service agencies). Films will be supplemented with readings drawn for diverse disciplines (African American Studies, Anthropology, Family Studies, History, Psychology, and Sociology) that allow us to examine key substantive, theoretical, methodological, and policy issues in the study of African American families. Same as HDFS 324.

AFRO 383 Hist of Blk Women's Activism credit: 3 Hours.
Examination of the history of twentieth century black women's activism, specifically concerned with how African American female activists have been critical to building, sustaining and leading black freedom movements. Same as GWS 383 and HIST 383. Prerequisite: AFRO 100 or AFRO 101 or AFRO 103 or consent of instructor.

AFRO 398 Spec Topics Afro-Am Studies credit: 3 Hours.
Advanced seminar on selected topics with particular emphasis on current research trends. May be repeated to a maximum of 6 hours. Prerequisite: Junior status and one of the following: AFRO 224, or HIST 275 or HIST 276, or ENGL 259 or ENGL 260.

AFRO 400 African Diasporic Lit Americas credit: 3 or 4 Hours.
Critical examination of the contributions of writers of African descent from the Caribbean (English, French, Spanish) and the United States. Major works of fiction, poetry, drama and essays from Cuba, Guadeloupe, Guyana, Haiti, St. Lucia, the United States and other countries are analyzed within a post-colonial theoretical framework. Same as CWL 400. 3 undergraduate hours. 4 graduate hours. Prerequisite: AFRO 224 or AFRO 259 or AFRO 260 or consent of instructor.
This course satisfies the General Education Criteria for:
UIUC: US Minority Culture(s)

AFRO 407 Slavery & Race in Latin Am credit: 2 to 4 Hours.
Same as HIST 407. See HIST 407.
AFRO 410 Hate Crimes credit: 3 Hours.
Hate crimes represent the manifestation of intergroup bias and aggression. Examples of these crimes will be examined while analyzing longstanding theories in social psychology. Same as PSYC 410. 3 undergraduate hours. 3 graduate hours. Prerequisite: PSYC 201 or consent of instructor.

AFRO 411 African American Psychology credit: 3 or 4 Hours.
Introduction to the research, theories, and paradigms developed to understand the attitudes, behaviors, and psychological and educational realities of African Americans. Same as PSYC 416. 3 undergraduate hours. 4 graduate hours. Prerequisite: AFRO 100 or one psychology course.

AFRO 415 Africana Feminisms credit: 3 or 4 Hours.
Explores readings and research from the perspective of feminists throughout the African diaspora, with a focus on Black feminist thought emanating from the United States. Same as AFST 420 and GWS 415. 3 undergraduate hours. 4 graduate hours. Prerequisite: AFRO 103 and an additional 300 or 400-level African American Studies course or consent of the instructor.

AFRO 421 Racial and Ethnic Families credit: 2 to 4 Hours.
Same as EPS 421, HDFS 424, and SOC 421. See EPS 421.

AFRO 435 Commodifying Difference credit: 3 or 4 Hours.
Same as AAS 435, GWS 435, LLS 435 and MACS 432. See LLS 435.

AFRO 453 Plantation Soc in Americas credit: 3 or 4 Hours.
Comparative and interdisciplinary approach to study of the development of New World societies with focus on plantation agriculture from the 15th to 19th centuries. Course considers Portuguese, Spanish, British, French, and Dutch colonization. Students will study the relative importance of culture versus economy and demography in determining social structure. Same as HIST 470. 3 undergraduate hours. 4 graduate hours. Prerequisite: A survey course in early United States history and/or western civilization; junior status, or consent of the instructor.

AFRO 460 Slavery in the United States credit: 3 or 4 Hours.
Examination of slavery in the U.S. using primary sources (slave narratives, songs and tales, plantation records, laws and newspapers) from the 18th century through emancipation. Same as HiST 482. 3 undergraduate hours. 4 graduate hours. Prerequisite: AFRO 100 or AFRO 101 and one 300-level AFRO course.

This course satisfies the General Education Criteria for:
UIUC: Advanced Composition

AFRO 465 Race, Sex, and Deviance credit: 3 or 4 Hours.
Same as AAS 465, GWS 465, and LLS 465. See LLS 465.

AFRO 466 Race & Science credit: 3 or 4 Hours.
Examination of the historical development of scientific theories of race, focusing on biology, anthropology, mind sciences and modern genetics. Same as HIST 483. 3 undergraduate hours. 4 graduate hours. Prerequisite: AFRO 100 or AFRO 101 and one 300-level AFRO course.

AFRO 474 Black Freed Move, 1955-Present credit: 3 or 4 Hours.
Presents the struggle of African Americans for self-definition, self-development, and self-determination from the inception of the civil rights movement to the contemporary period. Same as HIST 478. 3 undergraduate hours. 4 graduate hours. Prerequisite: AFRO 101, HIST 276, or consent of instructor.

This course satisfies the General Education Criteria for:
UIUC: Advanced Composition

AFRO 481 Urban Communities & Public Pol credit: 3 or 4 Hours.
Examination of how public policy has shaped urban communities and the life chances (i.e., the social, economic, mental and physical well-being) of families of color. Emphasizes the theoretical, political, and economic context of public policy making and specifically address urban issues of housing, communities and families, employment, welfare, and poverty. This course will draw on scholarship by sociologists, historians, policy analysts, race theorists, and economists. Same as SOC 472 and UP 481. 3 undergraduate hours. 4 graduate hours.

AFRO 490 Theory in African American St credit: 3 or 4 Hours.
Introduction to various theories and methodologies rising out of the study of the Black world based on African American intellectual traditions. 3 undergraduate hours. 4 graduate hours. Prerequisite: AFRO 100 and one additional 400-level AFRO course, or consent of instructor.

AFRO 491 Methodology in African Amer St credit: 3 or 4 Hours.
Introduction to various methodologies to be employed in the interdisciplinary field of African American/Africana studies. Access to personal computer software is required. 3 undergraduate hours. 4 graduate hours. Prerequisite: AFRO 100 and AFRO 220 and an additional 300 or 400-level African American Studies course or consent of instructor.

AFRO 495 Senior Thesis Seminar credit: 3 Hours.
3 undergraduate hours. No graduate credit. Prerequisite: AFRO 100 and AFRO 220 or AFRO 490.

AFRO 498 Spec Topics African Am Studies credit: 3 or 4 Hours.
Seminar on selected topics with particular emphasis on current research trends. 3 undergraduate hours. 4 graduate hours. May be repeated up to a maximum of 6 undergraduate hours or 8 graduate hours. Prerequisite: Upper level AFRO course (300 or above) or consent of instructor.

AFRO 500 Core Probs African-Am Studies credit: 4 Hours.
Introduction for grad students to the central concepts, theories, methodologies, and paradigms in Black Studies. Students will also be introduced to the key critical scholars, seminal works and emerging trends in Black Studies. Prerequisite: Graduate standing.

Information listed in this catalog is current as of 11/2014
AFRO 501 Problems African American Hist credit: 4 Hours.
Same as HIST 575. See HIST 575.

AFRO 502 Res Method on Racial Community credit: 4 Hours.
A critical examination of social scientific approaches to the study of black and other racialized communities. Students are introduced to the methodological, epistemological, and ethical challenges of doing social science and humanities research on these populations. Prerequisite: Graduate standing.

AFRO 503 Social Mvmts & Knowledge Prod credit: 4 Hours.
Analysis of the literature of Black and Latino radical social movements of the 1960s, and the history of anti-racists campaigns to transform the key social and political institutions, including the university. The use of Black and Latino research and scholarship to reconfigure history of racialized communities. The relationship between university sanctioned knowledge and community empowerment. Prerequisite: Graduate standing.

AFRO 504 Black Women's Studies credit: 4 Hours.
The study of black women and gender within critical discourses of history, the social sciences, and the humanities. Students are introduced to interdisciplinary and Black Women's Studies paradigms as means to study and understand the experiences of black women in the U.S. and other racialized women's groups.

AFRO 505 Proseminar I credit: 1 Hour.
Provides PhD students in African American Studies a review of the responsibilities of professional African American Studies scholars. This part introduces students to current debates and issues in the discipline, program requirements and expectations. Approved for S/U grading only. Prerequisite: Doctoral students in African American Studies only.

AFRO 506 Proseminar II credit: 1 Hour.
The second of three proseminars for PhD students in African American Studies. Provides students with a review of the responsibilities of professional African American Studies scholars and emphasizes processes of Master Paper development, writing, and conference presentations. Approved for S/U grading only. Prerequisite: AFRO 505 or consent of advisor and instructor.

AFRO 507 Proseminar III credit: 1 Hour.
The final of three proseminars for PhD students in African American Studies. Provides students with a review of the responsibilities of professional African American Studies scholars and emphasizes issue of pedagogy, research, and publication in the discipline of African American Studies. Approved for S/U grading only. Prerequisite: AFRO 506 or consent of advisor and instructor.

AFRO 508 Dissertation Design Practicum credit: 1 Hour.
Facilitate the development of dissertation proposals for PhD students in African American Studies. Approved for S/U grading only. Prerequisite: Completion of African American Studies PhD course work and Proseminar Series.

AFRO 531 Race and Cultural Critique credit: 4 Hours.
Same as AAS 561, ANTH 565, GWS 561, and LLS 561. See AAS 561.

AFRO 550 Blk Community & Class Politics credit: 4 Hours.
Exploration of the complex history of class relations within African American urban communities during the "long" twentieth century, and the relationship of these internal dynamics to external structures of racial control. Examination of the multiple processes through which both the urban black working class and a middle class formed, and were transformed, over time.

AFRO 552 Ethnography Urban Communities credit: 4 Hours.
Addresses substantive, theoretical, methodological, and policy issues within the field of urban community studies. Focusing primarily on African American urban communities, with comparisons to other racial-ethnic group communities (e.g. Euro-American, Latino, immigrant), ethnographic case studies are used to explore community processes (formation, ghettoization, gentrification, transnationalism), their relationship to historical, economic, social, and political factors, and how these processes are influences by ethnicity, class, gender and developmental cycle. Attention will also be given to how empirical studies can be used to inform public policies affecting urban communities. Interdisciplinary readings draw primarily from anthropology, education, and sociology. Same as HCD 543, SOC 578, UP 578.

AFRO 560 African Diaspora Seminar credit: 4 Hours.
Study of the key political, social, economic and cultural developments of the African Diaspora in Asia, Europe and the Americas. Using an interdisciplinary framework, students will examine recent scholarship in history, women's studies, political science, sociology and anthropology to understand the experiences and challenges faced by people of African descent. Same as AFST 560.

AFRO 562 Archaeology and Racialization credit: 4 Hours.
Same as ANTH 562. See ANTH 562.

AFRO 595 Directed Independent Readings credit: 1 to 4 Hours.
Primarily but not exclusively for students who are completing a minor or concentration in African American Studies. Approved for both letter and S/U grading. May be repeated in the same or separate terms to a maximum of 12 hours. Prerequisite: Consent of instructor.

AFRO 597 Problems in African-Am Studies credit: 4 Hours.
Focused reading and study of special problems in African American Studies. May be repeated to a maximum of 8 hours. Prerequisite: Graduate standing, AFRO 500 or equivalent, or consent of instructor.
AFRO 598 Res Sem in African-Am Studies credit: 4 Hours.
Graduate seminar on special topics based on current research trends. May be repeated to a maximum of 8 hours. Prerequisite: Graduate standing, AFRO 500 or equivalent, or consent of instructor.

AFRO 599 Thesis Research credit: 0 to 16 Hours.
Individual direction in research and guidance in writing theses and dissertations for advanced degrees. Approved for S/U grading only. May be repeated in separate terms.

African Studies (AFST)

AFST Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/AFST)

Courses

AFST 103 Black Women in the Diaspora credit: 3 Hours.
Same as AFRO 103 and GWS 103. See AFRO 103.
This course satisfies the General Education Criteria for:
UIUC: US Minority Culture(s)

AFST 199 Undergraduate Open Seminar credit: 1 to 5 Hours.
May be repeated.

AFST 201 Elementary Bamana I credit: 5 Hours.
Same as BMNA 201. See BMNA 201.

AFST 202 Elementary Bamana II credit: 5 Hours.
Same as BMNA 202. See BMNA 202.

AFST 209 Constr Afr and Carib Identity credit: 3 Hours.
Same as CWL 225, FR 240, and LAST 240. See FR 240.
This course satisfies the General Education Criteria for:
UIUC: Non-Western Cultures

AFST 210 Intro to Mod African Lit credit: 3 Hours.
Significant contemporary African writings depicting the history and cultural traditions of African peoples. Same as CWL 210 and ENGL 211.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Non-Western Cultures

AFST 211 Elementary Lingala I credit: 5 Hours.
Same as LGLA 201. See LGLA 201.

AFST 212 Elementary Lingala II credit: 5 Hours.
Same as LGLA 202. See LGLA 202.

AFST 222 Introduction to Modern Africa credit: 3 Hours.
Interdisciplinary introduction to Africa dealing with basic themes and problems in the politics, economics, sociology, anthropology, and history of Africa. Same as ANTH 222, PS 242, and SOC 222.
This course satisfies the General Education Criteria for:
UIUC: Non-Western Cultures

AFST 231 Elementary Swahili I credit: 5 Hours.
Same as SWAH 201. See SWAH 201.

AFST 232 Elementary Swahili II credit: 5 Hours.
Same as SWAH 202. See SWAH 202.

AFST 241 Elementary Wolof I credit: 5 Hours.
Same as WLOF 201. See WLOF 201.

AFST 242 Elementary Wolof II credit: 5 Hours.
Same as WLOF 202. See WLOF 202.

AFST 243 Pan Africanism credit: 3 Hours.
Same as AFRO 243, PS 243, and SOC 267. See PS 243.
This course satisfies the General Education Criteria for:
UIUC: Non-Western Cultures
UIUC: Social Sciences
AFST 251 Elementary Zulu I credit: 5 Hours.
Same as ZULU 201. See ZULU 201.

AFST 252 Elementary Zulu II credit: 5 Hours.
Same as ZULU 202. See ZULU 202.

AFST 254 Economic Systems in Africa credit: 3 Hours.
Same as ACE 254. See ACE 254.
This course satisfies the General Education Criteria for:
UIUC: Non-Western Cultures
UIUC: Social Sciences

AFST 266 African Film and Society credit: 3 Hours.
Same as ANTH 266. See ANTH 266.
This course satisfies the General Education Criteria for:
UIUC: Non-Western Cultures

AFST 267 Memoirs of Africa credit: 3 Hours.
Same as ANTH 267. See ANTH 267.

AFST 312 Central African Art credit: 3 Hours.
Same as ARTH 312. See ARTH 312.

AFST 313 Modern and Contemp African Art credit: 3 Hours.
Same as ARTH 313. See ARTH 313.

AFST 325 Social Media and Global Change credit: 3 Hours.
Same as EPS 325, ASST 325, EURO 325, ASST 325, LAST 325, REES 325, and SAME 325. See EPS 325.

AFST 403 Intermediate Bamana I credit: 4 Hours.
Same as BMNA 403. See BMNA 403.

AFST 404 Intermediate Bamana II credit: 4 Hours.
Same as BMNA 404. See BMNA 404.

AFST 405 Topics Swahili Lang & Lit I credit: 3 Hours.
Same as SWAH 407. See SWAH 407.

AFST 406 Topics Swahili Lang & Lit II credit: 3 Hours.
Same as SWAH 408. See SWAH 408.

AFST 407 Adv Topics Swahili Lang&Lit I credit: 3 or 4 Hours.
Same as SWAH 409. See SWAH 409.

AFST 408 Adv Topics Swahili Lang&Lit II credit: 3 or 4 Hours.
Same as SWAH 410. See SWAH 410.

AFST 410 Modern African Fiction credit: 3 or 4 Hours.
Examines selected major African novels along thematic and formal lines; literary responses to colonialism and political independence and the crises that accompanied both in Africa; and study of critical approaches to the African novel and African characteristics of and contribution to the novel as a genre. Readings in English. Same as CWL 410, ENGL 470, and FR 410. 3 undergraduate hours. 4 graduate hours. Prerequisite: AFST 210 or AFST 222, or junior standing.

AFST 412 Lang in African Culture & Soc credit: 3 or 4 Hours.
Same as LING 412. See LING 412.

AFST 413 Intermediate Lingala I credit: 4 Hours.
Same as LGLA 403. See LGLA 403.

AFST 414 Intermediate Lingala II credit: 4 Hours.
Same as LGLA 404. See LGLA 404.

AFST 415 Advanced Lingala I credit: 3 Hours.
Same as LGLA 405. See LGLA 405.

AFST 416 Advanced Lingala II credit: 3 Hours.
Same as LGLA 406. See LGLA 406.

AFST 417 Topics Lingala Lang & Lit I credit: 3 Hours.
Same as LGLA 407. See LGLA 407.
AFST 418 Topics Lingala Lang & Lit II credit: 3 Hours.
Same as LGLA 408. See LGLA 408.

AFST 420 Africana Feminisms credit: 3 or 4 Hours.
Same as AFRO 415 and GWS 415. See AFRO 415.

AFST 421 Sacred African Diaspora Arts credit: 3 or 4 Hours.
Same as ARTH 413. See ARTH 413.

AFST 425 Southern Africa Race & Power credit: 3 or 4 Hours.
Same as HIST 412. See HIST 412.

AFST 431 Advanced Bamana I credit: 3 Hours.
Same as BMNA 405. See BMNA 405.

AFST 432 Advanced Bamana II credit: 3 Hours.
Same as BMNA 406. See BMNA 406.

AFST 433 Intermediate Swahili I credit: 4 Hours.
Same as SWAH 403. See SWAH 403.

AFST 434 Intermediate Swahili II credit: 4 Hours.
Same as SWAH 404. See SWAH 404.

AFST 435 Advanced Swahili I credit: 3 Hours.
Same as SWAH 405. See SWAH 405.

AFST 436 Advanced Swahili II credit: 3 Hours.
Same as SWAH 406. See SWAH 406.

AFST 437 Egypt Since World War I credit: 2 to 4 Hours.
Same as HIST 438. See HIST 438.

AFST 443 Intermediate Wolof I credit: 4 Hours.
Same as WLOF 403. See WLOF 403.

AFST 444 Intermediate Wolof II credit: 4 Hours.
Same as WLOF 404. See WLOF 404.

AFST 445 Advanced Wolof I credit: 3 Hours.
Same as WLOF 405. See WLOF 405.

AFST 446 Advanced Wolof II credit: 3 Hours.
Same as WLOF 406. See WLOF 406.

AFST 447 Topics Wolof Lang & Lit I credit: 3 Hours.
Same as WLOF 407. See WLOF 407.

AFST 448 Topics Wolof Lang & Lit II credit: 3 Hours.
Same as WLOF 408. See WLOF 408.

AFST 451 Intermediate Zulu I credit: 4 Hours.
Same as ZULU 403. See ZULU 403.

AFST 452 Intermediate Zulu II credit: 4 Hours.
Same as ZULU 404. See ZULU 404.

AFST 453 Advanced Zulu I credit: 3 Hours.
Same as ZULU 405. See ZULU 405.

AFST 454 Advanced Zulu II credit: 3 Hours.
Same as ZULU 406. See ZULU 406.

AFST 467 Kinship-Culture-Power-Africa credit: 2 or 4 Hours.
Same as ANTH 469. See ANTH 469.

AFST 468 Religions of Africa credit: 3 or 4 Hours.
Same as ANTH 468 and RLST 468. See ANTH 468.

AFST 469 Structure of Semitic Languages credit: 3 or 4 Hours.
Same as LING 469. See LING 469.

AFST 478 African Immigrants in Europe credit: 3 or 4 Hours.
Same as ANTH 478 and EURO 478. See ANTH 478.
AFST 484 African Urbanization credit: 3 or 4 Hours.
Same as SOC 484. See SOC 484.

AFST 509 Seminar in African Art credit: 4 Hours.
Same as ARTH 510. See ARTH 510.

AFST 510 Problems in African History credit: 4 Hours.
Same as HIST 510. See HIST 510.

AFST 511 Seminar in African History credit: 4 Hours.
Same as HIST 511. See HIST 511.

AFST 515 Practicum in African Studies credit: 2 Hours.
A supervised practicum that emphasizes participation in the Center's educational activities and includes organizing conferences and outreach to K-12 educators, the media, and the community. Approved for S/U grading only. Prerequisite: Enrollment in graduate African Studies program or related Ph.D. programs, or consent of instructor.

AFST 522 Development of African Studies credit: 4 Hours.
Examines the development of Africanist scholarship during the 20th century and the changing paradigms in African Studies; focuses on the rise of the area studies model and its influences on the major Social Science and Humanities disciplines. Prerequisite: Graduate student status and approval of instructor.

AFST 550 Special Topics credit: 2 or 4 Hours.
Topics vary with the disciplinary focus. May be repeated to a maximum of 12 hours. Prerequisite: Consent of instructor.

AFST 555 Mult Educ/Global Perspectives credit: 4 Hours.
Same as CI 512. See CI 512.

AFST 560 African Diaspora Seminar credit: 4 Hours.
Same as AFRO 560. See AFRO 560.

AFST 599 Thesis Research credit: 0 to 8 Hours.
Individual direction in research and guidance in writing theses for advanced degrees. Approved for S/U grading only. May be repeated to a maximum of 8 hours.

Agr & Consumer Economics (ACE)

ACE Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/ACE)

Courses

ACE 100 Agr Cons and Resource Econ credit: 4 Hours.
Principles of microeconomics; demand, production, supply, elasticity, markets, and trade are presented and used in the analysis of decisions of individuals relating to agricultural production, food and textile consumption, and natural resource use. Macroeconomic concepts are also introduced. Credit is not given for ACE 100 if credit for ECON 102 has been earned.
This course satisfies the General Education Criteria for:
UIUC: Social Sciences

ACE 161 Microcomputer Applications credit: 3 Hours.
Instruction and practice in solving data-related problems with microcomputers and general purpose software packages.

ACE 199 Undergraduate Open Seminar credit: 1 to 5 Hours.
Experimental course on a special topic in agricultural and consumer economics. Topic may not be repeated except in accordance with the Code. Additional fees may apply. See Class Schedule. Approved for both letter and S/U grading. May be repeated up to 5 hours in a semester, to a maximum of 12 hours.

ACE 210 Environmental Economics credit: 3 Hours.
Economic issues surrounding environmental quality, including: costs and benefits of environmental protection; economics of environmental policies (such as those dealing with toxics, water, and air pollution, and municipal solid waste); and economics of international environmental problems (such as ozone depletion and climate change). Same as ECON 210, ENVS 210, NRES 210, and UP 210.
This course satisfies the General Education Criteria for:
UIUC: Social Sciences

ACE 222 Agricultural Marketing credit: 3 Hours.
Examines factors affecting the size of the market for agricultural products and the scope of marketing activities; functions and services performed; pricing agricultural products, including the nature and causes of price fluctuations; and costs of marketing and efforts to reduce costs and improve the marketing system. Prerequisite: ACE 100 or ECON 102 or consent of instructor.
ACE 231 Food and Agribusiness Mgt credit: 3 Hours.
Overview of management in the food and agribusiness sector. Major topics covered include: introduction to the food and agribusiness sector; the environment of the firm; fundamentals, structural design, and change in organizations; leadership, motivation, communication; and planning and control. Coverage is at the introductory level with a focus on textbook material and current issues. Prerequisite: Sophomore standing and ACE 100 or ECON 102.

ACE 232 Management of Farm Enterprises credit: 3 or 4 Hours.
Economic principles are applied to the management of farms using budgeting system analysis, record analysis, financial management, and lease analysis. Problems related to resource appraisal and business organization are also addressed. Three hours credit without home farm problem, or four hours credit with home farm problem. Prerequisite: ACE 100 or ECON 102 or consent of instructor.

ACE 240 Personal Financial Planning credit: 3 Hours.
Examines principles of financial planning applied to individuals and households, with attention to organizing and analyzing financial information, budgeting, acquiring financial assets, managing credit, planning for taxes, investments, risk management, retirement, and estate planning. Prerequisite: Sophomore standing or consent of instructor.

ACE 251 The World Food Economy credit: 3 Hours.
Examination of global food production, consumption, and trade; problems of hunger and population; the role of agricultural development, trade, and aid in relieving hunger. Prerequisite: ACE 100 or ECON 102 or consent of instructor.

This course satisfies the General Education Criteria for:
UIUC: Non-Western Cultures
UIUC: Social Sciences

ACE 254 Economic Systems in Africa credit: 3 Hours.
Examines systems of production and exchange in Africa. Through lectures, discussions, readings and films participants will study the ways African people interact in local markets and the impact of national and international markets on their welfare. Same as AFST 254.

This course satisfies the General Education Criteria for:
UIUC: Non-Western Cultures
UIUC: Social Sciences

ACE 255 Econ of US Rural Poverty & Dev credit: 3 Hours.
Examination of rural poverty and development issues in the United States, with particular attention to current anti-poverty policies and programs and alternative programs. Topics include measurement of poverty; causes of rural poverty; income maintenance, education, and employment policies and their consequences; and rural development strategies. Prerequisite: ACE 100 or ECON 102 or consent of instructor.

This course satisfies the General Education Criteria for:
UIUC: Social Sciences

ACE 261 Applied Statistical Methods credit: 4 Hours.
Statistical methods and computer applications for agricultural and consumer economics, including descriptive statistics, probability distribution, interval estimation, hypothesis testing, analysis of variance, simple and multiple regression, and non-parametric methods. Credit is not given for ACE 261 if credit for any of ECON 202, CPSC 440, STAT 100, or equivalent has been earned. Prerequisite: MATH 124 or MATH 125.

This course satisfies the General Education Criteria for:
UIUC: Quant Reasoning I

ACE 270 Consumer Economics credit: 3 Hours.
Introduction to the study of the consumer in the American economy; sources of consumer information and consumer protection; and examination of current consumer issues within an economic framework. Prerequisite: Sophomore standing or consent of instructor.

ACE 293 Off-Campus Internship credit: 1 to 4 Hours.
Supervised, off-campus experience in a field directly pertaining to a subject matter in agricultural and consumer economics. Approved for S/U grading only. May be repeated up to 4 hours in a semester, to a maximum of 10 hours. Prerequisite: Sophomore standing, cumulative GPA of 2.5 or above at the time the internship is arranged, and consent of instructor.

ACE 294 On-Campus Internship credit: 1 to 4 Hours.
Supervised, on-campus, learning experience with faculty engaged in research. Approved for S/U grading only. May be repeated up to 4 hours in a semester, to a maximum of 10 hours. Prerequisite: Sophomore standing, cumulative GPA of 2.5 or above at the time the internship is arranged, and consent of instructor.

ACE 295 Independent Study credit: 1 to 4 Hours.
Individual or small group research, special problems, or other studies under the supervision of an appropriate member of the faculty. Approved for both letter and S/U grading. May be repeated in the same or subsequent terms as topics vary. May be repeated up to 4 hours in a semester, but no more than 12 hours of special problems, research, thesis and/or individual studies may be counted toward the degree. Prerequisite: Junior standing, cumulative GPA of 2.5 or above at the time the activity is arranged, and consent of instructor.
ACE 306 Food Law credit: 3 Hours.
Explores the legal and political dimensions of food law, policy and trade in the United States and major trading partners. Examines the development of major national and state laws that apply to production, distribution and retail sale of food. Evaluates current issues in food regulation, including: biotechnology, organics, health labeling claims, food safety and products liability litigation. Discusses food regulation in other countries within the context of international treaties such as the World Trade Organization and United Nations.

ACE 310 Natural Resource Economics credit: 3 Hours.
Economic principles are used to analyze a broad range of natural resource policy and management issues. Economic concepts developed include public goods, social welfare, discounting, dynamic efficiency, and resource scarcity. Natural resources examined include biodiversity, fisheries, forests, minerals, soil, and water resources. Same as ENVS 310 and NRES 310. Prerequisite: ACE 100 or ECON 102.

ACE 341 Contemp Issues in AgAccy&Fin credit: 2 Hours.
Students study contemporary issues and career opportunities in AgriAccounting and AgriFinance in this course. An in-depth dialogue with industry professionals helps develop an understanding of the skill sets needed to succeed in each of the different career paths discussed. May not be repeated for credit.

ACE 345 Finan Decision Indiv Sm Bus credit: 3 Hours.
Introduction to financial decision-making for small businesses and individuals. Examines financial statement preparation and analysis; capital structure (use of debt and equity); investment analysis and portfolio theory; time value of money; interest rates and term structure; asset markets (pricing theories); evaluation of financial risk and insurance concepts, and an introduction to credit markets and financial capital suppliers. In addition, there is a class project involving a visit to either a lender or a financial planner/advisor, and other experiences to introduce students to services and careers in financial sectors. Prerequisite: ACCY 201 or equivalent, or consent of instructor.

ACE 346 Tax Policy and Finan Planning credit: 3 Hours.
Explores the federal tax system, including income, social security, Medicare, and estate taxes, and state and local tax systems. Students learn basic tax principles, public policy issues embedded in the tax systems, and how tax law influences financial plans and decisions. Helps students make wiser financial decisions through increased understanding of the tax impacts of those decisions, participate knowledgeably in public debates surrounding tax policy, and prepare for careers as financial planners. Prerequisite: ACCY 201 or equivalent, or consent of instructor.

ACE 360 Spreadsheet Models & Applic credit: 2 Hours.
Spreadsheet development and modeling skills intended for economics and finance applications. Advanced uses of spreadsheet software, development of user-defined functions, use of Visual Basic and comparable external interface languages, data query designs, and advanced data analyses, summary and presentation skills are stressed. Intended to serve as a prerequisite for advanced modeling courses in specific disciplinary areas. Prerequisite: ACE 100 or equivalent, ACE 161 or CS 105, and completion of ACE 261 or ECON 203 or equivalent.

ACE 396 Honors Research or Thesis credit: 1 to 4 Hours.
Individual research, special problems, thesis, development and/or design work under the direction of the Honors advisor. May be repeated in the same or subsequent terms as topics vary. May be repeated up to 4 hours in a semester, but no more than 12 hours of special problems, research, thesis and/or individual studies may be counted toward the degree. Prerequisite: Junior standing, admission to the ACES Honors Program, and consent of instructor.

ACE 398 Seminar credit: 1 to 3 Hours.
Group discussion on a special topic in a field of study directly pertaining to subject matter in agricultural and consumer economics. Approved for both letter and S/U grading. May be repeated to 3 hours in a semester, up to a maximum of 12 total hours. Prerequisite: Junior standing and consent of instructor.

ACE 403 Agricultural Law credit: 3 to 4 Hours.
Relation of common-law principles and statutory law to land tenure, farm tenancy, farm labor, farm management, taxation, and other problems involving agriculture. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: Junior standing.

ACE 406 Environmental Law credit: 3 to 4 Hours.
Examination of environmental law issues. Topics include common-law pollution control; role of administrative agencies and courts; federal and state power; air and water pollution; regulation of toxic substances; protection of land, soil and other natural resources. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: ACE 403, or BADM 300, or BADM 301 recommended.

ACE 411 Environment and Development credit: 3 to 4 Hours.
Relationship between economic development and environmental sustainability through application of cost-benefit analysis and environmental economics. Developing and developed country issues are considered with an emphasis on hands-on applications of project appraisal, social benefit-cost analysis, green accounting, and non-market valuation. 3 undergraduate hours. 4 graduate hours. Prerequisite: ECON 302 or equivalent.

ACE 427 Commodity Price Analysis credit: 3 Hours.
A comprehensive and in-depth survey of commodity price analysis with emphasis on the fundamental factors affecting prices of agricultural products; sources of information relating to production and demand factors; government activities as they relate to prices of agricultural products; technical analysis of agricultural product prices; and market efficiency and forecasting. 3 undergraduate hours. 3 graduate hours. Prerequisite: ACE 100 or ECON 102; ACE 261, or equivalent.
ACE 428 Commodity Futures and Options credit: 3 Hours.
Development of futures trading; operation and governance of commodity exchanges; economic functions of futures trading; operational procedures and problems in using futures markets; public regulation of futures trading; evaluation of market performance. Additional fees may apply. See Class Schedule. 3 undergraduate hours. 3 graduate hours. Prerequisite: ACE 222 or FIN 300 or equivalent.

ACE 430 Food Marketing credit: 3 Hours.
Performance of the food system; marketing margins; transportation, advertising, and retailing of food products; structure, conduct, and performance of food marketing firms and industries; government and public interest in the food system. Same as FSHN 425. 3 undergraduate hours. 3 graduate hours. Prerequisite: ACE 100 or ECON 102 or ACE 222 recommended.

ACE 431 Agri-food Strategic Management credit: 3 Hours.
Process of strategic decision-making in food and agribusiness firms; methods for analysis of business and regulatory environment; organizational issues in strategy choice for firms and supply chains. Same as BADM 438. 3 undergraduate hours. 3 graduate hours. Prerequisite: ACE 231, BADM 320, or ACE 222; or consent of instructor.

ACE 432 Farm Management credit: 3 or 4 Hours.
Students develop expertise in evaluating and making decisions similar to those faced by farm operators and managers. 3 undergraduate hours. 4 graduate hours. Prerequisite: ACE 232; credit or concurrent registration in ACE 360 or equivalent.

ACE 435 Global Agribusiness Management credit: 3 Hours.
Examination of the economic and strategic management of food, textile, and agribusiness firms within a global business environment; topics include the global business environment and its institutions, organizational strategies and policies, and business operations in global agricultural, food and textile industries. 3 undergraduate hours. 3 graduate hours. Prerequisite: ACE 231, ACE 222, or BADM 320 or consent of instructor.

ACE 436 Intl Business Immersion credit: 4 Hours.
Provides participants an in-depth, experiential immersion into the complex issues and constraints that confront international marketing channel participants. Contextually grounded and themed in a specific industry, the course combines on-campus lectures with an intensive international immersion experience to Europe, Asia, or Latin America. By following the complete marketing channel from raw materials procurement to final consumption, participants gain first-hand knowledge of the necessary managerial decision-making skills required to successfully operate in today's global business environment. Same as BADM 436. 4 undergraduate hours. 4 graduate hours. May be repeated to a maximum of 8 undergraduate and/or 8 graduate hours. Prerequisite: Consent of instructor.

ACE 440 Finan Plan for Professionals credit: 3 or 4 Hours.
Capstone course applies financial planning principles and concepts in realistic case studies of specific planning needs, requires a comprehensive financial planning exercise, and covers professional ethics and responsibilities. 3 undergraduate hours. 4 graduate hours. Prerequisite: Concurrent enrollment in or completion of ACE 345, ACE 346, ACE 444, and ACE 449.

ACE 444 Finan Serv & Invest Plan credit: 3 or 4 Hours.
Advanced skills in and understanding of asset pricing, equity and debt investment, portfolio theory and diversification, asset allocation, financial risk management, and financial intermediation and regulation emphasizing applications in financial planning and agricultural finance. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: ACE 240, ACE 345, or FIN 221, and ECON 302 or consent of instructor.

ACE 445 Intermediate Personal Fin Plan credit: 4 Hours.
Financial planning philosophies, techniques, and procedures. Course uses case studies and problem-solving activities to construct financial plans for individuals and families in various life cycle stages and family structures. 4 undergraduate hours. 4 graduate hours. Prerequisite: ACE 240, ECON 302, and junior standing or consent of instructor; FIN 230 is recommended.

ACE 446 Modeling App’s Finan Plan credit: 2 Hours.
Improves ability to make effective financial plans and decisions. Involves development of decision tools that are applied to "real world" financial data sets and planning/decision-making circumstances. Topics include applied data management techniques (designing queries/storable forms), financial statement analysis, numeric optimization tools, leverage assessment, incorporating risk in decisions, capital budgeting and time value of money, term structure of interest rates, and currency exchange. 2 undergraduate hours. 2 graduate hours. Prerequisite: One of ACE 240, ACE 345, FIN 221; or consent of instructor and advanced knowledge of spreadsheet software equivalent to the coverage of ACE 360.

ACE 447 Case Stud Agr Accy & Fin Plan credit: 3 Hours.
Capstone course for agricultural accounting, agricultural finance, and financial planning; applies business and planning concepts and tools to real-world situations; emphasizes group decision making; industry professions participate in the learning experience. 3 undergraduate hours. 3 graduate hours. Prerequisite: One of ACCY 301, ACE 444, FIN 300; or consent of instructor.

ACE 448 Rural Real Estate Appraisal credit: 3 or 4 Hours.
Valuation methods and value bases of rural real estate; legal aspects of property rights, appraisal theory and procedures, condemnation appraisal, characteristics of the rural land market, soil identification and productivity, and other legal, economic, agronomic, and engineering aspects of real estate valuation. Laboratory field trips, including a practice appraisal; see Class Schedule for approximate cost. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: ACE 232 or ACE 360; NRES 201.
ACE 449 Retirement & Benefit Planning credit: 3 or 4 Hours.
Employee benefit and retirement planning, including employer-sponsored or individually managed options, with particular attention to determining benefit and retirement needs and managing risks in specific planning situations. 3 undergraduate hours. 3 or 4 graduate hours. Credit is not given for both ACE 449 and FIN 434. Prerequisite: ACE 240, ACE 345, and ECON 302 or consent of instructor.

ACE 451 Agriculture in Int'l Dev credit: 3 to 4 Hours.
Economics of agricultural development and the relationships between agriculture and other sectors of the economy in developing nations; agricultural productivity and levels of living in the less developed areas of the world; and studies of agricultural development in different world regions including Africa, Asia, and Latin America. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: ECON 302 or consent of instructor.

ACE 452 The Latin American Economies credit: 2 to 4 Hours.
Same as ECON 452. See ECON 452.

ACE 454 Econ Dev of Tropical Africa credit: 2 to 4 Hours.
Types of African economies and growth of the exchange economy; development of natural resources, industry, trade, finance, and education; analysis of economic integration, governmental planning, and development projects; and demographic, land tenure, and institutional influences on development. 2 to 4 graduate hours. Prerequisite: ECON 302 or consent of instructor.

ACE 455 Intl Trade in Food and Agr credit: 3 Hours.
Economic theory used to analyze trends and patterns of international trade in major agricultural commodities and to understand interaction between economic development, policy, and trade; welfare implications of policies affecting production, consumption, and trade; implications of protectionism, free trade, regional trade blocs, and multilateral trade liberalization, and the role for international trade institutions. 3 undergraduate hours. 3 graduate hours. Prerequisite: ECON 302 or consent of instructor.

ACE 456 Agr and Food Policies credit: 3 to 4 Hours.
Analysis of agricultural and food policies and programs and their effects on producers and consumers of agricultural products. Formulation of agricultural and food policies are examined with an emphasis on historical and current economic problems affecting agriculture and rural America. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: ECON 302 or consent of instructor.

ACE 471 Consumer Economic Policy credit: 3 Hours.
Analysis of choice-making, buying, using, and disposing of consumer goods by families, social policy Perspectives considered. 3 undergraduate hours. No graduate credit. Prerequisite: ACE 100 or equivalent and junior standing.

ACE 474 Econ of Consumption credit: 3 to 4 Hours.
Concepts, theories, and methods for analysis of the micro and macro aspects of consumption; includes standards and content of consumption and description of consumption patterns and trends in the USA and selected other countries. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: ECON 302 or consent of instructor; a course in statistics; junior standing.

ACE 476 Family Economics credit: 2 to 4 Hours.
Economic welfare of American families, application of economic theory to the behavior of families and individuals with respect to time allocation between the home and the market; family forms; human capital accumulation; gender differences in income; income inequality; and poverty. Role of public policy is considered. 3 undergraduate hours. 2 to 4 graduate hours. Prerequisite: ECON 302 or consent of instructor; a course in statistics; senior standing.

ACE 496 Practicum credit: 4 to 12 Hours.
Cooperatively supervised field experience in management and administration in a textile marketing business. Only four hours may be applied to the total required for a graduate degree. At the undergraduate level, up to four hours may be counted toward the hours required in Agricultural and Consumer Economics. 4 to 12 undergraduate hours. 4 to 12 graduate hours. Approved for both letter and S/U grading. Prerequisite: Consent of instructor. Not available to students on probation.

ACE 499 Seminar credit: 1 to 4 Hours.
Group discussion or an experimental course on a special topic in agricultural and consumer economics. 1 to 4 undergraduate hours. 1 to 4 graduate hours. Approved for both letter and S/U grading. May be repeated in the same semester to 4 hours, or subsequent terms to a maximum of 12 hours as topics vary.

ACE 500 Applied Economic Theory credit: 4 Hours.
Provides an understanding of theory of the firm, consumer economics and various market models necessary to conduct applied professional economic research with special emphasis on applications relevant to agricultural, consumer, development, and resource economics. Multivariate calculus and optimization methods are used.

ACE 501 Risk and Info: Theory and App credit: 4 Hours.
Applications of the theory of economic behavior under uncertainty and asymmetric information. Analysis of individual decision making under uncertainty includes: tests of the expected utility hypothesis; comparative statistics of changes in risk preferences and risk; and moment based models of decision making. Analysis of economic equilibrium under uncertainty and asymmetric information includes tests for complete markets and applications of noncooperative game theory. Prerequisite: Concurrent enrollment in ECON 500 and ECON 506.

ACE 502 Demand/Supply/Firms/Households credit: 4 Hours.
Applications of demand and supply theories and applications of firm and household behavior. Topics include demand and supply systems, aggregation and separability, dynamics, formation and boundaries of the firm, household decision making, intrahousehold allocation, allocation of time, human capital, and hedonics. Same as ECON 553. Prerequisite: ECON 500 and ACE 501.
ACE 503 Equilibrium and Welfare Econ credit: 4 Hours.
Provides a theoretical and applied treatment of economic equilibrium and the consequences of displacement of equilibrium for the welfare levels of economic agents. Displacement of equilibrium will be shown to be brought about by changes in government policy, technology, and consumer preferences. Welfare measures under partial equilibrium, general equilibrium, and multi-market models will be presented. Includes various applications of welfare economics in the analysis of policy and technological change. Prerequisite: ECON 500 and at least two semesters of college calculus.

ACE 510 Adv Natural Resource Economics credit: 4 Hours.
Economic theory is used to examine the allocation of renewable and efficiency issues that arise from natural resource policy and management issues. Same as ECON 548, ENVS 510, and NRES 510. Prerequisite: ECON 302 or equivalent.

ACE 516 Environmental Economics credit: 4 Hours.
Same as ECON 549. See ECON 549.

ACE 520 Food Commodity Markets credit: 4 Hours.
Examination of selected economic problems in marketing agricultural products and relevant theory and empirical methods for analyzing and interpreting research results. Topics include: operational efficiency in marketing firms and industries; efficient allocation over space, form, and time; price making institutions; and research in demand stimulation and selected issues in trade. Prerequisite: ACE 562 and ACE 563, and ECON 500; or equivalent.

ACE 527 Advanced Price Analysis credit: 4 Hours.
Study of methods used to analyze factors affecting agricultural prices; analysis of agricultural prices and price movements with respect to time, space, and form; and examination of methods of price forecasting and techniques of time series analysis. Prerequisite: ACE 562 or ECON 507 and ECON 500; or equivalent.

ACE 528 Research in Futures Markets credit: 4 Hours.
Research literature on commodity futures and options markets, both theoretical and empirical; topics include: supply of storage, basis models, theory of the firm and hedging under uncertainty, optimal hedging, speculative returns, market performance, pricing efficiency and option pricing. Prerequisite: ECON 500 or equivalent.

ACE 530 Microeconometrics credit: 4 Hours.
Applied micro-econometrics concentrating on cross section data, panel data, and treatment effects. Includes methods for estimating treatment effects in the Rubin causal model framework. Emphasis will be placed on econometric procedures relevant for agricultural and applied economists and their implementation in Stata, including Mata. Prerequisite: ECON 506 and ECON 507, or equivalent.

ACE 531 Impact Evaluation credit: 2 Hours.
The problem of identification. Methods for impact evaluation, including randomized field experiments, propensity score matching, differences in differences, instrumental variables, and regression discontinuity. Includes exercises using the econometric software program STATA. Prerequisite: ACE 500 or ECON 500 or equivalent.

ACE 542 Advanced Agricultural Finance credit: 4 Hours.
Theory of financial decision making as applied to farms and firms related to agriculture. Topics include asset pricing models, financial markets, capital structure, farmland control, term structure of interest rates, risk management and credit evaluation. Prerequisite: ECON 500, calculus, and mathematical statistics, or equivalent; at least one course in finance strongly recommended; or consent of instructor.

ACE 552 Regional Development Theory credit: 4 Hours.
Same as UP 552. See UP 552.

ACE 555 Economic Impact Analysis credit: 2 Hours.
Examines the theories and limitations of input-output models, sources and weaknesses of the data, and validity of selected impact studies by researchers in universities, government, and the private sector. Combining economic theory, county-level data, and state-of-the-art software, students build an input-output model and carry out a professional impact study. Students pick their topics and regions, think through the economics of a scenario, figure out how to make the scenario mesh with the peculiar economic logic of the input-output model, and complete a regional impact study with a sound knowledge of the inherent theoretical and data issues. Same as UP 555.

ACE 556 Agr Policy and Political Econ credit: 4 Hours.
Economic theory is used to study both the effects and the causes of public policies that influence agricultural industries, consumers, and taxpayers. Neoclassical models of government intervention are used to study the welfare effects of income redistribution and stabilization policies and macroeconomic policies as they affect agriculture. Formal models of political economy and public choice are used to analyze the underlying causes of public policy. Emphasis is placed on the political power of interest groups as an explanation of public policy decisions. Prerequisite: ECON 500 or equivalent and ACE 502 and ACE 503.

ACE 557 Food, Poverty and Development credit: 2 Hours.
Economic theory and empirical analyses are used to study economic development, emphasizing the structural transformation of an economy, poverty alleviation among households, improvement in food security and public policies to support those processes. Topics include poverty measurement, poverty dynamics, growth theory, and impact evaluation. Special attention is paid to the role of the agricultural sector and rural development. Prerequisite: ACE 500 or ACE 504 or ECON 500 and basic econometrics.
**ACE 559 Food, Trade and Development credit: 2 Hours.**
Economic theory and empirical analyses are used to study international trade, emphasizing food trade, agricultural policy and international development. Topics include theoretical models of international trade, regional agreements, and food trade. Special attention is given to the impact of trade in developing countries with large agricultural sectors and to issues relating to trade in food products. Prerequisites: ACE 500 or ACE 501 or ECON 500 and basic econometrics.

**ACE 561 Adv Res and Scholarly Comm credit: 4 Hours.**
Seminar intended for Ph.D. students who have completed written preliminary examinations. Develops a comprehensive understanding of the research process. Discussions include identification of research topics, structure of research proposals, review of literature, effective communication, management of research activities, and contributions to scholarly debate. Prerequisite: Consent of instructor.

**ACE 562 Applied Regression Models I credit: 2 Hours.**
Application of simple regression methods to problems in agricultural and consumer economics with emphasis on foundational probability, random variable, and distribution concepts, development of the simple, two-variable regression model; estimation of model parameters; hypothesis testing; and prediction. Prerequisite: ACE 261 or equivalent; one of MATH 220, MATH 221, MATH 234.

**ACE 563 Math Program App Econ I credit: 2 Hours.**
Application of mathematical programming methods to discrete models in agricultural economics; Kuhn-Tucker theorem, Lagrange multipliers, duality, simplex method as applied to linear and quadratic programming, and input-output analysis models in agriculture. Prerequisite: MATH 124; one of MATH 220, MATH 221, MATH 234.

**ACE 564 Applied Regression Models II credit: 2 Hours.**
Application of multiple regression methods to problems in agricultural and consumer economics with emphasis on extensions to the simple, two-variable regression model, development of the multiple regression model; and problems created by violations of basic model assumptions. Prerequisite: ACE 562 or equivalent.

**ACE 565 Mathematics for Applied Econ credit: 2 Hours.**
Applications of concepts of linear algebra, calculus, and multivariate optimization to equilibrium analysis, comparative statistics, and other topics in agricultural and consumer economics.

**ACE 566 Math Program App Econ II credit: 2 Hours.**
Advanced mathematical programming methods with particular emphasis on applications in agricultural and consumer economics. Covers nonlinear programming, sector modeling, risk modeling, and methodological issues in mathematical programming modeling of agricultural systems. Prerequisite: ACE 563 or equivalent.

**ACE 569 Career Development for PhDs credit: 1 Hour.**
This course is intended to help doctoral candidates transition into careers in or out of academia. The class covers job market processes and strategies, presentation skills, teaching philosophies, and development of research trajectories. Approved for S/U grading only. Prerequisite: ACE 561.

**ACE 571 Household Economics credit: 2 Hours.**
Discussion of current topics and review of the literature in household economics. Relevant topics include marriage, divorce, intergenerational transfers, investment in children, migration. Prerequisite: ECON 500 or equivalent.

**ACE 591 Independent Study credit: 0 to 8 Hours.**
Individual research work under the supervision of an appropriate member of the faculty. Approved for both letter and S/U grading. May be repeated to a maximum of 8 hours if topics vary.

**ACE 592 Special Topics credit: 0 to 8 Hours.**
Group instruction on a special topic under the direction of one or more members of the faculty. Approved for both letter and S/U grading. May be repeated in a semester to a maximum of 8 hours. May be repeated to a maximum of 24 total hours, if topics vary.

**ACE 594 Seminars and Workshops credit: 0 to 8 Hours.**
Participation in a seminar or workshop with other graduate students and faculty members. Approved for both letter and S/U grading. May be repeated.

**ACE 599 Thesis Research credit: 0 to 16 Hours.**
Individual research under supervision of members of the graduate teaching faculty in their respective fields. Approved for S/U grading only. May be repeated.

**Agr, Consumer, & Env Sciences (ACES)**

ACES Class Schedule ([https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/ACES](https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/ACES))

**Courses**

**ACES 101 Contemporary Issues in ACES credit: 2 Hours.**
Study of contemporary issues in the human, food and natural resource systems, and an overview of the role of the College of Agricultural, Consumer and Environmental Sciences and the University of Illinois in these systems. Required of and limited to freshmen enrolled in the College of ACES.
ACES 179 History of Ag in IL Since 1860 credit: 3 Hours.
An introduction to the history of agriculture in the rural Midwest with an emphasis on Illinois based on an analysis of the attitudes of indigenous peoples, immigrants, farmers and agribusiness interests toward land, labor, crop selection and production, and technology. The course compares the regional characteristics of the rural Midwest to other U.S. regions, and explores factors that created the American “breadbasket,” a region recognized for the commodities, equipment and ideas that it exports to the world. This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: US Minority Culture(s)

ACES 199 Undergraduate Open Seminar credit: 1 to 5 Hours.
Experimental course on a special topic in the College of Agricultural, Consumer and Environmental Sciences. Topic may not be repeated except in accordance with the Code. Approved for letter and S/U grading. May be repeated. No more than 12 hours may be counted toward graduation.

ACES 200 ACES Transfer Orientation credit: 0 Hours.
Introduction to College of ACES and campus resources for students new to the College of ACES. Required of all off campus transfer students and optional for Inter College Transfer students. First eight weeks course. Approved for S/U grading only.

ACES 250 Introduction to Bioenergy credit: 3 Hours.
Introductory undergraduate survey course of a wide range of bioenergy issues. Topics span the entire life cycle of biofuels from feedstock production to end-product utilization. Class participants will gain a general understanding of each topic presented and an appreciation for what progress has been made and the challenges that remain in enabling biofuels production and utilization to meet national goals.

ACES 293 International Internship credit: 0 to 5 Hours.
Supervised learning experience designed for ACES students registering for an academic term abroad and/or for non-degree exchange students enrolling for an academic term at Illinois. The nature of the experience and the setting in which it takes place must be approved in advance by ACES faculty and by representative(s) of institutions/organizations/agencies that cooperate with the College of ACES in student exchange/study abroad programs. 0 to 3 undergraduate hours. Approved for both letter and S/U grading. May be repeated to a maximum of 10 hours.(Summer Session). Prerequisite: Written consent of ACES Study Abroad Office.

ACES 295 Undergrad Research or Thesis credit: 1 to 4 Hours.
Individual research, special problems, thesis, development and/or design work under the supervision of an appropriate member of the faculty. May be repeated to a maximum of 12 hours. Students may register in more than one section per term. Prerequisite: GPA of 3.0 or above at the time the activity is arranged, and consent of instructor.

ACES 298 International Experience credit: 1 to 9 Hours.
International experience in agricultural, consumer and environmental sciences related areas involving foreign travel and study without enrollment in another institution. Experience must be planned and approved in advance through consultation with a College of Agricultural, Consumer and Environmental Sciences faculty member. Additional fees may apply. See Class Schedule. Approved for both letter and S/U grading. May be repeated to a maximum of 9 hours. Not open to students on probation. Prerequisite: Written consent of ACES Study Abroad Office.

ACES 299 ACES Study Abroad credit: 0 to 18 Hours.
Provides campus credit in the College of Agricultural, Consumer and Environmental Sciences for study at accredited foreign institutions. Final determination of credit granted is made upon the student's successful completion of work. 0 to 8 undergraduate hours. Approved for both letter and S/U grading. May be repeated to a maximum of 36 hours within one calendar year. (Summer session). Prerequisite: Consent of major department, college, and Study Abroad Office.

ACES 396 UG Honors Research or Thesis credit: 1 to 4 Hours.
Undergraduate research, bachelor's thesis, and/or design work under the direction of a faculty mentor, culminating in the writing of a research abstract and presentation of a display poster at an approved event such as ExplorACES, the Provost's Undergraduate Research Symposium, and/or an external professional/scientific meeting. May be repeated in separate terms to a maximum of 12 hours. No more than 12 hours of special problems, research, thesis and/or individual studies may be counted toward a degree. Prerequisite: Junior or senior standing, cumulative GPA of 3.4 or above, enrollment in the ACES James Scholar Honors Program, and consent of instructor.

ACES 399 Honors Seminar credit: 1 Hour.
Designed to promote exposure to, and subsequent critical reflection about a variety of topics relevant to ACES James Scholars. Feature presentations by faculty members on topics of current interest in the agricultural, consumer and environmental sciences. Students engage in the topics by responding to faculty members' presentations through classroom activities, lab tours, stimulating debates, and lively discussions. The writing of a seminar paper rounds out the course. May be repeated in separate terms as topics vary. Prerequisite: James Scholars enrolled in the College of ACES with junior or senior standing.

ACES 409 Bioenergy Systems credit: 3 Hours.
Introductory survey course in bioenergy systems. Focus on plants, soils and bioenergy feedstocks; bioenergy production, processing and use; agricultural, environmental, economic and legal aspects of the bioenergy life cycle; tools and methods. 3 undergraduate hours. 3 graduate hours. Credit is not given for both ACES 409 and ACES 509.
ACES 499 Interdisciplinary ACES Seminar credit: 1 to 4 Hours.
Platform for experimental courses on special interdisciplinary topics within the agricultural, consumer and environmental sciences. Designed to provide upper-level undergraduates and graduate students with access to subject offerings of new and developing areas of knowledge across the ACES curricula. 1 to 4 undergraduate hours. 1 to 4 graduate hours. Approved for both letter and S/U grading. May be repeated to a maximum of 8 hours in the same term and 12 hours in separate terms if topics vary.

ACES 501 Advanced Bioenergy Topics credit: 2 Hours.
Seminar in Advanced Bioenergy Topics presented by experts in the field.

ACES 509 Advanced Bioenergy Systems credit: 3 Hours.
Introductory survey course in bioenergy systems. Focus on plants, soils and bioenergy feedstocks; bioenergy production, processing and use; agricultural, environmental, economic and legal aspect of the bioenergy life cycle; tools and methods. Students design and execute a research project that identifies pathways to improve the existing bioenergy system from at least two of the course topics from different disciplines. Credit is not given for both ACES 509 and ACES 409.

Agricultural Communications (AGCM)

AGCM 110 Intro to Ag and Env Comm credit: 3 Hours.
Development and role of communication in relation to food, feed, fiber, energy, natural resources, international development and other dimension of agriculture. Introduction to channels, methods, challenges and opportunities for improving communication within agriculture and communicating agriculture to the public.

AGCM 199 Undergraduate Open Seminar credit: 1 to 5 Hours.
Experimental course on a special topic in agricultural communications. May be repeated in the same or separate terms as topics vary.

AGCM 220 Communicating Agriculture credit: 3 Hours.
Skills necessary to communicate complex information about the broad agriculture domain to different audiences. Application of communication theories. Emphasis on essential communication skills, including writing, conducting interviews, planning, and critical evaluation of information sources. Same as ENVS 220 and NRES 220. Prerequisite: Completion of a Composition I course. This course satisfies the General Education Criteria for: UIUC: Advanced Composition

AGCM 270 Sales Communications credit: 3 Hours.
Role, dynamics, and principles of sales communications as related to food and agriculture, food systems, environment and other related enterprises, including media sales. Students will learn techniques and methods for setting sales objective, conducting sales communications efforts, and analyzing and evaluating sales results.

AGCM 293 Communications Internship credit: 1 to 3 Hours.
Supervised experience in a field directly pertaining to agricultural communications. Approved for S/U grading only. May be repeated. Prerequisite: Sophomore standing. AGCM Program approval required.

AGCM 294 Research Internship credit: 1 to 4 Hours.
Supervised, on-campus, learning experience with faculty engaged in research. Approved for S/U grading only. May be repeated in the same or subsequent terms to a maximum of 10 hours. Prerequisite: Sophomore standing.

AGCM 295 Independent Study or Research credit: 1 to 3 Hours.
Individual research, special problems, thesis, development and/or design work under the supervision of an appropriate member of the faculty. May be repeated. Prerequisite: AGCM Program and instructor approval required.

AGCM 315 Emerging Media credit: 3 Hours.
Students learn the trends of emerging communication tools and norms on the agriculture sectors of society (theories & models), and the best practices and basic skills required to implement these new media (practice). Students will learn from agricultural communications cases and apply concepts to solving current new media communications problems in agriculture. Agriculture includes a variety of sectors such as food, natural resources, animals, biofuels, and human health/nutrition. Course is taught through the frameworks of public relations, agricultural communications, and information diffusion. Same as ADV 315. Prerequisite: AGCM 220 or ADV 310; or consent of instructor.

AGCM 320 Public Information Campaigns credit: 4 Hours.
Coordinated approach to planning, implementing and evaluating information campaigns in the broad domain of food and agriculture. Students work with groups, agencies and organizations in designing communication campaigns strategies and tactics. Prerequisite: Sophomore standing and Composition I course. This course satisfies the General Education Criteria for: UIUC: Advanced Composition
AGCM 330 Environmental Communications credit: 3 Hours.
Basics of communicating about environmental issues to various audiences, emphasizing communication to lay publics. Gathering information about a current environmental issue, analyzing interests of groups involved, and examining strategies for communicating clearly to different groups. Same as ENVS 330 and NRES 330. Prerequisite: Sophomore standing.

AGCM 396 Honors Research or Thesis credit: 1 to 4 Hours.
Individual research, special problems, thesis, development and/or design work under the direction of the Honors advisor. May be repeated in the same or subsequent terms. Prerequisite: Junior standing, admission to the ACES Honors Program.

AGCM 398 Undergraduate Seminar credit: 1 to 3 Hours.
Special topics in a field of study directly pertaining to subject matter in agricultural communications. May be repeated in the same or subsequent terms to a maximum of 12 hours.

AGCM 430 Comm in Env Social Movements credit: 3 Hours.
Examines the interests, values systems and communications strategies of key participants in the environmental movement. Students examine environmental issues and predict possible reactions from key participants in the environmental arena. 3 undergraduate hours. 3 graduate hours. Same as ENVS 430, NRES 430, and SOC 464. Prerequisite: Composition I course.

AGCM 499 Seminar credit: 1 to 4 Hours.
Special topics in agricultural communications. 1 to 4 undergraduate hours. 1 to 4 graduate hours. May be repeated in the same or subsequent terms to a maximum of 12 undergraduate or graduate hours as topics vary.

Agricultural Education (AGED)

AGED Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/AGED)

Courses

AGED 100 Intro to Ag & Leadership Ed credit: 2 Hours.
Overview of agricultural and leadership education career pathways in school and non-school settings, including extension, corporate and government sectors, and international and industry organizations. Includes overview of certification requirements, professional development, and current issues for agricultural education professionals.

AGED 199 Undergraduate Open Seminar credit: 1 TO 5 Hours.
An experimental course on a special topic in agricultural education. May be repeated in the same or separate terms as topics vary to a maximum of 12 hours.

AGED 220 Prog Del in Ag & Leadership Ed credit: 3 Hours.
Introduces formal and non-formal methods used to deliver education and training in agricultural and leadership education programs. Focuses on types and purposes of agricultural education, program components, principles of teaching and learning, community relationships, and reflective teaching. Technology-supported lab component provides skills needed to develop teaching and training materials.

AGED 230 Leadership Communications credit: 3 Hours.
Application of communication skills used in the dissemination of information by public or organizational leaders in contemporary times. Founded on empirical leadership studies and through use of experiential learning activities, presentations, projects, and examinations, students will consider how identity and the setting impact what they write, say, and do when communicating a message.
This course satisfies the General Education Criteria for:
UIUC: Advanced Composition
UIUC: Social Sciences

AGED 250 Observation and Program Analys credit: 4 Hours.
Early field experience in agricultural education, including observation and analysis activities in public schools, extension programs, or other selected settings; participation in clinical field experience activities; examination of educational program development and operation, teaching and learning processes, contextual factors in learning, evaluation of student learning; and professionalism. Approximately 45 hours of early field experience will be acquired. Off-campus observation begins the first week of January. Agricultural education programs in both school and non-school settings are examined. Prerequisite: AGED 220; concurrent enrollment in EDPR 203.

AGED 260 Intro to Leadership Studies credit: 3 Hours.
Study of leadership theories and their application to the development of leadership skills. Students develop a personal philosophy of leadership, prepare a development plan for enhancing leadership skills, and begin a portfolio to record their leadership growth. Explores topics concerning diversity, ethics, and leadership/follower roles.
This course satisfies the General Education Criteria for:
UIUC: Social Sciences

AGED 280 Training Needs Assessment credit: 2 Hours.
Students in this course will be equipped to analyze an employee and/or organization's performance to determine the training needs for a business or organization. Helps learners determine whether or not training is the solution to a job performance problem.
AGED 293 Ag Leadership Internship credit: 1 to 6 Hours.
Supervised off-campus experience in a field directly pertaining to subject matter in agricultural leadership education. Approved for S/U grading only. May be repeated in the same or subsequent terms to a maximum of 12 hours.

AGED 295 Independent Study or Research credit: 1 to 4 Hours.
Individual research, special problems, thesis, development and/or design work under the supervision of an appropriate member of the faculty. May be repeated in the same or subsequent terms.

AGED 300 Training and Development credit: 4 Hours.
Students will learn to assess, design, develop, implement, and evaluate a training program in agricultural and non-agricultural industries. Topics will emphasize the theory of training and development, methods of assessing training needs and learning styles, design of effective training, presentation skills, and program evaluation. Different types of training programs will be examined, including orientation, skills training, team building, management development, and diversity training. Students will create and present a training program for an actual client utilizing the training design process. Prerequisite: AGED 260.

AGED 310 Prof Dev in Leadership Ed credit: 3 Hours.
Provides agricultural leadership education students with non-formal professional experiences prior to enrollment in the student internship. A minimum of 32 hours of observation and participatory experiences with professionals in extension/outreach, business and industry, political and/or communications/human resources are required for satisfactory completion of this class.

AGED 340 Leadership Ethics & Pluralism credit: 3 Hours.
Theory and research in leadership ethics and multicultural competence in a leadership context. Students will examine the underpinning of multiculturalism and identity development, and how both affect leadership practice. Also explores issues of power, oppression, privilege and the responsibilities of leadership. Integrates both ethics and multiculturalism through the examination of cases that include topics such as globalization, immigration, etc. Prerequisite: AGED 260.

AGED 340 Leadership Ethics & Pluralism credit: 3 Hours.
This course satisfies the General Education Criteria for:
UIUC: US Minority Culture(s)

AGED 350 Early Field Experience credit: 3 Hours.
Supervised experience during the summer months and fall semester including: supervision of students’ agricultural experience programs and projects; development of problem-solving and decision-making skills related to use of instructional technologies, management of FFA activities, and supervision of agricultural experiences; review of teacher certification requirements and application for teacher certification; development of online teacher certification portfolio meeting state, UIUC, and program requirements. A minimum of 50 hours or early field observation is required. Prerequisite: AGED 250.

AGED 360 Advanced Leadership Studies credit: 3 Hours.
Examines current and emerging leadership theories and their practical application in real-world settings. Continues exploration of advanced leadership theories begun in AGED 260, and includes opportunities for self-assessment and person leadership development. Prerequisite: AGED 260.

AGED 360 Advanced Leadership Studies credit: 3 Hours.
This course satisfies the General Education Criteria for:
UIUC: Social Sciences

AGED 380 Leadership in Groups and Teams credit: 3 Hours.
Theory and practice of group and team leadership, including leadership assessment, group dynamics, group process, goal-setting, conflict management and resolution, leadership skill development, and case study analyses. Students engage in group activities throughout the semester. Prerequisite: AGED 260 and completion of the General Education Composition I requirement.

AGED 386 Honors Research or Thesis credit: 1 to 4 Hours.
Individual research, special problems, thesis, development and/or design work under the direction of the Honors advisor. May be repeated in the same or subsequent terms. Prerequisite: Junior standing, admission to the ACES Honors Program.

AGED 400 Foundations of Ag & Extn Ed credit: 3 Hours.
Comparative examination of the mission, purpose, and historical foundations of agricultural and extension education. Topics include review of agricultural education programs and delivery systems, the nature of teaching in school and non-school settings, and trends and developments in agricultural education. Also examines teacher characteristics and approaches to teaching, education program components, community relationships, and reflective teaching. 3 undergraduate hours. 3 graduate hours.

AGED 410 Grad Early Field Experience credit: 2 Hours.
An introduction to the application of pedagogy through early field experiences in agricultural education. Students participate in eight weeks of instruction and 40 hours of participatory experiences in approved agricultural education programs. Off-campus observation begins the first week of January. Restricted to graduate students in the teacher education option. 2 undergraduate hours. 2 graduate hours. Prerequisite: Concurrent enrollment in EDPR 203.

AGED 420 Curr Design & Instruction credit: 3 Hours.
This instructional methodology course provides students the opportunity to analyze the principles of learning and teaching as they influence the academic motivation of learners in formal and non-formal environments within agricultural, food and environmental sciences. Topics include: the understanding and implementation of psychological aspects of learning, planning and development of agricultural courses and curricula, creating teaching plans, managing positive learning environments, evaluating student learning, and the utilization of effective self-reflective teaching behaviors. 3 undergraduate hours. 3 graduate hours. Prerequisite: AGED 220 for majors; consent of instructor for non-majors.
AGED 421 Teaching Strategies in AGED credit: 3 Hours.
Synthesis of principles of teaching and learning as they influence educational activities in formal and non-formal environments within agricultural and related sciences. Gives individuals an opportunity to apply the educational concepts covered in AGED 300 or AGED 420. Individuals will design, implement, and evaluate learner-centered approaches in a variety of simulated educational environments. 3 undergraduate hours. No graduate credit. Prerequisite: AGED 300 or AGED 420.

AGED 430 Youth Development Programs credit: 3 or 4 Hours.
Instruction in the youth development process, including learning: philosophy and purposes of youth development policies, programs, and organizations; relationships to organizational missions; principles and procedures for developing, coordinating, and implementing youth development programs; and examining research and practice in youth-at-risk initiatives. 3 or 4 undergraduate hours. 3 or 4 graduate hours. Prerequisite: AGED 220, or HDFS 105, or PSYC 100.

AGED 450 Program Delivery and Eval credit: 3 Hours.
Students complete this course during their twelve-week practice teaching or internship experience. Written assignments will focus on development of teaching plans, program initiation and improvement plans, and actual evaluation studies of agricultural education programs. Instruction will be provided during on-site faculty visits and by cooperating personnel. 3 undergraduate hours. 3 graduate hours. Prerequisite: AGED 420.

AGED 451 Professional Dev in Ag Ed credit: 1 Hour.
Analysis of teaching and learning processes, program evaluation and improvement strategies, curriculum development and modification, professional development, facility development, using community resources, program management, and discussion of trends and issues in agricultural education. 1 undergraduate hour. 1 graduate hour. Prerequisite: Senior standing.

AGED 480 Collaborative Leadership credit: 3 or 4 Hours.
Leadership operates within the context of community. The course will teach the research, theory, and practice of building effective community collaborations to deal with complex societal issues. A collaborative framework will be delivered by which students apply their knowledge of person, organizational, and community leadership to real-world problems. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: AGED 260 or equivalent.

AGED 490 Adult Learning Principles credit: 3 or 4 Hours.
Theory and practice of adult learning including: overview of teaching and learning theory related to adults; core adult learning principles; individual and situational learning differences; goals and purposes for learning; and the future of adult learning. 3 undergraduate hours. 4 graduate hours.

AGED 499 Seminar credit: 1 to 4 Hours.
Special topics in agricultural education. 1 to 4 undergraduate hours. 1 to 4 graduate hours. May be repeated in the same or subsequent terms to a maximum of 12 undergraduate or graduate hours as topics vary.

AGED 500 Special Topics in Ag Education credit: 1 to 4 Hours.
Advanced study in selected phases of agricultural education applicable to agricultural educators in schools, community colleges, universities, cooperative extension, agribusiness, and community and governmental agencies. May be repeated in the same and subsequent terms.

AGED 510 Education Program Management credit: 4 Hours.
Theoretical and practical approaches to planning, delivering and evaluating programs in agricultural education, with a focus on development of comprehensive educational plans.

AGED 511 Grad Professional Dev in Ag Ed credit: 1 Hour.
Analysis of teaching and learning processes, program improvement strategies, professional development, FFA chapter development, awareness of school law, program management, and discussion of trends and issues in agricultural education.

AGED 520 Teaching College-Level ACES credit: 2 Hours.
Planning, delivering and evaluating effective teaching and learning of college-level agricultural, consumer and environmental sciences; the role of faculty in the governance of higher education in the agricultural sciences. Prerequisite: Master's standing.

AGED 540 Volunteer Management credit: 3 Hours.
Theory and practice of volunteer management including: volunteer demographics; recruitment; selection; orientation; training and development; retention; supervision; motivation; evaluation; legal issues; and risk management. Students will develop a comprehensive volunteer management strategy based on using volunteers in non-profit organizations.

AGED 545 Research Methods & Design credit: 4 Hours.
Provides foundations for quantitative and qualitative research methodologies and design principles for investigating problems in social and behavioral sciences. Focuses on language of research, purposes, validity threats, data collection methods, and critical evaluation of current literature.

AGED 549 Independent Study credit: 2 to 4 Hours.
Individual investigation and reporting of research on any phase of agricultural education selected by the student and approved by the advisor and faculty member who will supervise the study. May be repeated in the same or subsequent terms to a maximum of 8 hours.

AGED 550 Advanced Program Delivery credit: 2 Hours.
Theory and practice of advanced program delivery in non-school settings, including the following: strategic planning; environmental scanning; logic model development; experiential and accelerated learning methodologies; and training and development strategies.
AGED 551 Advanced Program Evaluation credit: 2 Hours.
Theory and practice of advanced program evaluation in non-school settings, including the following: measuring the impact of educational programs;
program outcomes and indicators; measuring behavior change, and developing, using, interpreting, and reporting pre-post evaluations, qualitative data,
surveys, focus group data, and observational data.

AGED 599 Thesis Research credit: 0 to 8 Hours.
Individual research in the various areas of agricultural and extension education under the supervision of faculty members. Approved for S/U grading
only. May be repeated in separate terms.

Agricultural and Biological Eng (ABE)

ABE Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/ABE)

Courses

ABE 100 Intro Agric & Biological Engrg credit: 1 Hour.
Introduction to the engineering profession with career opportunities in the agricultural and biological engineering discipline. Concepts necessary for
becoming a successful engineer including time management, design concepts, ethics, and teambuilding. Familiarization with laboratories, computer
facilities, internships, and other opportunities. Team design experience. Emphasis on technical communication and problem-solving skills as well as
career planning.

ABE 141 ABE Principles: Biological credit: 2 Hours.
Principles of biology relevant to agriculture, food, energy, and the environment, including microbiology, biochemistry, genetics, plant and animal
systems, and ecosystems. Case studies of engineering applications where these biological principles have been taken into account or leveraged for the
purpose of design.

ABE 199 Undergraduate Open Seminar credit: 1 to 5 Hours.
May be repeated to a maximum of 12 hours.

ABE 223 ABE Principles: Machine Syst credit: 2 Hours.
Machinery systems for off-road applications: internal combustion engines; fluid power; tractors, and traction; chemical application; grain harvesting.
Prerequisite: One of MATH 220, MATH 221, MATH 234.

ABE 224 ABE Principles: Soil & Water credit: 2 Hours.
Engineering principles and methods of design and management of natural resources and environmental systems; watershed and hydrologic cycle;
infiltration and surveying; runoff and erosion; water quality; non-point source pollution. Prerequisite: One of MATH 220, MATH 221, MATH 234.

ABE 225 ABE Principles: Bioenvironment credit: 2 Hours.
Principles of environmental control for biological structures: psychrometrics; mass and heat transfer through buildings; ventilation requirements.
Prerequisite: One of MATH 220, MATH 221, MATH 234.

ABE 226 ABE Principles: Bioprocessing credit: 2 Hours.
Principles of bioprocess engineering applied to food and agricultural products: material balances; fluid flow; heat and mass transfers; drying;
evaporation; fermentation; distillation; process simulation. Prerequisite: One of MATH 220, MATH 221, MATH 234.

ABE 341 Transport Processes in ABE credit: 3 Hours.
Principles of transport processes involving momentum, heat, and mass as applied to biological systems in agriculture, food, energy, and the
environment. Credit is not given for both ABE 341 and CHBE 421. Prerequisite: ABE 223, ABE 224, ABE 225, ABE 226, and PHYS 213.

ABE 361 Off-Road Machine Design credit: 3 Hours.
Design and development concepts of agricultural and industrial machines; analysis and synthesis of tillage, planting, harvesting, chemical application,
material handling mechanisms, and precision farming tools. Prerequisite: ABE 223 and TAM 212.

ABE 374 Environ Control for Buildings credit: 3 Hours.
Application of bioenvironmental engineering principles to control agricultural building environments. Psychrometrics, room air distribution, fluids, heat
transfer, ventilation equipment, environmental physiology, and design topics. Prerequisite: ABE 225.

ABE 397 Independent Study credit: 1 to 4 Hours.
Individual research, special problems, thesis, development or design work under the supervision of a member of the faculty. May be repeated to a
maximum of 8 hours. Prerequisite: Consent of instructor.

ABE 398 Special Topics credit: 1 to 3 Hours.
Subject offerings of new and developing areas of knowledge in agricultural and biological engineering intended to augment the existing curriculum.
See Class Schedule or departmental course information for topics and prerequisites. May be repeated in the same or separate term if topics vary to a
maximum of 12 hours.

ABE 425 Engrg Measurement Systems credit: 4 Hours.
Principles of instrumentation systems, including sensing, signal conditioning, computerized data acquisition, test design, data analysis and synthesis. 4
undergraduate hours. 4 graduate hours. Credit is not given for both ABE 425 and ME 360. Prerequisite: ECE 205.
ABE 430 Project Management credit: 2 Hours.
Engineering team effectiveness; project definition; assessing related technologies; marketing and business planning related to engineering; budgeting and financial analyses of engineering projects; safety, ethics and environmental considerations; intellectual property; engineering proposal presentation. Same as TSM 430. 2 undergraduate hours. 2 graduate hours.

ABE 436 Renewable Energy Systems credit: 3 or 4 Hours.
Renewable energy sources and applications, including solar, geothermal, wind, and biomass. Renewable energy's role in reducing air pollution and global climate change. Capstone project to design a system for converting renewable energy into thermal or electrical energy. 3 undergraduate hours. 4 graduate hours. Credit is not given for both ABE 436 and TSM 438. Prerequisite: PHYS 211.

ABE 440 Applied Statistical Methods I credit: 4 Hours.
Same as ANSC 440, CPSC 440, FSHN 440, and NRES 440. See CPSC 440.

ABE 445 Statistical Methods credit: 4 Hours.
Same as ANSC 445 and NRES 445. See ANSC 445.

ABE 446 Biological Nanoengineering credit: 3 or 4 Hours.
Nanodevice design through organization of functional biological components; bio-molecular function and bioconjugation techniques in nanotechnology; modulation of biological systems using nanotechnology; issues related to applying biological nanotechnology in food energy, health, and the environment. 3 undergraduate hours. 4 graduate hours. Prerequisite: MCB 150.

ABE 455 Erosion and Sediment Control credit: 2 Hours.
Processes, estimation, and control of soil erosion by water, wind and resultant sedimentation. Upland, in-channel, urban, agricultural, disturbed (both military training and mining), and forested environments. Capstone experience in site planning and design. 2 undergraduate hours. 2 graduate hours. Prerequisite: CEE 350 or NRES 401; CEE 380 or NRES 201.

ABE 456 Land & Water Resources Engrg credit: 3 or 4 Hours.
Hydrology, hydraulics, design, construction and cost estimating of structures for the conservation and quality control of soil and water resources; relationship of topography, soils, crops, climate, and cultural practices in conservation and quality control of soil and water for agriculture. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: Credit or concurrent registration in TAM 335.

ABE 457 NPS Pollution Processes credit: 2 Hours.
Principles, concepts, and analysis of processes for nonpoint source pollution involving sediment, inorganic and organic chemicals, and microbial pathogens; hydrologic and pollutant interactions, pollutant fate and transport processes from storm water runoff and percolation; impact of pollutant transport on receiving water and ecosystems. 2 undergraduate hours. 2 graduate hours. Prerequisite: ABE 224 or CEE 350.

ABE 458 NPS Pollution Modeling credit: 2 Hours.
Concepts, principles, and application of modeling for assessment and management of agricultural nonpoint source pollution. Modeling of agroecosystems and land use impacts on hydrologic and water quality response of upland catchments. Model selection, calibration, validation, and application for comparative analysis. Case studies in current watershed management issues, with a focus on agricultural waste and nutrient management, using existing field and watershed nonpoint source pollution models. 2 undergraduate hours. 2 graduate hours. Prerequisite: ABE 457.

ABE 459 Drainage and Water Management credit: 3 or 4 Hours.
Design, construction, performance, and maintenance of agricultural drainage systems to meet both production and water quality objectives. Modeling drainage systems. Principles of conservation drainage. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: Credit or concurrent registration in TAM 335.

ABE 463 Electrohydraulic Systems credit: 3 Hours.
Engineering principles of electrohydrodynamic control systems related to off-road vehicles. Basics of fluid power systems, concepts of electrohydraulic systems and controls, analysis and design of electrohydrodynamic control systems, and applications of electrohydraulic control. 3 graduate hours. Prerequisite: ECE 110 or both ECE 205 and ECE 206; ME 310 or TAM 335.

ABE 466 Engineering Off-Road Vehicles credit: 3 Hours.
Design and application of off-road vehicles for farm and construction use; thermodynamics of engines; measurement of power and efficiencies; power transmission and traction; chassis mechanics; operator environment. 3 undergraduate hours. 3 graduate hours. Credit is not given for both ABE 466 and TSM 464. Prerequisite: ME 300.

ABE 468 Industry-Linked Design Project credit: 4 Hours.
Industry-submitted and sponsored design projects which utilize principles of design, engineering analysis and functional operation of engineering systems. Design teams develop concepts, evaluate alternatives, model and analyze solutions, and build and test a final product. Emphases on communication skills, technical writing, and interaction with industry representatives. 4 undergraduate hours. 4 graduate hours. Prerequisite: One of ABE 361, CHBE 421, TAM 335; or credit or concurrent registration in ME 370. This course satisfies the General Education Criteria for: UIUC: Advanced Composition

ABE 476 Indoor Air Quality Engineering credit: 4 Hours.
Principles and applications of indoor air quality. Particle mechanics, gas kinetics, air quality sampling principles and techniques, air cleaning technologies such as filters, cyclones, electrostatic precipitation for indoor environments; ventilation effectiveness for pollutant control. Research or design project. 4 undergraduate hours. 4 graduate hours. Prerequisite: PHYS 213, MATH 285, and TAM 335.
ABE 482 Package Engineering credit: 3 Hours.
Same as FSHN 469. See FSHN 469.

ABE 483 Engrg Properties of Food Matls credit: 3 Hours.
Physical properties of foods and biological materials; properties relating to equipment design and the sensing and control of food processes; thermal, electromagnetic radiation, rheological, and other mechanical properties. 3 undergraduate hours. 3 graduate hours. Prerequisite: TAM 251; either CHBE 421 or both ME 330 and TAM 335.

ABE 488 Bioprocessing Biomass for Fuel credit: 3 Hours.
Engineering and scientific principles governing bioprocessing of biomass for production of ethanol and other fermentation products. Process unit operations; conventional and alternative feed stock materials; recovery of value-added coproducts and other variables involved in producing fuel ethanol; process simulation; economic analysis. 3 undergraduate hours. 3 graduate hours. Prerequisite: CHBE 321 and TAM 335.

ABE 497 Independent Study credit: 1 to 4 Hours.
Individual research, special problems, thesis, development or design work under the supervision of a member of the faculty. 1 to 4 undergraduate hours. No graduate credit. May be repeated to a maximum of 8 hours. Prerequisite: Consent of instructor.

ABE 498 Special Topics credit: 1 to 4 Hours.
Subject offerings of new and developing areas of knowledge in agricultural and biological engineering intended to augment the existing curriculum. See Class Schedule or departmental course information for topics and prerequisites. 1 to 4 undergraduate hours. 1 to 4 graduate hours. May be repeated in the same or separate terms if topics vary to a maximum of 16 hours.

ABE 501 Graduate Research I credit: 1 Hour.
Basic research orientation, research methods, presentation skills, laboratory practices, case studies, and professional and ethical conduct.

ABE 502 Graduate Research II credit: 1 Hour.
Research methodology, teaching methods, lecture preparation and delivery, critical review of scientific articles, peer review and publishing, mentoring and peer relationships, time management, and intellectual property.

ABE 594 Graduate Seminar credit: 0 Hours.
Presentations of thesis research by graduate students; other presentations on teaching or current research issues related to agricultural and biological engineering. Approved for S/U grading only. May be repeated up to a maximum of 6 times.

ABE 597 Independent Study credit: 1 to 4 Hours.
Individual investigations or studies of any phases of agricultural engineering selected by the student and approved by the advisor and the faculty member who will supervise the study. May be repeated to a maximum of 16 hours. Prerequisite: Consent of instructor.

ABE 598 Special Topics credit: 1 to 4 Hours.
Subject offerings of new and developing areas of knowledge in agricultural and biological engineering intended to augment the existing curriculum. See Class Schedule or departmental course information for topics and prerequisites. May be repeated in the same or separate terms if topics vary to a maximum of 8 hours.

ABE 599 Thesis Research credit: 0 to 16 Hours.
Approved for S/U grading only. May be repeated.

Air Force Aerospace Studies (AFAS)

AFAS Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/AFAS)

Courses

AFAS 102 Leadership Laboratory credit: 0 Hours.
Leadership Laboratory (LLAB) is a dynamic and integrated grouping of leadership developmental activities designed to meet the needs and expectations of prospective Air Force second lieutenants and complements the AFROTC academic program (AFAS 111 - AFAS 342). It is a student planned, organized, and executed practicum conducted under the supervision of the Detachment Commander and operations Flight Commander. Approved for S/U grading only. May be repeated. Prerequisite: Consent of instructor.

AFAS 111 Found of the US Air Force I credit: 1 Hour.
The Foundations of the United States Air Force is a survey course designed to introduce students to the United States Air Force and provides an overview of the basic characteristics, missions, and organization of the Air Force. Prerequisite: Requires concurrent enrollment with AFAS 102.

AFAS 112 Found of the US Air Force II credit: 1 Hour.
The Foundations of the United States Air Force is a survey course designed to introduce students to the United States Air Force and provides an overview of the basic characteristics, missions, and organization of the Air Force. Prerequisite: AFAS 111 or consent of instructor. Requires concurrent enrollment with AFAS 102.
AFAS 221 Evolution Air & Space Power I credit: 1 Hour.
The Evolution of USAF Air and Space Power® features topics on Air Force heritage and leaders; introduction to air power through examination of the Air Force Core Functions; and continued application of communication skills. Its purpose is to instill an appreciation of the development and employment of air power and to motivate sophomore students to transition from AFROTC cadet to Air Force ROTC officer candidate. Prerequisite: AFAS 112 or consent of instructor. Requires concurrent enrollment with AFAS 102.

AFAS 222 Evolution Air & Space Power II credit: 1 Hour.
The Evolution of USAF Air and Space Power® features topics on Air Force heritage and leaders; introduction to air power through examination of the Air Force Core Functions; and continued application of communication skills. Its purpose is to instill an appreciation of the development and employment of air power and to motivate sophomore students to transition from AFROTC cadet to Air Force ROTC officer candidate. Requires concurrent enrollment with AFAS 102. Prerequisite: AFAS 221 or consent of instructor.

AFAS 331 USAF Leadership Studies I credit: 3 Hours.
The United States Air Force Leadership Studies,” teaches cadets advanced skills and knowledge in management and leadership. Special emphasis is placed on enhancing leadership skill. Cadets have an opportunity to try out these leadership and management techniques in a supervised environment as juniors and seniors. Requires concurrent enrollment with AFAS 102. Prerequisite: AFAS 222 or consent of instructor.

AFAS 332 USAF Leadership Studies II credit: 3 Hours.
The United States Air Force Leadership Studies,” teaches cadets advanced skills and knowledge in management and leadership. Special emphasis is placed on enhancing leadership skill. Cadets have an opportunity to try out these leadership and management techniques in a supervised environment as juniors and seniors. Requires concurrent enrollment with AFAS 102. Prerequisite: AFAS 331 or consent of instructor.

AFAS 341 Nat Sec Afrs/Prep Actv Duty I credit: 3 Hours.
National Security Affairs/Preparation for Active Duty” is designed for college seniors and gives them the foundation to understand their role as military officers in American society. It is an overview of the complex social and political issues facing the military profession and requires a measure of sophistication commensurate with the senior college level. Requires concurrent enrollment with AFAS 102. Prerequisite: AFAS 332 or consent of instructor.

AFAS 342 Nat Sec Afrs/Prep Actv Duty II credit: 3 Hours.
National Security Affairs/Preparation for Active Duty” is designed for college seniors and gives them the foundation to understand their role as military officers in American society. It is an overview of the complex social and political issues facing the military profession and requires a measure of sophistication commensurate with the senior college level. Requires concurrent enrollment with AFAS 102. Prerequisite: AFAS 341 or consent of instructor.

American Indian Studies (AIS)

AIS Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/AIS)

Courses

AIS 101 Intro to Amer Indian Studies credit: 3 Hours.
Interdisciplinary introduction surveys the stories, histories, and lands of tribal peoples who became known as “American Indians. This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: US Minority Culture(s)

AIS 102 Contemp Issues in Ind Country credit: 3 Hours.
Surveys a variety of topics in contemporary American Indian life. Focusing on the modern experience, topics may include law and politics; lands and environment; education; visual arts; languages and literatures; health; social justice; business; treaties; the sacred; gender; sports; decolonization; comparative tribal, Indian and global indigenous concerns. This course satisfies the General Education Criteria for:
UIUC: Social Sciences
UIUC: US Minority Culture(s)

AIS 140 Native Religious Traditions credit: 3 Hours.
An interdisciplinary survey of native religious traditions, exploring the breadth and depth of spiritual expression among native people in North America. Assigned readings and class discussions cover a variety of important themes including sacred landscapes, mythic narratives, oral histories, communal identities, tribal values, elder teachings, visionary experiences, ceremonial practices, prayer traditions, and trickster wisdom. Students also consider historic encounters with missionary colonialism and contemporary strategies for religious self-determination. Class discussions are supplemented by audiovisual materials and guest speakers. Same as RLST 140.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: US Minority Culture(s)
AIS 165 Lang & Culture Native North Am credit: 3 Hours.
Same as ANTH 165. See ANTH 165.
This course satisfies the General Education Criteria for:
UIUC: Non-Western Cultures

AIS 199 Undergraduate Open Seminar credit: 1 to 5 Hours.
May be repeated to a maximum of 6 hours.

AIS 265 Intro to American Indian Lit credit: 3 Hours.
Introduces students to the study of American Indian literature by focusing on texts by contemporary American Indian novelists, poets, and playwrights. Over the course of the semester, students will consider how indigenous aesthetics shape narrative in addition to examining how American Indian authors engage the legacies of colonization and the histories of their tribal communities through their stories. Same as ENGL 265.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: US Minority Culture(s)

AIS 275 Am Indian and Indigenous Film credit: 3 Hours.
Introduction to representations of American Indians and Indigenous peoples in film. Reconstructions of American Indians within the Western genre and more recent reconstructions by Native filmmakers will be considered. Other topics may include the development of an indigenous aesthetic; the role of documentaries and nonfiction films in the history of Native and Indigenous film; the role of commerce in the production of Native films. Same as ENGL 275 and MACS 275.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: US Minority Culture(s)

AIS 277 Encounters in Native America credit: 3 Hours.
Same as HIST 277. See HIST 277.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: US Minority Culture(s)

AIS 278 Native American History credit: 3 Hours.
Same as HIST 278. See HIST 278.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: US Minority Culture(s)

AIS 280 Intro to Federal Indian Policy credit: 3 Hours.
Traces the evolution of U.S. federal law as it pertains to American Indian nations. From the doctrine of discovery, through which European nations asserted control over the lands they claimed, to the processes of reorganization and recognition that have shaped contemporary rights and struggles native nations currently face, this class will interrogate how American Indian nations were transformed into "domestic dependent nations.

AIS 285 Indigenous Thinkers credit: 3 Hours.
An introduction to the English-language traditions of indigenous intellectuals. Specific topics vary. May be repeated in the same term to a maximum of 6 hours. May be repeated in subsequent terms to a maximum of 9 hours.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: Non-Western Cultures

AIS 288 American Indians of Illinois credit: 3 Hours.
Same as ANTH 288 and HIST 288. See ANTH 288.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: US Minority Culture(s)

AIS 291 Independent Study credit: 1 to 6 Hours.
Supervised reading and research in American Indian Studies chosen by the student with instructor approval. Approved for both letter and S/U grading. May be repeated in the same or separate terms to a maximum of 6 hours. Prerequisite: One course in American Indian Studies and consent of instructor.

AIS 295 US Citizenship Comparatively credit: 3 Hours.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: US Minority Culture(s)
AIS 430 Indigenous Governance credit: 3 or 4 Hours.
Indigenous peoples have long and rich traditions of governance and political philosophies that have shaped institutions and informed diplomacies amongst each other and with European nations. This course examines the indigenous governance historically and within contemporary contexts with emphasis on the importance of sovereignty within institutions, education, language revitalization, and cultural resurgence. 3 undergraduate hours. 4 graduate hours. Prerequisite: Any 100 or 200-level American Indian Studies course or consent of instructor.

AIS 451 Politics of Popular Culture credit: 3 or 4 Hours.
Concerned with interdisciplinary frameworks that allow us to 'read' popular culture as well as with its actual forms and specific artifacts, this course seeks, first, to grasp how popular culture has legitimized the colonization of American Indian peoples and second, to reflect on the ways in which Indians engage popular culture to assert an anti-oppression politics. Same as MACS 461. 3 undergraduate hours. 4 graduate hours. Credit is not given for both AIS 461 and MACS 320 or MDIA 570. Prerequisite: Any 100 or 200-level American Indian Studies course or consent of the instructor.

AIS 459 Topics in American Indigenous Lit credit: 3 or 4 Hours.
Interdisciplinary seminar on special and advanced topics in American Indian and Indigenous Literatures. Same as ENGL 459. 3 undergraduate hours. 4 graduate hours. May be repeated in the same or subsequent terms to a maximum of 6 undergraduate hours or 8 graduate hours. Prerequisite: Fulfillment of the Advanced Composition requirement; junior standing or above; or consent of instructor.

AIS 461 Topics in American Indian Lit credit: 3 or 4 Hours.
Explores the distinctive form of inquiry which critiques settler-colonial ideas and institutions at the interdisciplinary crossroads where American Indian and Indigenous Studies engages other theories including but not limited to feminist theory, critical race theory, semiotics and phenomenology, psychanalysis, and the postcolonial theory (to name only some of the many possibilities). Prerequisite: Graduate standing or consent of the instructor.

AIS 461 Politics of Indian Educ credit: 3 or 4 Hours.
Students will study various efforts to "civilize" American Indians through US government initiatives and religious churches, as well as educational models developed by tribal entities following passage of the Indian Self-Determination and Education Assistance Act of 1975. Same as EPS 481. 3 undergraduate hours. 4 graduate hours.

AIS 490 Adv Topics in Am Ind Studies credit: 3 or 4 Hours.
3 undergraduate hours. 4 graduate hours. May be repeated to a maximum of 6 undergraduate hours or 8 graduate hours. Prerequisite: Any course in American Indian Studies; junior standing; or consent of instructor.

AIS 491 Readings in Am Ind Studies credit: 1 to 8 Hours.
Individual guidance in intensive readings in the theories and practices of the field of American Indian Studies. 1 to 8 undergraduate hours. 1 to 8 graduate hours. May be repeated in the same or subsequent terms to a maximum of 6 undergraduate hours or 8 graduate hours. Prerequisite: Graduate standing or one course in AIS and consent of instructor.

AIS 493 Seminar in American Indian Studies credit: 4 Hours.
Research and writing seminar that offers special topics based on current research questions and concerns in American Indian and indigenous Studies and opportunities for graduate students who have made considerable progress in defining a research project to advance the research and writing to the next stage (e.g., to include as a thesis or dissertation chapter or for publication). Topics vary. May be repeated as topic varies in subsequent semesters to a maximum of 8 hours. Prerequisite: AIS 501 or consent of the instructor.

AIS 500 Topics in Indian Critical Theory credit: 4 Hours.
Examines the distinctive form of inquiry which critiques settler-colonial ideas and institutions at the interdisciplinary crossroads where American Indian and Indigenous Studies engages other theories including but not limited to feminist theory, critical race theory, semiotics and phenomenology, psychoanalysis, and the postcolonial theory (to name only some of the many possibilities). Prerequisite: Graduate standing or consent of the instructor.

AIS 501 Indigenous Critical Theory credit: 4 Hours.
Introduction for graduate students to key critical scholars and prevailing and emerging models in research methods that seek ethical knowledge production in American Indian and/or Indigenous Studies, including ethnography, archival research, interviews, and translation (to name only some of the myriad options). Focus is on assisting students to initiate, develop, clarify, and justify the research methods they adopt and practice to reach their research goals. Prerequisite: AIS 501 or consent of the instructor.

AIS 503 Seminar in Indigenous Studies credit: 4 Hours.
Research and writing seminar that offers special topics based on current research questions and concerns in American Indian and indigenous Studies and opportunities for graduate students who have made considerable progress in defining a research project to advance the research and writing to the next stage (e.g., to include as a thesis or dissertation chapter or for publication). Topics vary. May be repeated as topic varies in subsequent semesters to a maximum of 8 hours. Prerequisite: AIS 501 and AIS 502, or consent of the instructor.

AIS 590 Am Indian Studies Grad Seminar credit: 4 Hours.
May be repeated up to a maximum of 8 hours. Prerequisite: Graduate standing or consent of instructor.

AIS 591 Problems in Indigenous Studies credit: 1 to 8 Hours.
Offers flexible, rigorous, and wide-ranging opportunities for interdisciplinary graduate-level work in Indigenous (including American Indians) Studies; thus, depending on student needs and instructor interests, the course may be negotiated as a directed reading, directed research, supervised fieldwork, supervised teaching, project, or thesis supervision. May be repeated in the same or subsequent semesters to a maximum of 8 hours. Prerequisite: Consent of instructor.

Animal Sciences (ANSC)

ANSC Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/ANSC)
Courses

ANSC 100 Intro to Animal Sciences credit: 4 Hours.
Survey of beef and dairy cattle, companion animals, horses, poultry, sheep, and swine. Includes the importance of product technology and the basic principles of nutrition, genetics, physiology, and behavior as they apply to breeding, selection, feeding, and management. Lecture and lab.

ANSC 101 Contemporary Animal Issues credit: 3 Hours.
Provides an understanding of fundamental issues impacting the care and use of animals, and their role in human welfare. Topics addressed include the fundamental principles of animal domestication and its impact on humans, animal welfare and care, animal-environmental interactions, food safety, diet and health issues, economic and societal issues facing the world today, and bioethical issues.

ANSC 103 Working With Farm Animals credit: 2 Hours.
Introductory course that will provide novice students with the fundamentals of animal-animal and animal-human interactions for domestic farm animals. Emphasizes hands-on experiences to develop a background in the concepts and practice of recognizing and understanding the animal's physiology and behavior, animal well being, and animal responses to human interactions. Prerequisite: ANSC 100.

ANSC 109 Meat Pricing and Preparation credit: 2 Hours.
General approach to meat utilization with emphasis on selecting, grading, cutting, and pricing meat for the home, restaurant, and food service industry; includes laboratory. When appropriate, field trips are taken to area commercial establishments.

ANSC 110 Life With Animals and Biotech credit: 3 Hours.
Lecture/discussion course that will provide students an overview of biotechnology and animals. Focuses on biotechnological achievements involving animals and how they influence the global development of agriculture, medicine, and industry. Topics will be covered from scientific, discovery, historical, social, and political perspectives.
This course satisfies the General Education Criteria for:
UIUC: Life Sciences

ANSC 199 Undergraduate Open Seminar credit: 1 to 5 Hours.
An experimental course on a special topic in animal sciences. Topic may not be repeated except in accordance with the Code. May be repeated to a maximum of 12 hours. No more than 12 hours may be counted toward graduation.

ANSC 201 Principles of Dairy Production credit: 3 Hours.
Surveys the dairy industry; examines principles of breeding, selection, reproduction, feeding, milking and management of dairy cattle. Prerequisite: ANSC 100.

ANSC 204 Intro Dairy Cattle Evaluation credit: 2 Hours.
Evaluation of physical traits of dairy cattle in relation to economic value and genetic improvement; sire selection, mating systems, and genetic merit for dairy cattle. Field trip required. Prerequisite: ANSC 100 or consent of instructor.

ANSC 205 World Animal Resources credit: 3 Hours.
Examination of the world's animals, domesticated and wild, and their uses in various climatic, economic and cultural contexts. Exploration of their contemporary management and their future prospects. Provides background for international experiences, such as ACES 298 and ACES 299. Prerequisite: Completion of the campus Composition I general education requirement.
This course satisfies the General Education Criteria for:
UIUC: Advanced Composition

ANSC 206 Horse Management credit: 3 Hours.
Focus on the principles of managing horses from birth through breeding; topics include reproductive physiology, breeding management, nutrition, diseases, parasites, herd health programs, genetics, facility design and exercise physiology.

ANSC 207 Companion Animal Biology & Care credit: 3 Hours.
An introduction to companion animal biology through consideration of the physical structure, nutrition, behavior, and reproduction of animal species most commonly kept as companions. The basic information is applied to discussion of basic preventive health care. Course content is largely focused on cats and dogs, although other mammals, birds and reptiles will be briefly considered. Legal and economic issues, and ethical considerations associated with companion animals are also incorporated into the course discussion.
This course satisfies the General Education Criteria for:
UIUC: Life Sciences

ANSC 209 Meat Animal Carcass Eval credit: 3 Hours.
Study principles and techniques used in meat animal and carcass evaluation along with factors that influence composition, meat quality and preparation. Students planning to enroll in ANSC 310 and ANSC 312 should take ANSC 209 in their sophomore year. Prerequisite: ANSC 100.

ANSC 211 Breeding Animal Evaluation credit: 3 Hours.
Application of current scientific tools, methods, and performance programs available to livestock breeders for improving beef cattle, swine, and sheep; emphasis on the changing nature of modern breeds of livestock as influenced by selection, economics, and consumer and market trends. Course requires visits (including weekends) to farms, related companies, and events to observe the latest techniques and scientific principles associated with livestock selection and evaluation. Students are responsible for personal expenses on the field trips. Prerequisite: Junior standing; credit or concurrent registration in ANSC 209.
ANSC 219 Meat Technology credit: 3 Hours.
Student participation in the transformation of live animals through harvest and carcass fabrication into food products for human consumption; includes laboratory. Purchase of personal equipment is required.

ANSC 221 Cells, Metabolism and Genetics credit: 3 Hours.
Provides an introductory background in basic aspects of cell biology, physiology, and genetics. Topics addressed include cell structure, cell organelles, and different types of cells, protein synthesis and gene expression, chromosome structure, basic mechanisms of chromosome replication, basic principles of quantitative and population genetics, and an introduction to genomics and proteomics. Prerequisite: ANSC 100, CHEM 102 and 103 or concurrent enrollment.

ANSC 222 Anatomy and Physiology credit: 3 Hours.
Provides an introductory background in basic and fundamental principles of animal anatomy and physiology. The major organ systems (muscle, skeletal, neural, endocrine, cardiovascular, respiratory, and renal) will be presented with an emphasis on comparative anatomy, integrated function, and specific homeostatic mechanisms. Prerequisite: ANSC 100.

ANSC 223 Animal Nutrition credit: 3 Hours.
Provides an introductory background in the fundamental principles of animal nutrition and how nutrition impacts animal well-being and performance. Students will develop comprehensive knowledge in gastrointestinal and digestive anatomy and physiology, nutrient function and requirements, and energy utilization in various species. Specific topics include different classes and properties of nutrients, differences in digestive mechanisms in monogastric vs. ruminant animals, and how carbohydrates, lipids, proteins, minerals, and vitamins contribute to the nutrient requirements of animals. Prerequisite: ANSC 100, ANSC 221, and CHEM 104 and CHEM 105.

ANSC 224 Animal Reproduction and Growth credit: 4 Hours.
Study of the basic principles of reproduction, lactation, growth, and hormonal regulation in animals as well as humans, including cell growth and differentiation, processes of reproduction, biotechnological methods of reproductive control, manipulation, performance enhancement of lactation and growth. Prerequisite: ANSC 100, ANSC 221.

ANSC 250 Companion Animals in Society credit: 3 Hours.
Explores the current and historical functions and influences of companion animals in American society. Topics include the evolution of animal protection, the use of assistance and service animals, and the growth of the pet supply industry. Controversial issues which are of current concern to society will also be examined.
This course satisfies the General Education Criteria for:
UIUC: Western Compartv Cult

ANSC 256 Horse's Role in Human History credit: 3 Hours.
Provides an understanding of the crucial roles that horses have played in the development and expansion of human civilization, including how the role of the horse in culture and society has changed throughout history. Topics addressed include an understanding of the evolution and domestication of horses, use of horses for transportation, sport, warfare and power, and the impact of horses on societal issues facing the world today.

ANSC 293 Internship Off Campus credit: 1 to 4 Hours.
Supervised, off-campus learning experience in an animal-related enterprise. May be repeated in the same or separate terms to a maximum of 10 hours. Prerequisite: Good academic standing; ANSC 100.

ANSC 294 Intern On Campus Practical Exp credit: 1 to 5 Hours.
Supervised, on-campus learning experience associated with subject matter specific to animal sciences. Approved for both letter and S/U grading. May be repeated in the same or separate terms to a maximum of 10 hours. Prerequisite: Good academic standing; ANSC 100.

ANSC 295 UG Research or Thesis credit: 1 to 5 Hours.
Individual research in animal sciences. May be repeated in the same or separate terms to a maximum of 10 hours. Prerequisite: Minimum GPA of 2.5; not open to students on probation; consent of instructor.

ANSC 298 Undergraduate Seminar credit: 1 Hour.
Presentations and discussion of employment opportunities, departmental research activities, and topics relevant to animal agriculture. Prerequisite: Sophomore standing.

ANSC 299 Animal Mgt Field Studies credit: 1 or 2 Hours.
Field studies of farms and service industries; discusses and demonstrates management practices on commercial farms. Trip normally taken during spring break.

ANSC 305 Human Animal Interactions credit: 3 Hours.
Explores the relationships between humans and companion animals and the roles and functions that animals play in today's society. Examines the evolution of the human/companion animal bond, benefits and disadvantages of this bond, and working/nonworking roles of companion animals. Controversial issues which are of current concern to society will be examined in detail. Writing and in-class discussions are emphasized. Prerequisite: ANSC 250.
ANSC 306 Equine Science credit: 3 Hours.
Understand and apply current scientific research and principles of equine science to intensive horse production. An in-depth approach to equine reproductive physiology, nutrition, anatomy and exercise physiology will be followed using a combined lecture and laboratory format. Emphasis on current research and hands-on techniques. Prerequisite: ANSC 206, ANSC 222 or equivalent, and credit or concurrent enrollment in ANSC 224 or equivalent; or consent of instructor.

ANSC 307 Companion Animal Management credit: 3 Hours.
This course provides an advanced overview of companion animal biology through consideration of the physical structure, nutrition, behavior, and reproduction of animal species most commonly kept as companions. Course content is applied to discussion of best management practices and basic preventive health care. Course content is largely focused on cats and dogs, although other mammals, birds and reptiles are briefly considered. Legal and economic issues, ethical considerations, and career opportunities associated with companion animals are also incorporated into course discussion. Credit is not given for both ANSC 307 and ANSC 207.

ANSC 310 Meat Selection and Grading credit: 3 Hours.
Study characteristics associated with the value of carcasses, primal and retail cuts from meat animals; emphasize USDA grading and specifications as well as written communication. Field trips to meat packing plants are required.

ANSC 312 Advanced Livestock Evaluation credit: 3 Hours.
Advanced instruction in the selection of breeding animals of beef, sheep, and swine species and in the evaluation of market animals for slaughter. This course requires visits to farms, related companies, and events to observe the latest techniques and scientific principles associated with livestock selection and evaluation. Prerequisite: ANSC 204 or consent of instructor.

ANSC 313 Horse Appraisal credit: 2 Hours.
Advanced course for students interested in improving their performance and conformation evaluation skills; provides exposure to the horse show industry and the career opportunities associated with this facet of the horse industry; students may compete in intercollegiate judging contests.

ANSC 314 Adv Dairy Cattle Evaluation credit: 2 Hours.
Advanced instruction in the selection of breeding dairy animals. Involves visits to farms, related companies and events to observe the latest techniques and scientific principles associated with dairy cattle selection and evaluation. Field trips for cattle judging are required. May be repeated to a maximum of 4 hours. Prerequisite: ANSC 204 or consent of instructor.

ANSC 322 Livestock Feeds and Feeding credit: 3 Hours.
Livestock feeds and practical feeding applications for livestock will be addressed. Feed identification and ration formulation will be strongly emphasized. One session of this class will take place at the UIUC Feed Mill. Prerequisite: ANSC 223.

ANSC 331 Biology of Reproduction credit: 2 to 4 Hours.
Study of comparative reproduction, lactation, behavior, reproductive strategies, assisted reproduction, and reproductive diseases in domestic and wild animals including mammals, birds, reptiles, and amphibians. Prerequisite: Sophomore standing; IB 104 or one introductory level biology course. This course satisfies the General Education Criteria for:

UIUC: Life Sciences

ANSC 350 Cellular Metabolism in Animals credit: 3 Hours.
Principles and regulation of cellular metabolism in animals, emphasizing energy derivation and its relationship to domestic animal and food production. Prerequisite: CHEM 104, CHEM 105, and ANSC 221 or equivalent.

ANSC 363 Behavior of Domestic Animals credit: 4 Hours.
Introduction to concepts of animal behavior with emphasis on domestic animals; lecture and lab. Prerequisite: ANSC 100.

ANSC 366 Animal Behavior credit: 3 Hours.
Same as ANTH 342 and IB 329. See IB 329.

ANSC 370 Companion Animal Policy credit: 3 Hours.
This course provides an overview of public policy with respect to the use and treatment of companion animals in the United States. Current and alternative policies are considered in terms of their effectiveness in improving or otherwise altering the treatment of companion animals. The influences of animal protection organizations, consumer groups, politicians, the scientific community, and other stakeholders on the development and enforcement of policies are examined in detail. Prerequisite: ANSC 250.

ANSC 396 UG Honors Research or Thesis credit: 1 to 5 Hours.
Independent study, under the supervision of a faculty member, on a problem of appropriate scope and character that culminates in writing a thesis. Intended primarily for honors students who plan on conducting research or pursuing graduate study. Thesis projects must be supervised by a faculty member and reviewed by a departmental committee. Students must present a satisfactory thesis to receive credit. May be repeated in the same or subsequent terms to a maximum of ten hours. Prerequisite: Junior standing, minimum GPA of 3.4; consent of a faculty member.

ANSC 398 UG Experiential Learning credit: 1 to 5 Hours.
Student-directed experiential learning on special topics directly pertaining to subject matter in animal sciences. Students are required to complete a Memorandum of Agreement prior to enrolling in this course. Approved for both letter and S/U grading. May be repeated up to 5 hours per semester, up to a maximum of 10 total hours.
ANSC 400 Dairy Herd Management credit: 3 Hours.
The technology of modern milk production practices; application of principles in nutrition, physiology, economics, health and hygiene, waste management, and facilities design for efficient dairy herd management systems. 3 undergraduate hours. 3 graduate hours. Prerequisite: ANSC 201 or consent of instructor.

ANSC 401 Beef Production credit: 3 Hours.
The principles of the management of beef cattle enterprises. Applies science and technology to the breeding, selection, feeding, health and production of beef and beef products. Emphasizes the use of research findings in decision-making. 3 undergraduate hours. 3 graduate hours. Credit is not given for both ANSC 401 and ANSC 213. Prerequisite: ANSC 223 or equivalent.

ANSC 402 Sheep Production credit: 3 Hours.
Study of management, nutrition, reproduction, genetics, marketing, economics, housing, health and production record programs as they apply to sheep production. History of the U. S. sheep industry will be explored along with a study of wool production, marketing and processing. 3 undergraduate hours. 3 graduate hours. Prerequisite: ANSC 223 or equivalent.

ANSC 403 Pork Production credit: 3 Hours.
Applies science and technology to the selection, breeding, feeding, housing and management of swine in a production enterprise; emphasizes use of research findings in decision making. 3 undergraduate hours. 3 graduate hours. Credit is not given for both ANSC 403 and ANSC 213. Prerequisite: ANSC 221 or equivalent; ANSC 223 or equivalent; ANSC 467; and ANSC 224 or equivalent or ANSC 431.

ANSC 404 Poultry Science credit: 3 or 4 Hours.
Basic principles of genetics, physiology, nutrition, and health of avian species; the application of science and technology in solving the breeding, nutrition, disease, housing, and other management problems encountered in commercial egg and poultry meat production. 3 or 4 undergraduate hours. 3 or 4 graduate hours. Undergraduate and graduate students must complete research project to obtain 4 hours.

ANSC 405 Advanced Dairy Management credit: 2 Hours.
Advanced dairy management compliments the four other classes offered in the dairy certificate program featuring applied management principles and practices needed in modern dairy production. 2 undergraduate hours. 2 graduate hours. Prerequisite: ANSC 223 or equivalent or consent of instructor.

ANSC 406 Zoo Animal Conservation Sci credit: 3 Hours.
Topics related to the conservation, physiology and management of exotic animal species in a captive setting will be addressed. These include conservation biology, population genetics, nutrition, reproduction (natural and assisted), behavior, exhibitry, environmental enrichment and veterinary care. Also covers taxonomy, zoo research, the role of zoos in conservations, and the ethics of maintaining captive animals. 3 undergraduate hours. 3 graduate hours. One Saturday field trip may be required. Prerequisite: ANSC 221 or IB 104, or equivalent.

ANSC 407 Animal Shelter Management credit: 3 Hours.
Basic management concepts related to maintaining the physical and behavioral health of companion animals in a shelter setting will be addressed. Population dynamics and management will be heavily emphasized. Utilizes practical resources available through local and national animal welfare organizations. Two class sessions will take place at the Champaign County Humane Society. One Saturday field trip is required. 3 undergraduate hours. No graduate credit. Prerequisite: ANSC 207 or ANSC 307.

ANSC 409 Meat Science credit: 3 Hours.
Fundamental biological principles that influence composition, processing, preservation, and quality of meat and meat products. 3 undergraduate hours. 3 graduate hours. Prerequisite: ANSC 221 or equivalent, ANSC 222 or equivalent, ANSC 223 or equivalent, and ANSC 224 or equivalent.

ANSC 420 Ruminant Nutrition credit: 3 Hours.
Physiology and microbiology of digestion in the ruminant, and biochemical pathways of utilization of the absorbed nutrients for productive purposes. 3 undergraduate hours. 3 graduate hours. Prerequisite: ANSC 223 or equivalent.

ANSC 421 Minerals and Vitamins credit: 3 Hours.
Nutritional implications and metabolic roles of minerals and vitamins in animal metabolism. The course is designed to instill a basic understanding of vitamin and mineral functions, absorption, metabolism, and excretion. Research methodologies used in the study of vitamin and mineral nutrition will also be discussed. 3 undergraduate hours. 3 graduate hours. Prerequisite: ANSC 223 or equivalent, credit or concurrent registration in MCB 450 or ANSC 350, or consent of instructor.

ANSC 422 Companion Animal Nutrition credit: 3 Hours.
Digestive physiology and basic nutritional considerations of companion animals, with primary focus on dogs and cats. Topics discussed include nutritional idiosyncrasies of dogs and cats, the importance of nutrition in various physiological states, and nutrient needs during disease. Information on pet food regulations, common ingredients and formulation, manufacturing methods, and trends in the pet food industry will also be covered. 3 undergraduate hours. 3 graduate hours. Prerequisite: ANSC 223 or equivalent.

ANSC 423 Advanced Dairy Nutrition credit: 2 Hours.
All aspects of dairy cattle nutrition will be discussed including nutrients, phase feeding (milk curve analysis, dry matter intake, and body weight loss), dry and transition cow programs, forage feeding systems, feed delivery approaches, metabolic disorders related to nutrition, and application of various dairy feeding guides. 2 undergraduate hours. 2 graduate hours. Prerequisites: ANSC 201 or equivalent, or consent of instructor.
ANSC 431 Advanced Reproductive Biology credit: 3 Hours.
Course is an upper-level undergraduate or entry-level graduate course dealing with reproductive biology. It will include the study of basic cell biology of reproduction, lactation, growth and hormone regulation of domestic and non-domestic animals as well as humans, including biotechnology methods of reproduction control, manipulation, performance enhancement of lactation and growth, and disease control. 3 undergraduate hours. 3 graduate hours. Prerequisite: ANSC 224 or equivalent.

ANSC 435 Milk Quality and Udder Health credit: 2 Hours.
An advanced course on the physiological basis of mammary growth, milk secretion, and udder health. Topics covered includes mammary gland anatomy, hormonal control, causes and control of mastitis, milk harvesting, and milk quality. The course will be delivered via CD and web-based synchronous discussion. Students should have a basic course in dairy/animal sciences, or physiology, or consent of the instructor before taking this course. 2 undergraduate hours. 2 graduate hours. Prerequisite: ANSC 201 or equivalent or consent of instructor.

ANSC 437 Adv Reproductive Management credit: 2 Hours.
The focus of this course is advanced techniques and technologies used to manage production livestock. The course will emphasize advanced and emerging technologies such as embryo transfer, cloning, semen sexing, and ultrasound pregnancy diagnosis and fetal sexing and innovations in existing procedures including artificial insemination, reproductive health management, and estrus synchronization. Implementation of existing and emerging techniques and research and discovery will be covered for individuals focusing on careers in livestock production, clinical veterinary medicine, education, technical service/support, and research and development. 2 undergraduate hours. 2 graduate hours. Prerequisite: ANSC 331 or equivalent, or consent of instructor.

ANSC 438 Lactation Biology credit: 4 Hours.
Examines the structural and functional development of the mammary gland, cell biology, and control of milk synthesis, and composition and biochemistry of milk. Compares and analyzes the physiological processes of lactation in mammals. 4 undergraduate hours. 4 graduate hours. Prerequisite: ANSC 224 or equivalent.

ANSC 440 Applied Statistical Methods I credit: 4 Hours.
Same as ABE 440, CPSC 440, FSHN 440, and NRES 440. See CPSC 440.

ANSC 441 Human Genetics credit: 3 or 4 Hours.
Same as ANTH 441. See ANTH 441.

ANSC 444 Applied Animal Genetics credit: 3 Hours.
Principles of heredity and their application to the problems of animal improvement. 3 undergraduate hours. 3 graduate hours.

ANSC 445 Statistical Methods credit: 4 Hours.
Design and analysis of experiments: multiple regression, method of fitting constants, factorial experiments with unequal subclass numbers, analysis of covariance, experimental design; computer applications to agricultural experiments using statistical packages. Same as ABE 445 and NRES 445. 4 undergraduate hours. 4 graduate hours. Prerequisite: CPSC 440, or equivalent.

ANSC 446 Population Genetics credit: 3 or 4 Hours.
Conceptual and mathematical approach to the genetics of populations: estimation of allele and genotype frequencies; Hardy-Weinberg principle; measures of genetic diversity and distance; selection; non-random mating; genetic drift; mutation; neutral theory; migration and population subdivision; linkage and recombination; coalescence and phylogenetic inference. Applications to animals, plants, human health and wildlife conservation. Same as IB 416. 3 or 4 undergraduate hours. 3 or 4 graduate hours. Students desiring 4 hours credit do additional work in some area of population genetics. Prerequisite: An introductory genetics course (ANSC 221 or IB 204); one of MATH 220, MATH 221, or MATH 234; or consent of instructor.

ANSC 448 Math Modeling in Life Sciences credit: 3 or 4 Hours.
Introduction to deterministic and stochastic mathematical models for the life sciences, statistical methods for fitting and testing models, and computer simulation programs. Applications to populations, processes, and products of animals, plants, and humans. Same as IB 487 and STAT 458. 3 or 4 undergraduate hours. 3 or 4 graduate hours. Students desiring 4 hours credit do additional work in some area of mathematical modeling in the life sciences. Prerequisite: IB 104; a course in calculus, and a course in computer sciences; or consent of instructor.

ANSC 449 Biological Modeling credit: 3 or 4 Hours.
Same as CPSC 448, GEOG 468, and IB 491. See GEOG 468.

ANSC 450 Comparative Immunobiology credit: 4 Hours.
Advanced concepts of immunophysiology and immunogenetics. Immunophysiology with an emphasis on immune-neuroendocrine interactions. The molecular and cellular basis of self-nonself recognition with an emphasis on the major histocompatibility complex in vertebrates and invertebrates. The mucosal immune system, which requires a complex interplay between innate and acquired immunity to protect mucosal surfaces exposed to the environment. A working knowledge of genetics and cellular and molecular biology is recommended. Same as MCB 422 and PATH 410. 4 undergraduate hours. 4 graduate hours.

ANSC 451 Microbes and the Anim Indust credit: 3 Hours.
Fundamental aspects of the ecology of microorganisms and their biochemical activities related to the degradation of organic matter with emphasis on the gastrointestinal tract of production animals. 3 undergraduate hours. 3 graduate hours. Prerequisite: MCB 100, and ANSC 350, MCB 300, MCB 424, or equivalent.
ANSC 452 Animal Growth and Development credit: 3 or 4 Hours.
Basic principles of animal growth from early fetal development through typical marketing ages for the major domestic animal species. Topics discussed include molecular and cellular determinants of tissue development and whole animal growth, with coverage of current and future technologies for manipulating growth to enhance animal production. 3 or 4 undergraduate hours. 4 graduate hours. Prerequisite: ANSC 221, ANSC 222, ANSC 223, and ANSC 224.

ANSC 453 Stem Cell Biology credit: 3 or 4 Hours.
The history of stem cell biology as well as up-to-date topics in stem cell research will be presented and discussed with emphasis on experimental approaches. Each student is expected to present research articles relative to each focus area and lead the discussion for the whole class every week. Topics include Molecular Reproductive Biology, Genetics, Physiology of both adult- and embryo-derived stem cells, and their application to Biotechnology and Regenerative Medicine. 3 undergraduate hours. 4 graduate hours. Prerequisite: STAT 100 or equivalent, MCB 316, ANSC 221, ANSC 224, or equivalent; or consent of instructor.

ANSC 467 Applied Animal Ecology credit: 3 Hours.
An in-depth multidisciplinary approach (physiology, behavior, immunology, neuroscience) to understanding animal-environment interactions (including thermal, air, microbial, photic and behavioral factors) as basis for prescribing practical environments for keeping animals. Courses in physiology, biology, nutrition, microbiology, and genetics are recommended. 3 undergraduate hours. 3 graduate hours. Prerequisite: ANSC 221 or equivalent, ANSC 222 or equivalent, and ANSC 223 or equivalent; or consent of instructor.

ANSC 471 ANSC Leaders & Entrepreneurs credit: 3 Hours.
Designed to familiarize students with the tools and skills necessary for successful business operation in industry and entrepreneurial environments including food animal production farms. The overall aim is to explore how enhanced interpersonal and leadership skills facilitate positive relations in business. Students will design a business plan, an entrepreneurial enterprise, that will be read by an external committee of professors, community members, and business owners and evaluated for its viability and creativity. This course is relevant for leaders as well as future entrepreneurs interested in acquiring valuable skills that may be applied to many careers. 3 undergraduate hours. 3 graduate hours. Prerequisites: Any advanced composition course.

ANSC 483 Outreach Education Skills credit: 3 Hours.
Same as CPSC 483. See CPSC 483.

ANSC 498 Integrating Animal Sciences credit: 2 Hours.
Introduction to the theoretical basis of and skills associated with leadership, inquiry, and collaborative learning. Capstone experience in integrating knowledge, practicing skills, and applying theory through collaborative projects that address current issues in animal sciences. Projects relate to the impact of animals and animal use on humans and societal issues facing the world today. 2 undergraduate hours. 2 graduate hours. Prerequisite: Must have completed one of the following: ANSC 293, ANSC 294, ANSC 295, ANSC 299, ANSC 396, ANSC 398, ACES 293, ACES 298 or ACES 299.

ANSC 499 Seminar credit: 1 to 4 Hours.
Group discussion or an experimental course on a special topic in animal sciences. 1 to 4 undergraduate hours. 1 to 4 graduate hours. May be repeated.

ANSC 509 Muscle Biology credit: 2 Hours.
Microstructure and chemical composition of muscle tissue; chemistry and biosynthesis of muscle and connective tissue proteins; and biochemical aspects of muscle contraction and rigor mortis. Prerequisite: ANSC 452, ANSC 409, and ANSC 350 or MCB 450.

ANSC 510 Science of Animal Well-Being credit: 1.5 Hours.
Same as VCM 510. See VCM 510.

ANSC 520 Protein and Energy Nutrition credit: 3 Hours.
Physiological aspects of protein and amino acids, fats and fatty acids, and carbohydrates as applied to higher animals; includes classification, digestion, absorption, utilization, metabolism, and dietary deficiencies and excesses. Prerequisite: MCB 450 or equivalent and ANSC 222 or equivalent.

ANSC 521 Regulation of Metabolism credit: 4 Hours.
Same as FSHN 511 and NUTR 511. See NUTR 511.

ANSC 522 Advanced Ruminant Nutrition credit: 3 Hours.
Physiological and microbiological aspects of ruminant digestion and their influence on the metabolism of the extraruminal tissues; interpretation of nutritive requirements in terms of rumen microbial activities; and evaluation of research techniques. Offered in alternate years. Prerequisite: ANSC 420 or equivalent, and ANSC 350, MCB 450, or equivalent.

ANSC 523 Techniques in Animal Nutrition credit: 3 Hours.
Discusses and applies methods of laboratory analysis and animal experimentation frequently used in nutrition research. May be repeated with approval. Prerequisite: Courses in nutrition, physiology, and biochemistry and consent of instructor.

ANSC 524 Nonruminant Nutrition Concepts credit: 2 Hours.
Review of literature in nonruminant nutrition. Emphasizes basic concepts associated with food intake, carbohydrate and fat utilization, protein quality, bioavailability of nutrients, and diet formulation. Prerequisite: Consent of instructor.

ANSC 525 Topics in Nutrition Research credit: 1 Hour.
Same as FSHN 510 and NUTR 510. See NUTR 510.
ANSC 526 Adv Companion Animal Nutrition credit: 3 Hours.
Students will learn how to effectively apply advanced concepts related to pet nutrition and disease, including the metabolism within healthy and diseased dogs and cats, how nutrition may aid in preventing and treating disease, and the science behind pet food formulation and production. Students will develop critical-thinking and problem-solving skills by writing and reviewing grant proposals and delivering an oral presentation. Prerequisite: ANSC 422 (Companion Animal Nutrition) or consent of instructor.

ANSC 530 Advanced Endocrinology credit: 2 Hours.
Same as MCB 512 and CB 512. See MCB 512.

ANSC 533 Repro Physiology Lab Methods credit: 1 to 3 Hours.
Laboratory methods used in reproductive physiology studies, such as blood sampling, large animal surgery, collection of tissues and gametes, embryo recovery, in vitro fertilization, tissue culture, hormone measurements, and directed individual research problems. Same as MCB 533 and CB 533. Prerequisite: Consent of instructor.

ANSC 541 Regression Analysis credit: 5 Hours.
Same as CPSC 541. See CPSC 541.

ANSC 542 Applied Bioinformatics credit: 4 Hours.
Introduction to theoretical and applied aspects of bioinformatics. Topics include genomic and proteomic databases, sequence alignment and search algorithms (e.g., BLAST, FASTA, CLUSTAL W), predictive methods in DNA sequence, machine-learning techniques (e.g., Hidden Markov Models) and data mining, biomolecular structure and its prediction, molecular evolution and phylogenetic reconstruction, structural genomics and phylogenomics. Concepts are complemented with hands-on experience with computational biology databases and bioinformatic tools. Same as CPSC 569 and IB 506. Prerequisite: Graduate level status or consent of instructor.

ANSC 543 Bioinformatics credit: 4 Hours.
Same as CHBE 571, MCB 571, and STAT 530. See CHBE 571.

ANSC 545 Statistical Genomics credit: 3 or 4 Hours.
This course presents current statistical approaches to analyze DNA microarray, quantitative trait loci and proteomic data and understand the genetic architecture of complex phenotypes including health, performance and behavior. DNA microarray studies measure the expression of thousands of genes simultaneously. Quantitative trait loci (QTL) mapping studies detect associations between genomic regions and phenotypes. Results from these and proteomic studies help identify and quantify genes, regulators and products leading to drug, biotechnology and scientific discoveries. Same as CPSC 545 and IB 507. Prerequisite: Graduate level course in Statistics and graduate level course in Molecular Biology.

ANSC 554 Immunobiological Methods credit: 3 Hours.
Same as PATH 544. See PATH 544.

ANSC 561 Animal Stress Physiology credit: 2 Hours.
Examines animal's physiological and behavioral adaptations to stress. Prerequisite: Consent of the instructor.

ANSC 590 Animal Sciences Seminar credit: 0 to 2 Hours.
Discussions of current research and literature. Registration for 0 to 2 hours each term is expected for animal sciences graduate students. Approved for both letter and S/U grading. May be repeated to a maximum of 2 hours for Masters students and 4 hours for Ph.D. students.

ANSC 592 Adv Topics in Animal Science credit: 1 to 4 Hours.
Selected topics associated with teaching, research, and production related to the animal industry. Prerequisite: Consent of instructor.

ANSC 593 Res Studies in Animal Sciences credit: 1 to 4 Hours.
Directed and supervised study of selected research topics in Animal Sciences. May be repeated to a maximum of 4 hours. Prerequisite: Consent of instructor.

ANSC 599 Thesis Research credit: 0 to 16 Hours.
Approved for S/U grading only. May be repeated.

Anthropology (ANTH)

ANTH Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/ANTH)

Courses

ANTH 101 Introduction to Anthropology credit: 3 Hours.
Anthropology was first envisioned as a holistic discipline, combining insights from the study of human anatomy and evolution, research on material remains of human settlements, and the analysis of social interaction in language and other cultural practices. Following this tradition, this course explores the questions about where humans came from, how societies live and communicate, and why human cultural groups vary. This course satisfies the General Education Criteria for:
UIUC: Non-Western Cultures
UIUC: Social Sciences
UIUC: Western Compartv Cult
ANTH 102 Human Origins and Culture credit: 4 Hours.
Introduction to and survey of human origins and evolution, physical anthropology, race and racism, archaeology, and the beginning of human civilization. Recommended, though not required, to be taken with ANTH 103 as a survey of the field of anthropology.
This course satisfies the General Education Criteria for:
UIUC: Social Sciences

ANTH 103 Anthro in a Changing World credit: 3 Hours.
Presents the fundamental areas of anthropological analysis through a series of comparative cases that emphasize social and cultural relations in global contexts. Directs attention to the anthropological history of global empires and colonial states, their cultural exchanges, and contemporary studies of culture, society, and globalization. This course can be used to fulfill either Western or non-Western general education categories, but not both.
This course satisfies the General Education Criteria for:
UIUC: Non-Western Cultures
UIUC: Social Sciences
UIUC: Western Comparv Cult

ANTH 104 Talking Culture credit: 3 Hours.
Introduction to linguistic anthropology, focusing on the role of language in the creation and maintenance of society and culture and on a person's concept of self within that culture. Demonstrates how language use within a community can serve as the foundation for the analysis of cultural practices. Same as LING 104.
This course satisfies the General Education Criteria for:
UIUC: Social Sciences

ANTH 105 World Archaeology credit: 3 Hours.
Using archaeological data, traces our prehistoric heritage and the processes which led to the evolution of agriculture, settled villages, and civilization in many areas of the world. Lectures range from the earliest Homo sapiens to Sumeria, Egypt, Mexico, Peru, and the United States.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect

ANTH 106 Hist Arch Americas credit: 3 Hours.
Explores recent theoretical, methodological, and thematic developments in historical archaeology in North America and the Caribbean. The temporal coverage is 1500-1900 AD. Examines how historical archaeologists use artifactual, documentary and oral history evidence in interpreting the past, and how historical archaeology can contribute to our understanding of the ways by which material culture can be used to study race, class, gender, and ethnic identities. Same as AFRO 106.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: US Minority Culture(s)

ANTH 108 Religion & Society in West I credit: 3 Hours.
Same as PHIL 108, RLST 108, and SOC 108. See RLST 108.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: Western Comparv Cult

ANTH 109 Religion & Society in West II credit: 3 Hours.
Same as PHIL 109, RLST 109, and SOC 109. See RLST 109.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: Western Comparv Cult

ANTH 130 History of South Asia credit: 3 Hours.
Same as HIST 130. See HIST 130.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: Non-Western Cultures

ANTH 143 Biology of Human Behavior credit: 3 Hours.
Critical consideration of data and information bearing on current controversies and ideas concerning selected aspects of human behavior. Topics to be discussed include communication; social organization; and parental, sexual, and aggressive behavior. Same as HDFS 143.
This course satisfies the General Education Criteria for:
UIUC: Life Sciences

ANTH 150 Novel Archaeology credit: 3 Hours.
Designed for non-anthropology majors; survey course of prehistory as seen through the eyes of novelists, science fiction writers, as well as visual media; covers 2 million years of prehistory examining what happened in the past as well as the interface between fact and fiction and past and present.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
ANTH 157 The Archaeology of Illinois credit: 3 Hours.
Traces the prehistory of Illinois from the first entry of people into the region more than 113,000 years ago until the 17th century and the beginning of historical records; examines subsequent cultural changes up to the 19th century and statehood from an archaeological and ethnohistorical perspective.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect

ANTH 160 Contemporary Social Issues credit: 3 Hours.
Course considers how anthropological theory and methods enhance our understanding of contemporary social and political issues, including immigration, education, affirmative action, and welfare. It examines the relationship between social policy and social science as well as the strengths and limits of anthropological methods for social and political issues.
This course satisfies the General Education Criteria for:
UIUC: US Minority Culture(s)

ANTH 161 The Holocaust and Its Meanings credit: 3 Hours.
Survey of the Holocaust as a cultural symbol and crucial reference point for debates on morality, ethics, and the lessons of history. Traces the Holocaust as a symbol in its historical and cross-cultural dimensions through text and film.
This course satisfies the General Education Criteria for:
UIUC: Western Compartv Cult

ANTH 165 Lang & Culture Native North Am credit: 3 Hours.
Develops understanding of the rich diversity of languages and cultures found among Native North American peoples from the perspectives of sociocultural and linguistic anthropology. Same as AIS 165.
This course satisfies the General Education Criteria for:
UIUC: Non-Western Cultures

ANTH 171 Evolution of Human Comm credit: 3 Hours.
Same as SHS 171. See SHS 171.
This course satisfies the General Education Criteria for:
UIUC: Behavioral Sciences

ANTH 175 Archaeology and Pop Culture credit: 3 Hours.
Examines the ways in which the ancient past has been interpreted, appropriated, represented, used, and misused for a variety of reasons by political parties, national governments, and religious and ethnic groups living in the present.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect

ANTH 180 The Archaeology of Death credit: 3 Hours.
Cross-cultural introduction to the celebration of death across time and space. Examines the anthropological and archaeological literature on death, particularly in terms of death ritual and burial practices. Students study popular films on death in different cultures, and carry out a field project at a local cemetery.
This course satisfies the General Education Criteria for:
UIUC: Social Sciences

ANTH 182 Latin American Cultures credit: 4 Hours.
Latin America considered as a theater of conflict and cultural experimentation among Native American, African, and Iberian peoples; their survival and transformation as reported in selected ethnographies and eyewitness sources; and some modern theories and controversies about their experience.
This course satisfies the General Education Criteria for:
UIUC: Non-Western Cultures

ANTH 184 Asian American Cultures credit: 3 Hours.
Surveys the heterogeneity of contemporary Asian American communities. Explores the core concepts of "culture" and "social organization" through the variety of experiences in the family, churches, business establishments, schools, and other public institutions. Same as AAS 184 and SOC 124.
This course satisfies the General Education Criteria for:
UIUC: Social Sciences

ANTH 185 The Global Pacific credit: 3 Hours.
An introduction to the environment, history, and cultures of the Pacific with special attention to transformations in lifeways as people, ideas, and products flow into the islands from other world regions and flow out from Oceania to diasporic communities worldwide.
This course satisfies the General Education Criteria for:
UIUC: Non-Western Cultures
UIUC: Social Sciences
ANTH 190 American Jewish Culture credit: 3 Hours.
Examines American Jewish experience in its cultural and historical diversity. Introduces the approaches of cultural anthropology in order to investigate how an ethnic group has elaborated and continues to elaborate its identity in American culture and society through strategies of individual and collective behavior. In this way, American Jewish identities emerge as the products of specific interactions between Judaism's overarching cultural system and local American cultural formations.
This course satisfies the General Education Criteria for:
UIUC: US Minority Culture(s)

ANTH 199 Undergraduate Open Seminar credit: 1 to 5 Hours.
May be repeated.

ANTH 209 Food, Culture, and Society credit: 3 Hours.
Introduces basic anthropological and sociological methods, concepts and approaches to the study of the food. Explores issues including gender roles, religious influences, family relationships, community sharing, nationalist rituals, and global processes in the production, distribution and consumption of food. Film, ethnographies, and other social science studies will be examined. Same as SOC 269.
This course satisfies the General Education Criteria for:
UIUC: Social Sciences

ANTH 210 Families in Global Perspective credit: 3 Hours.
Same as HDFS 220. See HDFS 220.
This course satisfies the General Education Criteria for:
UIUC: Non-Western Cultures
UIUC: Social Sciences

ANTH 220 Introduction to Archaeology credit: 3 Hours.
Introduction to the problems of studying past cultures; special attention given to the ranges of techniques available and the adequacy of various methodologies as bases for sound inference about the structure of extinct cultures. Prerequisite: ANTH 102 or consent of instructor.

ANTH 222 Introduction to Modern Africa credit: 3 Hours.
Same as AFST 222, PS 242, and SOC 222. See AFST 222.
This course satisfies the General Education Criteria for:
UIUC: Non-Western Cultures

ANTH 223 Exploring African Cities credit: 3 Hours.
Same as LA 220. See LA 220.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: Non-Western Cultures

ANTH 224 Tourist Cities and Sites credit: 3 Hours.
Examination of tourism's social, political, economic, cultural, and physical dimensions from an anthropological perspective.

ANTH 225 Women in Prehistory credit: 3 Hours.
Course identifies the presence of women in the archaeological record and seeks to reconstruct women's lives and roles in a range of ancient societies. It also considers the intellectual history of gender studies in archaeology and anthropology. Same as GWS 225.
This course satisfies the General Education Criteria for:
UIUC: Social Sciences

ANTH 226 Intl Competence - Study Abroad credit: 1 Hour.
Provides students with cross-cultural communication and critical thinking skills that will enhance their experience abroad. Through activities, readings and assignments students will gather valuable information about their prospective host community. We'll explore foreign perspectives on American culture to encourage reflection upon the attitudes and reactions students will both encounter and generate during their travels. Students will learn to manage common challenges, stay safe, and have a successful international experience. Same as GLBL 226.

ANTH 227 Unpacking Intl Experience credit: 1 Hour.
For students who have recently completed an international experience (study abroad, service learning, fieldwork). Provides students with practical and theoretical tools to reflect upon their international experience and helps them identify the professional and personal skills they acquired while abroad. Explores how cultural values and assumptions shape one's attitude abroad, and the ways these factors affect cross-cultural interactions between people. Same as GLBL 227.

ANTH 230 Sociocultural Anthropology credit: 3 Hours.
Introduction to the anthropological study of contemporary human societies; emphasis on the comparative study of social organization, interpersonal relations, cultural ecology, and processes of sociocultural change, but also includes some consideration of the method and theory of ethnographic field research.
ANTH 240 Biological Anthropology credit: 3 Hours.
Past and present evolution of the human species and population and individual biological variation; topics include genetic principles relevant to human evolution, primate phylogeny and behavior, fossil evidence for human evolution, and the origin and significance of biological diversity in modern humans. Prerequisite: ANTH 102 or ANTH 143; or an introductory life sciences course; or consent of instructor.

ANTH 241 Human Variation and Race credit: 3 Hours.
Examines the biological concept of race as applied and misapplied to Homo sapiens by anthropologists and others from the 18th century to the present and of the origin, nature, and significance of so-called racial variation.

ANTH 242 History of Human Evolution credit: 3 Hours.
Reviews the history of evolution and its controversies from the pre-Darwinians to contemporary debates. Examines disciplinary and wider societal debates and how they affect each other.

ANTH 243 Sociality of the Great Apes credit: 3 Hours.
Examines the social organization, mating patterns, and group structure of free-ranging chimpanzees, gorillas, and orangutans. Presents historical perspective focusing on misconceptions that have colored our understanding of ape social behavior; addresses questions concerned with learning potential, food sharing, social cooperation, aggressive behavior, self-awareness, and the appropriateness of the apes as models for understanding human behavior. Prerequisite: ANTH 102, ANTH 143, or an equivalent course in animal behavior; or consent of instructor.

ANTH 246 Forensic Science credit: 4 Hours.
History and theory underlying methods used in forensic science. Topics include the courtroom, the units of a crime laboratory, methods of securing and investigating a crime scene, and the analysis of evidence collected from a crime scene such as blood, fibers, hair and fingerprints.
This course satisfies the General Education Criteria for:
UIUC: Life Sciences

ANTH 249 Evolution and Human Disease credit: 3 Hours.
Principles of modern evolutionary theory are applied to medical problems. Topics include: transmission, pathogen strategies, symptoms and spectrum of disease, evolution of virulence, concept of cause, antimicrobial resistance, emerging diseases, stress and adaptation, nutrition, diachronic overview of changing patterns of human disease, and ecological factors.
This course satisfies the General Education Criteria for:
UIUC: Life Sciences

ANTH 250 The World Through Museums credit: 3 Hours.
Same as MUSE 250. See MUSE 250.
This course satisfies the General Education Criteria for:
UIUC: Social Sciences
UIUC: Western Compartv Cult

ANTH 258 Sex in Nature and Culture credit: 3 Hours.
A simultaneous exploration of human sexuality from a biological and cultural perspective. Same as GWS 258.

ANTH 259 Latina/o Cultures credit: 3 Hours.
Introduction to the Spanish-speaking population of the United States, including demography, history, economics, and culture; emphasis on Mexican-Americans and Puerto Ricans, although other Spanish-speaking groups are also considered. Same as LLS 259. Prerequisite: ANTH 103 or consent of instructor.

ANTH 260 World Ethnography credit: 3 Hours.
Study and criticism of ethnographic descriptions of exotic ways of life, both as scientific reporting and as a literary art form. Readings include examples from several major culture areas: Africa, the Americas, the Middle East, Oceania, southern and eastern Asia, and Western civilization. Prerequisite: ANTH 102, ANTH 103, or consent of instructor.
This course satisfies the General Education Criteria for:
UIUC: Social Sciences

ANTH 261 Intro to the African Diaspora credit: 3 Hours.
Same as AFRO 261. See AFRO 261.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: US Minority Culture(s)

ANTH 262 Women's Lives credit: 3 Hours.
Perceptions of women, their perceptions of themselves, and their varying roles and statuses in several contemporary societies in diverse countries; supervised ethnographic observation of women's behavior. Same as GWS 262.
This course satisfies the General Education Criteria for:
UIUC: Social Sciences
ANTH 265 Ethnicity in the USA credit: 3 Hours.
Course examines the history and present day circumstances of a variety of U.S. ethnic groups. It uses the tools of ethnography and history to explore this complex topic. The first half of the course explores 18th and 19th century ethnicities by combining historical and ethnographic methods. The second half focuses on contemporary ethnic movements and theories about them. Prerequisite: ANTH 103.

ANTH 266 African Film and Society credit: 3 Hours.
Introduction to African cinema as a contemporary art form and as a window on the social and cultural realities of Africa. The course includes discussion of modern African culture, the African film industry, and African cinema as an art form and as popular entertainment. Same as AFST 266. This course satisfies the General Education Criteria for:
UIUC: Non-Western Cultures

ANTH 267 Memoirs of Africa credit: 3 Hours.
Course introduces Africa to students who have read little or nothing about the continent, the course provides a "user-friendly" approach by offering engagingly written narratives of actual lives lived. The texts may be a combination of memoirs written by Africans (about their childhood experiences growing up in various regions of Africa) and by non-African scholars and other authors (including but not limited to anthropologists) who have spent significant amounts of time on the continent. Same as AFST 267. Prerequisite: Completion of Campus Composition I general requirement. This course satisfies the General Education Criteria for:
UIUC: Advanced Composition
UIUC: Non-Western Cultures

ANTH 268 Images of the Other credit: 3 Hours.
Do all peoples view neighboring or distant populations as radically different "Others," or can humans create mutual images based on a notion of shared humanity? Course compares and analyzes the range of images of ethnic, "racial," gender, class, and bodily differences that have been enacted historically and cross-culturally in both Western and non-Western populations. Prerequisite: A previous course in history and/or one of the social sciences suggested.
This course satisfies the General Education Criteria for:
UIUC: Advanced Composition
UIUC: HistPhilosoph Perspect
UIUC: Western Compartv Cult

ANTH 270 Language in Culture credit: 3 Hours.
Examines the intersections of culture and language. Topics include the definition of language; the cultural shaping of narrative; how different linguistic systems guide speakers to think differently about the world; and how ideologies about language relate to beliefs about the nation, modernity, race, and gender. Credit is not given for both ANTH 270 and ANTH 271.

ANTH 271 Language in Culture-ACP credit: 3 Hours.
Course is identical to ANTH 270 except for the additional writing component. Credit is not given for both ANTH 271 and ANTH 270. Prerequisite: Completion of campus Composition I general education requirement. This course satisfies the General Education Criteria for:
UIUC: Advanced Composition

ANTH 275 The World of Jewish Sephardic credit: 3 Hours.
Study of the cultural legacy and history of the Sephardic Jews, mostly focusing on the Mediterranean and the thriving communities they established in countries of Muslim governance and in the Balkans, and more recently in America. The Judeo-Spanish language, which has been preserved until the end of the twentieth century, the press, literature and music are components of this course. Same as HIST 267 and RLST 275.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: Non-Western Cultures
UIUC: Western Compartv Cult

ANTH 277 Ancient Cities, Sacred Land credit: 3 Hours.
Examines urban development from its origins to the present day. Among the concepts covered are urbanism, urbanization, ceremonial centers and ceremonial cities, the city as a system, the spatial and economic organization of cities, and the built environment (sacred landscapes, vernacular architecture, places of power). Small field project is conducted in Champaign-Urbana.
This course satisfies the General Education Criteria for:
UIUC: Social Sciences
UIUC: Western Compartv Cult

ANTH 278 Climate Change & Civilization credit: 3 Hours.
Examination of how climate change impacts society. With the increasing need to understand how climate changes and society intersect at present, it is becoming important that we address critical questions about how lessons from the past inform present needs. Case studies from around the world are discussed.
ANTH 280 Personal Anthropology credit: 3 Hours.
Anthropological approaches and methods related to the student's everyday life situation. Explanation and use of ritual, ideology, myth, communication, media images, rites of passage, structure, symbols, and other concepts so that the student may develop a more critical understanding of contemporary American society and his or her position in it.

ANTH 284 Adv Topics in Asian America credit: 3 Hours.
Considers a number of theoretical and methodological topics in sociocultural anthropology through ethnographic writings on Asian America. Theoretical topics include transnationalism, colonialism, resistance, culture, race, and identity. Methodological topics include fieldwork, ethnographic writing (including the blurring of genres) and ethics. Same as AAS 284. Prerequisite: ANTH 184 or consent of instructor.
This course satisfies the General Education Criteria for:
UIUC: Social Sciences
UIUC: US Minority Culture(s)

ANTH 285 Intro to Korea Through Film credit: 3 Hours.
Same as EALC 285. See EALC 285.
This course satisfies the General Education Criteria for:
UIUC: Non-Western Cultures

ANTH 286 Southeast Asian Civilizations credit: 3 Hours.
Overviews the cultural and institutional history of the Indianized states and Vietnam, with attention to dominant commercial, political, religious, artistic, and social traditions of Southeast Asia. Same as ASST 286 and HIST 225.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: Non-Western Cultures

ANTH 287 Contemporary East Asia credit: 3 Hours.
Same as EALC 288. See EALC 288.

ANTH 288 American Indians of Illinois credit: 3 Hours.
An interdisciplinary survey of the Native American experience in the Illinois region from pre-Columbian times to the present. Introduces theories, concepts and methods in archaeology, history, and sociocultural anthropology. Includes archaeological field site and museum visits, plus guest lectures by American Indian scholars and community members. Same as AIS 288 and HIST 288.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: US Minority Culture(s)

ANTH 290 Jewish Cultures of the World credit: 3 Hours.
Survey of the world's Jewish cultures with a particular focus on the non-Western world. Addresses the relations between Judaism and other religious systems and the nature of Jewish life in such locales as North Africa, Subsaharan Africa, India, China, and South America.
This course satisfies the General Education Criteria for:
UIUC: Non-Western Cultures

ANTH 342 Animal Behavior credit: 3 Hours.
Same as ANSC 366 and IB 329. See IB 329.

ANTH 343 Behavior and Biology of Women credit: 3 Hours.
Exploration of female biology and behavior in a broad evolutionary context. Explores development from pre-puberty through menopause, reproductive processes such as pregnancy, birth and lactation, cognitive and behavioral sex differences, and male and female reproductive strategies in a variety of cultural settings. Examples are drawn primarily from traditional and modern human societies as well as field and experimental data from other species, particularly non-human primates. Prerequisite: ANTH 143 or consent of instructor.

ANTH 346 Forensic Anthropology credit: 3 Hours.
Analysis of human skeletal remains of the medico-legal profession. Topics include the development of the field of forensic anthropology, biological profile and skeletal trauma analysis, interval since death estimation. Additional topics include investigation of crime scenes, the legal role of the biological anthropologist as an expert witness and case report preparation. Attention will also be drawn to the incorporation of anthropological and ethical approaches to dealing with death and using human remains for research. Prerequisite: ANTH 240 and ANTH 246.

ANTH 358 People of the Ice Age credit: 3 Hours.
Explores a vast period of human prehistory - 2 million to 10,000 years ago - before the first cities arose and before people domesticated plants and animals in the Old World; uses archaeological and paleoanthropological data to understand past life ways as well as reasons for change through time in human adaptation. Prerequisite: ANTH 102.

ANTH 359 Adv Topics in Latina/o US credit: 3 Hours.
Theoretical and methodological perspectives on the construction of Latina/Latino identities in contemporary American society. Same as LLS 359.
This course satisfies the General Education Criteria for:
UIUC: US Minority Culture(s)
ANTH 360 Evolution and Human Health credit: 3 Hours.
Same as IB 360. See IB 360.

ANTH 361 Ecology and Human Health credit: 3 Hours.
Same as IB 361. See IB 361.

ANTH 362 Body, Personhood, and Culture credit: 3 Hours.
Examines basic cultural assumptions about the human body and what it means to be a "person" in Western and non-Western societies. Addresses key themes in cultural anthropology and the social sciences concerning the relationship of the individual and society and of nature and culture.
This course satisfies the General Education Criteria for:
UIUC: Social Sciences

ANTH 363 Anth of Dance/Movement credit: 3 Hours.
Anthropological study of dance and other human movement systems in cultural contexts. Designed especially for students with little or no background in socio-cultural anthropology or the social sciences. Includes reading the works of major figures in the field, and learning how to study dances, signed languages and ritual events from an anthropological perspective. Students will also learn about socio-cultural theory and observation, doing fieldwork, movement literacy, problems of subjectivity and objectivity, and personal anthropology.

ANTH 364 Performing "America credit: 3 Hours.
For students who have recently completed an international experience (study abroad, service learning, fieldwork). Provides students with practical and theoretical tools to reflect upon their international experience and helps them identify the professional and personal skills they acquired while abroad. Explores how cultural values and assumptions shape one's attitude abroad, and the ways these factors affect cross-cultural interactions between people. Prerequisite: at least one course in anthropology or the social sciences.

ANTH 368 'America' in the World credit: 3 Hours.
Study of the lure and rejection of the U.S. around the world, by drawing on long-standing anthropological approaches to the histories of peoplehood, selfhood, and otherness. Examines the historical, political, cultural, economic, and social context of both anti- and pro-Americanism, in various parts of the globe. Prerequisite: Any previous course in cultural anthropology.

ANTH 370 Latina/o Ethnography credit: 3 Hours.
Same as LLS 370. See LLS 370.

ANTH 373 Culture & Psychology credit: 3 Hours.
Same as PSYC 373. See PSYC 373.

ANTH 374 Anth of Science and Technology credit: 3 Hours.
Examination of science as a cultural system. Utilizing ethnographic methods and social theories, the course will locate scientific knowledge, institutions and practices within enduring anthropological questions around rationality and truth, meaning, personhood, sociality, power inequalities, social transformations, and social justice. Prerequisite: Junior standing.

ANTH 375 The Culture of Nature credit: 3 Hours.
Examines how the natural and the cultural are mutually-constitutive concepts, and investigates contemporary and historical constructions of notions of a natural world. We will see how these concepts have varied over time and among different social groups, with a special emphasis on the contemporary United States. Topics will include the idea of landscape and of nature as a resource to be used, appreciated, represented, controlled, or enjoyed. In addition, the course will feature a special unit on sustainability, and one devoted to analyzing our relationships to animals. Prerequisite: At least one anthropology course or a course in another social science.

ANTH 376 Aztec Civilization credit: 3 Hours.
Detailed description and analysis of Aztec culture, society, and empire at c. 1500 AD, based primarily on ethnohistorical documentation. Topics covered include life cycle, family and society, political and economic organization, warfare, religion, and intellectual and aesthetic traditions. External relationships with neighboring peoples and the indigenous view of the Spanish conquest are considered. Prerequisite: ANTH 102, ANTH 103, or ANTH 105.
This course satisfies the General Education Criteria for:
UIUC: Non-Western Cultures

ANTH 378 Plants and Their Uses credit: 3 Hours.
Same as IB 363. See IB 363.

ANTH 379 Medical Anthropology credit: 3 Hours.
Introduction to concepts and social aspects of health, illness, and curing in different cultures. Considers concepts of interaction between folk and modern medicine in developing nations and delivery of health care as an international social problem. Prerequisite: ANTH 230 or ANTH 260, or consent of instructor.

ANTH 380 Ethnography of the University credit: 3 Hours.
Introduces students to ethnographic research methods through research on the University of Illinois. Emphasizes qualitative research methods and institutional analysis. Student work builds on research done by prior students and student research is web archived. Reflection on and reconfiguration of research questions and hypotheses is encouraged as research projects proceed. Prerequisite: Any 100-level or 200-level sociocultural anthropology course: ANTH 103, ANTH 104, ANTH 230 etc.
ANTH 390 Individual Study credit: 2 to 4 Hours.
Supervised reading and research on anthropological topics chosen by the student with staff approval. Especially (but not exclusively) for students who are preparing for a summer field-work project, or who have some justifiable reason for doing independent study, but who do not qualify for the honors (departmental distinction) courses. Prerequisite: Senior standing; 3.6 GPA in anthropology; 37 hours of anthropology courses, and consent of instructor. May not be taken concurrently with ANTH 391 or ANTH 495.

ANTH 391 Honors Individual Study credit: 2 to 4 Hours.
A two-term individual study and research project for those students who are candidates for departmental distinction in anthropology. Prerequisite: Senior standing; 3.6 GPA in anthropology; 37 hours of anthropology courses, and consent of instructor. May not be taken concurrently with ANTH 390.

ANTH 399 Special Topics credit: 1 to 3 Hours.
Topics are given on a one-time only, experimental basis. Faculty offer special topics in their areas of expertise that provide an opportunity for undergraduates to be exposed to some of the most current developments in faculty research. May be repeated.

ANTH 402 Transnational Islam, Europe-US credit: 3 or 4 Hours.
Anthropological approach to transnational Islam, focusing on its various expressions in Europe and the United States, particularly since World War II. Same as ASST 402 and RLST 409. 3 undergraduate hours. 4 graduate hours. Prerequisite: ANTH 230 or consent of instructor.

ANTH 403 Women in Muslim Societies credit: 3 or 4 Hours.
Same as GLBL 403, GWS 403, HIST 434, RLST 403, and SAME 403. See RLST 403.

ANTH 404 Disability, Culture & Society credit: 3 or 4 Hours.
Same as CHLH 407, KIN 407, and REHB 407. See CHLH 407.

ANTH 405 Contemporary Central America credit: 3 or 4 Hours.
Explores cultural, political and historical processes in 20th- and 21st-century Central America--focusing on Costa Rica, Nicaragua, Honduras, El Salvador, and Guatemala--through an anthropological lens. Grapples with a core set of questions arising from changes in the global relations, including the rise of global neoliberalism, the crises and renovations of political projects, the transformations of spatial relations through transnational migration, and the proliferation of various pan-hemispheric as well as local identity-based movements. 3 undergraduate hours. 4 graduate hours. Prerequisite: ANTH 103 or ANTH 182 or ANTH 230 or a course in Latin American history or consent of instructor.

ANTH 408 Human Evolutionary Anatomy credit: 3 or 4 Hours.
Comprehensive, comparative study of musculoskeletal anatomy in primates, focusing on functional and adaptive changes that have occurred in the masticatory apparatus, facial skeleton, and locomotor systems of New World monkeys, Old World monkeys, apes, and humans. Relationships between morphology, ecology, and behavior are discussed, applied to the fossil record, and used to address current issues in human evolution. 3 undergraduate hours. 4 graduate hours. Prerequisite: ANTH 443 or ANTH 440 or ANTH 456 or a course in human or comparative vertebrate anatomy.

ANTH 409 Human Evolutionary Anatomy Lab credit: 3 or 4 Hours.
Comparative detailed dissections of craniofacial, locomotor, neural, and alimentary systems in nonhuman primates, to understand the anatomical bases of human evolution. 3 undergraduate hours. 4 graduate hours. Prerequisite: Credit or concurrent registration in ANTH 408.

ANTH 411 Methods of Cultural Anth credit: 3 or 4 Hours.
Major philosophical, theoretical, and methodological issues that arise in conducting cultural-oriented anthropological field work today; application of class knowledge to an actual field experience; emphasis on field work as a reflexive experience and as a mutually creative and frustrating endeavor. 3 undergraduate hours. 4 graduate hours. Prerequisite: ANTH 391 or ANTH 495.

ANTH 414 Writing Ethnography credit: 3 or 4 Hours.
Addresses issues of the theoretical divide between the humanities and the social sciences, the unique authority of the scholar/author, and the invisibility of the reader in producing scholarly texts. Focusing on the ways in which scholars are also authors, we explore current debates by reading a selection of contemporary anthropological texts (and some prescient precursors) that boldly experiment with how ethnography is written. Students will experiment with several ethnographic writing styles. This course is designed for advanced undergraduate anthropology students and graduate students in cultural anthropology, writing studies, and education. 3 undergraduate hours. 4 graduate hours. Prerequisite: Undergraduate students should have already taken at least one 300-level course in cultural anthropology, and graduate students in cultural anthropology, writing studies, and education. Other students should contact the instructor.
This course satisfies the General Education Criteria for:
UIUC: Advanced Composition

ANTH 416 Anthropology of Music credit: 3 Hours.
Same as MUS 416. See MUS 416.

ANTH 419 Civilization in Ancient Peru credit: 3 or 4 Hours.
Survey of Central Andean prehistory from the earliest inhabitants through the emergence of complex societies culminating in the Inca Empire. 3 undergraduate hours. 4 graduate hours. Prerequisite: ANTH 102 or ANTH 105 or another 400-level archaeology course or graduate standing.

ANTH 420 Case Studies Global Heritage credit: 3 or 4 Hours.
Cultural heritage encompasses major domains of social, economic, political, religious and environmental practice and policy-making under today’s conditions of globalization. Students will critically examine cultural heritage case studies from around the world. 3 undergraduate hours. 4 graduate hours.
ANTH 421 Social Organization credit: 3 or 4 Hours.
Introduction to anthropological concepts of social organization and structure; considers kinship theory, descent and alliance systems, social stratification, nonkin association, social networks, group identification and boundaries, structural-functional interpretations of society, and the meaning of social or cultural structure. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: ANTH 230 or consent of instructor.

ANTH 423 Economic Anthropology credit: 3 or 4 Hours.
Covers the emergence of economic anthropology as a subdiscipline; considers various definitions of economics with their implications for the study of human society; emphasizes the relationship between social organization and economic life from the perspectives of classical studies in anthropology and their contemporary interpretations. 3 undergraduate hours. 4 graduate hours. Prerequisite: ANTH 230.

ANTH 425 Anthropology of Education credit: 2 or 4 Hours.
Same as EPS 425 and EPSY 466. See EPS 425.

ANTH 430 The History of Anthropology credit: 4 Hours.
Provides a selective overview of the history and historiography of anthropology in the 19th and 20th centuries. The class moves chronologically and topically, paying particular attention to the social, institutional, and historical contexts of paradigmatic shifts, the interconnections between various national traditions, and the negotiations of the discipline's boundaries. 4 undergraduate hours. 4 graduate hours. Prerequisite: Graduate or senior standing in anthropology, or consent of instructor.

ANTH 431 History of Bioanthropology credit: 3 or 4 Hours.
Surveys the histories of ideas in biological anthropology, with a focus on the development of the field in the U.S. Examination of the foundations of contemporary theory, placing these ideas into historical and societal context. 3 undergraduate hours. 4 graduate hours. Prerequisite: ANTH 102, ANTH 240, ANTH 242, ANTH 243 or equivalent.

ANTH 432 Genes and Behavior credit: 3 Hours.
Same as IB 432, NEUR 432, and PSYC 432. See IB 432.

ANTH 433 Comparative Vertebrate Anatomy credit: 5 Hours.
Same as IB 432, NEUR 432, and PSYC 432. See IB 432.

ANTH 434 Comparative Vertebrate Anatomy credit: 5 Hours.
Same as IB 432. See IB 432.

ANTH 435 The Neandertal Debate credit: 3 or 4 Hours.
A detailed investigation of the origin and biological adaptations of late archaic humans and the emergence of modern humans. Explores the practice and validity to using skeletal anatomy to interpret the behavior of past populations using evolutionary and comparative approaches. This course will interpret Neandertal biology and anatomy with particular emphasis on its relevance for theories about the origin and evolution of our species. 3 undergraduate hours. 4 graduate hours. Prerequisite: ANTH 240.

ANTH 436 Biogeography credit: 3 Hours.
Same as ESE 439, GEOG 436, IB 439 and NRES 441. See IB 439.

ANTH 437 Primate Behav Endocrinology credit: 3 or 4 Hours.
Introduction to behavioral endocrinology, focusing on primate, especially human behaviors. Examines the relationship between hormones and behavior using an evolutionary and comparative approach, considering both how hormones influence behavior and how behavioral interactions regulate endocrine physiology. The course covers basic endocrine system physiology and function, hormonal influences on primate social behaviors such as male and female reproductive behaviors, courtship, parental care, bonding and attachment, as well as aggression and territoriality. Other topics include stress, hormones, and health. Same as IB 437. 3 undergraduate hours. 4 graduate hours. Prerequisite: IB 150 and ANTH 143; or an equivalent course in behavioral ecology, primate behavior, physiology or psychology; or consent of instructor.

ANTH 438 Primate Life History Evolution credit: 3 or 4 Hours.
Life history seeks to explain why differences exist in the pathways that organisms follow from conception to death. Examination of the diversity in the evolution of primate (including human) life histories. 3 undergraduate hours. 4 graduate hours. Prerequisite: ANTH 102, ANTH 143, ANTH 240, ANTH 243 or equivalent.

ANTH 440 Human Paleontology credit: 3 or 4 Hours.
Principles of evolution and a survey of human evolution from the early primates through the Pleistocene epoch; emphasis on evolutionary theory as applied to humans and interpretation of the fossil record. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: ANTH 240 or consent of instructor.

ANTH 441 Human Genetics credit: 3 or 4 Hours.
Principles of human genetics; anthropological aspects of race and race formation; and hereditary and environmental factors in the biological variation of modern humans. Same as ANSC 441. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: ANTH 102 or equivalent.

ANTH 443 Primate Form and Behavior credit: 3 or 4 Hours.
Survey of primate social behavior and the classification, morphology, and distribution of living and extinct species; emphasis on interrelationships among behavior, biology, and ecology. Same as IB 428. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: ANTH 240 or consent of instructor.

ANTH 444 Methods in Bioanthropology credit: 3 or 4 Hours.
Supervised participation in biological anthropology research projects; techniques, methods, and procedures discussed and practiced under actual field or laboratory working conditions. Normally taken concurrently with ANTH 445. 3 undergraduate hours. 4 graduate hours. May be repeated if topics vary. Usually offered in the summer session only. Prerequisite: ANTH 240 or equivalent; consent of instructor.

Information listed in this catalog is current as of 11/2014
ANTH 445 Research in Bioanthropology credit: 3 or 4 Hours.
Analysis, interpretation, evaluation, and organization of field and laboratory data in biological anthropology; preparation of written reports on research. May be taken concurrently with ANTH 444 or subsequently. 3 undergraduate hours. 4 graduate hours. May be repeated if topics vary. Usually offered in the summer session only. Prerequisite: ANTH 240 or equivalent; consent of instructor.

ANTH 446 Behavioral Inference & Fossils credit: 3 or 4 Hours.
Theories and methods for interpreting behaviors inferred from the human and primate fossil record. Topics include discussions of adaptation, methods of inference in historical sciences, and practical experimental approaches to understanding aspects of diet, locomotor behavior and social organization in species known only from the fossil record. Same as IB 403. 3 undergraduate hours. 4 graduate hours. Prerequisite: ANTH 240.

ANTH 448 The Prehistory of Africa credit: 3 or 4 Hours.
The study of cultural development in Africa from the appearance of hominids to the time of European domination. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: ANTH 220 or consent of instructor.

ANTH 449 North American Archeology credit: 3 or 4 Hours.
Methods, techniques, and results of archaeology in North America; focuses on divergent approaches to the regional archaeology of North America; and surveys and synthesizes the archaeology of the subcontinent. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: ANTH 220 or consent of instructor.

ANTH 451 Archaeological Surveying credit: 3 or 4 Hours.
Familiarization with methods used in the location and recording of archaeological sites, including techniques of mapping especially adapted to the needs of archaeology; attention given to means of presenting results and interpreting data derived from this work; and work both in the field and in the laboratory. 3 undergraduate hours. 4 graduate hours. Prerequisite: ANTH 220 or consent of instructor.

ANTH 452 Stone Tool Technology Analysis credit: 3 or 4 Hours.
Lecture and laboratory on the principles and techniques of stone and bone artifact manufacture, identification, classification, metrical analysis, interpretation, and integration with other classes of archaeological evidence. Emphasis on the use of lithics to test human behavioral models. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: ANTH 220.

ANTH 453 Landscape Archaeology credit: 3 or 4 Hours.
The use of archaeological, documentary, and oral history evidence to study and interpret the ways past peoples shaped their landscapes through the deployment of cultural and social practices, and the ways, in turn, that such people were influenced, motivated, or constrained by their natural surroundings. Same as LA 454. 3 undergraduate hours. 4 graduate hours. Prerequisite: Introductory archaeology course, such as ANTH 220, or introductory landscape architecture course, such as LA 215, and a 300 level course in socio-cultural anthropology or archaeology, or equivalent with instructor's permission.

ANTH 454 Archaeological Field School credit: 3 or 4 Hours.
Participation in archaeological excavations; techniques, methods, and procedures discussed and practiced under actual working conditions. Normally taken concurrently with ANTH 455. 3 undergraduate hours. 4 graduate hours. May be repeated if topics vary. Usually offered in the summer session only. Prerequisite: Consent of instructor.

ANTH 455 Lab Analysis in Archaeology credit: 3 or 4 Hours.
Laboratory work including processing, classifying, dating, interpretation, evaluation, and preparation of written reports of archaeological research. May be taken concurrently with ANTH 454 or subsequently. 3 undergraduate hours. 4 graduate hours. May be repeated if topics vary. Prerequisite: ANTH 102 or consent of instructor.

ANTH 456 Human Osteology credit: 3 or 4 Hours.
Skeletal analysis of human remains to infer past biological and cultural traits, including growth and development, nutritional status, health histories, and disease. Introduction to analytical techniques used in human osteology including paleopathology, paleodemography and forensics. 3 undergraduate hours. 4 graduate hours. Prerequisite: ANTH 102 or ANTH 240 or consent of instructor.

ANTH 457 Developmental Biology credit: 3 or 4 Hours.
Structure and ontogeny of the human body; growth and development; muscular system. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: Consent of instructor.

ANTH 458 Animal Behavior & the Primate Fossil Record credit: 3 or 4 Hours.
Behavioral ecology of extant species is studied in the context of fossil records of primate evolution. Cases involving the species known only from the fossil record. 3 undergraduate hours. 4 graduate hours. Prerequisite: ANTH 240.

ANTH 459 The Ancient Maya credit: 3 Hours.
Introduction to the Ancient Maya of Mexico, Guatemala, Belize, and Honduras. Evaluates theories that account for the rise and fall of Classic (c. A.D. 250-950) Maya rulership. Excavation data, iconography, and inscriptions are used to reconstruct political and social organization, ideology, subsistence activities, and inter-regional interactions. 3 undergraduate hours. 4 graduate hours. Prerequisite: ANTH 220 or at least one ANTH 300- or 400-level archaeological area course.

ANTH 460 Heritage Management credit: 3 or 4 Hours.
Detailed examination of the theoretical and practical issues of archaeological heritage management. Focusing on the legal, environmental, ethical, social, political, educational, and touristic aspects of the management of ancient sites for their continued sustainability. Same as LA 460. 3 undergraduate hours. 4 graduate hours. Prerequisite: ANTH 220.

ANTH 461 Hist of Archaeological Theory credit: 3 or 4 Hours.
Examines the prominent theories in archaeology from its inception to the present day and does so within the context of general developments in anthropological thought. Provides a foundation for graduate students and a capstone for majors emphasizing archaeology. 3 undergraduate hours. 4 graduate hours. Prerequisite: For undergraduates: ANTH 220; anthropology major with focus on archaeology; senior standing or consent of the instructor. For graduate students: enrollment in ANTH 430 during the same term advised.
ANTH 462 Museum Theory and Practice credit: 3 or 4 Hours.
A foundational introduction to museology consisting of a critical examination of the history and social life of museums and how museums have been studied by scholars in a range of academic disciplines. Includes visits to campus and local museums. Same as ARTH 462 and LA 472. 3 undergraduate hours. 4 graduate hours.

ANTH 463 Religion and Society credit: 4 Hours.
Course focuses on theoretical issues raised by religion. Does religion address itself essentially to intellectual, emotional or pragmatic issues? Is religion created by rulers, clerics or worshippers? How does the individual experience religion, and (how) can s/he reshape it? In exploring these and related issues, we will read the writings of German, French, and British social scientists of the past 150 years as well as work by contemporary anthropologists. Theoretical perspectives covered include symbolic, processual, materialist, structural-functionalist, structuralist, and postmodernist approaches. Same as RLST 463. 4 undergraduate hours. 4 graduate hours. Prerequisite: A 200-level course in cultural anthropology or consent of instructor; or graduate standing.

ANTH 465 Oceania’s Peoples and Cultures credit: 3 or 4 Hours.
Survey of the Pacific Islands; regional geography, human ecology, culture history, and ethnography of Melanesia, New Guinea, Polynesia, New Zealand, Micronesia, and Australia; and some consideration of Pacific ethnology and the role of Oceania in the modern world. Same as ASST 465. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: ANTH 102 and ANTH 103, or consent of instructor.

ANTH 466 Class, Culture and Society credit: 4 Hours.
Social hierarchies in a variety of cultural contexts; industrial societies and the process of industrialization; looks at other social forms for the purposes of comparison. A variety of social theories will be discussed and compared through ethnographic studies. 4 undergraduate hours. 4 graduate hours. Prerequisite: ANTH 103 and ANTH 230 or graduate standing.

ANTH 467 Cultures of Africa credit: 3 or 4 Hours.
Culture and social organization in traditional African societies with emphasis on the politics, kinship, and religion of a small sample of societies illustrating the main cultural variations found in sub-Saharan Africa; some discussion of ecological factors and ethnic group relations in precolonial times. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: ANTH 230 or consent of instructor.

ANTH 468 Religions of Africa credit: 3 or 4 Hours.
Explores a variety of religious traditions and experiences in sub-Saharan Africa from an anthropological perspective. Local, indigenous traditions are emphasized, but African experiences of Islam and Christianity are also covered. Same as AFST 468 and RLST 468. 3 undergraduate hours. 4 graduate hours. Prerequisite: A 200-level course in cultural anthropology or consent of instructor; or graduate standing.

ANTH 469 Kinship-Culture-Power-Africa credit: 2 or 4 Hours.
To present the classic approaches to kinship in anthropology that were developed for Africa; to explore the variety of kinship arrangements and strategies that exist in Africa; and to expose students to the panoply of contemporary critiques of classic works on kinship in Africa, and contemporary alternatives to them. Same as AFST 467. 2 or 4 undergraduate hours. 2 or 4 graduate hours. Prerequisite: For students outside anthropology or African Studies, at least one previous course in cultural anthropology is strongly recommended.

ANTH 471 Ethnography through Language credit: 3 or 4 Hours.
Overview of theoretical perspectives and methodologies in linguistic anthropology, including sociolinguistics, ethnography of communication, performance and poetics, discursive practices, and structural analyses. 3 undergraduate hours. 4 graduate hours. Prerequisite: ANTH 230 or ANTH 270 and preferably both.

ANTH 472 Border Latina, Latino Cultures credit: 3 or 4 Hours.
Explores and examines the production of U. S. Latina/Latino identities as instances of international, cultural, historical, and social border crossings. In both regional and global contexts, we will analyze the ways in which Mexican American, Cuban American and Puerto Rican identities have been shaped by colonial relations vis-a-vis Spain and by postcolonial conditions vis-a-vis the United States. Same as LLS 472. 3 undergraduate hours. 4 graduate hours. Prerequisite: ANTH 103, and ANTH 259 or ANTH 359.

ANTH 473 Museums and Communities credit: 3 or 4 Hours.
Examination of museums and members of ethnographic source communities, and the development of new curatorial practices that incorporate source community needs and views. 3 undergraduate hours. 4 graduate hours.

ANTH 477 Pottery Analysis credit: 3 or 4 Hours.
Introduction to the theories and techniques of pottery analysis for archaeologists. In addition to presentation and discussion of the major literature, there is hands-on practice making, drawing, breaking and analyzing pottery. 3 undergraduate hours. 4 graduate hours. Prerequisite: ANTH 220 or consent of instructor.

ANTH 478 African Immigrants in Europe credit: 3 or 4 Hours.
Examines the pressing issues facing the new European Union as the realities of multicultural continent shape the daily lives of all. Begins with EU policy and theoretical models of immigration, but most readings emphasize perspectives of Africans’ own experiences as immigrants and refugees in Europe. Same as AFST 478 and EURO 478. 3 undergraduate hours. 4 graduate hours. Prerequisite: One prior 300-level anthropology or related social science course, or consent of instructor.

ANTH 479 Race, Medicine, and Society credit: 3 or 4 Hours.
Same as AAS 479 and LLS 479. See LLS 479.
ANTH 480 Intrepretive Anthropology credit: 4 Hours.
Focus on recent developments in symbolic and interpretive anthropology; topics covered include writing the ethnographic text, subject-object relations, critical reflection on fieldwork, construction of the self, dialogism, practice, performance, narrative, power, and representation. 4 graduate hours. Prerequisite: ANTH 421 and ANTH 463, or similar courses in anthropology, the social sciences, or the humanities, and consent of instructor.

ANTH 481 Andean Ethnography credit: 3 or 4 Hours.
Survey of Andean cultures at the time of the Spanish conquest, of their subsequent history, and of modern Indian culture in the Andean countries. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: ANTH 182, ANTH 230 or consent of instructor.

ANTH 484 Asian Diasporas credit: 3 or 4 Hours.
Comparative study of Asian diasporic communities in various world regions through ethnography. Introduces concepts of transnationalism, globalization, and modernity in relation to Asian migration in contemporary times. Same as AAS 484. 3 undergraduate hours. 4 graduate hours. Prerequisite: ANTH 184 or ANTH 284 or consent of instructor.

ANTH 486 Peoples of Mainland SE Asia credit: 3 or 4 Hours.
Culture, cultural history, and social systems of mainland Southeast Asia: Burma, Thailand, Cambodia, Vietnam, Laos, Assam Hills, upland southwestern China, and Malaya; emphasis on the interaction of complementary ethnic types in the context of local ecology and the Hindu-Buddhist systems of religion and politics of the lowland states. Same as ASST 486. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: ANTH 220 or ANTH 230, or consent of instructor.

ANTH 488 Modern Europe credit: 4 Hours.
Historical studies which deploy anthropological methods in the study of early modern and modern Europe; looks at processes of twentieth century modernization through ethnographic studies. Western, Central and Eastern Europe will all receive attention, but the study of Western Europe will predominate. 4 undergraduate hours. 4 graduate hours. Prerequisite: ANTH 103 and ANTH 230 or three history courses or graduate standing.

ANTH 489 The Ethnography of Korea credit: 3 or 4 Hours.
Same as EALC 469. See EALC 469.

ANTH 495 Honors Senior Thesis credit: 2 to 4 Hours.
A requirement for all seniors writing honors thesis and who are candidates for departmental distinction in anthropology. 2 to 4 undergraduate hours. No graduate credit. Prerequisite: Senior standing; ANTH 391; 3.6 GPA in anthropology; 37 hours of anthropology courses, and consent of instructor.

ANTH 496 Individual Field Research credit: 3 or 4 Hours.
Supervised participation in field research in ethnography, ethnology, linguistics, or social anthropology; techniques, methods, and procedures discussed and practiced under actual working conditions. 3 undergraduate hours. 4 graduate hours. May be repeated if topics vary. Usually offered in the summer session only. Prerequisite: ANTH 230; some knowledge of the language of the area concerned; consent of instructor. Normally taken concurrently with ANTH 497.

ANTH 497 Individual Field Data Analysis credit: 3 or 4 Hours.
Analysis, interpretation, evaluation, and organization of field data in cultural anthropology; preparation of written reports on research in ethnography, ethnology, linguistics, or social anthropology. May be taken concurrently with ANTH 496 or subsequently. 3 undergraduate hours. 4 graduate hours. May be repeated if topics vary. Prerequisite: ANTH 230; some knowledge of the language of the area concerned; consent of instructor.

ANTH 498 Senior Seminar credit: 3 Hours.
Each seminar considers a topic or issue of current interest in anthropology. 3 undergraduate hours. No graduate credit. May be repeated to a maximum of 6 hours if topics vary. Prerequisite: ANTH 102 and ANTH 103, two additional anthropology courses, a grade-point average of 3.25 in anthropology courses, and consent of instructor.

ANTH 499 Topics in Anthropology credit: 4 Hours.
Research seminar on specialized topics in anthropology. 4 undergraduate hours. 4 graduate hours. May be repeated. Prerequisite: Consent of instructor.

ANTH 502 Ethnicity and Nationalism credit: 2 or 4 Hours.
Examines ethnic and national identities, their interactions, and the implications for them and of them within increasingly translocal, transnational, and global historical contexts. 2 or 4 graduate hours.

ANTH 504 Colonialism & Postcolonialism credit: 4 Hours.
Course examines the history of colonialism and post-colonialism in anthropological perspective. The relations of history and anthropology are explored through ethnographic studies that problematize historical memory. Theoretical works about colonized people will be debated and discussed. Same as HIST 519. Prerequisite: Graduate standing.

ANTH 505 Global Modernities credit: 4 Hours.
Examines the notion of "alternative" modernities: is "modernity" always imitative of the West, or under globalization does it emerge independently in local cultures? Does it obliterate local "tradition", or can it function as site of creativity and resistance? What are its implications for anthropological fieldwork methods and writing styles? Prerequisite: Graduate standing or consent of instructor.
ANTH 508 Feminism, Gender and Sexuality credit: 4 Hours.
Theoretical issues raised in recent feminist writings in anthropology. Theoretical approaches to be explored include constructionist, postmodern, textual and historical materialist perspectives. Selected contemporary ethnographies introduce the integration of feminist theory into data analysis. Same as GWS 508. Prerequisite: Graduate standing or consent of instructor.

ANTH 511 Research Proposal Seminar credit: 4 Hours.
This seminar guides graduate students in designing a doctoral research project and writing a grant proposal. Focus is on developing a cogent theoretical framework, articulating significance of the project, identifying appropriate research methods, and considering ethical issues. Seminar format allows regular feedback from peers to clarify and hone ideas. Prerequisite: Graduate standing in anthropology or consent of instructor.

ANTH 512 Language in Culture I credit: 4 Hours.
This first of our two core theoretical courses in linguistic anthropology pays particular attention to language in culture. Examines the historical development of the field and its debates, and its relationships with socio-cultural anthropology. Develops theoretical and critical analytical skills needed in contemporary ethnographic research. Same as LING 512. Approved for both letter and S/U grading. Prerequisite: Graduate standing.

ANTH 514 Seminar in Cognitive Science credit: 2 or 4 Hours.
Same as PSYC 514, CS 549, EPSY 551, LING 570, PHIL 514. See PSYC 514.

ANTH 515 Seminar in Anthropology credit: 2 or 4 Hours.
Analysis of selected topics of special interest in anthropology. May be repeated to a maximum of 8 hours in the same or subsequent semesters.

ANTH 517 Anthro Approach to Memory credit: 4 Hours.
Examines individual memory, the construction of memories in collective practice, and the orchestration of memory in social institutions such as museums and ritual. Reflects critically on primary sources, to integrate theory and ethnography and to compare alternative approaches. Approved for both letter and S/U grading. Prerequisite: Graduate standing.

ANTH 518 Language in Culture II credit: 4 Hours.
Part II of the core theoretical seminar in linguistic anthropology. Continues examination of historical developments in the sub-field and its debates, and relationships with socio-cultural anthropology. Develops theoretical and critical analytical skills needed in contemporary ethnographic research. Same as LING 518. Prerequisite: Graduate standing.

ANTH 523 Dynamic Embodiment credit: 4 Hours.
Examines anthropological theories and methods for understanding systems of body movement and performance in cultural contexts. Explores the study of everyday skills as well as the expressive complexities of dances, gestural systems, sacred and secular ritual, sign languages, sports, theater, and martial arts. Prerequisite: Graduate standing.

ANTH 532 Dissertation Writing Seminar credit: 4 Hours.
Through reading style handbooks, theoretical works on the nature of writing, and published dissertations in anthropology, as well as completing specific dissertation writing assignments, this course provides a forum for advanced doctoral students to outline and complete substantial work on their doctoral thesis. The class format is a workshop in which every student circulates dissertation chapters for discussion by the instructor and other class members. Prerequisite: Students must have completed all requirements for the Ph.D. in anthropology but the dissertation, and they must have completed their doctoral fieldwork.

ANTH 540 Seminar in Bioanthropology credit: 4 Hours.
Seminar designed to involve students in the theoretical and methodological approaches to problem areas in physical anthropology. May be repeated. Prerequisite: ANTH 440, ANTH 441, or ANTH 443; consent of instructor.

ANTH 541 Ontogeny and Phylogeny credit: 4 Hours.
Investigation of how ontogeny (growth and development) relates to phylogeny (evolutionary change) across the course of human evolution. Focuses on the exceptional nature of human size and shape development and its evolution, with particular attention to the evolution of the human skull and brain. Prerequisite: ANTH 102, ANTH 240, ANTH 440 or equivalent.

ANTH 543 Seminar in Primate Ecology credit: 2 or 4 Hours.
Group discussions and individual presentations of research reports and problems in fields of primate ethology, ecology, evolution, and related subjects; topics vary each term. Same as IB 543. May be repeated. Prerequisite: Consent of instructor.

ANTH 552 Res Prob in Archaeology credit: 4 Hours.
Seminar oriented to current research problems in archaeology, designed to acquaint students with theoretical and methodological aspects of particular problems and to develop a critical perspective archaeological research. May be repeated. Prerequisite: Consent of instructor.

ANTH 555 The Archaeology of Complexity credit: 4 Hours.
Examines patterns of behavior archaeologists associate with complex societies and seeks to understand if and how these behaviors generate and/or reflect cultural complexity; theoretical literature and case studies discussed. Major topics include chieftdoms, settlement pattern analysis, and ideology. Prerequisite: Graduate student standing.

ANTH 557 Social Construction of Space credit: 4 Hours.
Consideration of anthropological, archaeological, and related disciplinary perspectives on space, place, landscape, the built environment, and architecture. Coursework encompasses critical review of major theoretical literature and case studies of ancient and modern societies. Same as LA 562. Prerequisite: Consent of instructor.
ANTH 559 Social Norms and Law credit: 4 Hours.
Exploration of the interaction of social norms and formal legal rules. Norms provide social rules of expected behavioral responses to particular situations, often accompanied by the threat of informal sanctions, and provide cognitive categories for perceiving and ordering one's experiences. Explores these subjects using examples from various areas of legal doctrine, such as property, contracts and bargaining, crime, torts, and taxation; examines related studies in historical and non-Western cultures and considers the uses of anthropology in studying facets of our own legal system. Prerequisite: Consent of instructor.

ANTH 560 Anthropology and Law credit: 3 or 4 Hours.
Introduction to the field of legal anthropology. Addresses anthropological theories of the nature of law and disputes, examines related studies of legal structures in non-Western cultures, and considers the uses of anthropology in studying facets of our own legal system. Same as LAW 678. 4 graduate hours. 3 professional hours. Prerequisite: Consent of instructor.

ANTH 561 Archaeological Theory credit: 4 Hours.
Contemporary theory in archaeology. Different theoretical approaches are examined by critically analyzing seminal literature within the contexts of paradigmatic shifts in archaeology and general developments in the discipline of anthropology, focuses on materiality and corporality. Prerequisite: ANTH 461 or consent of instructor.

ANTH 562 Archaeology and Racialization credit: 4 Hours.
Study of theories and methods for archaeological and historical analysis of processes of racialization in past societies. Subjects include the interrelation of racializing ideologies with other cultural and social dimensions, such as class, ethnicity, gender, political and legal structures, and economic influences. Same as AFRO 562. Prerequisite: Consent of instructor.

ANTH 565 Race and Cultural Critique credit: 4 Hours.
Same as AAS 561, AFRO 531, GWS 561, and LLS 561. See AAS 561.

ANTH 570 Cultural Aspects of Tourism credit: 4 Hours.
Same as RST 570. See RST 570.

ANTH 589 Readings in Anthropology credit: 2 or 4 Hours.
Individual guidance in intensive readings in the literature of one or more subdivisions of the field of anthropology, selected in consultation with the adviser in accordance with the needs and interest of the student. May be repeated in the same or separate semesters as topics vary. Prerequisite: One semester of graduate work in anthropology; consent of advisor.

ANTH 590 Dissertation Readings credit: 4 to 16 Hours.
Supervised individual investigation or study of a topic not covered by regular courses. The topic selected by the student and the proposed plan of study are approved by the adviser and the staff member who supervises the work. Prerequisite: Consent of instructor.

ANTH 594 Cultural Heritage credit: 2 or 4 Hours.
Same as LA 594. See LA 594.

ANTH 599 Thesis Research credit: 0 to 16 Hours.
Preparation of theses. Approved for S/U grading only.

Applied Health Sci Courses (AHS)
AHS Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/AHS)

Courses
AHS 125 Freshmen Scholars Seminar credit: 1 Hour.
Designed for James Scholars for Applied Health Sciences who are in their first year of college to introduce them to research. Students will learn strategies to apply classroom material to community and society. Includes visits from faculty and staff from across campus and within the College who will expose students to an array of contexts and approaches for research. This course is a James Scholar course for freshmen only.

AHS 199 Undergraduate Open Seminar credit: 1 to 6 Hours.
Topics will vary each semester. Please see section topic. Approved for both letter and S/U grading. May be repeated to a maximum of 6 hours in the same or subsequent terms as topics vary.

AHS 292 AHS Study Abroad credit: 0 to 18 Hours.
Provides credit toward the undergraduate degree for study at an accredited international institution or approved overseas program. Final determination of credit granted is made upon the student’s successful completion of work. Approved for letter and S/U grading. May be repeated to a maximum of 44 hours. Prerequisite: One year or residence at UIUC and consent of major department and the college.

AHS 365 Civic Engagement in Wellness credit: 3 Hours.
Same as CHLH 365, KIN 365, RST 365, and SHS 370. See KIN 365.

AHS 375 Comm Partners & Health credit: 3 Hours.
Same as KIN 375 and SHS 375. See SHS 375.
AHS 399 Advanced Open Seminar credit: 1 to 6 Hours.
Advanced undergraduate seminar. Topics will vary each semester. Please see section topic. Approved for letter and S/U grading. May be repeated in the same or subsequent terms to a maximum of 6 hours.

AHS 494 Special Topics credit: 1 to 4 Hours.
Lecture courses in topics of current interest; specific subject matter will be announced in the Class Schedule. 1 to 4 undergraduate hours. 1 to 4 graduate hours. Approved for both letter and S/U grading. Prerequisite: See Class Schedule for section requirements.

Arabic (ARAB)

ARAB Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/ARAB)

Courses

ARAB 150 Lang&Culture of Arab World credit: 3 Hours.
Interdisciplinary overview of the major aspects of the contemporary Arab culture. Based on scholarly research, textual resources, media, and literature from both the Arab World and elsewhere, examines the Arab people's historical background; language varieties; literary traditions; and representative social institutions. Same as SAME 150.
This course satisfies the General Education Criteria for:
UIUC: Non-Western Cultures

ARAB 199 Undergraduate Open Seminar credit: 1 to 5 Hours.
May be repeated.

ARAB 201 Elementary Standard Arabic I credit: 5 Hours.
Mastery of the Arabic alphabet and phonetics; elementary formal grammar and the development of reading and writing skills; and conversation in the formal noncolloquial style. Participation in the language laboratory is required.

ARAB 202 Elementary Standard Arabic II credit: 5 Hours.
Continuation of ARAB 201. Participation in the language laboratory is required. Prerequisite: ARAB 201.

ARAB 210 Colloquial Arabic I credit: 4 Hours.
Development of conversational fluency in one of the major colloquial dialects; see Class Schedule for dialect to be taught each term.

ARAB 211 Colloquial Arabic II credit: 4 Hours.
Continuation of ARAB 210. Prerequisite: ARAB 210.

ARAB 403 Intermediate Stand Arabic I credit: 4 Hours.
Survey of more advanced grammar; emphasis on increasing conversational fluency in the formal noncolloquial style; and reading of prose texts reflecting aspects of Arabic culture. 4 undergraduate hours. 4 graduate hours. Prerequisite: ARAB 202.

ARAB 404 Intermediate Stand Arabic II credit: 4 Hours.
Continuation of ARAB 403. 4 undergraduate hours. 4 graduate hours. Prerequisite: ARAB 403.

ARAB 405 Advanced Standard Arabic I credit: 3 Hours.
Practice to attain conversational fluency in the formal noncolloquial style; introduction to Arabic literature; and readings in social, political, and historic writings. 3 undergraduate hours. 3 graduate hours. Prerequisite: ARAB 404.

ARAB 406 Advanced Standard Arabic II credit: 3 Hours.
Continuation of ARAB 405. 3 undergraduate hours. 3 graduate hours. Prerequisite: ARAB 405.

ARAB 407 Topics Stand Arabic Lang&Lit I credit: 3 Hours.
Selected readings from Modern Standard Arabic authors, with a focus on novels, plays, and basic poetry illustrative of Arab cultural issues and advanced level MSA grammar, as well as development of expository writing skills. 3 undergraduate hours. 3 graduate hours. Prerequisite: ARAB 406.

ARAB 408 Topics Stand Arabic LangLit II credit: 3 Hours.
Continuation of ARAB 407 with increased emphasis on the reading and comprehension of literary texts exemplified in advanced level novels, plays, and poetry, as well as on advanced mastery of expository writing skills. 3 undergraduate hours. 3 graduate hours. Prerequisite: ARAB 407.

ARAB 409 Adv Top Stand Arabic LangLit I credit: 3 or 4 Hours.
Introduction to Modern Standard Arabic in the professions as documented in selected newspapers, educational radio and TV programs, works of fiction, biographies, anthologies, and professional journals. Students will be introduced to argumentative writing in MSA, expected to make oral presentations, and to write a research paper in their field. 3 undergraduate hours. 4 graduate hours. Prerequisite: ARAB 408.

ARAB 410 AdvTop Stand Arabic LangLit II credit: 3 or 4 Hours.
Continuation of ARAB 409 with increased emphasis on the development of comprehension and writing of professional language. 3 undergraduate hours. 4 graduate hours. Prerequisite: ARAB 409.

ARAB 411 Survey of Arabic Varieties credit: 3 or 4 Hours.
Same as LING 411. See LING 411.
ARAB 413 Arabic-English Translation credit: 3 or 4 Hours.
Introduction to translation methodology and the profession of translation, with particular emphasis on the development of Arabic-to-English translation techniques and the acquisition of related knowledge above and beyond language skills. Students will be exposed to a variety of text types from different Arabic-speaking countries and learn to produce quality, professional translations and apply effective strategies to deal with the challenges of fully preserving the meaning of the original text while conveying the appropriate tone (style/register) and paying attention to grammar, mechanics, and audience-specific needs. Same as TRST 413. 3 undergraduate hours. 4 graduate hours. Prerequisite: Advanced standing in Arabic.

Architecture (ARCH)

ARCH Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/ARCH)

Courses

ARCH 101 Introduction to Architecture credit: 3 Hours.
An introduction to architecture, architectural education and the profession with emphasis on issues that influence architecture and the people and processes involved.

ARCH 199 Undergraduate Open Seminar credit: 1 to 5 Hours.
May be repeated.

ARCH 210 Intro to the Hist of Arch credit: 3 Hours.
Visual and cultural analysis of selected buildings, urban spaces, and cities, from ancient Greece to modern times; emphasizes the architectural traditions of Western Civilization, especially as they affect the built environment of America and the Middle West. Prerequisite: Sophomore standing or consent of instructor.

ARCH 222 Islamic Gardens & Architecture credit: 3 Hours.
Same as LA 222. See LA 222.

ARCH 231 Anatomy of Buildings credit: 4 Hours.
Introduction to building technology, materials and methods emphasizing integration of design and technology. Introduces buildings as a network of systems including space, structure and environmental controls operating within a larger context of environment and social function. Skills developed include analysis of building form and function, understanding of design/technology interrelationships, and communication of ideas through drawing. Prerequisite: Concurrent enrollment in ARCH 271 or ARCH 471.

ARCH 233 Construction of Buildings credit: 4 Hours.
Second course in building science and technology with emphases on the process of project execution from the initiation of design to the completion of construction of commercial, institutional, and other heavy construction building types. Includes comprehensive study of the construction of buildings and their systems, materials and methods, and their implications on building sustainability and design decision-making. CAD and BIM systems are used to develop construction documents for a case study building. Prerequisite: ARCH 231 or consent of instructor.

ARCH 271 Graphics for Architects credit: 4 Hours.
Introduction to architectural graphic communication skills that architects use to visualize, analyze, and record creative thoughts: 1) freehand sketching; 2) architectural delineation; and 3) digital applications. Prerequisite: ARCH 101 and concurrent enrollment in ARCH 231.

ARCH 272 Strategies of Arch Design credit: 4 Hours.
Integration of formal principles with functional fundamentals of architectural design; functional vocabulary, principles, and concepts of architectural design; introduction to precedent study and analysis; skills development in sketching, drafting, rendering, layout, and modeling; and creative problem-solving in 2- and 3-dimensional exercises. Prerequisite: ARCH 271 and concurrent enrollment in ARCH 233.

ARCH 300 Ind Studies in Urban Design credit: 3 Hours.
The individual study of selected topics involving the history, design, and function of significant European cities. Prerequisite: One year of history of architecture or Art History; consent of instructor.

ARCH 314 History of World Landscapes credit: 3 Hours.
Same as LA 314. See LA 314.
This course satisfies the General Education Criteria for:
UIUC: Advanced Composition
UIUC: HistPhilosop Perspect
UIUC: Western Compartv Cult
ARCH 341 Environment Tech HVAC credit: 4 Hours.
Study of the control of thermal environment, mechanical and related building sub-systems, and their integration into the overall building design. The specific topics include: thermal comfort and behavioral implications; fundamentals of thermal behavior of buildings; the principles of heat and moisture in buildings; indoor air quality and "Sick Building Syndrome"; energy and sustainability implications of building design; and mechanical systems including HVAC and plumbing systems. Prerequisite: ARCH 233.

ARCH 342 Environment Tech Ltg & Acoust credit: 4 Hours.
Study of the control of luminous and sonic environments, the supporting building systems, and their integration into the overall building design. Specific topics include: lighting fundamentals; light sources; effects of lighting on comfort and performance; lighting calculations and design; energy economy and sustainability; acoustic fundamentals; room acoustics; noise control; and basic electrical and sound systems. Prerequisite: ARCH 233.

ARCH 351 Statics & Dynamics credit: 4 Hours.
Study of equilibrium of rigid bodies in two and three dimensions; trusses; shear and bending moments in beams; arches and frames; cables; friction; introduction to dynamics; architectural applications. Prerequisite: MATH 220 or MATH 221; and MATH 231 or PHYS 101.

ARCH 352 Mech of Mat & Design Appl credit: 4 Hours.
Study of stresses, strains, and deformations in axially loaded members; direct shear and bearing stresses; torsion; beam stresses and deflections; stresses under combined loading; column buckling; design of structural members; introduction to statically indeterminate structures; architectural applications. Prerequisite: ARCH 351.

ARCH 373 Arch Design and the Landscape credit: 5 Hours.
Building design in a landscape setting; creation of place; schematic building design and site planning issues, universal design and accessibility; principles of energy efficient building design; human-environment relationship issues; and architectural design and presentation methods; required field trips. Prerequisite: ARCH 272.

ARCH 374 Arch Design and the City credit: 5 Hours.
Building design in the community setting; creation of place; introductory urban design and site planning issues, including universal design and accessibility; human-built environment relationship issues; architectural design and presentation methods; required field trips. Prerequisite: ARCH 373.

ARCH 399 Study in Versailles, France credit: 0 to 18 Hours.
Study in the University of Illinois Architectural Program at Versailles, France. Approved for S/U grading only. Prerequisite: Concurrent registration in the Versailles, France Study Abroad Program.

ARCH 400 Senior Honors in Architecture credit: 1 to 4 Hours.
For candidates for honors in Architecture. Independent guided study and research in a selected area of architecture. 1 to 4 undergraduate hours. No graduate credit. May be repeated to a maximum of 6 hours with consent of Director of School. Prerequisite: Senior standing in architecture, a University grade-point average of 3.0 or, in special cases, consent of Director of School.

ARCH 401 Independent Study credit: 0 to 4 Hours.
Independent guided study and investigation in a selected area of architecture. 0 to 4 undergraduate hours. 0 to 4 graduate hours. Approved for both letter and S/U grading. May be repeated. Prerequisite: Junior standing in architecture, written proposal approved by a sponsoring faculty member and the approval of the Director of the School.

ARCH 402 Intro to Hist of Arch Theory credit: 3 Hours.
Architectural theory, criticism, and historiography from antiquity to the present. Based on close readings of texts from antiquity to the present day. 3 undergraduate hours. 3 graduate hours. Prerequisite: Sophomore standing.

ARCH 403 Spec Topics in Arch History credit: 3 Hours.
Special topics in Architectural History courses. Topics and subject matter to be published in course listings. 3 undergraduate hours. 3 graduate hours. May be repeated in separate terms to a maximum of 6 hours. Prerequisite: ARCH 210 and sophomore standing.

ARCH 407 Rome: The Eternal City credit: 3 Hours.
Considers the architecture and urbanism of the city of Rome across time. Special focus will be placed on critical strategies for understanding urban sites. 3 undergraduate hours. 3 graduate hours. Prerequisite: Sophomore standing.

ARCH 409 Special Topics in Spanish Arch credit: 3 Hours.
Explores aspects of the architecture and urban design of Spain from antiquity until the present. 3 undergraduate hours. 3 graduate hours. May be repeated to a maximum of 6 hours. Prerequisite: ARCH 210.

ARCH 410 Ancient Egyptian & Greek Arch credit: 3 Hours.
Architecture and urban form in Egypt and the Greek world through the Hellenistic period. Same as CLCV 410. 3 undergraduate hours. 3 graduate hours. Prerequisite: ARCH 210, ARTH 111 or CLCV 131.

ARCH 411 Ancient Roman Architecture credit: 3 Hours.
Architecture and urban form in the ancient Roman world from the Etruscans through the Late Antiquity. Connections between Roman Late Antique, Early Christian, and Byzantine Architecture will be considered. Same as CLCV 411. 3 undergraduate hours. 3 graduate hours. Prerequisite: ARCH 210; ARTH 111, CLCV 131, or CLCV 132.
ARCH 412 Medieval Architecture credit: 3 Hours.
Explores aspects of the architecture and urban design of medieval Europe from late antiquity to the late Middle Ages (approximately 300-1400). Same as MDVL 412. 3 undergraduate hours. 3 graduate hours. Prerequisite: ARCH 210 or ARTH 111.

ARCH 413 Renaissance Architecture credit: 3 Hours.
Developments in architecture, urban design, and garden art in Italy and northern Europe in the fifteenth through the sixteenth centuries. 3 undergraduate hours. 3 graduate hours. Prerequisite: ARCH 210, ARTH 112, or consent of instructor.

ARCH 414 Baroque & Rococo Arch credit: 3 Hours.
Developments in architecture, urban design, and garden art in Italy, France, Germany, and England in the seventeenth and eighteenth centuries. 3 undergraduate hours. 3 graduate hours. Prerequisite: ARCH 210, ARTH 112, or consent of instructor.

ARCH 415 Neoclass & Nineteen Cent Arch credit: 3 Hours.
Evolution of Continental and British architecture and urban planning from 1750 to World War I; includes some reference to American architecture of the same period. 3 undergraduate hours. 3 graduate hours. Prerequisite: ARCH 210 or ARTH 112, or consent of instructor.

ARCH 416 Modern American Architecture credit: 3 Hours.
Development of American architecture and urban planning from the seventeenth century to the present. 3 undergraduate hours. 3 graduate hours. Prerequisite: ARCH 210, ARTH 112, or consent of instructor.

ARCH 417 Twentieth-Century Architecture credit: 3 Hours.
Developments in Western architecture and urban design from 1900 to the present; examines the rise of modernism in Europe and after World War II; includes work in the United States, India, Japan, and Australia. 3 undergraduate hours. 3 graduate hours. Prerequisite: ARCH 210 or ARTH 112, or consent of instructor.

ARCH 418 Hist of the Urban Environment credit: 3 Hours.
Examines the evolution of town planning and urban design in Western civilization from prehistory to the present; studies cultural and technical advancements affecting the form of the urban environment. 3 undergraduate hours. 3 graduate hours.

ARCH 419 Historic Building Preservation credit: 3 Hours.
Introduces historic preservation: legal, financial, and administrative assistance, graphic examination of restored buildings and sites, and application of conservation technology. 3 undergraduate hours. 3 graduate hours.

ARCH 420 Soc/Beh Factors for Design credit: 3 Hours.
Research-oriented introduction to existing social and behavioral knowledge, methods, and tools for relating man to his physical and social environment, with implications for theories and a philosophy of architectural design. 3 undergraduate hours. 3 graduate hours. Prerequisite: Consent of instructor.

ARCH 423 Heat and Moisture in Buildings credit: 3 Hours.
Provides information and skills necessary for the designer to deliver dry, durable and healthful buildings. First half covers theory, including heat transfer, psychrometrics, steady-state diffusion and conduction analysis, and transient analysis. Second half covers building applications: roofs, walls, windows, foundations, and mechanical systems. 3 undergraduate hours. 3 graduate hours. Prerequisite: ARCH 414 or equivalent.

ARCH 424 Theory of Reinforced Concrete credit: 4 Hours.
Introduces the concepts of reinforced concrete design and analysis. Topics include materials, behavior of reinforced concrete construction, behavior and design of structural elements, one-way slabs, beams, and girders; columns; ACI code requirements; and introduction to continuity in reinforced concrete structures. Course Information: 4 undergraduate hours. 4 graduate hours. Prerequisite: ARCH 352.

ARCH 425 Theory & Design Steel & Timber credit: 4 Hours.
Analysis and design of steel and timber structures for buildings. Steel columns, beams, trusses, connections, roof and floor framing systems; timber beams, columns, roof and floor framing systems. 4 undergraduate hours. 4 graduate hours. Prerequisite: ARCH 352.

ARCH 426 International Architecture credit: 4 Hours.
Interdisciplinary opportunity to focus on, study, and record the design and planning of cities and rural settlements in other cultures. Through directed study and participation in the intellectual environment of a foreign university, students analyze unfamiliar settings, developing insights to enrich their professional development. 4 undergraduate hours. 4 graduate hours. May be repeated in separate terms to a maximum of 8 hours. Prerequisite: Junior standing or higher in the School of Architecture, Department of Landscape Architecture, or the Department of Urban and Regional Planning.

ARCH 427 Critical Travel Documentation credit: 4 Hours.
Modern and historic city forms and rural practices are analyzed while experiencing the realities of daily life traveling in another culture. Journals include drawings and writings that record buildings, environs, and landscapes. 4 undergraduate hours. 4 graduate hours. May be repeated in separate terms to a maximum of 8 hours. Prerequisite: Junior standing or higher in the School of Architecture, the Department of Landscape Architecture, or the Department of Urban and Regional Planning.
ARCH 468 Overseas Architectural Studies credit: 3 Hours.
This course is designed to enrich the professional development of students in a study abroad location. Students participate in thematic workshops, seminars, lectures and field trips focused on understanding and analyzing architectural and urbanistic landmarks and settings on site through both directed and independent assignments. 3 undergraduate hours. No graduate credit. May be repeated in separate terms up to 6 hours. Prerequisite: Senior standing in the School of Architecture.

ARCH 471 Fundamentals of Arch Design credit: 6 Hours.
Basic architectural design methods, fundamentals, principles and concepts including creative problem solving in two- and three-dimensions. 6 undergraduate hours. 6 graduate hours. Prerequisite: Limited graduate standing in Architecture and concurrent enrollment in ARCH 231.

ARCH 472 Arch Des in Landscape & Cities credit: 6 Hours.
Intermediate architectural design methods, fundamentals, principles and concepts focusing on buildings in landscape and urban contexts. 6 undergraduate hours. 6 graduate hours. Prerequisite: ARCH 471 and concurrent enrollment in ARCH 233.

ARCH 473 Fundamentals of Arch Development credit: 6 Hours.
Schematic design and development of a small-scale public building emphasizing the integration of the basic elements of building; materials, details, structure, technology, program, life safety, and universal design. 6 undergraduate hours. 6 graduate hours. Prerequisite: ARCH 374 or ARCH 472.

ARCH 474 Arch Design & Exploration credit: 6 Hours.
Exploration of boundaries of architecture and the built environment. Focused exploration into specific design topics, such as issue-oriented building problems, urban design theory, intermediate building design and site planning theory, human-environment relationship theory, interdisciplinary design, and architectural design and presentation methods. 4 undergraduate hours. 4 graduate hours. Prerequisite: ARCH 475.

ARCH 480 Directed Research in Arch credit: 1 to 4 Hours.
Participation in on-going research projects which may include energy management, environmental perception, facilities development, building science, and other topics. 1 to 4 undergraduate hours. 1 to 4 graduate hours. May be repeated to a maximum of 8 hours. Prerequisite: Approval of written proposal by instructor and Director of School.

ARCH 499 Off-Campus Study credit: 0 to 12 Hours.
Provides opportunity for approved off-campus study. Detailed proposal for study off campus must be submitted for approval to the appropriate committee in the School prior to such study. Final determination of credit and its application toward the degree is made after a review of the student's off-campus work by the above committee and the Director of School. 0 to 12 undergraduate hours. 0 to 12 graduate hours. Approved for both letter and S/U grading. Prerequisite: Senior or graduate standing in architecture and approval of program prior to registration.

ARCH 500 Architectural Practice credit: 3 Hours.
Role of the architect in the building enterprise, professional ethics, and the conduct of professional practice; legal aspects of architectural practice and building construction; introduction of business management, marketing, operational procedures, financial planning, and cost control of architectural practices; and the administration of construction contracts. Prerequisite: Graduate standing or consent of instructor.

ARCH 502 Structural Planning credit: 4 Hours.
General problems in the selection and design of structural systems for buildings; methods of analysis; site explorations, soils, and foundations; bracing; and special systems. Prerequisite: ARCH 451 and ARCH 452.

ARCH 503 History of World Landscapes credit: 4 Hours.
Same as LA 513. See LA 513.

ARCH 510 Seminar in Ancient Arch credit: 3 Hours.
Seminar on topics in ancient architecture. Prerequisite: ARCH 410, or equivalent as determined by the instructor.

ARCH 511 Seminar in Medieval Arch credit: 3 Hours.
Seminar on topics in medieval architecture. Same as MDVL 512. May be repeated to a maximum of 12 hours in the same or subsequent terms. Prerequisite: ARCH 411, ARCH 412, or equivalent as determined by the instructor.

ARCH 512 Seminar in Ren & Baroque Arch credit: 3 Hours.
Seminar on topics in European architecture from the fifteenth through the eighteenth centuries. Prerequisite: ARCH 413 and ARCH 414, or equivalent as determined by the instructor.

ARCH 513 Architecture Seminar 1800-2000 credit: 3 Hours.
Seminar on topics in European and American architecture from 1800 to 2000. May be repeated in separate terms to a maximum of 12 hours. Prerequisite: ARCH 415, ARCH 416, or ARCH 417.

ARCH 516 Architecture Seminar credit: 6 Hours.
Examines techniques for recording historic buildings and sites: measuring, photographing, and drawing to Historic American Building Survey standards; taking field notes and investigating public records to document reports. Prerequisite: ARCH 419 and demonstrated ability in architectural graphics; or consent of instructor.

ARCH 517 Conserv of Building Materials credit: 3 or 4 Hours.
Examination, analysis, and pathologies of building materials and techniques for treatment and repair of historic buildings. Emphasis is on conservation of traditional masonry, concrete, and metals. Field trips and lab work. To receive 4 hours credit, students must participate in lab. Prerequisite: ARCH 419.
ARCH 530 Management in Architecture credit: 3 Hours.
Study of management and business administration topics relevant to the architecture profession. The application of: marketing, ethics, accounting, organizational behavior, quantitative analysis, finance, operations, economics, and strategic planning to the field of architecture. Management and economic issues that influence and motivate commercial, industrial, institutional, and individual clients are addressed. Prerequisite: Graduate standing in Architecture.

ARCH 534 Building Economics credit: 3 Hours.
Study of factors affecting cost of building including: the building market, construction cost, estimates and cost control, time value of money and building life-cycle cost, measuring the worth of investments, depreciation and tax consideration of cash-flows. Prerequisite: Graduate standing or consent of instructor.

ARCH 538 Econ Issues in Arch Develop credit: 4 or 6 Hours.
Individual and team analysis of architectural development proposals addressing relevant economic topics and trends. Proposals are analyzed for development, construction, finance, operation, and sale costs. Potential and projected rate of return on investment is established for specific time periods. Economic and social forces impacting upon real estate values are examined. Prerequisite: ARCH 501, ARCH 530, and ARCH 534; or consent of instructor.

ARCH 544 Bldg Sys & Design Integration credit: 3 or 4 Hours.
Advanced course on building design for greater performance, including the study of: the anatomical and functional variations of building subsystems and their design implications; inter-system relationships and synergistic integration of building subsystems into the overall building; and the strategies for designing buildings of high functional performance and greater overall value. Term paper is required for 4 hours credit. Prerequisite: Graduate standing in Architecture or consent of instructor.

ARCH 545 Design & Constructability credit: 3 or 4 Hours.
Advanced course on building design for greater constructability, including material alternatives and their architectural, performance, and construction implications; the implications of the specifics of design on the range of applicable construction methods, and therefore, on construction productivity and economy; and the strategies for designing buildings of high constructability and greater overall value. Term paper is required for 4 hours credit. Prerequisite: ARCH 544 or consent of instructor.

ARCH 546 Programming & Concept Studio credit: 6 Hours.
An advanced course on programming architectural projects and developing design concepts to best meet the project goals and maximize value creation. Investigation of relevant issues and appropriate methods of programming and concept development are followed by programming and design exercises. The specific contents include: theories and methods of programming; general program requirements and exemplary design responses for selected major building types; testing of the viability of selected model programs through exploration of appropriate design responses; further enhancement of the subject programs in light of such explorations; and investigation and development of philosophically sound and operationally efficient methods of programming and design. May not be repeated for credit. Prerequisite: Graduate standing in Architecture and consent of instructor.

ARCH 547 Architectural Practice Studio credit: 6 Hours.
Comprehensive building design with emphasis on holistic design integration for optimum performance and constructability with best possible economy under the realistic temporal, technical, legal, and budgetary limitations. The projects, typically real ones, are executed through partial construction document phase through collaborative design by project teams. (Day-long Friday field trips). Prerequisite: ARCH 534, ARCH 545, and ARCH 546; or consent of instructor.

ARCH 548 Const Execution & Admin credit: 4 Hours.
Advanced course in construction with emphasis on acquiring knowledge and developing skills for successful project execution in a real-time project with numerous variables affecting the project outcome, including: devising methods and strategies for effective project execution; making decisions that can steer the project to the best possible direction; and skillfully mediating disputes and conflicts that might arise. For this purpose, on-going major construction projects are used as Learning Laboratories. May be repeated to a maximum of 8 hours. (Summer I credit: 1 graduate hour and Summer II credit: 2 graduate hours). Prerequisite: ARCH 501 and ARCH 545; or consent of instructor.

ARCH 550 Reinforced Concrete Design credit: 4 Hours.
Selection, design, and comparison of reinforced concrete floor systems for buildings; study and design of columns and footings; and prestressed concrete. Prerequisite: ARCH 452.

ARCH 551 Structural Analysis credit: 4 Hours.
Advanced problems in the analysis of statically determinate structures; general theories and methods of analysis of statically indeterminate structures by geometric and energy methods; and introduction to theory of plastic design. Prerequisite: ARCH 451 and ARCH 452.

ARCH 552 Soil Mech and Foundations credit: 3 Hours.
Soil properties and site exploration; stresses in soils; soil consolidation and settlement; shear strength of soils; bearing capacity; design of spread and combined footings; mats; pile foundations; lateral soil pressure and retaining walls. Prerequisite: ARCH 452 and ARCH 551.

ARCH 553 Adv Reinforced Concrete Design credit: 3 Hours.
Critical review of the analysis, methods, and specifications involved in the design and behavior of reinforced concrete structures for buildings, including tall buildings, plates, and shells; computer applications. Prerequisite: ARCH 551; credit or concurrent registration in ARCH 560 or consent of instructor.
ARCH 554 Adv Steel Design credit: 3 Hours.
Advanced topics in the design of steel structures; critical study of the AISC specification; design of steel members and their connections; composite structures; and the analysis and design of continuous structures and tall buildings. Prerequisite: ARCH 560 or consent of instructor.

ARCH 555 Prestressed Concrete Design credit: 3 Hours.
Theory and design of prestressed concrete structures and suspension shell structures. Prerequisite: ARCH 553 or consent of instructor.

ARCH 556 Advanced Structural Planning credit: 4 Hours.
Study of the loads, functional and spatial requirements, and construction problems in the selection and design of structural systems for buildings; cost estimates; and integration of mechanical and electrical equipment. Prerequisite: ARCH 552 and ARCH 553; credit or concurrent registration in ARCH 554 and ARCH 555, or consent of instructor.

ARCH 558 Structural Wood Design credit: 3 Hours.
Analysis and design of wood structures for buildings; response of wood buildings to gravity and lateral loads; design of structural elements: beams, columns, beam-columns, members in tension, and trusses using NDS specifications; connections; plywood panels; diaphragms and shear walls. Prerequisite: ARCH 451 or equivalent.

ARCH 559 Structural Masonry Design credit: 3 Hours.
Engineering properties of masonry materials; codes and standards for masonry structures; analysis and design of masonry structures including multistory buildings and arches. Prerequisite: ARCH 452 or equivalent.

ARCH 560 Advanced Structural Analysis credit: 3 Hours.
Advanced theory and analysis of statically indeterminate structures, recognizing effects due to temperature, settlement, and fabrication errors; matrix methods focusing on computer analysis techniques; introduction to plastic analysis and design. Prerequisite: ARCH 551.

ARCH 563 Soc/Beh Research Designed Env credit: 4 Hours.
Introduction to methods and techniques of systematically generating social and behavioral information relevant to the programming, design, and evaluation of physical environments. Same as LA 563. Prerequisite: Graduate standing in architecture, landscape architecture, or urban and regional planning.

ARCH 571 Design:Detail & Architectonics credit: 6 Hours.
Design studio investigations of multiple techniques and methodologies addressing the design and fabrication of small-scale architectural constructions, explorations of specific sites and places, and interdisciplinary projects. Field trips may be required. May be repeated to a maximum of 12 hours. Prerequisite: Graduate standing in Architecture.

ARCH 572 Design: Behavior & Environment credit: 6 Hours.
Design studio explorations responding to social, economic, political and behavioral dimensions of human existence and settlement. Projects investigate the experience of physical environments at the human scale and socially sustaining design strategies addressing diverse human needs. Field trips may be required. May be repeated to a maximum of 12 hours. Prerequisite: Graduate standing in Architecture.

ARCH 573 Design:Technology & Performance credit: 6 Hours.
Design studio investigations of buildings and systems focusing on structure, enclosure, technology and performance. Integration of building materials, components and systems and their impact on the design, construction, and sustainability of buildings. Field trips may be required. May be repeated to a maximum of 12 hours. Prerequisite: Graduate standing in Architecture.

ARCH 574 Design:Arch/Urban&Preservation credit: 6 Hours.
Design studio investigations of issues that impact urban habitats, buildings and people. Architecture and urban design, preservation, and adaptation of new and existing buildings, cities, districts, public realms and urban environments. Designing and preserving buildings and communities in a sustainable manner. Field trips may be required. May be repeated to a maximum of 12 hours. Prerequisite: Graduate standing in Architecture.

ARCH 576 Architectural Design Seminar credit: 3 Hours.
Presentations and discussions relative to various areas of architectural and environmental design concerns. May be repeated to a maximum of 15 hours. Prerequisite: Consent of instructor.

ARCH 577 Theory of Architecture credit: 3 Hours.
Review of principles of architectural design; factors in programming architectural requirements; design development; and evaluation and criticism. Prerequisite: Graduate standing in Architecture or consent of instructor.

ARCH 589 PhD Colloquium credit: 1 Hour.
Provides graduate students insight on the responsibilities and expectations of academic faculty. Core responsibilities - research, teaching and service - required of faculty will be discussed, along with important resources and strategies to aid students in obtaining a faculty appointment and plotting a successful career path. Approved for S/U grading only. Must be repeated in separate terms to a maximum of 2 hours.

ARCH 590 Directed Research credit: 0 to 8 Hours.
Nature and scope of projects to be determined by consultation between student and faculty advisor; open to architecture and landscape architecture majors as well as those from other disciplines who wish to engage in interdisciplinary work. Approved for both letter and S/U grading. May be repeated in the same term up to 12 hours and separate terms up to 18 hours; MARCH students are limited to 12 hours. Prerequisite: Consent of instructor.
ARCH 591 Spec Prob Arch Hist & Pres credit: 2 to 4 Hours.
Individual investigation of the work of particular architects, of specific buildings, and of the architecture of periods or regions; comparative studies; and aesthetic problems. May be repeated in separate terms to a maximum of 12 hours. Prerequisite: Twelve hours of architectural history or consent of instructor.

ARCH 593 Spec Prob Arch Practice & Mgt credit: 2 to 4 Hours.
In-depth investigation of emerging issues and specific areas of research interest beyond what is covered in graduate courses of regular offering in the area of architectural practice and management. Students, as individuals or in groups, are expected to propose a research plan and methods for a specific topic of research interest in consultation with the instructor, and execute it under the guidance of the instructor through consultation on a regular basis. May be repeated in same and subsequent terms as topics vary to a maximum of 12 hours. Prerequisite: Advanced graduate standing and consent of instructor.

ARCH 594 Spec Prob Building Sci & Tech credit: 2 to 4 Hours.
In-depth investigation of emerging issues and specific areas of research interest beyond what is covered in graduate courses of regular offering in the area of building science technology. Students, as individuals or in groups, are expected to propose a research plan and methods for a specific topic of research interest in consultation with the instructor, and execute it under the guidance of the instructor through consultation on a regular basis. May be repeated to a maximum of 12 hours. (Summer credit: 1 to 2 graduate hours). Prerequisite: Advanced graduate standing and consent of instructor.

ARCH 595 Spec Prob Struct Theory & Des credit: 2 to 4 Hours.
Individual or group investigation and study in architectural engineering application; research in economy and design in correlation with architectural, mechanical, and structural requirements. May be repeated to a maximum of 12 hours. Prerequisite: Consent of instructor.

ARCH 596 Spec Prob Housing Env credit: 2 to 4 Hours.
Individual investigation or research in housing environments involving special issues such as energy conscious design, human-environmental relations, aesthetic theory, government policy, and cultural patterns. May be repeated to a maximum of 12 hours. Prerequisite: Consent of instructor.

ARCH 597 Spec Prob Arch Design credit: 2 to 4 Hours.
Individual investigation of building types and systems, aesthetic theories, design thesis programming and other problems in architectural design. May be repeated to a maximum of 16 hours. Prerequisite: Consent of instructor.

ARCH 599 Thesis Research credit: 0 to 16 Hours.
Approved for S/U grading only. May be repeated to a maximum of 16 hours. Prerequisite: Consent of instructor and graduate program coordinator.

Art (ART)

ART Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/ART)

Courses

ART 100 Understanding Visual Culture credit: 3 Hours.
Interdisciplinary methods in recognizing and understanding meaning of a wide range of visual messages in the arts, design, and culture, with emphasis on critical thinking and analysis. Topics include: visual perception, visual persuasion, the visual interpretation of time and space, humor. Contemporary art and design are explored through the use of semiotics and historical, cultural and ethical aesthetic and technical perspectives.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts

ART 102 Drawing for Non-Majors credit: 3 Hours.
Students will work with a wide variety of drawing materials, methods and strategies in a studio art context. Students will explore drawing concepts, form, and technique through production and critique of artworks, as well as address theories and histories of visual representation through readings and discussion. Students with little or no background in visual art are encouraged to participate as well as those who may have significant knowledge and experience. Not open to students majoring in art and design. Additional fees may apply. See Class Schedule.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts

ART 103 Painting for Non-Majors credit: 3 Hours.
Students will work with a wide variety of painting materials, methods and strategies in a studio art context. Students will explore painting concepts, form, and technique through production and critique of artworks, as well as address theories and histories of visual representation through readings and discussion. Students with little or no background in visual art are encouraged to participate along with those who have significant knowledge and experience. Additional fees may apply. See Class Schedule.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
ART 104 Sculpture for Non-Majors credit: 3 Hours.
Students will work with a wide variety of sculptural materials, methods and strategies in a studio art context. Students will explore sculpture concepts, form, and technique through production and critique of artworks, as well as address theories and histories of visual representation through readings and discussion. Students with little or no background in visual art are encouraged to participate along with those who may have significant knowledge and experience. Additional fees may apply. See Class Schedule. This course satisfies the General Education Criteria for: UIUC: Literature and the Arts

ART 105 Visual Design for Non-Majors credit: 3 Hours.
Theory and practice in the elements, and principles of visual design organized under three headings: color, a study of the visual, material and psychological nature of color; communication, an introduction to the fundamentals of visual communication using primarily digital media; and 3D craft, a survey of fabrication techniques using three-dimensional media. This course satisfies the General Education Criteria for: UIUC: Literature and the Arts

ART 140 Introduction to Art credit: 3 Hours.
A creative and expressive exploration of multiple art media, including but not limited to drawing, painting and design elements. This course is an introduction to the art making process with weekly interactive lectures and hands on studio sections. Additional fees may apply. See Class Schedule. Not open to students in art and design and architecture. This course satisfies the General Education Criteria for: UIUC: Literature and the Arts

ART 191 Unit One Studio/Seminar credit: 1 to 3 Hours.
Topics vary; consult Unit One office. Approved for both letter and S/U grading. May be repeated if topics vary.

ART 199 Undergraduate Open Seminar credit: 1 to 5 Hours.
Additional fees may apply. See Class Schedule. May be repeated.

ART 201 Art in Early Childhood credit: 2 Hours.
Philosophical and practical foundations for teaching art in early childhood settings. Lectures, discussions and class activities focus on the value of art in the curriculum, artistic development and instruction, observation and guided teaching practice. Additional fees may apply. See Class Schedule. Prerequisite: Not open to students majoring in art and design.

ART 202 Art in the Elementary Grades credit: 2 Hours.
Introductory laboratory experiences with the elements of design in the visual arts and with processes, materials, and activities appropriate for the elementary grades. Additional fees may apply. See Class Schedule. Prerequisite: Not open to students majoring in art and design.

ART 205 Experience & Meaning in Design credit: 3 Hours.
Introduces students to the cultural impact of graphic design by connecting graphic design theory to the everyday experience of meaningful design. Graphic design will be studied as a mediating factor between culture and cognitive processing. The course utilizes a weekly pattern of assigned readings, online presentations, design assignments delivered online, and peer review. The reading and presentations will connect the students to major concepts. The assignments will allow students to demonstrate understanding of those concepts. This course satisfies the General Education Criteria for: UIUC: Behavioral Sciences UIUC: Western Compartv Cult

ART 210 Special Topics for Non-Majors credit: 3 Hours.
Allows students to explore a revolving series of genres, specializations, and /or interdisciplinary practices. Possible subjects include, but are not limited to, site-specific public art, recycled and sustainable materials, performance, sound, or emerging technology. Topics and subject matter to be published in course listings. May be repeated to a maximum of 6 hours in separate terms.

ART 280 Exploring Visual Culture credit: 3 Hours.
Introduces key concepts for understanding the wide range of imagery that has come to characterize contemporary everyday life in the 21st century. Explores concepts drawn from the literature of visual culture studies. Analyzes images from popular culture, fine arts, and vernacular arts, with contemporary mass media, such as music videos and television dramas, being considered alongside historical paintings and sculpture. This course satisfies the General Education Criteria for: UIUC: Literature and the Arts UIUC: Western Compartv Cult

ART 299 Special Topics in Art credit: 1 to 3 Hours.
Topics and subject matter to be published in course listings. Additional fees may apply. See Class Schedule. May be repeated in the same term to a maximum of 6 hours. May be repeated in separate terms to a maximum of 12 hours. Prerequisite: Sophomore standing.
ART 310 Design Thinking credit: 3 Hours.
Introduces design literacy and promotes an understanding of the field of contemporary design. Explores design thinking as a common thread that connects all disciplines concerned with the making of things, the solving of problems, and the organization of information. Through a series of lectures, case studies, and simple design projects, this course offers an extensible framework of tools and strategies that can be applied across multiple disciplinary boundaries.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts

ART 350 Writing with Video credit: 3 Hours.
Students will engage in a comprehensive exploration of creative inquiry, self-reflection, social engagement, and media production. They will adapt the basic, traditional principles of critical writing and analysis, to communicate effectively using image production and post-production. Directed writings in concert with video production projects will allow students to experience an integrated process of thinking, creating, and problem-solving. Prerequisite: Any Composition I course.
This course satisfies the General Education Criteria for:
UIUC: Advanced Composition
UIUC: Literature and the Arts
UIUC: Western Compartv Cult

ART 375 Capstone Studio for Non-Majors credit: 3 Hours.
Non-majors with prior studio experience will identify and pursue project-based creative work, either individually or as part of a collaborative team. Students work closely with the instructor to identify individual interests and formulate a suitable semester-long project. Prerequisite: Two prior studio courses.

ART 499 Special Topics in Art credit: 1 to 4 Hours.
Topics and subject matter to be published in course listings. Additional fees may apply. See Class Schedule. 1 to 3 undergraduate hours. 1 to 4 graduate hours. May be repeated in the same term to a maximum of 6 undergraduate hours or 6 graduate hours. May be repeated in separate terms to a maximum of 9 undergraduate hours or 12 graduate hours. Prerequisite: Senior standing or consent of instructor.

ART 550 Writing with Video Workshop credit: 4 Hours.
Explores the use of video in research, scholarly, and/or creative endeavors. Students engage in a comprehensive examination of video as a rhetorical narrative medium, with a focus on the actual production of video work. Emphasizes the use of video as a tool for inquiry, engagement, composition, and communication across a broad range of cultural and professional practices. Additional fees may apply. See Class Schedule. Prerequisite: Graduate standing.

Art--Design (ARTD)

ARTD Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/ARTD)

Courses

ARTD 201 Industrial Design I credit: 4 Hours.
Introduction to the creative process and methods involved in industrial design; research, modeling, form giving, prototyping and communication with emphasis on user centered design. Projects of escalating scale and complexity complemented by lectures and demonstrations. Additional fees may apply. See Class Schedule. Prerequisite: Concurrent registration in ARTD 224 or ARTD 225.

ARTD 202 Industrial Design II credit: 4 Hours.
Studio design problems of increasing complexity involving structures and mechanisms. Lectures and discussions to explore design issues affecting contemporary culture and aesthetics perceptions. Additional fees may apply. See Class Schedule. Prerequisite: ARTD 201. Concurrent registration in ARTD 224 or ARTD 225. Sophomore standing in Industrial Design major.

ARTD 209 Chado (The Way of Tea) credit: 3 Hours.
Explores the Japanese Tea Ceremony and its relevance to everyday life. Students will acquire a better understanding of Japanese culture and a new appreciation of their own cultures through the study of the Tea Ceremony and the Zen worldview that informs it. Additional fees may apply. See Class Schedule.
This course satisfies the General Education Criteria for:
UIUC: Non-Western Cultures

ARTD 211 Design History Survey credit: 3 Hours.
The historical, social and cultural context of design concentrating on manufactured products, communication, media and design from the Industrial Revolution to the present. Lectures, seminars and individual research projects.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
ARTD 215 Introduction to Typography credit: 3 Hours.
This introductory studio functions as a survey of media-based affordances on typography. Students relate typographic form to reading conventions and reader expectations, as well as human cognitive and perceptual limitations. Internal consistency is established as a primary criterion for quality in design solutions. Additional fees may apply. See Class Schedule. Prerequisite: Sophomore standing in graphic design curriculum or consent of instructor.

ARTD 216 Introduction to Image Making credit: 3 Hours.
This introductory studio functions as a survey of representational strategies through image reproduction technology. Discussions center around the reader's construction of meaning through still and moving images. Students develop an authorial voice in visual practice. Additional fees may apply. See Class Schedule. Prerequisite: Sophomore standing in graphic design curriculum or consent of instructor.

ARTD 217 Introduction to Graphic Design credit: 3 Hours.
Introduces students to the field of graphic design in theory and practice. Examines what graphic designers make and the methods that are employed in contemporary design practice. Emphasis is placed on the organization and visual presentation of relevant content across media and their effect within systems. Additional fees may apply. See Class Schedule. Prerequisite: Sophomore standing in graphic design and ARTD 215.

ARTD 225 Design Drawing credit: 3 Hours.
Introduction to rapid drawing methods and tools used by designers. Focuses on theory and application of orthographic and perspective drawing for communication of design ideas. Additional fees may apply. See Class Schedule. May be repeated to a maximum of 6 hours. Prerequisite: Concurrent registration in ARTD 201 or ARTD 202.

ARTD 228 Computer Applications credit: 3 Hours.
Concepts, methods and applications of computer-aided industrial design to the design of products for mass manufacture. Rendering and lighting techniques to communicate product forms. Additional fees may apply. See Class Schedule. Prerequisite: Industrial Design major, sophomore standing or consent of instructor. Concurrent registration in ARTD 201 or ARTD 202.

ARTD 230 User-oriented Collab Design credit: 3 Hours.
Focuses on user-oriented, collaborative approaches to designing new products and services. The importance of design as a process and the development of design strategies is emphasized. Students observe and engage real users to develop an understanding of needs, perceptions, and values. A collaborative studio environment promotes shared understanding of design problems and product solution. Topics covered include design thinking, user research, concept development, interaction design, and usability engineering.

ARTD 240 eWaste: Sustainable Design credit: 3 Hours.
Examines the topics of electronic waste, or eWaste, within the context of sustainable design. Students will learn about sustainable and "green" electronic product design practices and develop the ability to assess a variety of products according to these criteria. Case studies will be supplemented by assigned readings, directed writing, and group discussion. This course satisfies the General Education Criteria for: UIUC: Literature and the Arts

ARTD 250 Basic Photography credit: 3 Hours.
Investigates basic image making and meaning. Student works with digital camera, exposure meter and learns digital printing. Student must furnish camera. Additional fees may apply. See Class Schedule. Prerequisite: Freshman standing in Art and Design or in Art History major or minor; or consent of instructor.

ARTD 251 Photography II credit: 3 Hours.
Uses digital process to express content with emphasis on the development of a personal aesthetic. Student must furnish camera. Additional fees may apply. See Class Schedule. Prerequisite: ARTD 260. For Art majors only.

ARTD 252 View Camera credit: 3 Hours.
Includes work with camera movements, exposure, black and white film development and basic wet process silver printing as tools of creative expression. Most equipment furnished. Additional fees may apply. See Class Schedule. May be repeated in separate terms to a maximum of 6 hours. Prerequisite: ARTD 261 or consent of instructor.

ARTD 253 Digital Photographic Output credit: 3 Hours.
Explores the potential of color printing and output in digital media as a form for creative expression. Student must furnish camera. Additional fees may apply. See Class Schedule. May be repeated in separate terms to a maximum of 6 hours. Prerequisite: ARTD 260.

ARTD 299 Spec Topics in Design Courses credit: 1 to 5 Hours.
Topics and subject matter to be published in course listings. Additional fees may apply. See Class Schedule. May be repeated to a maximum of 6 hours in a semester, to a maximum of 12 total hours. Prerequisite: Sophomore standing in Art and Design.

ARTD 301 Industrial Design III credit: 4 Hours.
Design of user centered products for mass production; experience in the iterative problem solving processes and methods. Addresses practical constraints such as sustainability, environmental factors/ergonomics, manufacturing and materials, social and political and economic. Additional fees may apply. See Class Schedule. Prerequisite: ARTD 202.

ARTD 302 Industrial Design IV credit: 4 Hours.
Industrial design problems of increasing complexity, scope and size. Continuation of ARTD 301. Prerequisite: ARTD 301. Additional fees may apply. See Class Schedule.
ARTD 310 Intermediate Graphic Design I credit: 3 Hours.
This intermediate studio expands student knowledge of contemporary research methodologies that focus on user experience, collaboration, sustainability, and social responsibility. Projects are designed to provide students with the basic knowledge to become agents of positive social and commercial change. Additional fees may apply. See Class Schedule. Prerequisite: Junior standing in graphic design curriculum and ARTD 215, ARTD 216, and ARTD 217.

ARTD 311 Intermediate Graphic Design II credit: 3 Hours.
This intermediate studio tasks student teams analyze a system of designed products or services and propose/manage an intervention strategy. Students develop inclusive practices with stakeholders, who are addressed with empathy as co-creators. This topic studio changes in content with each semester. Additional fees may apply. See Class Schedule. Prerequisite: Junior standing in graphic design curriculum and ARTD 310.

ARTD 313 Digital Interaction credit: 3 Hours.
This studio explores the construction of compelling user experiences that incorporate the use of digital media. Students investigate both the theoretical and practical aspects of interaction through exercises involving information architecture, interface design, and creative code. Additional fees may apply. See Class Schedule. Prerequisite: Junior standing in graphic design curriculum and ARTD 310.

ARTD 326 Sustainability & Manufacturing credit: 3 Hours.
Exploration of environmental origins, theory and practice of sustainable product design. Environmentally-responsive design methodologies and topics such as industrial ecology, dematerialization, design for disassembly, design for recycling and life-cycle assessment. Additional fees may apply. See Class Schedule. Prerequisite: Junior standing in Art and Design or consent of instructor.

ARTD 328 Human-Centered Product Design credit: 3 Hours.
Principles of human-centered design and usability applied to products, product systems, and product environments to enhance the user experience; strategies to enhance independent learning for professional development, to further research, and to acquire new skills. Additional fees may apply. See Class Schedule. Prerequisite: Junior standing in Art and Design or consent of instructor.

ARTD 360 Photography III credit: 3 Hours.
Explores creative expression through various media but primarily photography. Students select format based on prior experience; group critiques held weekly; initial opportunity to experiment in personally selected directions and assignments which will be refined and amplified in ARTD 460. Additional fees may apply. See Class Schedule. May be repeated to a maximum of 12 hours. Prerequisite: Junior standing in Photography or consent of instructor.

ARTD 362 Photography Workshop credit: 3 Hours.
Advanced course on a special topic; see Class Schedule section note for description. Additional fees may apply. See Class Schedule. May be repeated to a maximum of 12 hours. Prerequisite: Junior or senior standing in art and design; or consent of instructor based upon announced criterion that varies with topic.

ARTD 363 RAW Photography credit: 3 Hours.
An advanced Photoshop course for the student interested in a digital approach to Fine Art Photography. Students will explore the use and conversion methods of the RAW digital process, and learn how to extract, control, and enhance digital image files. Over the course of the semester, an effective and personal workflow within the Photoshop environment will be developed. Access to a digital SLR camera is required. Additional fees may apply. See Class Schedule. May be repeated in separate terms to a maximum of 6 hours. Prerequisite: Junior or above standing in Art and Design, or consent of the instructor. ARTD 260 and ARTD 261 are suggested.

ARTD 391 Special Problems in Design credit: 1 to 4 Hours.
Directed independent creative activity or research. Additional fees may apply. See Class Schedule. May be repeated to a maximum of 6 hours. Prerequisite: Junior standing in Art and Design; and consent of instructor, advisor, and associate director of the School. A contract must be completed & approved by the instructor & advisor. Must be Junior. 3.3 GPA, & only 6 hours total Ind. Study.

ARTD 393 Contemporary Art and Ideas credit: 3 Hours.
Advanced study of photographic issues and the creative process. Discusses creativity, aesthetics, criticism, and current imagery, as well as photography's relationship to other media. Additional fees may apply. See Class Schedule. May be repeated to a maximum of 6 hours. Prerequisite: Junior standing in Photography or consent of instructor.

ARTD 399 Internship in Design credit: 1 to 4 Hours.
Internships to be pre-approved for variable credit. Students will be required to document work completed during the internship with verification of supervisor. Supervisor will also be required to fill out a questionnaire either by mail or on-line. Faculty members will assess work and questionnaires to assign a grade. Approved for S/U grading only. Prerequisite: Junior standing in School of Art and Design.

ARTD 401 Industrial Design V credit: 4 Hours.
Advanced design projects in the context of the business environment in which product design and development takes place; marketing, branding, merchandizing, entrepreneurship within the context of globalized marketing and manufacturing. Additional fees may apply. See Class Schedule. 4 undergraduate hours. 4 graduate hours. Prerequisite: ARTD 302.

ARTD 402 Industrial Design VI credit: 4 Hours.
Capstone project integrating all aspects of the design process from concept through final design, documentation and presentation; reconciliation of user centered constraints such as socio-economic, environmental-sustainability, manufacturability, health and safety and ethical. Standard approach that of an entry level industrial design professional. Additional fees may apply. See Class Schedule. 4 undergraduate hours. 4 graduate hours. Prerequisite: ARTD 401.
ARTD 410 Advanced Graphic Design I credit: 4 Hours.
This advanced studio challenges students to seek and define problems within a shared topic. Emphasis is placed on the articulation of self-initiated narratives and consequent development of appropriate design strategies. This studio promotes a deeper understanding of design as a change agent within societal and economic systems that will lead to a comprehensive plan for the capstone project undertaken in ARTD 411. Additional fees may apply. See Class Schedule. 4 undergraduate hours. 4 graduate hours. Prerequisite: ARTD 311 and senior standing in graphic design; for graduate credit - consent of graphic design program chair.

ARTD 411 Advanced Graphic Design II credit: 4 Hours.
This capstone studio continues design investigations in the interest of understanding and confidently articulating individual interests and abilities. This studio also focuses on the refinement of a comprehensive portfolio; self, peer, faculty, and outside review of student work; and an enhanced study of the field in preparation for professional practice. Additional fees may apply. See Class Schedule. 4 undergraduate hours. 4 graduate hours. Prerequisite: ARTD 410 and senior standing in graphic design; for graduate credit - consent of graphic design program chair.

ARTD 415 Ninth Letter credit: 3 or 4 Hours.
Students develop, design, and produce issues of the national literary and arts journal, Ninth Letter. Also involves students in curating and designing content for the companion website, ninthletter.com. Additional fees may apply. See Class Schedule. 3 undergraduate hours. 4 graduate hours. May be repeated to a maximum of 6 undergraduate hours and 8 graduate hours. Prerequisite: Consent of instructor.

ARTD 420 Disability Design credit: 3 Hours.
Focuses on user-oriented, collaborative approaches to designing new products and services, with special emphasis on designing for people with disabilities. Students gain an understanding of the product development process by exploring empathic design research approaches, while working directly with prospective clients. Course work centers on designing products for mass production, and on recognizing opportunities to re-engineer existing products. 3 undergraduate hours. 3 graduate hours. Prerequisite: Junior standing.

ARTD 426 Product Innovation credit: 3 Hours.
Presents an overview of the product development process from concept generation to design for manufacturing and project management. Emphasis on product definition, innovation, the early phases of development and the role of designer in new product development. 3 undergraduate hours. 3 graduate hours.

ARTD 445 Seminar in Design credit: 3 or 4 Hours.
Investigation of special problems and current topics in industrial and/or graphic design. Students will conduct original research which will be shared through papers, presentations, and discussions. Additional fees may apply. See Class Schedule. 3 undergraduate hours. 4 graduate hours. May be repeated in separate terms to a maximum of 12 undergraduate hours or 16 graduate hours. Prerequisite: Junior standing in Art and Design or consent of instructor.

ARTD 448 Professional Design Practice credit: 3 Hours.
Concentrates on developing presentation and communication skills that form the basis of a successful design career. Students will engage in portfolio reviews, plan and install exhibitions, prepare client presentations, and rehearse job interviews. Written work will include CV preparation. Emphasis will be placed on familiarizing students with professional practices and contexts. 3 undergraduate hours. No graduate credit.

ARTD 450 Industrial Design I credit: 6 Hours.
Introduces graduate-level course emphasizing in-depth design research used to evaluate set studio projects. Focuses on the development of critical thinking and product evaluation, and the development of inherent skills required to communicate that thinking through designed artifacts. This course is the first level of a six-term study in a three-year program leading to a terminal degree of MFA in Industrial Design. Additional fees may apply. See Class Schedule. Prerequisite: BFA in Industrial Design or a related field (as accepted by the faculty), or consent of instructor.

ARTD 452 Disability Design credit: 3 Hours.
Provides an overview of social, cultural, and design factors that shape the field of disability design. Emphasis is placed on understanding the impact of design on people with disabilities, and the role of designers in promoting inclusion and accessibility. Students will conduct original research which will be shared through papers, presentations, and discussions. Additional fees may apply. See Class Schedule. 3 undergraduate hours. 3 graduate hours. Prerequisite: Consent of instructor.

ARTD 453 Industrial Design II credit: 6 Hours.
Second term of the introductory level year of the Industrial Design MFA degree program. Additional fees may apply. See Class Schedule. Prerequisite: ARTD 501.

ARTD 454 Industrial Design III credit: 6 Hours.
Starts the second level of a six-term study in a three-year program leading to a terminal degree of MFA in Industrial Design. For two-year program, emphasis is solely directed to a research and design project that is the first stage of a comprehensive written thesis. Additional fees may apply. See Class Schedule. Prerequisite: ARTD 502.
ARTD 504 Industrial Design IV credit: 6 Hours.
Completion of the second level of a six-term study in a three-year program leading to a terminal degree of MFA in Industrial Design. For two-year program, emphasis is solely directed to a research and design project that is the final stage of a comprehensive written thesis. Additional fees may apply. See Class Schedule. Prerequisite: ARTD 503.

ARTD 505 Industrial Design V credit: 6 Hours.
Beginning of the third year of six-term study in a three-year program leading to a terminal degree of MFA in Industrial Design. Emphasis is solely directed to a research and design project that is the first stage of a comprehensive written thesis. Additional fees may apply. See Class Schedule. Prerequisite: ARTD 504.

ARTD 506 Industrial Design VI credit: 6 Hours.
Final term of a three-year program leading to a terminal degree of MFA in Industrial Design. Emphasis is solely directed to a research and design project accompanied by a comprehensive written thesis. Additional fees may apply. See Class Schedule. Prerequisite: ARTD 505.

ARTD 591 Special Problems in Design credit: 2 to 8 Hours.
Directed individual creative activity or research. Additional fees may apply. See Class Schedule. May be repeated to a maximum of 20 hours. Prerequisite: Graduate standing in Design.

ARTD 595 Design Laboratory credit: 2 to 6 Hours.
Individually directed research in the studio with concentration in design. Additional fees may apply. See Class Schedule. May be repeated to a maximum of 20 hours. Prerequisite: Enrollment in the MFA program in graphic design or consent of departmental graduate committee.

ARTD 599 Industrial Design Thesis credit: 0 to 2 Hours.
Faculty guidance in research and writing thesis for advanced degree in Industrial Design. Additional fees may apply. See Class Schedule. Approved for S/U grading only. May be repeated. Prerequisite: Graduate study in Industrial Design.

Art--Education (ARTE)

ARTE Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/ARTE)

Courses

ARTE 201 Foundations of Art Education credit: 3 Hours.
Provides students with philosophical foundations for teaching art including in public schools. The primary emphasis will be on understanding recent and contemporary orientations through readings and practical activities. Particular emphasis will be placed on emerging trends in Art Education, especially the use of technology and the value of visual culture in student lives. It is envisaged that this course will provide the primary theoretical foundation for further practical and pre-service teaching courses in Art Education. Additional fees may apply. See Class Schedule.

ARTE 202 Methods of Teaching Art credit: 3 Hours.
Considers how competencies identified by the Illinois State Board of Education and the National Art Education Association inform the development of knowledge, dispositions, and resources for teaching art in a culturally diverse society, with particular attention to current theories and approaches to teaching art in Pre-School to Grade 12 settings. Emphasis is placed on professional development and reflective practices that engage inquiry-based teaching strategies. Teaching strategies for both making and appraising images are emphasized. Additional fees may apply. See Class Schedule.

ARTE 203 Art Teaching Seminar credit: 3 Hours.
This course is designed to provide undergraduates and graduates seeking certification in Art Education the opportunity to develop and evaluate art curricula for Grades Pre-K through 12. Seminar topics include formulating art lessons, strategies to motivate learners, children's artistic development, effective teaching methods, integrating art museum learning, critique, writing, and technology in the lesson planning process, and maintaining an ISBE file for certification in the State of Illinois. This course must be taken in conjunction with ARTE 204. Additional fees may apply. See Class Schedule. Prerequisite: ARTE 202.

ARTE 204 Practicum Teaching Experience credit: 4 Hours.
Provides undergraduate and graduates seeking certification in Art Education structured and supervised teaching experience in the Saturday Art School program, held 10 Saturday mornings during the semester. Professional development in personal communication skills, lesson plan delivery, organizational abilities, use of technology in instruction, and art classroom management will comprise the goals of the course. Must be taken in conjunction with ARTE 203. Additional fees may apply. See Class Schedule. Prerequisite: ARTE 202.

ARTE 260 Museums in Action credit: 3 Hours.
Considers how scholarly discourse in museum interpretation and educational program development are translated into practices that engage culturally diverse audiences. Readings, research, and professional activities provide students with opportunities for examination of museum interpretive practices, programming decisions, and public engagement activities, along with analysis of Krannert Art Museum's presence on the university campus, in the larger community, and on the World Wide Web.

ARTE 299 Spec Topics in Art Education credit: 3 Hours.
Topics and subject matter to be published in course listings. Additional fees may apply. See Class Schedule. May be repeated to a maximum of 6 hours in a semester or, to a maximum of 12 total hours. Prerequisite: Sophomore standing in Art and Design.
ARTE 301 Early Field Art Teaching credit: 3 Hours.
Early field experience in local elementary schools one half day weekly; includes identification, instruction, methods, and practicum on the psychology of the exceptional child. Additional fees may apply. See Class Schedule. Prerequisite: ARTE 203 and ARTE 204; Art education majors only.

ARTE 302 Public School Art Programs credit: 3 Hours.
The selection and arrangement of content for different educational levels; study and evaluation of curricula, equipment, and supplies; and program supervision. Additional fees may apply. See Class Schedule. Prerequisite: ARTE 301 or junior standing in art, or consent of instructor.

ARTE 350 Creative Dance for Children credit: 3 Hours.
Same as DANC 350 and HDFS 361. See DANC 350.

ARTE 391 Independent Study credit: 1 to 4 Hours.
Directed independent research or creative activity. Additional fees may apply. See Class Schedule. May be repeated to a maximum of 6 hours. Prerequisite: Junior standing in art and design; and consent of instructor, advisor, and associate director of the School.

ARTE 401 Teaching Seminar credit: 4 Hours.
Examines responsibilities, methods, and techniques specific to teaching art in elementary and secondary schools; includes the psychology of the exceptional child in conjunction with methods of instruction and student teaching experience. 4 undergraduate hours. 4 graduate hours. Prerequisite: ARTE 302; concurrent registration in EDPR 438 and EDPR 442, art education sections only.

ARTE 402 Artistic Development credit: 3 or 4 Hours.
Historical and contemporary perspectives on children's artistic development, emphasizing relationships between general intellectual growth and the ability to create and respond to works of art. Additional fees may apply. See Class Schedule. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: Junior standing, and PSYC 100 and EPSY 201.

ARTE 475 Art Museum Exhibition Practice credit: 3 or 4 Hours.
Explores issues pertaining to the preparation, installation and conservation of visual art. Students will learn how to organize, design, spot and install an exhibition; develop exhibition graphics; address conservation issues; handle works of art; and learn the business of art. Field trips and guest lectures by conservators, preparators, curators and exhibition designers will add further depth to the class. Additional fees may apply. See Class Schedule. 3 undergraduate hours. 4 graduate hours. May be repeated in separate terms to a maximum of 6 undergraduate hours or 8 graduate hours. Prerequisite: Junior standing in Art and Design.

ARTE 480 Popular Visual Culture credit: 3 or 4 Hours.
Focuses primarily on contemporary popular culture, but also draws upon fine art, folk art, and indigenous art from both the past and the present. Considers the often troubled relationships between the pleasures of visual culture and its ideologies. Students examine the literature of visual culture studies and develop research skills by examining a specific site of visual culture of their own choosing in terms of aesthetic pleasures and ideology including but not limited to sexism, class, ethnicity, religion, homophobia, and xenophobia. Theories of the body, consumerism, and globalization, among others will be considered. Additional fees may apply. See Class Schedule. 3 undergraduate hours. 4 graduate hours. May be repeated in separate terms to a maximum of 6 undergraduate hours or 8 graduate hours.

ARTE 490 Senior Honors credit: 2 to 5 Hours.
Independent guided research and study for honors. Additional fees may apply. See Class Schedule. 2 to 5 undergraduate hours. No graduate credit. May be repeated to a maximum of 5 hours. Prerequisite: Senior standing in art education, a cumulative grade point average of 3.0; and consent of instructor, advisor, and associate director of the School.

ARTE 501 Issues in Art Education credit: 4 Hours.
A range of topical issues are explored, which may vary from semester to semester, but may include children's artistic development, visual culture and curriculum, the philosophy of art, and cultural studies. Additional fees may apply. See Class Schedule. May be repeated to a maximum of 16 hours.

ARTE 502 Curriculum Development in Art credit: 4 Hours.
Analysis of curriculum organization in the visual arts; particular emphasis given to a range of curriculum positions in education and general research related to curriculum design. Additional fees may apply. See Class Schedule. Prerequisite: Consent of instructor.

ARTE 503 Professional Teaching Seminar credit: 2 to 4 Hours.
Advanced laboratory experiences in two-dimensional visual art techniques for elementary teachers, supervisors, and principals. Additional fees may apply. See Class Schedule. May be repeated to a maximum of 8 hours. Prerequisite: Consent of instructor.

ARTE 505 Foundations of Art Education credit: 4 Hours.
Designed for master's level students. Readings and discussions introduce the theories upon which classroom practices are based, and follow the historical sequence of three major movements within art education over the past 100 years: self-expression in art education, discipline-based art education, and the recent shift toward visual culture in art education. Primary emphasis will be on understanding recent and contemporary orientations. Designed to provide a basis for more in-depth study of curriculum and instruction, child development, multiculturalism, visual culture, and other areas germane to art education. Students compare and contrast the literature in terms of the theories offered, or assumed, of children, art, pedagogy, and society. In addition, students will be introduced to academic standards of writing.
ARTE 506 Theories of Art Education credit: 4 Hours.
Designed for doctoral level students. Readings and discussions introduce the theories upon which classroom practices are based, and follow the historical sequence of three major movements within art education over the past 100 years: self-expression in art education, discipline-based art education, and the recent shift toward visual culture in art education. Primary emphasis will be on understanding recent and contemporary orientations. Designed to provide a basis for more in-depth study of curriculum and instruction, child development, multiculturalism, visual culture, and other areas germane to art education. Students compare and contrast the literature in terms of the theories offered, or assumed, of children, art, pedagogy, and society. In addition, students will be introduced to academic standards of writing.

ARTE 591 Independent Graduate Studies credit: 1 to 8 Hours.
Individual direction in research and in creative activity; thesis. Additional fees may apply. See Class Schedule.

ARTE 599 Thesis Research credit: 0 to 16 Hours.
Guidance in research and writing theses for advanced degrees. Approved for S/U grading only. May be repeated. Prerequisite: Graduate standing in art education.

Art--Foundation (ARTF)

ARTF Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/ARTF)

Courses

ARTF 101 Contemporary Issues in Art credit: 2 Hours.
Exposes the first year student in an interactive lecture/discussion format to contemporary issues and disciplines in the visual arts. Course requirements include attendance of course lectures, field trips, visiting artist presentations, keeping of a journal and the writing of a paper. Additional fees may apply. See Class Schedule.

ARTF 102 Drawing I credit: 3 Hours.
Theory and practice in observational drawing with emphasis on fundamental principles such as mark/line, shape/form, space/composition, linear/perspective, scale/proportion, value/tonal range, and pattern/texture. Additional fees may apply. See Class Schedule. Prerequisite: Open to Art and Design majors only.

ARTF 103 Design I credit: 3 Hours.
Theory and practice in the elements, processes and principles of design. Course content is organized under three headings: COLOR, a study of the visual, material and psychological nature of color; COMMUNICATION, an introduction to the fundamentals of visual communication using primarily digital media; and 3D CRAFT, a survey of fabrication techniques using three-dimensional media. Additional fees may apply. See Class Schedule. Prerequisite: Open to Art and Design majors only.

ARTF 104 Drawing II credit: 3 Hours.
Continuation of ARTF 102 that includes the following drawing concepts: narrative, conceptual, applied, non-objective, format, process, seriality and collage. Additional fees may apply. See Class Schedule. Prerequisite: ARTF 102. Open to Art and Design majors only.

ARTF 105 Design II credit: 3 Hours.
Theory and practice in the elements, processes and principles of design. Course content is organized under three headings: RESEARCH, an introduction to methods used in research-driven project; TIME, an examination of the formal and technical aspects of temporal media such as sound, video or animation; and 3D EXPLORATION, a process-driven exploration of three-dimensional space and form. Additional fees may apply. See Class Schedule. Prerequisite: ARTF 103.

ARTF 199 Undergraduate Open Seminar credit: 1 to 5 Hours.
Additional fees may apply. See Class Schedule.

ARTF 201 Issues in Visual Communication credit: 2 Hours.
Survey ideas and movements that have had important impact on visual culture over the last century. Readings, discussions, presentations, and research projects, will introduce significant modern and contemporary theories, and the artists and designers who have exemplified and furthered those ideas. Students will gain an understanding of issues that have influenced visual art and design in recent history, improve their ability to analyze images, expand their concepts of how meaning gets attached to images and objects, and increase their ability to engage in debate and discussion about art and design practices.

ARTF 401 Art + Design Matters credit: 3 Hours.
Students attend a weekly lecture series featuring well-known artists, designers, art historians, and art educators. Provides an opportunity to hear leading contemporary practitioners talk about the ideas, concepts, and agendas behind their work. Lectures are supplemented by weekly online directed writing assignments that further explore issues and ideas raised in the lectures. As a final project, students research and write about a contemporary artist or designer of their choosing. 3 undergraduate hours. 3 graduate hours. Prerequisite: Junior standing.

Art--History (ARTH)

ARTH Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/ARTH)
Courses

ARTH 111 Ancient to Medieval Art credit: 4 Hours.
Development of the visual arts in Western Europe and the Near East in their cultural contexts from prehistoric times until the early fifteenth century; includes Egyptian, Greek, Roman, and medieval art and architecture. Same as MDVL 111.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts

ARTH 112 Renaissance to Modern Art credit: 4 Hours.
Development of the visual arts in Western Europe and the United States in their cultural contexts from the early fifteenth century to the present.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts

ARTH 113 Introduction to African Art credit: 4 Hours.
An introduction to the arts of Africa. Sculpture, textiles, architecture, body adornment, and performance will be examined on the basis of aesthetic, religious, political, and social contexts. The main emphasis will be on traditional art, although the course will address many changes and continuities within African art as evidenced in the late 20th century. The course will proceed geographically from western through central to eastern and southern Africa. Videos, music, and museum visits will complement the lectures.
This course satisfies the General Education Criteria for:
UIUC: Non-Western Cultures

ARTH 114 Introduction to East Asian Art credit: 4 Hours.
Thematic introduction to the visual arts of China and Japan, including calligraphy and painting, woodblock prints, sculpture, gardens and architecture. Same as EALC 114.
This course satisfies the General Education Criteria for:
UIUC: Non-Western Cultures

ARTH 115 Art in a Global Context credit: 4 Hours.
Introduces students to basic concepts necessary for understanding the visual arts. It orients students to the visual arts in a variety of international contexts, and in particular in our current globalizing world. This course can be used to fulfill either Western or Nonwestern general education categories, but not both.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Non-Western Cultures
UIUC: Western Compartv Cult

ARTH 211 Design History Survey credit: 3 Hours.
The historical, social and cultural context of design concentrating on manufactured products, communication, media and design from the Industrial Revolution to the present. Lectures, seminars and individual research projects.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts

ARTH 215 Greek Art credit: 3 Hours.
Survey of architecture, sculpture, and painting of the Greek world from the geometric period to the beginning of the Christian era. Same as CLCV 217.

ARTH 217 Development of Ancient Cities credit: 3 Hours.
Same as CLCV 231. See CLCV 231.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: Western Compartv Cult

ARTH 218 Ancient Greek Sanctuaries credit: 3 Hours.
Same as CLCV 232 and RLST 232. See CLCV 232.

ARTH 222 Medieval Art credit: 3 Hours.
The arts of Byzantium and Western Europe from the early Christian era to the Renaissance. Same as MDVL 222.

ARTH 230 Italian Renaissance Art credit: 3 Hours.
Architecture, painting, and sculpture of Italy during the Renaissance.

ARTH 231 Northern Renaissance Art credit: 3 Hours.
Architecture, painting, sculpture, and minor arts of Europe outside Italy in the fifteenth and sixteenth centuries. Same as MDVL 231.

ARTH 235 Baroque Art credit: 3 Hours.
Studies European painting, sculpture, and graphic work during the period 1580 to 1700.

ARTH 240 Art of the Nineteenth Century credit: 3 Hours.
Architecture, painting, sculpture, and minor arts of France, Germany, Spain, and England in the nineteenth century.
ARTH 241 20thCen European Art 1880-1940 credit: 3 Hours.
Survey of the major artists and artistic movements in European painting and sculpture from 1880-1940.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts

ARTH 249 American Visual Humor credit: 3 Hours.
Investigates the mechanics of visual humor in nineteenth-century American visual and material culture, including graphic satire, painting, sculpture, comics, and early film. Considers this material in the context of social and political attitudes, styles of communication, consumer culture, literary comedic strategies, aesthetic theory, and humor theory more generally. Incorporates in-class screenings of contemporary comedians, visits to the Rare Book Room at the University library, and visits to the Krannert Art Museum.

ARTH 250 American Art credit: 3 Hours.
Surveys American art and architecture from the colonial period to the present.

ARTH 257 History of Photography credit: 3 Hours.
Examines a history of photography from its origin to the present, including both documentary and artistic approaches; considers relationships with other arts.

ARTH 260 Graffiti and Murals credit: 3 Hours.
From Bronx walls to the Berlin Wall, from ancient palatial decorations to spray-can art, murals and graffiti have been revolutionary political tools, objects of aesthetic contemplation, and vehicles for identity formation. Primarily a lecture course that examines ancient and early modern cases from different cultures, as well as focusing on modern examples from Latin America and the USA. Same as LLS 260.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Western Compartv Cult

ARTH 299 Spec Topics in Art History credit: 3 Hours.
Special topics in Art History Courses. Topics and subject matter to be published in course listings. May be repeated up to 6 hours in a semester, to a maximum of 12 total hours. Prerequisite: Sophomore standing in Art and Design.

ARTH 310 African Art and Society I credit: 3 Hours.
Introduces the arts of Black Africa, i.e., dance, drama, songs, and poetry, as expressed in a multi-media framework and a social-religious context; surveys the art styles of the Dogon, Senufo, Mende, and Ashanti peoples.

ARTH 312 Central African Art credit: 3 Hours.
A one-semester introduction to the arts of central Africa. Sculpture, pottery, architecture, body adornment, contemporary art, and performance will be examined and discussed on the basis of aesthetic, religious, political, and social contexts. Discusses many changes and continuities within African artistic traditions as evidenced in late twentieth-century urban, popular, and political arts of central Africa. We shall also investigate some central African artistic influences found in African American arts. Same as AFST 312.

ARTH 313 Modern and Contemp African Art credit: 3 Hours.
Examines how multiple "modernisms" emerged from African independence movements, and thereby influenced the development of African and African-American art from the 1960s to the present. Same as AFST 313.

ARTH 350 American Art 1750-1900 credit: 3 Hours.
Studies the two major directions of art in the United States from independence to the centennial, with focus on major figures and the scientific and philosophical movements which influenced them. Prerequisite: One year of art history or consent of instructor.

ARTH 351 Early American Modernism credit: 3 Hours.
Examines American art, particularly painting and sculpture, 1876-1940, against its cultural background and the relation of the American artist to Europe in an attempt to isolate the roots of Modernism in the United States. Prerequisite: One year of art history or consent of instructor.

ARTH 360 Women and the Visual Arts credit: 3 Hours.
Explores the complex interconnections of women with the visual arts in Europe and North America from the classical era to the present, including the modes of artistic production and the representation of women in western society. Same as GWS 360.

ARTH 391 Individual Art History Topics credit: 1 to 4 Hours.
Directed independent research or creative activity. May be repeated to a maximum of 6 hours. Prerequisite: Junior standing in art and design; and consent of instructor, advisor, and associate director of the School.

ARTH 395 Junior Seminar in Art History credit: 3 Hours.
Offers Art History majors grounding in the discipline’s historiography and exposure to diverse historical methods. Provides students with experience in a range of research techniques as preparation for their Senior Seminar. Prerequisite: Junior standing in Art History curriculum or in Art History minor.

ARTH 401 Chinese Art credit: 3 or 4 Hours.
History of Chinese art from earliest times to the present. Same as EALC 401. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: Junior standing or consent of instructor.
ARTH 402 Ways of Seeing in Edo Japan credit: 3 or 4 Hours.
Focuses on modes of seeing and technologies of vision manifest in the visual arts of Edo Japan, 1615-1868. At the time, imported European instruments of seeing, such as the microscope, made possible unusual visual experiences; revivals of classical Japanese painting manipulated different ways of recreating and visualizing the past. A variety of themes, organized chronologically, will demonstrate the importance of seeing in painting and calligraphy, ceramics, woodblock prints, and architecture. Same as EALC 402. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: ARTH 114, or equivalent background in Japanese history or literature. Junior standing or consent of instructor.

ARTH 403 Word and Image in Chinese Art credit: 3 or 4 Hours.
Study of the diverse correlations between verbal texts and visual images in Chinese art and art theory from the twelfth through seventeenth centuries. Same as EALC 403. 3 undergraduate hours. 3 or 4 graduate hours.

ARTH 410 West African Art and Ideas credit: 3 or 4 Hours.
Study of West African art styles in chronological and cultural perspectives with a special interest in the use of interdisciplinary source materials. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: Junior standing or consent of instructor.

ARTH 413 Sacred African Diaspora Arts credit: 3 or 4 Hours.
Explores African diaspora arts grounded in the diverse aesthetic, philosophical, historical, political, and religious consciousnesses of peoples of African descent living in the Caribbean and the Americas. Focuses on the preservation and ongoing transformations of African visual and religious cultures surviving in African diaspora communities from the period of the trans-Atlantic slave trade to the present. Same as AFST 421. 3 undergraduate hours. 4 graduate hours.

ARTH 415 The Archaeology of Greece credit: 3 Hours.
Same as CLCV 443. See CLCV 443.

ARTH 416 The Archaeology of Italy credit: 3 Hours.
Same as CLCV 444. See CLCV 444.

ARTH 423 Romanesque Art credit: 3 or 4 Hours.
Art and architecture of the Romanesque period. Same as MDVL 423. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: Junior standing or consent of instructor.

ARTH 424 Gothic Art credit: 3 or 4 Hours.
Arts of western Europe from the end of the Romanesque period until the Renaissance. Same as MDVL 424. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: Junior standing or consent of instructor.

ARTH 430 Topics: Italian Art 1300-1500 credit: 3 or 4 Hours.
Special topics in the history of painting, sculpture, and architecture of Italy during the Renaissance selected for intensive study. 3 undergraduate hours. 3 or 4 graduate hours. May be repeated to a maximum of 6 undergraduate hours or 8 graduate hours. Prerequisite: Junior standing or consent of instructor.

ARTH 431 Topics: Northern Art 1300-1500 credit: 3 or 4 Hours.
Special topics in the history of painting, sculpture, and minor arts of France, Germany, Spain, and England during the Renaissance selected for intensive study. Same as MDVL 431. 3 undergraduate hours. 3 or 4 graduate hours. May be repeated to a maximum of 6 undergraduate hours or 8 graduate hours. Prerequisite: Junior standing or consent of instructor.

ARTH 432 Sixteenth-Century Italian Art credit: 3 or 4 Hours.
Painting, sculpture, and architecture in Italy from 1500 to 1580. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: Junior standing or consent of instructor.

ARTH 433 Fifteenth-Century Italian Art credit: 3 or 4 Hours.
Study of Italian painting, sculpture and architecture from circa 1300 to 1500. Same as MDVL 433. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: Junior standing or consent of instructor.

ARTH 435 Italian Baroque Art credit: 3 or 4 Hours.
Italian painting and sculpture during the period 1580-1700, with particular emphasis on art in Rome. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: Junior standing or consent of instructor.

ARTH 436 17th Century Dutch Painting credit: 3 or 4 Hours.
Seventeenth-century art in the Netherlands with extensive treatment of the careers of Rubens and Rembrandt. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: Junior standing or consent of instructor.

ARTH 439 18th Century European Art credit: 3 or 4 Hours.
Critical survey of the major developments in European painting of the eighteenth century. Emphasis is placed on French artists, but major figures in England, Spain, and Italy are also considered. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: Junior standing or consent of instructor.

ARTH 440 Romantic Art credit: 3 or 4 Hours.
Studies English, French, and German art from the end of the eighteenth century through 1840; focuses on revivalist movements, historicism, landscape art, and changing conceptions of art and artist during the period. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: Junior standing or consent of instructor.
ARTH 441 Realism to Post-Impressionism credit: 3 or 4 Hours.
Studies European art from 1850 to 1900, with emphasis on French painting. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: Junior standing or consent of instructor.

ARTH 442 Arts of Colonial Latin America credit: 3 or 4 Hours.
Introduction to the major art historical, stylistic and iconographic developments of several Latin American countries of the late sixteenth through eighteenth centuries. Themes to be investigate include: the pictorial representation of race; indigenous workshops, traditions, and the birth of European art academies; the constructions of gender; as well as the translation of styles. The course includes field trips to local museums and libraries. Previous introductory level art history of Latin American history course recommended. Same as LAST 442. 3 undergraduate hours. 3 or 4 graduate hours.

ARTH 444 Spanish Art 1700-1900 credit: 3 or 4 Hours.
Introduction to the rich visual cultures of Spain from the arrival of the Bourbon dynasty at the beginning of the eighteenth century through the years immediately following the “National Disaster” and Spain's defeat in the War of 1898. The course will examine a variety of themes: from the mythologized loves of Goya, to the grandeur of canvases recreating Spain's history; from Spanish Romanticism to the development of Mondernismo and the advent of Pablo Picasso. Previous introductory level art history course recommended. 3 undergraduate hours. 3 or 4 graduate hours.

ARTH 445 European Art Between the Wars credit: 3 or 4 Hours.
Study of the leading personalities and movements in European painting, sculpture, and architecture, with emphasis on painting. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: Junior standing or consent of instructor.

ARTH 446 Art Since 1940 credit: 3 or 4 Hours.
Critical survey of developments since World War II with emphasis on questions of quality and personal content and with consideration of the most current tendencies. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: Junior standing or consent of instructor.

ARTH 447 France and Its Others credit: 3 or 4 Hours.
Examines the relationship between art and colonialism in nineteenth-century France. Topics include orientalism, primitivism, and exoticism; the central figures include Delacroix, Flaubert, Gerome, and Gauguin. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: Junior standing or consent of instructor.

ARTH 460 Museum Management credit: 3 or 4 Hours.
This course is concerned with advanced theoretical issues of art museum work, taught by the professional staff of a museum. Topics covered include collections, curatorial issues, educational program planning, trustee relations, public outreach, fundraising, budgeting, and staff organization. 3 undergraduate hours. 4 graduate hours. Prerequisite: Junior standing or consent of instructor.

ARTH 462 Museum Theory and Practice credit: 3 or 4 Hours.
Same as ANTH 462 and LA 472. See ANTH 462.

ARTH 489 Senior Art-History Honors-BA credit: 2 to 5 Hours.
Independent guided research and study in a selected area of art history for candidates for the Bachelor of Arts in Art History with departmental distinction. 2 to 5 undergraduate hours. No graduate credit. May be repeated to a maximum of 5 hours. (Counts for advanced hours in LAS). Prerequisite: Senior standing in the art history curriculum; a cumulative grade point average of 3.25; an art history grade point average of 3.5; and consent of instructor, department advisor, and associate director of the School.

ARTH 490 Senior Art-History Honors-BFA credit: 2 to 5 Hours.
Directed independent research and study for honors. 2 to 5 undergraduate hours. No graduate credit. May be repeated to a maximum of 5 hours. Prerequisite: Senior standing in Fine and Applied Arts art history, a cumulative grade point average of 3.0, and consent of instructor, advisor, and associate director of the School.

ARTH 491 Topics in Art History credit: 1 to 4 Hours.
Variable content; consult the Class Schedule for current topics. 1 to 4 undergraduate hours. 1 to 4 graduate hours. May be repeated if topics vary. Prerequisite: Junior standing or consent of instructor.

ARTH 495 Senior Seminar in Art History credit: 3 Hours.
Required seminar for undergraduate majors that offers students practical experience in research techniques. Focuses on a specialized theme of the professor's choice, and will incorporate extensive reading in a specific field of Art History and the completion of a substantial research paper. 3 undergraduate hours. No graduate credit. May be repeated to a maximum of 6 undergraduate hours. Prerequisite: ARTH 395.

ARTH 501 Seminar in Chinese Art credit: 4 Hours.
Investigation of selected phases, concepts, and problems of the art of China; intensive reading and reports. Same as EALC 501. May be repeated to a maximum of 12 hours. Prerequisite: ARTH 401 or consent of instructor.

ARTH 510 Seminar in African Art credit: 4 Hours.
This seminar includes a variety of topics, such as African Diaspora Theory, Contemporary African Art, Performance Art in Africa, Tourist art in Africa. Each graduate seminar will have a significant reading list with weekly responses, as well as a research paper and presentation. Same as AFST 509. May be repeated to a maximum of 20 hours. Prerequisite: Consent of instructor.

ARTH 515 Seminar in Ancient Art credit: 4 Hours.
Research seminar in subject selected from the art and architecture of the ancient period. Same as CLCV 515. May be repeated to a maximum of 12 hours. Prerequisite: Consent of instructor.
ARTH 520 Seminar in Class Archaeology credit: 4 Hours.
Same as CLCV 520. See CLCV 520.

ARTH 522 Studies in Medieval Art credit: 4 Hours.
Research seminar in subjects selected from the art and architecture of the medieval period. Same as MDVL 522. May be repeated to a maximum of 12 hours. Prerequisite: Consent of instructor.

ARTH 530 Seminar Italian Art credit: 4 Hours.
Special problems in the history of Italian Renaissance art. May be repeated to a maximum of 12 hours. Prerequisite: Consent of instructor.

ARTH 531 Seminar in N. Renaissance Art credit: 4 Hours.
Research seminar in subjects selected from the art of the Northern Renaissance. Same as MDVL 540. May be repeated to a maximum of 12 hours. Prerequisite: Consent of instructor.

ARTH 535 Seminar in Baroque Art credit: 4 Hours.
Research seminar in problems selected from the art of seventeenth-century Europe. May be repeated to a maximum of 12 hours. Prerequisite: Consent of instructor.

ARTH 539 Academies of Art credit: 4 Hours.
Academies, schools of art, and training workshops, have been educational, administrative, political and economic centers for the debate, control, dissemination, and legitimization of the theories, teaching and practice of the “Fine Arts.” This seminar analyzes the aims, parameters and meanings ascribed to these heavily invested and historically empowered sites through an examination of historiography, as well as models traditionally used in their defense or denigration.

ARTH 540 Seminar in Art 1750 to 1900 credit: 4 Hours.
Intensive study of selected problems in European art. May be repeated to a maximum of 12 hours. Prerequisite: Consent of instructor.

ARTH 541 Seminar in Modern Art credit: 4 Hours.
Investigation of special problems in the history of twentieth-century art. Students present reports of their research. May be repeated to a maximum of 12 hours. Prerequisite: Consent of instructor.

ARTH 546 Seminar in Contemporary Art credit: 4 Hours.
Intensive study of selected problems or artists. May be repeated to a maximum of 12 hours. Prerequisite: Consent of instructor.

ARTH 550 Seminar in American Art credit: 4 Hours.
Investigation of selected problems in the history of American art. May be repeated to a maximum of 12 hours. Prerequisite: ARTH 350 and ARTH 351, or consent of instructor.

ARTH 560 Collections, Museums & Patrons credit: 4 Hours.
Deals with specific aspects of art collecting practices, patronage, and/or museology. Introduces students to the major debates and history of private and public art collections, origins of museums and patronage, the new museology. Taught in alternate years by art history faculty with different specializations. May be repeated in separate terms to a maximum of 8 hours. Prerequisite: Graduate standing or consent of instructor.

ARTH 591 Individual Readings credit: 2 to 4 Hours.
Directed readings in special fields or aspects of history of art not provided in depth by the current course offerings. Registration allowed for each section is 2 to 4 hours. Prerequisite: Consent of instructor.

ARTH 593 Theory and Methodology credit: 4 Hours.
Investigation of the theory and practice of art history as a discipline. Discussions address historiographical and methodological issues and include both traditional and recent approaches to the discipline. Prerequisite: Consent of instructor.

ARTH 599 Thesis Research credit: 0 to 16 Hours.
Guidance in research and writing theses for advanced degrees. Approved for S/U grading only. May be repeated. Prerequisite: Graduate standing in art history.

Art--Studio (ARTS)

ARTS Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/ARTS)

Courses

ARTS 200 Introduction to Book Arts credit: 3 Hours.
Creative expression and communication through the production of a variety of unique and limited edition books. Students will learn the tools and techniques of binding books by hand while studying the physical and narrative properties of books. Additional fees may apply. See Class Schedule. Prerequisite: Sophomore standing in Art and Design, in an Art History major, or in the Art History minor.
ARTS 210 Ceramics Sculpture I credit: 3 Hours.
Introduction to materials and techniques involved in the ceramic process. By achieving technical expertise using clay, students can begin to develop a personal artistic language employing clay as an art medium. Students will explore a variety of assignments employing hand-building techniques, as well as investigating various firing processes. Additional fees may apply. See Class Schedule. Prerequisite: Sophomore standing or consent of instructor. For Art majors only.

ARTS 230 Jewelry/Metals I credit: 3 Hours.
Design and execution of jewelry and related objects through fabrication, focusing on surface embellishment, joining, and finishing processes; exploring metal as a medium of personal aesthetic expression. Additional fees may apply. See Class Schedule. Prerequisite: Sophomore standing or consent of instructor. For Art majors only.

ARTS 231 Jewelry/Metals II credit: 3 Hours.
Additional experience and experimentation in designing and executing jewelry and related objects through fabrication, refinement of surface embellishment, joining, and finishing skills; further exploration of metal as a medium of personal aesthetic expression. Additional fees may apply. See Class Schedule. Prerequisite: ARTS 230.

ARTS 250 Life Drawing credit: 3 Hours.
Representational and interpretive drawing from life explored through close observation and structural analysis of the human figure and other subject matter. Additional fees may apply. See Class Schedule. May be repeated to a maximum of 6 hours. Prerequisite: ARTF 102 and ARTF 104. For Art majors only.

ARTS 251 Painting I credit: 3 Hours.
Familiarizes students with basic oil painting materials, techniques, and concepts. Topics include composition, color theory, historical painting techniques, illusionistic space, and paint handling and application. Exploration and discussion of the ways in which paintings make meaning. Additional fees may apply. See Class Schedule. Prerequisite: ARTF 102, ARTF 104.

ARTS 252 Making and Meaning credit: 3 Hours.
Introduction to the relationship of material, method, and process to meaning in art practice. Through research, critique, and application of concepts in material studio processes, students will explore a diverse range of methods of achieving meaning in an artwork. Additional fees may apply. See Class Schedule. May be repeated to a maximum of 6 hours. Prerequisite: ARTS 102 and ARTS 104.

ARTS 254 Painting II credit: 3 Hours.
Continuation of ARTS 251. Further develops the materials, skills, and issues introduced in that course; also considers additional painting media; explores and examines traditional and contemporary issues in painting. Additional fees may apply. See Class Schedule. Prerequisite: ARTS 251.

ARTS 280 Sculpture I credit: 3 Hours.
Introduction to basic concepts, processes, and materials in sculpture, with an emphasis on the relationship among these three aspects of producing works of art. Additional fees may apply. See Class Schedule. Prerequisite: ARTF 102 and ARTF 104. For Art majors only.

ARTS 281 Sculpture II credit: 3 Hours.
Continuation of ARTS 280. Explores the relationship of sculptural materials and media to meaning; research into the historical, contemporary, and contextual semiotics of materials in order to generate meaning. Additional fees may apply. See Class Schedule. Prerequisite: ARTS 280.

ARTS 299 Spec Topics in Studio Art credit: 3 Hours.
Special topics in Studio Art Courses. Topics and subject matter to be published in course listings. Additional fees may apply. See Class Schedule. May be repeated up to 6 hours in a semester, to a maximum of 12 total hours. Prerequisite: Sophomore standing in Art and Design.

ARTS 310 Ceramics Sculpture II credit: 3 Hours.
Students will develop more sophisticated techniques and processes necessary to develop their personal voice and take more responsibility for concept, process and material in their work. Emphasis will stress processes related to creating ceramic sculpture such as hand construction techniques, kiln firing, clay and glaze experimentation. Additional fees may apply. See Class Schedule. Prerequisite: ARTS 210.

ARTS 330 Jewelry Metals III credit: 3 Hours.
The design and production of jewelry and related objects with additional experience in manipulative techniques such as casting, electroforming, surface decoration, enameilling, complex construction and forming. Additional fees may apply. See Class Schedule. Prerequisite: ARTS 231 and enrollment in the crafts curriculum. For Art majors only.

ARTS 331 Jewelry Metals IV credit: 3 Hours.
Expands the general techniques of ARTS 330 with emphasis on experimentation and development of personal style through advanced techniques of hollowware, complex construction, enameilling, electroforming and plating, forging and the use of varied materials. Additional fees may apply. See Class Schedule. Prerequisite: ARTS 330. For Art majors only.

ARTS 332 Metal Technology credit: 2 Hours.
Understanding of the working properties of nonferrous metals. Experimentation with little known processes of metalwork to be subjects of individual research. Additional fees may apply. See Class Schedule. May be repeated to a maximum of 4 hours. Prerequisite: ARTS 330 and junior standing in crafts, or consent of instructor. For Metals majors only.
ARTS 333 Enamelling credit: 3 Hours.
Exploration and experimentation in image development and color through traditional enamelling processes; emphasis on cloisonne, champane, bassetaille, plaque-a-jour, limoges, and grisaille; exploration of enamel and metal as a medium of personal aesthetic expression. Additional fees may apply. See Class Schedule. May be repeated to a maximum of 9 hours. Prerequisite: ARTS 230 or consent of instructor.

ARTS 334 Metalsmithing credit: 3 Hours.
Experience and experimentation in designing and executing hollowware through traditional forming processes; emphasis on sinking, angle raising, crimping, stretching, seaming and snarling, cold forging, tube and spiculum forming, planishing, surface embellishment, and patination; exploration of metal as a medium of personal aesthetic expression. Additional fees may apply. See Class Schedule. May be repeated to a maximum of 12 hours. Prerequisite: ARTS 230 or consent of instructor.

ARTS 340 The Art of 3D Imaging credit: 3 Hours.
Investigation of the three-dimensional modeling capabilities of 3D Studio Max software through a series of original tutorials, class projects and individual problems. The emphasis will be on quality of form and content rather than technical expertise. The end result will culminate in the understanding and production of limited edition digital prints. Additional fees may apply. See Class Schedule. This course may not be repeated for credit.

ARTS 341 Image Practice credit: 3 Hours.
Looks at the production and reception of images through a combination of historical, theoretical and practical perspectives. A variety of contexts from contemporary art, design and popular culture will be explored through research and visual projects. Special consideration will be given to current forms of reproduction, with students learning and utilizing common methods for rendering and realizing still images, including both print and screen-based output. Additional fees may apply. See Class Schedule. Prerequisite: Junior standing.

ARTS 343 Time Arts I credit: 3 Hours.
Explores the potential of time-based media for creative expression and communications within the context of visual art and design. Classroom discussion will focus on historical and contemporary examples of time arts, written materials, and student work. Hands-on projects will introduce tools, issues and strategies particular to creating and analyzing work based in time. Additional fees may apply. See Class Schedule.

ARTS 344 Interaction I credit: 3 Hours.
Introduction to the conceptualization and construction of interactive experience for art and design. Interaction will be examined as technical, structural, social, and historical. Work will include practice, research, discussion, and lecture. Additional fees may apply. See Class Schedule. May be repeated to a maximum of 6 hours. Prerequisite: Junior standing.

ARTS 350 Intermediate Studio I credit: 4 Hours.
Combined painting, sculpture and new media studio. Self-directed arts practice. Individual and group critique; includes seminars, discussions, demonstrations, visiting artists and critics, and field trips. Interaction and collaboration among students in painting, sculpture and new media. Additional fees may apply. See Class Schedule. Prerequisite: ARTS 254 or ARTS 281 or ARTS 240. For Art majors only.

ARTS 351 Intermediate Studio II credit: 4 Hours.
Continuation of ARTS 350. Combined painting, sculpture and new media. Self-directed arts practice. Individual and group critique; includes seminars, discussions, demonstrations, visiting artists and critics, and field trips. Interaction and collaboration among students in painting, sculpture and new media. Additional fees may apply. See Class Schedule. Prerequisite: ARTS 350. For Art majors only.

ARTS 391 Independent Study credit: 1 to 4 Hours.
Directed independent creative activity or research. Additional fees may apply. See Class Schedule. May be repeated to a maximum of 6 hours. Prerequisite: Junior standing in Art and Design; and consent of instructor, advisor, and associate director of the School. For Art majors only.

ARTS 392 Current Art Issues Seminar credit: 3 Hours.
Seminar with readings, lectures, discussions on ideas and issues affecting contemporary art. Attendance is required at visiting artists’ and scholars’ lectures and field trips. May be repeated to a maximum of 6 hours. Prerequisite: Junior standing in Fine and Applied Arts or consent of instructor.

ARTS 399 Internship in Studio Arts credit: 1 to 4 Hours.
Internships to be pre-approved for variable credit. Students will be required to document work completed during the internship with verification of supervisor. Supervisor will also be required to fill out a questionnaire either by mail or on-line. Faculty members will access work and questionnaires to assign a grade. Approved for S/U grading only. Prerequisite: Junior standing in School of Art and Design.

ARTS 400 Advanced Book Arts credit: 3 or 4 Hours.
Advanced study of the history and techniques of hand bookbinding. Variations on binding structures and emphasis on creative expression through mixed media, collage, painting, photography, and writing. Field trips to book collections. Additional fees may apply. See Class Schedule. 3 undergraduate hours. 4 graduate hours. Prerequisite: ARTS 200, and junior standing in Art and Design or consent of instructor.

ARTS 410 Advanced Ceramics Sculpture credit: 3 or 4 Hours.
Students will develop more sophisticated techniques and processes necessary to develop their personal ideas. Emphasis will be placed on processes related to creating ceramic sculpture such as kiln firing, clay and glaze experimentation. At this level, the student begins to take more responsibility for concept, process and material in their work. Additional fees may apply. See Class Schedule. 3 undergraduate hours. 4 graduate hours. May be repeated up to 15 undergraduate hours or 20 graduate hours. Prerequisite: ARTS 210 and ARTS 310.

ARTS 412 Ceramics credit: 2 to 4 Hours.
Ceramic design with emphasis on the development of professional style and personal expression. Additional fees may apply. See Class Schedule. 2 to 4 undergraduate hours. 2 to 4 graduate hours. May be repeated to a maximum of 6 hours. Prerequisite: Consent of instructor.
ARTS 430 Jewelry Metals V credit: 5 Hours.
Expands the general techniques of ARTS 331 with emphasis on experimentation and development of personal style. Additional fees may apply. See Class Schedule. 5 undergraduate hours. No graduate credit. Prerequisite: ARTS 331.

ARTS 431 Jewelry Metals VI credit: 5 Hours.
Continuation of ARTS 430; emphasis on experimentation and development of personal style, a portfolio, and a senior exhibition. Additional fees may apply. See Class Schedule. 5 undergraduate hours. No graduate credit. Prerequisite: ARTS 430. For Art majors only.

ARTS 443 Time Arts II credit: 3 or 4 Hours.
Provides semester-long, in-depth explorations of single time arts topics. Using the ideas and basic tools from Time Arts I, students will study the advanced concepts and techniques particular to individual time arts genres while producing their own work. Additional fees may apply. See Class Schedule. 3 undergraduate hours. 4 graduate hours. May be repeated to a maximum of 6 hours. Prerequisite: ARTS 434 or consent of instructor.

ARTS 444 Interaction II credit: 3 or 4 Hours.
Further exploration of interaction, with an increased emphasis on realization and application of designed interactive experience, and depth of exposure to particular technical platforms. Additional fees may apply. See Class Schedule. 3 undergraduate hours. 4 graduate hours. May be repeated to a maximum of 6 undergraduate or 8 graduate hours. Prerequisite: ARTS 443 and consent of instructor.

ARTS 445 Special Topics in New Media credit: 3 or 4 Hours.
Course will explore one specialization within the field of New Media. Topics will rotate through each semester; possible subjects include Performance, Sound, Radio, Public Art, and Social Media. Additional fees may apply. See Class Schedule. 3 undergraduate hours. 4 graduate hours. May be repeated in the same or subsequent terms to a maximum of 12 undergraduate hours or 16 graduate hours as topics vary. Prerequisite: Junior standing.

ARTS 449 Advanced Seminar in New Media credit: 3 Hours.
Students will explore current issues in New Media with the goal of understanding their own artwork in a disciplinary context. Through reading, writing, research and discussions, students will be exposed to significant work in their field. 3 undergraduate hours. No graduate credit. May be repeated to a maximum of 6 undergraduate hours. Prerequisite: Open to New Media majors or consent of instructor.

ARTS 450 Advanced Studio I credit: 4 Hours.
First of two capstone courses in studio arts practice, individualized study for painting, sculpture, and new media majors. Explores and develops conceptual and aesthetic interests, topics, and projects; expands and refines material knowledge and expertise; develops research strategies and methodologies. Includes individual and group critiques, dynamic interaction with faculty and peers. Additional fees may apply. See Class Schedule. 4 undergraduate hours. No graduate credit. Prerequisite: ARTS 351 Intermediate Studio II. For Art majors only.

ARTS 451 Advanced Studio II credit: 4 Hours.
Continuation of ARTS 450. Second of two capstone courses in studio arts practice, providing individualized study for painting, sculpture, and new media majors. Explores and develops conceptual and aesthetic interests, topics, and projects; expands and refines material knowledge and expertise; develops research strategies and methodologies. Includes individual and group critiques, dynamic interaction with faculty and peers. Additional fees may apply. See Class Schedule. 4 undergraduate hours. No graduate credit. Prerequisite: ARTS 450. For Art majors only.

ARTS 454 Advanced Drawing credit: 3 Hours.
An advanced studio course that considers a variety of activities defined traditionally, historically and contemporarily as drawing. Students will investigate the questions of what drawing is and how it communicates meaning. They will use and experiment with a wide variety of materials and concepts as they work on in-class projects and outside assignments, investigate the work of contemporary artists to see how the practice of drawing is being redefined, and consider the influence drawing has had on design and visual culture. Students will be encouraged to experiment, innovate, and develop new visual vocabularies. Additional fees may apply. See Class Schedule. 3 undergraduate hours. 3 graduate hours. May be repeated to a maximum of 6 hours. Prerequisite: Two prior courses in drawing; junior standing.

ARTS 455 Advanced Painting credit: 3 Hours.
An advanced studio course focusing intensively on the practice of painting. Students will research contemporary painting and its recent history, discuss its relevance and place in contemporary art, and investigate and articulate their own conceptual motivations in using painting media. Topics will include the relationship of the history of painting to how its use generates meaning in a contemporary context. Students will engage in self-generated studio practice; this work will be the basis of group and individual discussion and critique. 3 undergraduate hours. No graduate credit. Additional fees may apply. See Class Schedule. May be repeated to a maximum of 6 hours. Prerequisite: ARTS 251 and ARTS 254; junior standing.

ARTS 456 Advanced Sculpture credit: 3 Hours.
Advanced studio course designed to integrate basic sculpture and other 3-D studio skills with advanced knowledge of contemporary sculptural practices and materials, along with an understanding of concepts and theories influencing contemporary sculptural art. Studies will investigate topics including site specificity, context, and critically as they develop research and studio production methods that allow them to generate work that is relevant to current and future discourse in the field. 3 undergraduate hours. No graduate credit. May be repeated to a maximum of 6 hours. Prerequisite: ARTS 280 and ARTS 281; junior standing.
ARTS 457 Art in Context credit: 3 Hours.
Focuses on the relationship between artworks and their historical, institutional, spatial, geographic, architectural or other contexts for the purpose of engaging in a critical analysis of artworks, as well as developing informed, intentional studio production. Students will encounter topics related to a critical and ethical understanding of context including site-specificity, phenomenology, public art, Situationism, relational aesthetics, and the production of space through social and political process such as building and mapping. The goal is to investigate and understand the dynamic relationship between art and its context. 3 undergraduate hours. No graduate credit. May be repeated to a maximum of 6 hours. Prerequisite: Junior standing.

ARTS 490 Senior Honors credit: 2 to 5 Hours.
Independent creative activity, guided study, or research for honors. 2 to 5 undergraduate hours. No graduate credit. May be repeated to a maximum of 5 hours. Prerequisite: Senior standing in Art & Design, a cumulative grade point average of 3.0; and consent of instructor, advisor, and associate director of the School. For Art majors only.

ARTS 499 Special Topics in Studio Art credit: 1 TO 4 Hours.
Special topics in studio arts. Topics and subject matter to be published in course listings. Additional course materials fee may apply. See Class Schedule. 1 to 3 undergraduate hours. 1 to 4 graduate hours. May be repeated to a maximum of 9 undergraduate hours or 12 graduate hours if topics vary. Prerequisite: Senior standing or consent of instructor.

ARTS 591 Graduate Studio credit: 2 to 8 Hours.
Directed individual creative activity or research. Additional fees may apply. See Class Schedule. May be repeated to a maximum of 20 hours. Prerequisite: Graduate standing. For Art majors only.

ARTS 593 Seminar: Methods Criticism credit: 1 to 4 Hours.
Prerequisite: Graduate standing in art.

ARTS 595 Graduate Laboratory credit: 4 to 12 Hours.
Individually directed research and personal. Additional fees may apply. See Class Schedule. Prerequisite: Enrollment in the MFA program in Art & Design or consent of departmental graduate committee. For Art majors only.

Asian American Studies (AAS)

AAS Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/AAS)

Courses

AAS 100 Intro Asian American Studies credit: 3 Hours.
Interdisciplinary introduction to the basic concepts and approaches in Asian American Studies. Surveys the various dimensions of Asian American experiences including history, social organization, literature, arts, and politics.
This course satisfies the General Education Criteria for:
UIUC: Social Sciences
UIUC: US Minority Culture(s)

AAS 120 Intro to Asian Am Pop Culture credit: 3 Hours.
Introductory understanding of the way U.S. popular culture has affected Asian Americans and the contributions Asian Americans have made to U.S. media and popular culture since the mid 1880's.
This course satisfies the General Education Criteria for:
UIUC: US Minority Culture(s)

AAS 184 Asian American Cultures credit: 3 Hours.
Same as ANTH 184 and SOC 124. See ANTH 184.
This course satisfies the General Education Criteria for:
UIUC: Social Sciences
UIUC: US Minority Culture(s)

AAS 199 Undergraduate Open Seminar credit: 1 to 5 Hours.
May be repeated to a maximum of 6 hours.

AAS 201 US Racial & Ethnic Politics credit: 3 Hours.
Same as AFRO 201, LLS 201 and PS 201. See PS 201.
This course satisfies the General Education Criteria for:
UIUC: Social Sciences
UIUC: US Minority Culture(s)
AAS 211 Asian Americans and the Arts credit: 3 Hours.
Examination of Asian American artistic expressions in the visual and the performing arts providing historical, theoretical, and conceptual foundations of understanding the history of various art genres in Asian American communities. Prerequisite: AAS 100 or AAS 120, or consent of instructor.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: US Minority Culture(s)

AAS 215 US Citizenship Comparatively credit: 3 Hours.
Examines the racial, gendered, and sexualized aspects of US citizenship historically and comparatively. Interdisciplinary course taught from a humanities perspective. Readings draw from critical legal studies, history, literature, literary criticism, and ethnography. Same as AFRO 215, AIS 295, GWS 215, and LLS 215. Prerequisite: One of: AAS 100, AAS 120, AFRO 100 AIS 101, GWS 250, LLS 100.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: US Minority Culture(s)

AAS 224 Asian Am Historical Sociology credit: 3 Hours.
Explores concepts of colonization, international labor migration, race, nation, assimilation, and class formation through socio-historical examinations of diverse groups categorized as Asian Americans. Same as SOC 224. Prerequisite: AAS 100.
This course satisfies the General Education Criteria for:
UIUC: US Minority Culture(s)

AAS 246 Asian American Youth in Film credit: 3 Hours.
Examines both mainstream and independent films and documentaries representing and/or produced by Asian American youth. Explores the role of multiculturalism and diversity issues in informing young people’s experiences.
This course satisfies the General Education Criteria for:
UIUC: Social Sciences
UIUC: US Minority Culture(s)

AAS 250 Asian American Ethnic Groups credit: 3 Hours.
Intensive interdisciplinary study of a particular Asian American Ethnic group (specific ethnic group focus will change every semester). May be repeated in the same or separate terms to a maximum of 9 hours. Prerequisite: Any AAS course at the 100- or 200-level or consent of instructor.

AAS 258 Muslims in America credit: 3 Hours.
Introduction to the study of Muslims in the United States and broadly the history of Islam in the Americas. Using a comparative approach, we study how the historical narrative of African American and Latino Muslims relates to newer immigrant populations, primarily Arab American and South Asian American Muslim communities. Same as LLS 258 and RLST 258.
This course satisfies the General Education Criteria for:
UIUC: Social Sciences
UIUC: US Minority Culture(s)

AAS 260 Intro Asian American Theatre credit: 3 Hours.
Same as THEA 260. See THEA 260.
This course satisfies the General Education Criteria for:
UIUC: US Minority Culture(s)

AAS 265 Politics of Hip Hop credit: 3 Hours.
Same as LLS 265. See LLS 265.

AAS 281 Constructing Race in America credit: 3 Hours.
Same as AFRO 281, HIST 281, and LLS 281. See HIST 281.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: US Minority Culture(s)

AAS 283 Asian American History credit: 3 Hours.
Same as HIST 283. See HIST 283.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: US Minority Culture(s)

AAS 284 Adv Topics in Asian America credit: 3 Hours.
Same as ANTH 284. See ANTH 284.
This course satisfies the General Education Criteria for:
UIUC: Social Sciences
UIUC: US Minority Culture(s)
AAS 286 Asian American Literature credit: 3 Hours.
Same as ENGL 286. See ENGL 286.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: US Minority Culture(s)

AAS 287 Food and Asian Americans credit: 3 Hours.
Introduction to the interdisciplinary study of food to better understand the historical, social, and cultural aspects of Asian American food preparation, distribution and consumption. Students will investigate the politics and poetics of Asian American foodways by examining social habits, and rituals around food in restaurants, ethnic cookbooks, fictional works, memoirs, magazines, and television shows. Prerequisite: AAS 100 or AAS 120, or consent of instructor.
This course satisfies the General Education Criteria for:
UIUC: Social Sciences
UIUC: US Minority Culture(s)

AAS 290 Individual Study credit: 2 to 3 Hours.
Supervised reading and research in Asian American Studies chosen by the student with instructor approval. May be repeated to a maximum of 6 hours. Prerequisite: AAS 100.

AAS 291 Hinduism in the United States credit: 3 Hours.
Introduction to the historical, religious, and socio-cultural aspects of Hinduism in the US. The role of Hinduism in the maintenance of the ethnic identity of Indians in the US will be examined in the context of the rituals, languages, temples, family, and other social organizations. The maintenance and/or shift of the features of traditional (Indian) Hinduism in the transplanted counterpart in the US will be examined. Same as RLST 291. Prerequisite: RLST 104 or RLST 286 or consent of instructor.

AAS 297 Asian Families in America credit: 3 Hours.
Same as HDFS 221 and SOCW 297. See SOCW 297.
This course satisfies the General Education Criteria for:
UIUC: Social Sciences
UIUC: US Minority Culture(s)

AAS 299 Begin Topics Asian Am Studies credit: 3 Hours.
May be repeated in the same or subsequent terms to a maximum of 6 hours.

AAS 310 Race and Cultural Diversity credit: 4 Hours.
Same as AFRO 310, EPS 310, and LLS 310. See EPS 310.
This course satisfies the General Education Criteria for:
UIUC: Advanced Composition
UIUC: US Minority Culture(s)

AAS 315 War, Memory, and Cinema credit: 3 Hours.
Interdisciplinary examination of the ways that memories of war, trauma, and immigration are produced through the medium of film. Because war has been key to discourses and practices of imperialism and globalization, some questions addressed will include how these wars have impacted the nation and the global order, as well as how images about these wars produced important constructions of race, gender, and sexuality for national and cultural identities. Also examines the aftereffects of war by analyzing connections between war's trauma, race, immigration, and incarceration. Students will read critical texts, film theory, screenplays, and view films. Same as GWS 315. Prerequisite: AAS 100 or AAS 120, or consent of the instructor.

AAS 317 Asian American Politics credit: 3 Hours.
Same as PS 317. See PS 317.

AAS 328 Asian Americans & Inequalities credit: 3 Hours.
Same as SOC 328. See SOC 328.

AAS 346 Asian American Youth credit: 3 Hours.
Explores cultural production of second-generation Asian American youth as a historical and social formation. Course examines how youth are actively shaping the U.S. landscape in terms of identity formation, youth, culture, education, juvenile justice, politics and activism, and community formations. These experiences are examined in backdrop of larger historical, economic, racial, social and political forces in the United States. Same as HDFS 341.

AAS 355 Race and Mixed Race credit: 3 Hours.
Same as LLS 355 and SOC 355. See LLS 355.

AAS 365 Asian American Media and Film credit: 3 Hours.
An examination of media generally and films and videos more specifically (experimental, documentary, independent, and Hollywood features) by, for, and about Asian Americans. Same as MACS 365. Prerequisite: Any AAS course at the 100- or 200-level, or consent of instructor.

AAS 390 Intermed Topics Asian Am St credit: 3 Hours.
May be repeated in the same or subsequent terms to a maximum of 6 hours.
AAS 395 Adv Asian Am Undergrad Reading credit: 2 or 3 Hours.
Supervised reading and research in upper level Asian American Studies topics chosen by the student with instructor approval. May be repeated to a maximum of 6 hours. Prerequisite: AAS 100.

AAS 397 Asian Families in America credit: 3 Hours.
Same as HDFS 321 and SOCW 397. See SOCW 397. This course satisfies the General Education Criteria for:
UIUC: Social Sciences
UIUC: US Minority Culture(s)

AAS 402 Asian American Education credit: 4 Hours.
Same as EPS 402. See EPS 402. This course satisfies the General Education Criteria for:
UIUC: Advanced Composition
UIUC: US Minority Culture(s)

AAS 435 Commodifying Difference credit: 3 or 4 Hours.
Same as AFRO 435, GWS 435, LLS 435, and MACS 432. See LLS 435.

AAS 465 Race, Sex, and Deviance credit: 3 or 4 Hours.
Same as AFRO 465, GWS 465, and LLS 465. See LLS 465.

AAS 479 Race, Medicine, and Society credit: 3 or 4 Hours.
Same as ANTH 479 and LLS 479. See LLS 479.

AAS 484 Asian Diasporas credit: 3 or 4 Hours.
Same as ANTH 484. See ANTH 484.

AAS 485 The Politics of Fashion credit: 3 or 4 Hours.
Same as GWS 485. See GWS 485.

AAS 490 Adv Topics in Asian Am Studies credit: 3 or 4 Hours.
Research seminar on specialized topics in Asian American Studies. 3 or 4 undergraduate hours. 3 or 4 graduate hours. May be repeated if topics vary. Students may register in more than one section per term if topics vary. Prerequisite: AAS 100 or any Asian American Studies course, or consent of instructor.

AAS 501 Theory and Methods in AAS credit: 4 Hours.
Foundational gateway course for graduate study in Asian American Studies, examining the political, historical, epistemological, and cultural bases of the field through an intensive reading of canonical works and study of core concepts in the field. Also highlights the problems of interdisciplinary research and scholarship and adopts an intersectional and coalitional approach to Asian American Studies as it assumes the necessary linkages between other areas in ethnic/racial and gender/sexuality studies.

AAS 539 Youth, Culture and Society credit: 4 Hours.
Same as EPS 539 and HCD 539. See HCD 539.

AAS 561 Race and Cultural Critique credit: 4 Hours.
Introduction to graduate level theoretical and methodological approaches in Comparative Race Studies. As a survey of theories of race and racism and the methodology of critique, this course offers an interdisciplinary approach that draws from anthropology, sociology, history, literature, cultural studies, and gender/sexuality studies. In addition, the study of racial and cultural formation is examined from a comparative perspective in the scholarship of racialized and Gender and Women's Studies. Same as AFRO 531, ANTH 565, GWS 561, and LLS 561.

AAS 589 Readings in Asian Am Studies credit: 1 to 4 Hours.
Individual guidance in intensive readings in the literature of one or more subdivisions of the field of Asian American Studies. May be repeated to a maximum of 8 hours. Students may register in more than one section per term if topics vary. Prerequisite: Graduate standing or consent of instructor.

AAS 590 Asian Am Studies Seminar credit: 2 to 4 Hours.
Approved for both letter and S/U grading. May be repeated to a maximum of 8 hours. Prerequisite: Graduate standing or consent of instructor.

Asian Studies (ASST)

ASST Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/ASST)

Courses

ASST 104 Asian Mythology credit: 3 Hours.
Same as RLST 104. See RLST 104. This course satisfies the General Education Criteria for:
UIUC: HistPhilos Perspect
UIUC: Non-Western Cultures
ASST 199 Undergraduate Open Seminar credit: 1 to 5 Hours.
May be repeated.

ASST 208 Cultures & Lits of South Asia credit: 3 Hours.
Same as CWL 208, RLST 208 and SAME 208. See RLST 208.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Non-Western Cultures

ASST 218 S Asian Cultural Landscapes credit: 3 Hours.
Same as LA 218. See LA 218.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Non-Western Cultures

ASST 286 Southeast Asian Civilizations credit: 3 Hours.
Same as ANTH 286 and HIST 225. See ANTH 286.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: Non-Western Cultures

ASST 325 Social Media and Global Change credit: 3 Hours.
Same as EPS 325, AFST 325, EURO 325, INFO 325, LAST 325, REES 325, and SAME 325. See EPS 325.

ASST 346 Gov & Pol of South Asia credit: 3 Hours.
Same as PS 346. See PS 346.

ASST 347 Gov & Pol of Middle East credit: 3 Hours.
Same as PS 347. See PS 347.

ASST 390 Individual Study credit: 2 to 4 Hours.
Directed readings in the languages and literatures of South Asia, Southeast Asia, or the Near East. The area selected depends on the student’s interest. Prerequisite: Consent of instructor.

ASST 391 Honors Tutorial credit: 2 to 4 Hours.
Tutorial in the civilizations of South Asia, Southeast Asia, or the Near East. The geographical area or nation and discipline depend on student interests. All students submit a substantial paper. May be repeated to a maximum of 6 hours. Prerequisite: Completion of two honors activities, work in Asian studies, and consent of instructor.

ASST 398 Colloquium in Asian Studies credit: 3 Hours.
Prerequisite: Junior standing.

ASST 402 Transnational Islam, Europe-US credit: 3 or 4 Hours.
Same as ANTH 402 and RLST 409. See ANTH 402.

ASST 465 Oceania’s Peoples and Cultures credit: 3 or 4 Hours.
Same as ANTH 465. See ANTH 465.

ASST 486 Peoples of Mainland SE Asia credit: 3 or 4 Hours.
Same as ANTH 486. See ANTH 486.

ASST 550 Seminar in Asian Studies credit: 4 Hours.
Seminar on selected Asian topics. May be repeated to a maximum of 12 hours if topics vary. Topics will vary with instructor. Prerequisite: Consent of instructor.

ASST 590 Individual Study and Research credit: 2 to 12 Hours.
Supervised individual investigation or study of a topic not covered by regular course offerings. The topic selected by the student and the proposed plan of study must be approved by the student’s adviser and the instructor who supervises the work. Approved for both letter and S/U grading. May be repeated. Prerequisite: Consent of instructor.

Astronomy (ASTR)

ASTR Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/ASTR)
Courses

**ASTR 100 Introduction to Astronomy** credit: 3 Hours.

One term introduction to astronomy. The nature of science; sun, planets, and moons; origin of the solar system; nature and evolution of stars; exploding stars; stellar remnants, including white dwarfs, neutron stars, and black holes; extrasolar planetary systems; galaxies and quasars; dark matter and dark energy; the Big Bang and the fate of the universe; and life in the universe. Lectures and observation; a field trip to Parkland Staerkel Planetarium may be required, nominal charge. Credit is not given for ASTR 100 if credit in any of ASTR 121, ASTR 122, ASTR 210, or equivalent has been earned. Students with credit in PHYS 212 are encouraged to take ASTR 210.

This course satisfies the General Education Criteria for:
UIUC: Physical Sciences

**ASTR 210 Introduction to Astrophysics** credit: 3 Hours.

Survey of modern astronomy for students with background in physics. Topics include: the solar system; nature and evolution of stars; white dwarfs, neutron stars, and black holes; galaxies, quasars and dark matter; large scale structure of the universe; the Big Bang; and Inflation. Emphasis will be on the physical principles underlying the astronomical phenomena. Prerequisite: Credit or concurrent registration in PHYS 212.

This course satisfies the General Education Criteria for:
UIUC: Physical Sciences

**ASTR 330 Extraterrestrial Life** credit: 3 Hours.

Scientific discussion of the search for extraterrestrial life. Topics include: cosmic evolution (protons to heavy elements to molecules); terrestrial evolution (chemical, biological, and cultural); high technology searches for extraterrestrial life in the solar system (Mars, Venus, outer planets); and beyond the solar system (Drake equation and current SETI projects).

This course satisfies the General Education Criteria for:
UIUC: Physical Sciences

**ASTR 350 Introduction to Cosmology** credit: 3 Hours.

Descriptive course on modern cosmological theories. Topics include aspects of special and general relativity; curved spacetime; the Big Bang; inflation; primordial element synthesis; the cosmic microwave background; the formation of galaxies and large scale structure. Credit is not given for ASTR 350 if credit in ASTR 406 has been earned. Prerequisite: ASTR 100, or ASTR 121, or ASTR 122, or ASTR 210, or consent of instructor.

Information listed in this catalog is current as of 11/2014
ASTR 390 Individual Study credit: 1 to 4 Hours.
Individual study at an advanced undergraduate level. May be repeated in separate terms to a maximum of 8 hours. Prerequisite: Consent of advisor and of faculty member who supervises the work.

ASTR 401 Scientific Writing for Astro credit: 1 Hour.
Development of journal-style writing skills. Papers written in accordance with the Astrophysical Journal Manual of Style on topics approved by the instructor. Emphasis on developing adequate and critical coverage of the topic, brevity compatible with clarity, and effective presentation. Proper referencing, footnotes, and bibliography are covered. 1 undergraduate hour. 1 graduate hour. Prerequisite: Completion of campus Composition I general education requirement. Concurrent enrollment in a designated 400-level astronomy course. This course satisfies the General Education Criteria for:
UIUC: Advanced Composition

ASTR 404 Stellar Astrophysics credit: 3 Hours.
Introduction to astrophysical problems, with emphasis on underlying physical principles; includes the nature of stars, equations of state, stellar energy generation, stellar structure and evolution, astrophysical neutrinos, binary stars, white dwarfs, neutron stars and pulsars, and novae and supernovae. 3 undergraduate hours. 3 graduate hours. Prerequisite: PHYS 212; or consent of instructor. Recommended: ASTR 210, PHYS 213, PHYS 214.

ASTR 405 Solar System and IS Medium credit: 3 Hours.
Physical processes in the solar system; dynamics of the solar system; physics of planetary atmospheres; individual planets; comets, asteroids, and other constituents of the solar system; extra-solar planets; formation of the solar system, stars, and planets; components of the interstellar medium; ionization and recombination; heating and cooling processes; comparison of theory with observations; composition and characteristics of interstellar dust; dynamics of the interstellar medium; interactions of stars with the interstellar medium; H II regions, planetary nebulae, and supernova remnants. 3 undergraduate hours. 3 graduate hours. Prerequisite: PHYS 212; or consent of instructor. Recommended: ASTR 210, PHYS 213, PHYS 214.

ASTR 406 Galaxies and the Universe credit: 3 Hours.
Nature of the Milky Way galaxy: stellar statistics and distributions, stellar populations, spiral structure, the nucleus and halo. Nature of ordinary galaxies; galaxies in our Local Group, structure of voids and superclusters. Nature of peculiar objects: Seyfert galaxies, starburst galaxies, and quasars. Elementary aspects of physical cosmology. 3 undergraduate hours. 3 graduate hours. Prerequisite: PHYS 212; or consent of instructor. Recommended: ASTR 210, PHYS 213, PHYS 214.

ASTR 414 Astronomical Techniques credit: 4 Hours.
Introduction to techniques used in modern optical and radio astronomy with emphasis on the physical and mathematical understanding of the detection of electromagnetic radiation; includes such topics as fundamental properties of radio and optical telescopes and the detectors that are used with telescopes. Lectures and laboratory. 4 undergraduate hours. 4 graduate hours. Prerequisite: MATH 241 or equivalent; PHYS 212; or consent of instructor. Recommended: ASTR 210, PHYS 213, PHYS 214.

ASTR 450 Astrochemistry credit: 4 Hours.
Same as CHEM 450. See CHEM 450.

ASTR 451 Astrochemistry Laboratory credit: 3 or 4 Hours.
Same as CHEM 451. See CHEM 451.

ASTR 496 Seminar in Astronomy credit: 1 to 4 Hours.
Lectures on topics of current interest in astronomy and astrophysics; for advanced undergraduates and graduates. See Class Schedule for current topics. 1 to 4 undergraduate hours. 1 to 4 graduate hours. Approved for both letter and S/U grading. May be repeated. Prerequisite: Consent of instructor.

ASTR 499 Astronomy Laboratory credit: 2 Hours.
Provides hands-on observational experience: how to use a telescope, how to image sources using a modern CCD camera, how to use a modern CCD spectrometer, and how to apply data analysis to astrophysical problems. 2 undergraduate hours. 2 graduate hours. Prerequisite: One 400-level astronomy course.

ASTR 501 Radiative Processes credit: 4 Hours.
Fundamentals of radiative processes in astronomy. Topics include radiative transfer, classical theory of radiation fields, relativistic covariance and kinematics, synchrotron emission and absorption, bremsstrahlung, plasma effects, atomic and molecular spectroscopy, and dust. Prerequisite: ASTR 404 or consent of instructor.

ASTR 502 Astrophysical Dynamics credit: 4 Hours.
Introduction to stellar dynamics and fluid dynamics. Topics include two body collisions, two body relaxation, potential theory for stellar systems, adiabatic invariance, stellar system models, Jeans equations, and the virial theorem. Also hydrodynamics, magnetohydrodynamics, waves, instabilities, shocks, explosions, density waves, and wind-blown bubbles. Prerequisite: PHYS 436, PHYS 427, and PHYS 486; or consent of instructor.

ASTR 503 Observational Astronomy credit: 4 Hours.
Techniques and basic results of observational astronomy; gamma ray, x-ray, ultraviolet, visible, infrared, and radio astronomy; photometry, imaging, spectroscopy, and polarimetry; gravitational waves; cosmic rays; neutrinos; positional astronomy; noise; statistics; data analysis; optics. Prerequisite: Consent of instructor.
ASTR 504 Theoretical Stellar Physics credit: 4 Hours.
Application of physical principles to energy generation and flow in astrophysical environments: equations of state; thermonuclear reactions; radiative transport; convection; stellar spectra; nebular spectra; evolution of both single and binary stars; compact stars; accretion disks; thermal and particle history of the universe. Same as PHYS 542. Prerequisite: PHYS 436, PHYS 427, and PHYS 486; or consent of instructor.

ASTR 505 Star Formation credit: 4 Hours.
Survey of the current state of astrophysical research into the topic of star formation. Particular emphasis placed on interpreting observations and how they relate to the theory of star formation. Prerequisite: ASTR 405 or consent of instructor.

ASTR 506 Galaxies credit: 4 Hours.
Survey of the different constituents of the Universe, including galaxies, active galaxies, galaxy clusters, and intergalactic gas. Particular emphasis will be placed on observable properties of the Milky Way and other galaxies, as well as relating such observations to the understanding of the dynamics and evolution of galaxies. Prerequisite: ASTR 406 or consent of instructor.

ASTR 507 Physical Cosmology credit: 4 Hours.
A survey of the essentials of modern cosmology, providing an overview of the state of the field, of open questions, and of observational and theoretical tools. Topics include: classical cosmology--the Friedmann universe; the early universe--inflation, nucleosynthesis, dark matter; the cosmic microwave background--basic physics, anisotropies, polarization; large scale structure formation--theoretical models and observational tests; dark energy--observational evidence, theoretical ideas. Emphasizes applying physical principles to understand observations, and on using observations to constrain the nature of matter and spacetime on cosmic scales--viewing the universe as a laboratory for fundamental physics. Course work focuses heavily on problem solving. Prerequisite: ASTR 406 or consent of instructor.

ASTR 510 Computational Astrophysics credit: 4 Hours.
Prepares students to use numerical simulations to study complex problems in astrophysics and cosmology. Numerical methods and parallel computing will be covered together with the design, validation, and analysis of simulations. Emphasis is placed on solving ordinary and partial differential equations that arise in astrophysical contexts. Students work on assigned numerical problems and perform simulations using existing simulation codes, writing a final paper which presents the results of simulations using one of these codes. There are no formal prerequisites except knowledge of a scientific programming language such as Fortran, C, and C++. Familiarity with Unix/Linux and astronomical analysis tools is useful but not required.

ASTR 515 General Relativity I credit: 4 Hours.
Same as PHYS 515. See PHYS 515.

ASTR 516 General Relativity II credit: 4 Hours.
Same as PHYS 516. See PHYS 516.

ASTR 540 Astrophysics credit: 4 Hours.
Same as PHYS 540. See PHYS 540.

ASTR 541 Physics of Compact Objects credit: 4 Hours.
Same as PHYS 541. See PHYS 541.

ASTR 590 Individual Study credit: 2 to 16 Hours.
Individual study or non-thesis research. May be repeated. Prerequisite: Consent of adviser and of faculty member who supervises the work.

ASTR 596 Seminar in Special Topics credit: 0 to 16 Hours.
Approved for both letter and S/U grading. May be repeated. Prerequisite: Consent of instructor.

ASTR 599 Thesis Research credit: 0 to 16 Hours.
Approved for S/U grading only. May be repeated.

Atmospheric Sciences (ATMS)

ATMS Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/ATMS)

Courses

ATMS 100 Introduction to Meteorology credit: 3 Hours.
Introduces the student to the basic concepts and principles of meteorology via the interpretation of weather maps and charts; uses current weather information to illustrate key concepts; emphasizes the physical atmospheric processes responsible for weather. By the end of the class students will be able to interpret and make basic weather forecasts as well as be able to explain basic atmospheric phenomena. Same as GEOG 100.
This course satisfies the General Education Criteria for:
UIUC: Physical Sciences
UIUC: Quant Reasoning II
ATMS 120 Severe and Hazardous Weather credit: 3 Hours.
Most extreme manifestations of weather and climate are analyzed in terms of their physical basis and their historical, economic and human consequences. Emphasis is placed on the interplay between technological advances, the evolution of meteorology as a science, and the impacts of extreme weather (winter storms, floods, severe thunderstorms, hurricanes, El Nino). Technological advances include satellites, weather radars and profilers, and computer models used for weather prediction. Same as ESE 120. This course satisfies the General Education Criteria for:
UIUC: Physical Sciences
UIUC: Quant Reasoning II

ATMS 140 Climate and Global Change credit: 3 Hours.
Introduces climate change and its interactions with the global environment; surveys the physical, chemical, biological and social factors contributing to global change; includes topics such as greenhouse warming, acid rain, ozone depletion, distinguishes anthropogenic influences and natural variability of the earth system; addresses societal impacts, mitigation strategies, policy options and other human responses to global change. Same as ESE 140. This course satisfies the General Education Criteria for:
UIUC: Physical Sciences

ATMS 199 Undergraduate Open Seminar credit: 1 to 5 Hours.
Special topics each term. May be repeated.

ATMS 201 General Physical Meteorology credit: 3 Hours.
Introduction to physical processes in the atmosphere, focusing on those relevant to weather and storms. Emphasizes quantitative problem solving. Topics include atmospheric structure, atmospheric thermodynamics, clouds, synoptic meteorology, weather forecasting, and storms. For students in atmospheric sciences, physics, mathematics, engineering, and other physical and natural sciences. Prerequisite: MATH 220 or MATH 221; credit or concurrent registration in MATH 231 and PHYS 211.

ATMS 301 Atmospheric Thermodynamics credit: 3 Hours.
Introduction to fundamental thermodynamic processes that occur in Earth's atmosphere. Defines, describes, and derives various thermodynamic concepts including (1) the conservation of energy, (2) laws of thermodynamics, (3) kinetic theory, (4) phase transitions of water, and (5) thermodynamic processes of the atmosphere. Applies thermodynamic concepts to atmospheric structure and stability, water phase transformations, and energy and mass transport within the atmosphere. Prerequisite: ATMS 201, MATH 241, and PHYS 211.

ATMS 302 Atmospheric Dynamics I credit: 3 Hours.
Introduction to fundamental dynamical processes in the atmosphere through a descriptive and quantitative analysis of dynamical meteorology at the synoptic and global scale. Covers basic laws of fluid mechanics as applied to the atmospheric sciences, vorticity and circulation in 2-D and 3-D flows, boundary layer dynamics and friction, basic concepts of geophysical waves, and baroclinic instability. These topics will be covered both descriptively and mathematically with emphasis on computer representation of the fundamental processes governing atmospheric motion and application of theory to real-world examples. Same as PHYS 329. Prerequisite: ATMS 201, MATH 241 and PHYS 211.

ATMS 303 Synoptic-Dynamic Wea Analysis credit: 4 Hours.
Conceptualizes the structure and dynamics of the atmosphere through interpretation and analysis of weather charts, time and cross sections, soundings, and forecast products. Students develop case studies of weather system structure, and participate in discussions of weather processes as depicted by weather maps. Depiction of atmospheric kinematic and dynamic processes on weather charts is emphasized. Students learn conceptual models of the structure of mid-latitude cyclones and convective weather systems, including cyclogenesis, frontogenesis, the process of storm intensification, occlusion and frontolysis. Prerequisite: ATMS 201 and credit or concurrent registration in MATH 241.

ATMS 304 Radiative Transfer-Remote Sens credit: 3 Hours.
Introduction to the laws governing the propagation of electromagnetic radiation in the Earth's atmosphere. Topics include absorption, emission, and scattering of radiation, absorption and scattering properties of atmospheric constituents, the Sun as a source of radiation, the radiative transfer equation, and simple radiative balance models. Emphasis will be placed on the role of radiation in weather and climate, the description of atmospheric optical phenomena, and the application to remote sensing. Prerequisite: MATH 241 and PHYS 212.

ATMS 305 Computing and Data Analysis credit: 3 Hours.
Introduction to the statistical treatment and graphical representation of atmospheric sciences data, both in the space and time domain. Emphasis is placed on applications and real-world examples. Discusses relevant statistics, methods of interpolation and least squares, and linear and nonlinear correlations. Students gain experience using MATLAB for data analysis, develop theoretical skills for analyzing and modeling data, and perform virtual experiments and analyze real-world publicly available data sets. Prerequisite: MATH 241 or consent of instructor.

ATMS 306 Cloud Physics credit: 4 Hours.
Develops an understanding of microphysical processes occurring within clouds through use of in-situ observations, modeling, and theoretical studies; topics covered include nucleation, diffusional growth of water and ice particles, the warm rain process, the cold rain process (including riming, aggregation, graupel and hail), weather modification, and an introduction to radar meteorology. Prerequisite: ATMS 301.

ATMS 307 Climate Processes credit: 3 Hours.
Introduces students to Earth's climates and the processes that determine them. Examines factors that control natural climate change over long and short time scales, processes by which humans impact climate and climate change, methods to predict climate change, and climate change response by policymakers. Prerequisite: ATMS 201.

Information listed in this catalog is current as of 11/2014
ATMS 311 Environmental Issues Today credit: 3 Hours.
Same as ESE 311. See ESE 311.

ATMS 312 Atmospheric Dynamics II credit: 4 Hours.
Rigorous examination of the dynamical nature of various manifestations of the atmospheric circulation. Topics include the intrinsic effects of earth’s rotation and stratification, vorticity and potential vorticity dynamics, various forms of boundary layer, wave dynamics (gravity waves and Rossby waves), geostrophic adjustment, cyclogenesis, frontogenesis and a potpourri of instability theories. Same as PHYS 330. Prerequisite: ATMS 301, ATMS 302.

ATMS 313 Synoptic Weather Forecasting credit: 4 Hours.
Examines the tools and techniques of weather forecasting, with heavy emphasis on actual forecasting. Numerical models used to forecast weather are reviewed and compared. Forecasting using numerical, statistical and probabilistic forecasting techniques is studied. Forecasts of significant winter weather, convection, floods and other weather hazards are emphasized. Students learn the process behind Severe Weather Watches and Warnings, Quantitative Precipitation Forecasts, precipitation type forecasts, flood forecasts and forecasts of other significant weather. Prerequisite: ATMS 302, ATMS 303 or consent of instructor.

ATMS 314 Mesoscale Dynamics credit: 3 Hours.
Examination of the structure and dynamics of weather systems that occur on the mesoscale. The course first reviews what is meant by “mesoscale”. Examines the structure and dynamics of both free and forced mesoscale circulations. Free circulations are those internal to the atmosphere, such as thunderstorms, mesoscale convective systems, squall lines, hurricanes, jet streaks, and fronts. Forced circulations are those tied to features external to the atmosphere, such as shorelines (the sea breeze), lakes (lake effect storms), and mountains. Prerequisite: ATMS 301, ATMS 302, ATMS 303, or consent of instructor.

ATMS 315 Meteorological Instrumentation credit: 3 Hours.
Introduction to the instruments and metrology of measuring weather variables. The focus is to explore modern methods of weather observation while training each student to gather, assess and interpret weather data. This class will also focus on research applications, industrial application in addition to routine weather observation. Prerequisite: ATMS 201.

ATMS 322 Soc Impacts Weather & Climate credit: 3 Hours.
Examines the interconnectedness of weather, climate and society. Focus is on the complex relationship between weather and climate and society from both a physical and social perspective with an examination of the role of sustainability in both impacts and future mitigation. Discussions focused on the physical principles driving the weather and climate and how they interact with all aspects of society. Same as ENSU 301.
This course satisfies the General Education Criteria for:
UIUC: Social Sciences

ATMS 323 Air Pollution to Global Change credit: 3 Hours.
 Develops the science of air pollution across spatial scales with an Earth-systems approach. Considers how fossil fuel combustion, agriculture development, waste generation, synthetic chemicals production, biomass burning, and changes in land use are significantly altering levels of radiatively and chemically active gases and aerosols in the atmosphere, and how these pollutants interact at local, regional, and global scales. The systems nature of the processes through which air pollution is linked to global change will be examined via integrated science assessment modeling that includes feedbacks from societal policies, industrial practices, and human populations. Same as ENSU 302.

ATMS 324 Field Studies Convection credit: 2 Hours.
Students learn to recognize the structural features characteristic of supercellular convection, organized mesoscale convective systems, frontal squall lines, and ordinary thunderstorms, and to relate these structures to theory and conceptual models. Students forecast atmospheric convection, providing daily meteorological forecast discussions and analysis of current and future weather conditions. This course includes a mandatory 12-14 day field trip. Additional fees may apply. See Class Schedule. Approved for S/U grading only. May be repeated in separate terms to a maximum of 6 hours. Prerequisite: ATMS 201. ATMS Majors or Minors only with consent of instructor.

ATMS 391 Topics in Atmospheric Sciences credit: 1 to 3 Hours.
Special topics in atmospheric sciences at the undergraduate level. See Class Schedule for topics and prerequisites. Additional fees may apply. See Class Schedule. May be repeated in the same or separate terms to a maximum of 12 hours if topics vary.

ATMS 401 Applied Meteorology credit: 3 Hours.
Examines how providers of meteorological information work with stakeholders who value that information to develop decision support systems in fields such as aviation, hydrometeorology, energy, health, national security, transportation, agriculture, emergency management, air quality, and climate sustainability. 3 undergraduate hours. 3 graduate hours.

ATMS 405 Boundary Layer Processes credit: 4 Hours.
Course will qualitatively and quantitatively describe atmospheric boundary layer characteristics and processes. The course will focus on the turbulent structure of the boundary layer and the factors that influence this structure over a variety of surfaces (e.g., soil, vegetation, marine) and under a variety of atmospheric conditions (e.g., stability, diurnal/nocturnal). This atmospheric layer is important to our daily lives because it is where humans live and it connects the small-scale fluxes of energy and mass to the large-scale atmospheric circulation. 4 undergraduate hours. 4 graduate hours. Prerequisite: ATMS 301, ATMS 302, and ATMS 304; MATH 285; or consent of instructor.
ATMS 406 Tropical Meteorology credit: 4 Hours.
Covers the mesoscale, synoptic scale and planetary scale motions in the tropical circulation. Emphasis will be on delineating the unique characteristics of tropical dynamics. Topics include Hadley circulation, Walker circulation, Julian-Madden oscillation, monsoons, easterly waves, equatorial waves, hurricanes, the quasi-biennial oscillation, El Nino and the Southern Oscillation. 4 undergraduate hours. 4 graduate hours. Prerequisite: ATMS 301 and ATMS 302 and MATH 285; or consent of instructor.

ATMS 410 Radar Remote Sensing credit: 4 Hours.
Basic principles of radar and references to other ground based remote sensing systems, with emphasis on radar. Discusses principles of conventional and Doppler radar, data processing, and use of Doppler radar in meteorology. Emphasizes radar observations of meteorological phenomena, such as severe thunderstorms and wind shear. Students analyze data from national radar facilities. 4 undergraduate hours. 4 graduate hours. Prerequisite: ATMS 201 and MATH 231 and credit or concurrent registration in MATH 241; or consent of instructor.

ATMS 411 Satellite Remote Sensing credit: 4 Hours.
Review of the basic techniques used in satellite remote sensing of the Earth’s surface and atmosphere, as well as other planets in our solar system. Topics include radiative transfer, scattering and absorption processes, the Sun, mathematics of inversion, atmospheric properties and constituents, surface properties, precipitation, radiation budgets, image classification, satellite technology and orbital configurations. Laboratory work on radiative transfer modeling and satellite data analysis emphasized. All students participate in a team project that has novel and practical applications. 4 undergraduate hours. 4 graduate hours. Prerequisite: MATH 285 and PHYS 212.

ATMS 420 Atmospheric Chemistry credit: 3 Hours.
Same as CEE 447. See CEE 447.

ATMS 421 Earth Systems Modeling credit: 4 Hours.
Introduction to systems modeling with applications to the earth and environmental sciences. Basic systems concepts and systems thinking in the contexts of hydrological, climatic, geochemical, and other environmentally relevant systems. Students identify key processes and relationships in systems, represent these elements quantitatively in models, test the models, use them to predict system behavior, and assess the validity of the predictions. No special mathematical or computing background is required. Same as ESE 421, GEOG 421, GEOL 481, and NRES 422. 4 undergraduate hours. 4 graduate hours. Prerequisite: Junior, senior, or graduate standing in a natural science, geography, natural resources and environmental studies, or engineering.

ATMS 422 Environmental Stable Isotopes credit: 3 Hours.
Same as GEOL 488, IB 488, and NRES 478. See IB 488.

ATMS 425 Air Quality Modeling credit: 4 Hours.
Same as CEE 445. See CEE 445.

ATMS 444 Arctic Meteorology and Climate credit: 4 Hours.
Introduction to the fundamental synoptic and dynamical processes of Arctic meteorology and climate as well as the interactions of the Arctic oceans and sea ice with the atmosphere. 4 undergraduate hours. 4 graduate hours. Prerequisite: ATMS 301 and ATMS 302, or consent of instructor.

ATMS 446 Climate & Social Vulnerability credit: 3 or 4 Hours.
Same as GEOG 496 and SOC 451. See GEOG 496.

ATMS 447 Climate Change Assessment credit: 3 Hours.
Provides students with first-hand experience with computer models used to study climate change and permits them to test hypotheses, develop scenarios, learn about the implications of various structures of the modeled system, and evaluate the climatic impacts of anthropogenic emissions. Students perform calculations and produce model scenarios using a web interface to our Integrated Science Assessment Model (ISAM). 3 undergraduate hours. 3 graduate hours.

ATMS 449 Biogeochemical Cycles credit: 4 Hours.
Presents the key physical, biological, and chemical concepts of biogeochemical cycles central to understanding the causes of global changes in climate and air quality, focusing on an atmospheric sciences view of these cycles and their influences. 4 undergraduate hours. 4 graduate hours. Prerequisite: Consent of instructor.

ATMS 490 Individual Study credit: 1 to 4 Hours.
Individual study or reading at an advanced undergraduate level in a subject not covered in normal course offerings. 1 to 4 undergraduate hours. 1 to 4 graduate hours. May be repeated to a maximum of 8 hours. May not be used to satisfy requirements for an M.S. or Ph.D. degree in Atmospheric Sciences. Prerequisite: Consent of advisor and of staff member supervising work.

ATMS 491 Adv Topics in Atmospheric Sci credit: 2 to 4 Hours.
Special topics in atmospheric sciences. See Class Schedule for topics and prerequisites. 2 to 4 undergraduate hours. 2 to 4 graduate hours. May be repeated in the same or separate terms as topic varies to a maximum of 12 hours.

ATMS 492 Capstone Undergrad Research credit: 4 Hours.
All senior Atmospheric Sciences undergraduate majors are expected to take a Capstone Undergraduate Research experience. Students will either be engaged in an atmospheric science research project or will participate in an approved internship program with an agency involved in atmospheric science research or in meteorological operations. A research or internship project will be with a program at UIUC or with an allied organization. The student will need to first gain approval for their research or internship. 4 undergraduate hours. No graduate credit. May be repeated to a maximum of 8 undergraduate hours. Prerequisite: Senior standing in Atmospheric Sciences.

Information listed in this catalog is current as of 11/2014
ATMS 500 Dynamic Meteorology credit: 4 Hours.
Examines the observed behavior of the atmosphere through the application of physical and hydrodynamical principles to analyses of real meteorological data; develops concepts for studying atmospheric circulations, particularly extratropical cyclones and anticyclones. Laboratory work includes the development of diagnostic techniques suitable for a better understanding of the current weather.

ATMS 501 Mesoscale Meteorology credit: 4 Hours.
Basic concepts and ideas on atmospheric processes that occur on scales of motions from a few kilometers to a few hundred kilometers, a scale loosely classified by meteorologists as "mesoscale". After an introductory discussion of mesoscale classifications and attendant forecast problems, the course will introduce various mesoscale phenomena, internally generated circulations, externally forced circulations, and mesoscale instabilities. Covers all three fundamental aspects of mesoscale meteorology: observations, theory and modeling, with particular emphasis on the dynamics of precipitating mesoscale systems.

ATMS 502 Numerical Fluid Dynamics credit: 4 Hours.
Addresses numerical techniques for solving linear and nonlinear differential equations in initial value fluid flow problems. Students receive a thorough background in the principles used to evaluate numerical methods, the ability to critically interpret these methods as presented in the literature, and in particular, the practical application of these techniques in modeling multi-dimensional flow on high-performance computers. Temporal and directional splitting, finite differencing/volume methods, and adaptive nesting will be discussed. Same as CSE 566. Prerequisite: MATH 285.

ATMS 504 Physical Meteorology credit: 4 Hours.
Examines the physical processes that occur in the atmosphere. Topics include atmospheric thermodynamics, cloud physics and atmospheric radiation.

ATMS 505 Weather Systems credit: 4 Hours.
Examination of the structure and dynamics of mid-latitude weather systems, integrating weather observations, with the current state of dynamic theory, numerical weather prediction models, and the physical principles of atmospheric thermodynamics, cloud and precipitation physics, and radiation to the problems of weather analysis and forecasting. Students will be required to give weather forecast briefings to develop an understanding of the weather forecasting process, and gain experience in communicating weather forecasts. Prerequisite: Graduate standing.

ATMS 507 Climate Dynamics credit: 4 Hours.
Investigates the dynamical and physical processes that govern Earth's paleo, current, and future climates. Emphasizes principles of climate change, natural and anthropogenic, and regional, national, and global. Global climate models and their predictions are examined in the context of scenarios for future population growth and energy consumption.

ATMS 510 Precipitation Physics credit: 4 Hours.
Develops an understanding of precipitation processes through cloud observations, microphysics, dynamics, and comprehensive theoretical models; includes growth by condensation, coalescence, and riming; and studies ice crystals, hail, and weather modification. Prerequisite: ATMS 504 or consent of the instructor.

ATMS 511 Atmospheric Radiation credit: 4 Hours.
Physical concepts and various methods of analysis of radiation scattering by atmospheric molecules, particulates, and clouds; infrared radiative transfer in a stratified inhomogeneous atmosphere; radiation and ozone photochemistry in the stratosphere; and remote temperature and composition sensing techniques using satellite radiation data. Prerequisite: ATMS 504 or consent of the instructor.

ATMS 512 Clouds and Climate credit: 4 Hours.
The following topics are addressed to examine the role of clouds in the climate system: aerosols and aerosol cloud interactions, direct, semi-direct and indirect aerosol effects, in-situ measurements of clouds, properties of liquid and ice clouds, precipitation mechanisms and representation in models, scattering by cloud particles and model representations, remote sensing of cloud properties, and representation of clouds in climate models. Prerequisite: ATMS 504 or consent of instructor.

ATMS 535 Aerosol Sampling and Analysis credit: 4 Hours.
Same as CEE 545. See CEE 545.

ATMS 571 Professional Development credit: 1 Hour.
Aimed at professional development in the atmospheric sciences so that students recognize the importance of breath of knowledge, effective oral and written scientific communication, and other skills they will need as professionals. Approved for S/U grading only. May be repeated to a maximum of 2 hours. Prerequisite: Graduate student in Atmospheric Sciences or consent of instructor.

ATMS 590 Individual Study credit: 2 to 4 Hours.
Individual study or reading in a subject not covered in normal course offerings. May be repeated to a maximum of 8 hours. Prerequisite: Consent of instructor.

ATMS 591 Atmospheric Sciences Seminar credit: 0 Hours.
Seminar on topics of current interest. Approved for S/U grading only. Prerequisite: Consent of Instructor.

ATMS 596 Non-Thesis Research credit: 0 to 12 Hours.
Non-thesis research in the Atmospheric Sciences. Approved for S/U grading only. May be repeated. No more than 4 hours may be counted toward a master's degree in ATMS. Prerequisite: Restricted to students in the non-thesis option.

Information listed in this catalog is current as of 11/2014
ATMS 597 Special Topics in Atmos Sci credit: 0 to 4 Hours.
Lecture course in topics of current interest; subjects such as tropical meteorology, aerosol physics, and geophysical fluid dynamics will be covered in term offerings on a regular basis. Approved for both letter and S/U grading. Prerequisite: Consent of instructor.

ATMS 599 Thesis Research credit: 0 to 16 Hours.
Section A: For master's degree candidates; Section B: For doctoral degree candidates. Approved for S/U grading only. Prerequisite: Consent of instructor.

Aviation (AVI)

AVI Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/AVI)

Courses

AVI 090 Orientation Refresher credit: 0 Hours.
Course provides the student with additional aeronautical experience to develop the required proficiency to successfully complete the objectives of a flight course, pilot certificate, or aircraft rating. The flight hours may be divided between dual instruction or solo flight as required to meet the student's needs. The amount of dual vs. solo time and aircraft to be used will be determined by the chief pilot. Students enrolled in this course will also participate in up to 5 hours of research flight experiments. Additional fees may apply. See Class Schedule. Approved for S/U grading only. May be repeated. Prerequisite: Consent of director.

AVI 100 Intro to Aviation credit: 1 Hour.
A weekly class for students who are new to the Institute of Aviation. Provides an overview of field as well as institution-specific information. Approved for S/U grading only.

AVI 101 Private Pilot I credit: 3 Hours.
The first of a two course sequence to prepare for FAA Private Pilot certification. Includes classroom instruction on aerodynamics, airplane systems, airport and airplane operations, federal regulations and airplane safety. Also includes 27.5 hours of flight training. Students enrolling in this course will also participate in up to 5 hours of research flight experiments. Private Pilot certification requires the completion of AVI 120. Additional fees may apply. See Class Schedule. Prerequisite: Consent of director.

AVI 120 Private Pilot II credit: 3 Hours.
Second of a two course sequence to prepare for FAA Private Pilot certification. Includes classroom instruction on airplane operation, navigation, night flying and meteorology. Includes 34.5 hours of flight training and 3 hours in a flight simulator in the flight laboratory. Students enrolling in this course will also participate in up to 5 hours of research flight experiments. Students successfully completing final examinations will be issued a Private Pilot certificate. Additional fees may apply. See Class Schedule. Credit is not given for both AVI 120 and AVI 121. Prerequisite: AVI 101 and consent of director.

AVI 121 Private Pilot Requalification credit: 2 Hours.
Forty-five classroom hour transitional course for students entering the Institute with a Private Pilot certificate who desire to continue in the Commercial-instrument sequence (AVI 130 through 210/211). Includes instruction on airplane operations, navigation, and meteorology. Includes 17 hours of flight training and 3 hours in a flight simulator in the flight laboratory. Students enrolling in this course will also participate in up to 5 hours of research flight experiments. Additional fees may apply. See Class Schedule. Credit is not given for both AVI 120 and AVI 121. Prerequisite: Private Pilot certificate (with a minimum of 60 hours of flight), and consent of director.

AVI 130 Commercial - Instrument I credit: 3 Hours.
First of a two course sequence to prepare the private pilot for the instrument rating; reviews cross-country flight with an emphasis on instrument approaches and enroute instrument procedures; includes 45 hours classroom instruction on instrument flying, navigation, aircraft instruments, and regulations. Includes 28.2 hours of flight training and 8 hours in a flight simulator in the flight laboratory. Students enrolling in this course will also participate in up to 5 hours of research flight experiments. Issuance of the instrument rating requires completion of AVI 140. Additional fees may apply. See Class Schedule. Prerequisite: AVI 120 or AVI 121, and consent of director.

AVI 140 Commercial - Instrument II credit: 3 Hours.
Second of a two course sequence to prepare the private pilot for the instrument rating. Includes forty-five hours classroom instruction on advanced maneuvers, aerodynamics, navigation, and aircraft systems. Includes 30.2 hours of flight training and 8 hours in a flight simulator in the flight laboratory. Students enrolling in this course will also participate in up to 5 hours of research flight experiments. Additional fees may apply. See Class Schedule. Prerequisite: AVI 130 and consent of director.

AVI 184 Aircraft Systems for Pilots credit: 3 Hours.
Basic aircraft systems, their components, and theory of operation. Familiarization of Federal Aviation Administration maintenance rules and regulations applicable to pilots.

AVI 199 Undergraduate Open Seminar credit: 1 to 5 Hours.
May be repeated.
AVI 200 Commercial Pilot I credit: 4 Hours.
Advanced course in preparation toward the FAA Commercial Pilot Certification. Includes 39.5 hours of flight (22.5 hours dual, 15.5 hours solo, and 1.5 hour flight exam), and 7 hours in a Flight Training Device. Includes 45 hours of classroom instruction covering cross country procedures, appropriate federal aviation regulations, maintenance inspections, and pilot responsibilities. Emphasis is on complex airplane operation and instrument flying procedures. Successful completion is required prior to enrolling in AVI 210 (or AVI 211). Students enrolling in this course will also participate in up to 5 hours of research flight experiments conducted by Institute of Aviation staff. Additional fees may apply. See Class Schedule. Prerequisite: Successful completion of AVI 140 and consent of director.

AVI 210 Commercial Pilot II credit: 4 Hours.
Final course in a series of advanced lecture/flight courses in preparation for the FAA Commercial Pilot Certificate with Instrument Rating. Includes 38.7 hours of flight (21.5 hours dual, 15.7 hours solo, 1.5 hour flight exam), and 6 hours in a Flight Training Device. Includes 45 hours of classroom instruction covering cross country procedures appropriate federal aviation regulations, commercial maneuvers, and pilot responsibilities. Emphasis is on complex airplane operation and commercial maneuvers. Students enrolling in this course will also participate in up to 5 hours of research flight experiments conducted by Institute of Aviation staff. Additional fees may apply. See Class Schedule. Credit is not given for both AVI 210 and AVI 211. Prerequisite: Successful completion of AVI 200 and consent of director.

AVI 211 Commercial Pilot II - M.E. credit: 3 Hours.
Final course in a series of advanced lecture/flight courses in preparation for the FAA Commercial Pilot certificate with both the Instrument rating and multi-engine ratings. Includes 45 hours classroom instruction on fundamentals of teaching, student motivation, blocks to learning, stress, cognitive approaches to learning, flight instructor duties/responsibilities, lesson planning and development, aerodynamics, and pertinent federal aviation regulations. Includes 35 hours of flight instruction and training (23 hours multi-engine airplane and 12 hours single-engine airplane) and 2 hours in a flight simulator in the flight laboratory. Includes three flight exams for qualified individuals. Students enrolling in this course will also participate in up to 5 hours of research flight experiments conducted by Institute of Aviation staff. Credit is not given for both AVI 210 and AVI 211. Prerequisite: AVI 200, recommendation from AVI 200 instructor, and consent of director.

AVI 225 Aviation Weather credit: 3 Hours.
Provides knowledge of weather related to aviation operations for aviation professionals. Includes interpretation of aviation reports, charts, forecasts, other weather information, and human factor issues related to safe weather decision making in numerous scenarios and applications. Prerequisite: AVI 120 or AVI 121.

AVI 320 Flight Instructor-Airplane credit: 3 Hours.
Prepares the commercial pilot for an FAA Flight Instructor (Airplane) certificate. Includes forty-five hours classroom instruction on fundamentals of teaching, student motivation, blocks to learning, stress, cognitive approaches to learning, flight instructor duties/responsibilities, lesson planning and development, aerodynamics, and pertinent federal aviation regulations. Includes 23.8 hours of flight training and instruction and one hour in flight simulator teaching techniques in the flight laboratory. Also includes a one hour flight check for course completion. Students enrolling in this course will also participate in up to 5 hours of research flight experiments Additional fees may apply. See Class Schedule. Prerequisite: Commercial Pilot certificate with instrument rating and consent of director.

AVI 322 Instrument Flight Instructor credit: 1 Hour.
Provides the instruction and supervised training for the addition of the Instrument-Airplane rating to the Flight Instructor certificate. Reviews instrument operations with an emphasis on the instructional aspects of these operations. Includes 13.2 hours of flight instruction and supervised training, 15 hours of discussion and a one hour flight test. Students enrolling in this course will also participate in up to 5 hours of research flight experiments. Additional fees may apply. See Class Schedule. Prerequisite: Commercial Pilot certificate with instrument rating; flight instructor-airplane certificate or concurrent enrollment in AVI 320; and consent of director.

AVI 324 All Attitude Orientation credit: 0 Hours.
Primary focus of this course is to teach the recovery of an airplane from emergency inflight attitudes. Teaches the safe handling of an aircraft in all attitudes of flight through the use of various acrobatic maneuvers including loops, snap rolls, slow rolls, Immelmans, Cuban eights, spins, and similar maneuvers, plus takeoff and landing procedures in a tailwheel airplane. Ten flight hours. Students enrolling in this course will also participate in up to five hours of research flight experiments conducted by the Institute of Aviation staff. Additional fees may apply. See Class Schedule. Approved for S/U grading only. Prerequisite: AVI 101 and AVI 120 or the Private Pilot certificate and consent of director.

AVI 350 Practice Teaching-Airplane credit: 3 Hours.
Practice teaching using classroom, audiovisual materials, flight simulators, and airplanes; prepares the certified flight instructor to teach in all modes of aviation education. A minimum of 2 hours of classroom lecture, 3 hours of simulator instruction, and from 1 to 19 hours of airplane instruction is given by the student; an additional 20 hours of classroom lecture-discussion clarifies and explains the proper methods of aviation instruction. Prerequisite: AVI 320 and flight instructor certificate; junior standing; recommendation from AVI 320 flight instructor; and consent of director.

AVI 358 Human Factors credit: 4 Hours.
Same as IE 340 and PSYC 358. See IE 340.

AVI 380 Multiengine Land credit: 1 Hour.
Prepares the commercial pilot for an FAA multiengine land airplane rating; 10 hours of discussion and 15 hours of flight in a multiengine airplane (13 hours dual instruction, one-half hour solo, plus 1.5 hours check ride for qualified individuals). Students enrolling in this course will also participate in up to 5 hours of research flight experiments conducted by Institute of Aviation staff. Additional fees may apply. See Class Schedule. Prerequisite: Commercial Pilot certificate and consent of director.
AVI 381 Cockpit Resource Management credit: 3 Hours.
Examines societal-cultural, industry, governmental regulatory agency, organizational, group, and individual influences on cockpit behavior and cockpit resource management. Two 90 minute lecture/discussion and one two-hour laboratory/flight periods each week. Laboratory and flight sections use multi-engine flight simulators and multi-engine aircraft. Students will gain experience flying preplanned scenarios in both aircraft and simulators. Materials from lecture/discussions will be emphasized in flights. Additional fees may apply. See Class Schedule. Prerequisite: Multi-engine instrument rating; junior standing and consent of director.

AVI 384 Jet Aircraft System and Ops I credit: 3 Hours.
Operator-oriented study of modern turbo-prop and pure turbine aircraft systems and operation procedures, including aerodynamic performance, fault diagnosis and troubleshooting procedures, and emergency procedures. Prerequisite: AVI 184, AVI 200, or consent of instructor.

AVI 391 Special Flight Ratings credit: 0 Hours.
Consists of aeronautical experience that can be used for special FAA certificates and/or ratings such as Airline Transport Pilot or Rotercraft-helicopter. Course may also be used for specialized flight such as advanced multi-engine operations. Sixteen hours of discussion and a variable number of hours of flight instruction (dual and/or solo) to meet the individual needs of the student. Students enrolling in this course will also participate in up to five hours of research flight experiments conducted by the Institute of Aviation staff. Additional fees may apply. See Class Schedule. Approved for S/U grading only. Prerequisite: Pilot certificate and consent of director.

AVI 392 Flight Instructor CFII and ME credit: 3 Hours.
Provides the instruction and supervised training for the addition of the Instrument Airplane and Airplane Multiengine ratings to the Flight Instructor certificate. Reviews instrument operations and multiengine operations with an emphasis on the instructional aspects of these operations. Includes 25 hours of instruction and 45 hours classroom. Additional fees may apply. See Class Schedule. Credit is not given for both AVI 392 and AVI 322. Prerequisite: AVI 320 and AVI 380.

AVI 393 Turboprop Pilot Orientation credit: 3 Hours.
Introduction to multi-engine turboprop airplane operations. Forty-five hours of lecture-discussion, and 16 hours (as pilot and co-pilot) of simulated flight in a Frasca 242T Turboprop aircraft simulator or equivalent. Includes turbine engine theory and operation, normal and emergency procedures, performance calculations, and crew coordination. Additional fees may apply. See Class Schedule. Prerequisite: AVI 184, AVI 380, AVI 381, and consent of director.

AVI 455 Aviation Accident Analysis credit: 3 or 4 Hours.
Fundamental concepts of aviation safety augmentation with emphasis on accident prevention through accident investigation, casualty reduction through crashworthy design, and safety enhancement resulting from litigation; accident investigation techniques and crash survival design factors. 3 undergraduate hours. 4 graduate hours. Prerequisite: AVI 101 or consent of instructor.

AVI 456 Human Performance and Cognition in Context credit: 3 or 4 Hours.
Same as EPSY 456, IE 445, and PSYC 456. See EPSY 456.

AVI 497 Special Topics in Aviation credit: 2 to 4 Hours.
Special topics in the field of aviation. May be repeated in subsequent terms only when separate topics are offered to a maximum of 12 hours. Prerequisite: AVI 495 or equivalent and junior standing; or consent of instructor.

AVI 542 Cooperative Problem Solving credit: 4 Hours.
Same as IE 542. See IE 542.

AVI 590 Individual Research credit: 0 to 16 Hours.
For graduate students who wish to conduct research on special problems not included in graduate thesis. Approved for S/U grading only. May be repeated to a maximum of 32 hours. Prerequisite: Graduate standing and consent of instructor.

AVI 599 Thesis Research credit: 0 to 16 Hours.
May be repeated to a maximum of 36 hours. Prerequisite: Graduate standing and consent of instructor.

Bamana (BMNA)

BMNA Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/BMNA)

Courses

BMNA 201 Elementary Bamana I credit: 5 Hours.
Introduction to Bamana (Bambara), a West African language spoken from Mauritania to Benin; emphasis on grammar, pronunciation, reading and conversation in standard Bamana. Participation in the language laboratory required. Same as AFST 201.

BMNA 202 Elementary Bamana II credit: 5 Hours.
Continuation of BMNA 201, with introduction of more advanced grammar; emphasis on more fluency in speaking, reading, and writing simple sentences in standard Bamana. Participation in the language laboratory required. Same as AFST 202. Prerequisite: BMNA 201.

BMNA 403 Intermediate Bamana I credit: 4 Hours.
Survey of more advanced grammar, with emphasis on increasing conversational fluency, compositional skills, study of written texts in standard Bamana, and discussion of grammatical variations. Same as AFST 403. 4 undergraduate hours. 4 graduate hours. Prerequisite: BMNA 202.

Information listed in this catalog is current as of 11/2014
BMNA 404 Intermediate Bamana II credit: 4 Hours.
Continuation of BMNA 403; emphasis on ability to engage in reasonably fluent discourse in Bamana and comprehensive knowledge of formal grammar, and ability to read ordinary texts in standard Bamana. Same as AFST 404. 4 undergraduate hours. 4 graduate hours. Prerequisite: BMNA 403.

BMNA 405 Advanced Bamana I credit: 3 Hours.
Third year Bamana with emphasis on conversational fluency and on increased facility in reading, comprehension, writing in response to authentic Bamana texts such as those documented in selected newspapers, magazines, and other Bamana-speaking communities’ cultural materials. Same as AFST 431. 3 undergraduate hours. 3 graduate hours. Prerequisite: BMNA 404.

BMNA 406 Advanced Bamana II credit: 3 Hours.
Continuation of BMNA 405 with increased emphasis on conversational fluency and on increased facility in reading, comprehending authentic Bamana literary texts, including prose and cultural materials from Bamana-speaking communities in West Africa (i.e., Burkina Faso, Cote d’Ivoire, and Mali.) Same as AFST 432. 3 undergraduate hours. 3 graduate hours. Prerequisite: BMNA 405.

Basque (BASQ)

Courses

BASQ 401 Beginners’ Basque credit: 3 Hours.
Basic communication skills in Basque (listening, speaking, reading and writing). Introduction to basic information on Basque culture and history. 3 undergraduate hours. 3 graduate hours. Prerequisite: Four semesters or equivalent of Spanish, French or another Romance language.

BASQ 402 Readings in Basque Studies credit: 3 Hours.
Directed research providing individualized instruction on specific topics in Basque linguistics and culture. 3 undergraduate hours. 3 graduate hours. May be repeated to a maximum of 6 hours. Prerequisite: BASQ 401 or consent of instructor.

Biochemistry (BIOC)

Courses

BIOC 199 Undergraduate Open Seminar credit: 1 to 5 Hours.
Approved for both letter and S/U grading. May be repeated.

BIOC 290 Individual Topics credit: 1 to 5 Hours.
Laboratory work and/or reading in fields selected in consultation with an appropriate faculty member. May be repeated in separate terms to a maximum of 10 hours. Prerequisite: Consent of instructor.

BIOC 406 Gene Expression credit: 3 Hours.
Same as MCB 406. See MCB 406.

BIOC 440 Physical Chemistry Principles credit: 4 Hours.
Same as CHEM 440. See CHEM 440.

BIOC 445 Current Topics in Biochemistry credit: 3 Hours.
Capstone course of the Biochemistry Specialized Curriculum, designed to expose undergraduate seniors to developing areas of research in biochemistry. Each year the course will cover 3 to 4 topics of high current research activity, each presented by one faculty member. Readings will be based on the primary lecture. 3 undergraduate hours. No graduate credit. Prerequisite: Senior standing in the Biochemistry Specialized Curriculum; MCB 354 and MCB 406 or consent of instructor.

BIOC 446 Physical Biochemistry credit: 3 Hours.
Physical properties of biological macromolecules, with the emphasis on spectroscopic methods, including UV, visible and FTIR spectroscopies, magnetic resonance techniques as well as X-ray diffraction methods. Same as CHEM 472 and MCB 446. 3 undergraduate hours. 3 graduate hours. Prerequisite: It is strongly recommended to take CHEM 440 (section B) prior to this course. MCB 354 or MCB 450 or equivalent background in biochemistry is also recommended.

BIOC 455 Technqs Biochem & Biotech credit: 4 Hours.
Introduction to modern methods of experimentation with biochemical experimentation. Lectures and labs on the theory and practices underlying various methods and instrumentation. Includes protein purification and quantitative analyses, immunoassays, enzymology, peptide sequencing, lipid analysis, carbohydrate analysis, and bioinformatics. 4 undergraduate hours. 4 graduate hours. Prerequisite: CHEM 232 or CHEM 236, or equivalent; credit in MCB 251 or equivalent, and MCB 354 or MCB 450 or equivalent, or consent of instructor.
BIOC 460 Biochemistry Senior Seminar credit: 3 Hours.
Writing intensive course dealing with the technical literature, current issues, and current advances in Biochemistry. 3 undergraduate hours. 3 graduate hours. Graduate students may register, but priority will be given to undergraduate students. Prerequisite: Completion of the Campus Composition I general education requirement; MCB 354 and BIOC 455, or consent of instructor. This course satisfies the General Education Criteria for:
UIUC: Advanced Composition

BIOC 492 Senior Thesis credit: 2 to 6 Hours.
Limited in general to seniors in biochemistry. BIOC 492 is recommended for all those who plan to do research and graduate study, and it is a prerequisite for graduation with distinction in biochemistry. Each student who desires to do thesis research must receive written permission from a member of the biochemistry faculty. Accordingly, prospective students are encouraged to contact the biochemistry staff in the term prior to registration in this course. Students must present a thesis to receive credit in this course. Registration of 10 hours over two terms is expected. 2 to 6 undergraduate hours. No graduate credit. Prerequisite: MCB 354 and BIOC 455, or consent of instructor.

BIOC 555 Analytical Biochemical Literature credit: 2 Hours.
Same as MCB 555. See MCB 555.

BIOC 590 Individual Topics credit: 1 to 16 Hours.
Designed for students in biochemistry who wish to undertake individual studies of a non-Ph.D. thesis nature under the direction of a faculty member of the department. Approved for S/U grading only. May be repeated. (Summer Session, 1 to 8 hours). Prerequisite: Consent of head of department.

BIOC 595 Biochemistry Seminar credit: 0 to 1 Hours.
Students, faculty, and invited speakers present seminars and discussions on current research topics. Required of all Biochemistry Ph.D. students. Approved for S/U grading only. May be repeated to a maximum of 12 hours. Prerequisite: Graduate standing in Biochemistry.

BIOC 599 Thesis Research credit: 0 to 16 Hours.
Approved for S/U grading only. May be repeated.

Bioengineering (BIOE)

BIOE Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/BIOE)

Courses

BIOE 120 Introduction to Bioengineering credit: 1 Hour.
Lectures and discussions of recent trends in bioengineering; topics typically include biological interaction with ultrasound and microwave radiation, modeling, instrumentation, biomaterials, biomechanics, biological heat and mass transfer, and medical imaging techniques.

BIOE 198 Special Topics credit: 1 to 3 Hours.
Subject offerings related to Bioengineering intended to augment the Bioengineering curriculum. Offerings will be at the freshman level. See class schedule or course information websites for topics and prerequisites. May be repeated if topics vary. Prerequisite: Majors only.

BIOE 199 Undergraduate Open Seminar credit: 1 to 5 Hours.
May be repeated.

BIOE 201 Conservation Principles Bioeng credit: 3 Hours.
Material, energy, charge, and momentum balances in biological problems. Steady-state and transient conservation equations for mass, energy, charge, and momentum will be derived and applied to mathematically analyze physiological systems using basic mathematical principles, physical laws, stoichiometry, and thermodynamic properties. Prerequisite: CHEM 104, MCB 150, and PHYS 211.

BIOE 202 Cell & Tissue Engineering Lab credit: 2 Hours.
Principles of cell biology inherent in tissue engineering design. Lab experience in safely and skillfully manipulating cells of the four tissue types and performing various quantitative analyses on products produced by cells that have differentiated. Prerequisite: MCB 150, and credit or concurrent enrollment in BIOE 206.

BIOE 205 Signals & Systems in Bioengr credit: 3 Hours.
Introduction to signals and linear systems with examples from biology and medicine. Linear systems and mathematical models of systems, including differential equations, convolution, Laplace transforms, Fourier series and transforms, and discrete representations. Class examples and coursework apply general techniques to problems in biological signal analysis, including circuits, enzyme kinetics, and physiological system analysis. Use of Matlab and Simulink software to understand more complex systems. Prerequisite: CS 101, MATH 285, and PHYS 212.

BIOE 206 Cellular Bioengineering credit: 3 Hours.
Molecular and cellular biology focusing on instrumentation and measurement techniques: gene expression, translation, and regulation; cellular energetics and enzyme kinetics; membrane transport and cell signaling; cytoskeleton and the cell cycle; cell biology fundamentals emphasizing modern imaging and measurement systems to quantify cellular function. Credit is not given for both BIOE 206 and MCB 252. Prerequisite: MCB 150.
BIOE 220 Bioenergetics credit: 4 Hours.
An integrative view of functional organization and energy transfer in biological systems. Emphasis on dynamics and kinetics of quantum, sub-molecular, and molecular interactions for metabolism. Topics include biomolecules of life, laws of thermodynamics, enzyme kinetics, protein-ligand binding, DNA binding, and modeling of molecular systems. Credit is not given for both BIOE 220 and ME 300, PHYS 214, or CHBE 321. Prerequisites: BIOE 201 and BIOE 206.

BIOE 297 Individual Study credit: 1 to 4 Hours.
Special project or reading activity. May be repeated in the same or separate terms to a maximum of 12 hours. Prerequisite: Approved written application to department as specified by department or instructor.

BIOE 298 Special Topics credit: 0 to 4 Hours.
Subject offerings of new and developing areas of knowledge in bioengineering intended to augment the existing curriculum. See Class Schedule or departmental course information for topics and prerequisites. May be repeated in the same or separate terms if topics vary to a maximum of 8 hours.

BIOE 301 Introductory Biomechanics credit: 3 Hours.
Structure and mechanics of biological systems. Statics, dynamics, stress-strain analysis, Newtonian mechanics, and continuum mechanics. Applications to bone, soft tissue, and cells. Prerequisite: PHYS 211.

BIOE 302 Modeling Human Physiology credit: 3 Hours.
Description, quantification, and modeling of human physiological systems, based on systems fundamentals. Components, relationships, and homeostatic controls of neural, musculoskeletal, respiratory, cardiovascular, endocrine, digestion, and renal-filtration systems. Application of mathematical modeling and MATLAB simulation to further understanding of the systems and relate physiological consequences to changes in environment or component function. Prerequisite: CS 101, BIOE 205, MATH 285, and MCB 252 or BIOE 206.

BIOE 303 Quantitative Physiology Lab credit: 2 Hours.
Experiments involving the modeling and measurement of animal and human physiology systems. Use of computer simulations to provide mathematical descriptions of physiology behavior. Calibration and validation of models through hands-on experiments. Focus on quantitative measurement of neural, cardiovascular, respiratory, muscular, and endocrine system functions. Prerequisite: BIOE 302.

BIOE 310 Comp Tools Bio Data credit: 3 Hours.
Fundamental and applied statistics, including probability distributions, parameter estimation, descriptive statistics, hypothesis testing, and linear regression. Statistical methods in genomics including sequence analysis, gene expression data analysis, human genomic variation, regulatory genomics, and cancer genomics. Credit is not given for both BIOE 310 and IE 300. Prerequisites: BIOE 205 and BIOE 206.

BIOE 360 Transport & Flow in Bioengrg credit: 3 Hours.
Fundamentals of fluid dynamics and mass transport applied to analysis of biological systems. Quantitative understanding of microscopic to macroscopic phenomena in biological systems related to their sensing by imaging techniques. Molecular phenomena in both healthy tissue and disease using examples from cardiovascular problems and cancer using ultrasound, optical and MRI techniques. Credit is not given for both BIOE 360 and any of CHBE 421, CHBE 451, or TAM 335. Prerequisites: BIOE 201 and BIOE 301.

BIOE 380 Biomedical Imaging credit: 3 Hours.
Same as ECE 380. See ECE 380.

BIOE 397 Individual Study credit: 1 to 4 Hours.
Special project or reading activity. May be repeated up to 8 hours in a term to a maximum of 12 total hours. Prerequisite: Approved written application to department as specified by department or instructor.

BIOE 398 Special Topics credit: 1 TO 4 Hours.
Subject offerings of new and developing areas of knowledge in bioengineering intended to augment the existing curriculum. See Class Schedule or departmental course information for topics and prerequisites. May be repeated in the same or separate terms if topics vary to a maximum of 8 hours.

BIOE 414 Biomedical Instrumentation credit: 3 Hours.
Engineering aspects of the detection, acquisition, processing, and display of signals from living systems; biomedical sensors for measurements of biopotentials, ions and gases in aqueous solution, force, displacement, blood pressure, blood flow, heart sounds, respiration, and temperature; therapeutic and prosthetic devices; medical imaging instrumentation. Same as ECE 414. 3 undergraduate hours. 3 graduate hours. Prerequisite: BIOE 205, ECE 205 or ECE 210.

BIOE 415 Biomedical Instrumentation Lab credit: 2 Hours.
Laboratory to accompany BIOE 414. Use of sensors and medical instrumentation for static and dynamic biological inputs. Measurement of biomedical signals. 2 undergraduate hours. 2 graduate hours. Same as ECE 415. Prerequisite: Credit or concurrent registration in BIOE 414.

BIOE 416 Biosensors credit: 3 Hours.
Same as ECE 416. See ECE 416.
BIOE 420 Intro Bio Control Systems credit: 3 Hours.
Systems engineering approach to modeling physiological systems to examine natural biological control systems, homeostasis, and control through
eternal medical devices. Introduces open loop and closed loop feedback control; Laplace and Fourier analysis of system behavior; impulse and steady
state responses; physiological modeling and system identification; and stability. Includes biological systems for endocrine function, muscle position,
neuronal circuits, and cardiovascular function. Mathematical modeling, Matlab and Simulink simulation, and physiological measurements to relate control
systems to maintenance of internal environment. 3 undergraduate hours. No graduate credit. Credit is not given for BIOE 420 if credit for AE 353, ECE
486, GE 320, or ME 340 has been earned. Prerequisites: BIOE 205, BIOE 302, BIOE 303, BIOE 414, BIOE 415.

BIOE 435 Senior Design I credit: 2 Hours.
Capstone bioengineering design activity to develop solutions to projects provided by academia, industry, or clinical settings, utilizing principles of design,
engineering analysis, and functional operation of engineering systems. Concept-design, safety, human-factors, quality, and Six-Sigma considerations.
Initial solution proposals meeting professional technical-writing and communication standards. Concluded in BIOE 436. 2 undergraduate hours. No
graduate credit. Prerequisite: BIOE 301, BIOE 414, and BIOE 415.

BIOE 436 Senior Design II credit: 2 Hours.
Continuation of BIOE 435. Design teams finalize concepts, evaluate alternatives, model and analyze solutions, build and test a final product, and present
the results professionally to project sponsors. 2 undergraduate hours. No graduate credit. Prerequisite: BIOE 435.

BIOE 461 Cellular Biomechanics credit: 4 Hours.
Same as TAM 461. See TAM 461.

BIOE 467 Biophotonics credit: 3 Hours.
Same as ECE 467. See ECE 467.

BIOE 473 Biomaterials Laboratory credit: 3 Hours.
Same as MSE 472. See MSE 472.

BIOE 474 Metabolic Engineering credit: 3 or 4 Hours.
Same as CHBE 474. See CHBE 474.

BIOE 476 Tissue Engineering credit: 3 Hours.
Tissue engineering therapies for cell-based, material-based, and therapeutic-based solutions. Stem cells, immunology, and clinical applications. 3
undergraduate hours. 3 graduate hours. Prerequisite: BIOE 301.

BIOE 480 Magnetic Resonance Imaging credit: 3 or 4 Hours.
Same as ECE 480. See ECE 480.

BIOE 481 Whole-Body Musculoskel Biomech credit: 3 or 4 Hours.
Same as ME 481. See ME 481.

BIOE 482 Musculoskel Tissue Mechanics credit: 3 OR 4 Hours.
Same as ME 482. See ME 482.

BIOE 497 Individual Study credit: 1 to 4 Hours.
Special project or reading activity. 1 to 4 undergraduate hours. 1 to 4 graduate hours. May be repeated up to 8 hours in a term to a maximum of 12 total
hours. Prerequisite: Approved written application to department as specified by department or instructor.

BIOE 498 Special Topics credit: 1 to 4 Hours.
Subject offerings of new and developing areas of knowledge in bioengineering intended to augment the existing curriculum. See Class Schedule or
departmental course information for topics and prerequisites. 1 to 4 undergraduate hours. 1 to 4 graduate hours. May be repeated in the same or
separate terms if topics vary to a maximum of 12 hours, but no more than 8 in any one term.

BIOE 499 Senior Thesis credit: 1 to 5 Hours.
Limited in general to seniors in the curriculum in bioengineering. Any others must have the consent of the head of the department. Each student taking
the course must register in a minimum of 5 hours either in one term or divided over two terms. A maximum registration of 10 hours in two terms is
permitted. 1 to 5 undergraduate hours. No graduate credit. May be repeated. Prerequisite: Majors only, senior standing.

BIOE 500 Graduate Seminar credit: 1 Hour.
Lecture surveying a broad range of Bioengineering topics. Approved for S/U grading only. May be repeated to a maximum of 2 hours.

BIOE 501 Seminar Discussion credit: 1 Hour.
Familiarization with reading and discussing academic journals in Bioengineering. Approved for S/U grading only.

BIOE 502 Bioengineering Professionalism credit: 1 Hour.
Ethical questions and conduct, procedures, and professional standards in the practice of bioengineering. Authorship and mentoring, use of animal
and human subjects, conflict of interest, ethical behavior in scientific research, intellectual property, and approval processes for drugs and biomedical
devices.
BIOE 504 Analytical Methods in Bioeng credit: 4 Hours.
Mathematical concept relating to modeling of physiological and bio-molecular processes and the instrumentation used to measure those processes. Review of matrix methods, probability, linear systems, and integral transforms. Singular value decomposition, Bayesian decision making, and linear system solutions to ordinary differential equations. Application of concepts to biosensor design and evaluation, tracer kinetic modeling, and filtering and curve-fitting approaches to forward modeling problems. Prerequisite: MATH 285.

BIOE 505 Computational Bioengineering credit: 4 Hours.
Mathematical and statistical models plus accompanying computational techniques central to many aspects of systems biology and bioengineering research. Theory of supervised and unsupervised learning; linear models; dimension reduction; Monte Carlo computation; analysis of gene expression data and genome sequence data; modeling of gene transcription network signaling pathways. Prerequisite: STAT 400.

BIOE 506 Molecular & Cellular Bioengineering credit: 4 Hours.
Cutting-edge engineering technologies applied to molecular and cellular biology research. Methods to monitor, measure, manipulate, and model the properties of genes, molecules, and cells to advance understanding of the complex biological system. Recombinant DNA technologies, RNA and protein technologies, genetic engineering approaches for fluorescence biosensors and live-cell imaging, signaling regulation and tissue engineering. Prerequisite: MCB 250.

BIOE 507 Advanced Bioinstrumentation credit: 4 Hours.
Instrumentation and underlying theory employed in bioengineering. Concepts in the design and operation of sensors, fundamentals of optics, basic control theory and systems, digital components, and fundamental principles of medical imaging techniques. Specific knowledge of one biomedical instrument or system will be emphasized including detailed mathematical analysis. Prerequisite: BIOE 504.

BIOE 570 Bioinstrumentation Seminar credit: 1 Hour.
Lecture and discussion on topics relevant to the development, regulatory approval, marketing, and application of systems used in the fields of biomedical imaging, life science research, pharmaceutical discovery, agriculture, food safety, and environmental monitoring. Emphasis upon case studies on topics that will include regulatory approval, intellectual property, strategy, and technology innovation. May be repeated up to 2 hours in separate terms. Prerequisite: For students enrolled in the M.Eng Bioinstrumentation major.

BIOE 581 MRI Pulse Sequence Design credit: 3 Hours.
Modular approach to pulse sequence programming in magnetic resonance imaging; descriptions of current pulse sequences; RF pulse design; data sampling considerations; k-space acquisition trajectories. Pulse sequence development simulator usage to program, simulate, and reconstruct images from student-designed acquisitions. Prerequisite: ECE 480.

BIOE 597 Individual Study credit: 1 to 8 Hours.
Special project or reading activity. May be repeated. Prerequisite: Approved written application to department as specified by department or instructor.

BIOE 598 Special Topics credit: 1 to 4 Hours.
Subject offerings of new and developing areas of knowledge in bioengineering intended to augment the existing curriculum. See Class Schedule or departmental course information for topics and prerequisites. May be repeated in the same or separate terms if topics vary to a maximum of 12 hours, but no more than 8 in any one term.

BIOE 599 Thesis Research credit: 0 to 16 Hours.
Bioengineering graduate thesis research. Approved for S/U grading only. May be repeated.

Biology (BIOL)

BIOL Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/BIOL)

Courses

BIOL 599 Thesis Research credit: 0 to 16 Hours.
Approved for S/U grading only. May be repeated.

Biophysics (BIOP)

BIOP Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/BIOP)

Courses

BIOP 401 Introduction to Biophysics credit: 3 or 4 Hours.
Same as PHYS 475. See PHYS 475.

BIOP 419 Brain, Behavior & Info Process credit: 3 Hours.
Same as MCB 419 and NEUR 419. See MCB 419.

BIOP 432 Photosynthesis credit: 3 Hours.
Same as CPSC 489 and IB 421. See IB 421.
BIOP 470 Computational Chemical Biology credit: 3 or 4 Hours.
Same as CHEM 470. See CHEM 470.

BIOP 550 Biomolecular Physics credit: 4 Hours.
Same as MCB 550 and PHYS 550. See PHYS 550.

BIOP 581 Lab Rotation I credit: 2 Hours.
Laboratory research methods; familiarization of first-year graduate students with experimental methods used in research in Biophysics and Computational Biology. Required of all first-year students majoring in Biophysics and Computational Biology. First five weeks of fall term. Prerequisite: First-year graduate status and consent of department; concurrent registration in BIOP 582 and BIOP 583.

BIOP 582 Lab Rotation II credit: 2 Hours.
Laboratory research methods; familiarization of first-year graduate students with experimental methods used in research in Biophysics and Computational Biology. Required of all first-year students in Biophysics and Computational Biology. Second five weeks of fall term. Prerequisite: First-year graduate status and consent of department; concurrent registration in BIOP 581 and BIOP 583.

BIOP 583 Lab Rotation III credit: 2 Hours.
Laboratory research methods; familiarization of first-year graduate students with experimental methods used in research in Biophysics and Computational Biology. Required of all first-year students majoring in Biophysics and Computational Biology. Meets last five weeks of the fall term. Prerequisite: First-year graduate status and consent of department; concurrent registration in BIOP 581 and BIOP 582.

BIOP 586 Special Topics in Biophysics credit: 1 to 4 Hours.
Advanced course/tutorials on topics of interest in biophysics, such as electrophysiology, radiation biology, bioenergetics, protein structure, or the physics of muscular contraction. May be repeated. Prerequisite: Consent of instructor.

BIOP 590 Individual Topics credit: 2 to 10 Hours.
For graduate students wishing to study individual problems or topics not assigned in other courses. May be repeated. Prerequisite: Consent of department.

BIOP 595 Biophysics Seminars credit: 1 to 2 Hours.
Survey of literature in one area of biophysics, with special emphasis on student reports. Approved for S/U grading only. May be repeated. Prerequisite: Graduate standing in Biophysics and Computational Biology.

BIOP 599 Thesis Research credit: 0 to 16 Hours.
Research may be conducted in any area under investigation in a faculty laboratory, subject to the approval of the faculty member concerned and the department in which the research is to be done. Approved for S/U grading only. May be repeated.

Bosnian-Croatian-Serbian (BCS)

BCS Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/BCS)

Courses

BCS 101 Basic Serbian or Croatian I credit: 4 Hours.
Oral and written work on pronunciation, grammar, and vocabulary. For students with no previous study of Serbian or Croatian.

BCS 102 Basic Serbian or Croatian II credit: 4 Hours.
Continuation of BCS 101. Prerequisite: BCS 101 or equivalent proficiency.

BCS 115 South Slavic Cultures credit: 3 Hours.
Exploration of South Slavic cultures in the historically rich and complex region sometimes referred to as "the Balkans," focusing particularly on those groups found within the successor states of the former Yugoslavia. Critical look at the traditional view of the region as the crossroads or the bridge between East and West, and at the term Balkanization which has become a pejorative term used to characterize fragmented, and self-defeating social systems.
This course satisfies the General Education Criteria for:
UIUC: Non-Western Cultures
UIUC: Social Sciences
UIUC: Western Compartv Cult

BCS 199 Undergraduate Open Seminar credit: 1 to 5 Hours.
May be repeated.

BCS 201 2nd Year Serbian & Croatian I credit: 4 Hours.
Completion of grammar; written and oral exercises aimed at active command of the language. Prerequisite: BCS 102 or equivalent proficiency.

BCS 202 2nd Year Serbian & Croatian II credit: 4 Hours.
Selected readings in Serbian or Croatian literature and culture. Prerequisite: BCS 201 or equivalent proficiency.
BCS 301 Third-Year Serbian/Croatian I credit: 3 Hours.
Analysis of the sound system and grammar of the contemporary Serbian or Croatian language. Prerequisite: Knowledge of another Slavic language or consent of instructor.

BCS 302 Third-Year Serbian/Croatian II credit: 3 Hours.
Reading and analysis of selected texts. Prerequisite: BCS 301 or consent of instructor.

**Bulgarian (BULG)**

BULG Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/BULG)

**Courses**

BULG 481 Structure of Modern Bulgarian credit: 3 Hours.
Analysis of the sound system and grammar of the contemporary Bulgarian language. 3 undergraduate hours. 3 graduate hours. Prerequisite: RUSS 302 or equivalent.

BULG 482 Readings in Bulgarian Lit credit: 3 or 4 Hours.
Reading, analysis, and discussion of selected excerpts from Bulgarian literature, scientific prose, and the press. 3 undergraduate hours. 3 or 4 graduate hours. May be repeated if topics vary. Prerequisite: BULG 481 or consent of instructor.

**Business (BUS)**

BUS Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/BUS)

**Courses**

BUS 101 Business Prof Responsibility credit: 2 Hours.
Introduces College of Business freshmen to professional responsibility in Business. Begins by developing the concept of professional responsibility within a personal and interperson context. Students will discover the meaning of professional responsibility in their career and in professional relationships. Continues by expanding the concept of professional responsibility to an ethical balance of the profit motive and corporate responsibility within the global context.

BUS 120 Business Honors Seminar credit: 2 Hours.
Introduction to business and an overview of the role of the College of Business and the University of Illinois in providing opportunities for undergraduates to prepare to become business leaders. Introduction to the College of Business Honors Program, a leadership program for approximately 40 incoming freshmen in the College of Business. Students will begin to work as a team to use leadership in service to all undergraduates in the College of Business. Approved for both letter and S/U grading. Prerequisite: Membership in freshman class of College of Business Honors Program.

BUS 199 Undergraduate Open Seminar credit: 0 to 5 Hours.
Approved for both letter and S/U grading. May be repeated.

BUS 299 BUS Internship credit: 0 Hours.
Accommodates students who must be registered for a course at the University while completing an internship, either because the internship is unpaid and the company requires registration, or because of visa requirements. Only internships in the College of Business will be considered. Approved for S/U grading only.

BUS 301 Principles Prof Responsibility credit: 3 Hours.
Examines in depth a number of the multi-dimensional attributes required to advance understanding of professional responsibility in the context of an ever-changing business environment, focusing on principles for addressing dilemmas that regularly arise in professional life in the work of business. Explores connections between academic integrity while in school and professional responsibility in later work life. Builds on BUS 101 and provides a breadth and depth of that body of knowledge that will enable highly successful students in BUS 301 to be considered for the role of section leaders in BUS 101. Aspiring section leaders in BUS 101 must have excelled in BUS to be considered for the position. Prerequisite: BUS 101; by application and interview.

BUS 399 Business Study Abroad credit: 0 to 18 Hours.
Upon prior written approval of the College of Business’ Office of Undergraduate Affairs, a student may earn up to 18 credit hours per term undertaking a study and/or research project in international business at accredited foreign institutions or approved overseas programs. Final determination of appropriate credit will be made upon completion of the work done abroad. While absent from the Urbana-Champaign campus, the student must continue to pay all fees required by the University of Illinois to retain continuity of enrollment and to allow the time spent away from this campus to count toward residency. Approved for both letter and S/U grading. Maximum of 18 hours per term and 36 hours total. Prerequisite: One academic year (or one semester in the case of transfer students) in residence at UIUC, good academic standing, completion of at least thirty semester hours toward the bachelor's degree, and prior approval of course work by the College of Business’ Office of Undergraduate Affairs. Some programs have additional requirements.
Business Administration (BADM)

BADM Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/BADM)

Courses

BADM 199 Undergraduate Open Seminar credit: 1 to 5 Hours.
May be repeated.

BADM 205 Business Location Decisions credit: 3 Hours.
Same as GEOG 205. See GEOG 205.

BADM 261 Technology & Mgmt Seminar credit: 1 Hour.
Current topics in technology and management presented by senior executives from a wide range of industries. Executives discuss challenges they confront and approaches taken in execution of their respective businesses. Format encourages dialogue and discussions between executives and students. Same as ENG 261. Credit is not given toward technical electives in the College of Engineering nor business electives in the College of Business, nor toward the T&M Minor.

BADM 300 The Legal Environment of Bus credit: 3 Hours.
Introduction to law and the legal system, tort law, products liability, agency law, introduction to business organizations, introduction to government regulation, securities regulation, antitrust law. Course Information.

BADM 301 Summary of Business Law credit: 3 Hours.
Basic principles of the private law of business including the law of contracts, agency, and business organizations; a brief introduction to the law of sales, negotiable instruments, security devices, and property. Credit is not given for both BADM 301 and BADM 403. Course is not open to students in the College of Business.

BADM 303 Principles of Public Policy credit: 3 Hours.
Same as ACCY 321 and PS 321. See PS 321.

BADM 310 Mgmt and Organizational Beh credit: 3 Hours.
General analysis of management and organizational behavior from a systems point of view, including classical organizational theory and management, organizational behavior, and management science; environmental forces; planning, organizing, and control processes; motivation, incentives, leadership, communication, and interpersonal relations; and discussion of production and decision-making and mathematical models.

BADM 311 Individual Behavior in Orgs credit: 3 Hours.
Understanding the behavior of employees in work organizations; particular attention to the motivation of individuals to join and perform in organizations and to employee satisfaction with elements of the work environment; and emphasis on various management strategies to modify employee motivation and satisfaction. Prerequisite: BADM 310.

BADM 312 Org Design and Environment credit: 3 Hours.
Understanding of complex organizations; particular attention to ways of dividing work, achieving coordination, and issues connected with change and adaptation. Prerequisite: BADM 310.

BADM 313 Human Resource Management credit: 3 Hours.
Studies concepts and methods used by the staff personnel unit in building and maintaining an effective work force in an industrial organization; development of ability to design the personnel subsystem within the firm and to deal effectively with problems encountered in such areas as recruitment, selection, training, and wage and salary administration; and considerable emphasis on case analysis, role playing, and research. Credit is not given for both BADM 313 and PSYC 245. Prerequisite: BADM 310.

BADM 320 Principles of Marketing credit: 3 Hours.
Emphasizes the concepts of planning, organization, control, and decision making as they are applied in the management of the marketing function. Provides an overview of aspects of the marketing discipline. Prerequisite: ECON 202 or equivalent (Statistics I).

BADM 321 Principles of Retailing credit: 3 Hours.
Gives a general analysis of the structure of retailing emphasizing the retailing environment and operating efficiencies; includes patronage behavior, merchandise control, pricing, promotion, location, and vendor relations; and gives special attention to emerging trends in retailing. Prerequisite: BADM 320.

BADM 322 Marketing Research credit: 3 Hours.
Focuses on the techniques and methods of marketing research; emphasizes primarily survey research and experimental design; and offers students the opportunity to apply techniques to real-world situations. Prerequisite: BADM 320 and ECON 202.

BADM 323 Marketing Communications credit: 3 Hours.
Introduces the student to the topic of marketing communications and promotion management. Topics covered include: advertising, sales promotion, point-of-purchase communications, interactive marketing, and event sponsorships. Prerequisite: BADM 320.

Information listed in this catalog is current as of 11/2014
BADM 324 Purchasing and Supply Mgmnt credit: 3 Hours.
Examines the analysis, planning, and forms of organization that are associated with the buying functions in business. Major focus on the principal issues involved in the procurement of raw materials, components, equipment, operating supplies, and services. Also treats the unique aspects of institutional and government purchasing. Case problems constitute a major vehicle of instruction. Prerequisite: Credit or concurrent enrollment in BADM 320.

BADM 325 Consumer Behavior credit: 3 Hours.
Studies the factors affecting customer behavior in household and organizational markets and their relevance for marketing management planning and analysis; provides an overview of explanations of consumption differences anchored in socioeconomic, demographic, cultural, and psychological processes; and surveys buyer decision-making processes and their implications for marketing strategy. Prerequisite: BADM 320.

BADM 326 Pricing Policies credit: 3 Hours.
The role of pricing in contemporary marketing and major pricing decisions facing the firm; theoretical, economic, and practical methods and models for setting prices; pricing new products, initiating price changes, and responding to competitive pricing; the relationship of pricing objectives and strategies to the goals of the firm; and sealed bidding for contracts. Prerequisite: BADM 320.

BADM 327 Marketing to Business and Govt credit: 3 Hours.
Introduces the general area of industrial marketing; examines the nature of industrial markets especially as they compare to consumer markets and emphasizes such factors as the demand for industrial goods, marketing intelligence systems for industrial firms, marketing strategy in industrial markets, and analyses and control of industrial marketing programs; integrates important concepts from sales management and business logistics throughout the course; uses case studies. Prerequisite: BADM 320.

BADM 328 Business-to-Business Selling credit: 3 Hours.
Introduces the use of persuasive personal communication in attracting and retaining customers. Uses experiential learning exercises to address principles and techniques of personal selling and the administration of the selling function as it relates to the development of marketing strategy and the achievement of corporate objectives. Prerequisite: Junior standing.

BADM 329 New Product Development credit: 3 Hours.
Exposes student to business and marketing decisions in the context of new product development and marketing. Helps students learn how to use state-of-the-art management techniques to identify markets, develop new product ideas, measure customer benefits, and design profitable new products. Prerequisite: BADM 320.

BADM 335 Supply Chain Management Basics credit: 3 Hours.
Course broadly exposes students to the basics of supply chain management. It concentrates on the basic concepts, terminology, techniques and tools in supply chain management. Introduces the main functions of supply chain management and its interface with marketing, finance, and information management. Studies the interactions among the logistics of manufacturing, inventory, and transportation. Students are introduced to mathematical modeling and computer simulations to optimize the performance of supply chains.

BADM 336 Modeling the Supply Chain credit: 3 Hours.
Course introduces students to supply chain modeling. It covers optimization and simulation modeling, value stream mapping, and the SCOR model for representation of supply chains. Models for strategic and tactical decision-making in supply chain design and operations will be considered. Presents examples of supply chain modeling in practice and integration of supply chain models with other business functions. Prerequisite: BADM 335.

BADM 337 Practicum in Supply Chain Mgt credit: 3 Hours.
This is the capstone course for the Supply Chain Management major. Students are required to work in teams to solve real-world supply chain management problems using the tools and techniques learned from their other classes. Students are required to present their progress and final reports to both the faculty and company sponsors. Also covers some basic elements of project management and a large case study.

BADM 340 Ethical Dilemmas of Business credit: 3 Hours.
Examines business decision making and the role ethics plays in that process. Analysis of how managers behave and whether ethical choices are knowingly made or only realized thereafter. The object is to increase awareness of the moral dimension of business activity.

BADM 350 IT for Networked Organizations credit: 3 Hours.
Examines the information technology and its impact on modern organizations. Topics include: (1) IT, Internet Technologies, E-Commerce and business models, (2) organizing and modeling enterprise data, (3) Network protocol and architecture, (4) development of IT systems, and (5) IT management and organization design.

BADM 351 E-Business Management credit: 3 Hours.
Designed to provide current perspective about enterprise IT-applications and the management issues that such applications entail. Emphasis is on current developments that will be explored with lectures, case studies, and hands-on applications. The course builds on BADM 350. May be repeated in subsequent terms. Prerequisite: BADM 350.

BADM 352 Database Design and Management credit: 3 Hours.
Introduce the modern concepts, techniques and management practices when dealing with data and use of data in organizations. Topics include data modeling, database logical and physical designs, implementation, database administration and web-based database environment. Students will be involved in constructing a database and researching an advanced topic to solidify the learning. Same as ACCY 352.
BADM 353 Info Sys Analysis and Design credit: 3 Hours.  
Methodologies and techniques used and deliverables created in developing large-scale information systems, including preliminary planning, feasibility analysis, design implementation, and post-implementation review of the system; a term-long project which familiarizes students with methodology and techniques is required. Same as ACCY 353. Prerequisite: BADM 352.

BADM 354 Mgmt of Data Communications credit: 3 Hours.  
Course stresses a top-down, business oriented approach to evaluating and selecting data communications technology. Students who successfully complete this course gain practical knowledge of network telecommunications technology including hardware and software. They learn enough to allow them to help design systems that include network components. Prerequisite: BADM 350.

BADM 355 Enterprise Software Management credit: 3 Hours.  
Almost every professional who works in a field related to Information Technology requires an understanding of how enterprise projects and IT projects, in general, should be managed. Provides fundamental managerial skills for students who will work on IT projects. Covers different kinds of enterprise software applications - Enterprise Resource Planning Systems, Customer Relationship management systems and supply chain management IT systems. Students will get hands-on understanding through a term project and project-management software. Discusses approaches to estimate and manage costs, schedules and resources. Students get an understanding of real-world challenges through case studies throughout the course. May be repeated in subsequent terms. Prerequisite: BADM 350.

BADM 356 New Product Marketing credit: 3 Hours.  
Exposes engineering students to the discipline of marketing and to business decision-making in the unique context of new product marketing decisions. Credit is not given for both BADM 365 and BADM 320.

BADM 357 Management Decision Models credit: 3 Hours.  
Introduction to methods of operations research from an executive or managerial viewpoint, emphasizing formulation of business problems in quantitative terms; industrial applications of linear programming, dynamic programming, game theory, probability theory, queuing theory, and inventory theory. Prerequisite: ECON 203.

BADM 358 Logistics Management credit: 3 Hours.  
Treats the total flow of materials from their acquisition as basic or unprocessed supplies to delivery of the finished product, as well as the related counter-flows of information that both record and control material movement. Major topics include forecasting material requirements; transportation planning; order processing system; raw material, in-process and finished goods inventory management; packaging; in plant and field warehousing; location theory (space, time, and cost trade-offs); communications; and control.

BADM 359 Business Process Improvement credit: 3 Hours.  
The survival and growth of any organization requires the continuous improvement of its processes. This course focuses on philosophies and tools for enhancing customer-defined value created through processes. Contemporary process improvement programs are emphasized along with conventional ideas - topics include Statistical Quality Control, Value Stream Mapping, Total Quality Management, and Six Sigma.

BADM 360 Mgmt of Innov and Technology credit: 3 Hours.  
Focuses on the strategic management of technology and innovation in organizations. It builds primarily on broad models of technological evolution and organizational change. Same as TMGT 367. Prerequisite: Admission to the Technology and Management Program.

BADM 361 Product Design and Development credit: 3 Hours.  
An overview of the product development process from concept generation to design manufacturing and project management. There is an emphasis on product definition, early concept development, visual reasoning and engineering graphics. Students work in cross disciplinary teams working through product development projects. Same as TMGT 366. Prerequisite: Admission to the Technology and Management Program.

BADM 362 Enterprise Proc Integr & Dynm credit: 3 Hours.  
Enterprise-level study of a business that focuses on the integration and management of many interrelated processes. The focus is on linkages between these business processes and the management of these linkages in a dynamic business environment. Prerequisite: BADM 375.

BADM 363 Project Management credit: 3 Hours.  
In-depth treatment of management concepts, tools, and techniques that apply to the organization, planning, and control of projects; particular emphasis on analyzing needs, defining work, scheduling tasks, allocating resources; assessing costs, managing risks; tracking and evaluating performance; and building and leading teams.

BADM 364 Enterprise Software Management credit: 3 Hours.  
mment of manufacturing and service business processes; central concepts include managing process-speed, -capacity, -inventory, and -uncertainty; additional topics include simultaneous product and process design, and an introduction to quality management, process improvement and lean thinking.

BADM 365 Enterprise Proc Integr & Dynm credit: 3 Hours.  
Enterprise-level study of a business that focuses on the integration and management of many interrelated processes. The focus is on linkages between these business processes and the management of these linkages in a dynamic business environment. Prerequisite: BADM 375.

BADM 366 Product Design and Development credit: 3 Hours.  
Exposes engineering students to the discipline of marketing and to business decision-making in the unique context of new product marketing decisions. Credit is not given for both BADM 365 and BADM 320.

BADM 367 Project Management credit: 3 Hours.  
In-depth treatment of management concepts, tools, and techniques that apply to the organization, planning, and control of projects; particular emphasis on analyzing needs, defining work, scheduling tasks, allocating resources; assessing costs, managing risks; tracking and evaluating performance; and building and leading teams.

BADM 368 Logistics Management credit: 3 Hours.  
Treats the total flow of materials from their acquisition as basic or unprocessed supplies to delivery of the finished product, as well as the related counter-flows of information that both record and control material movement. Major topics include forecasting material requirements; transportation planning; order processing system; raw material, in-process and finished goods inventory management; packaging; in plant and field warehousing; location theory (space, time, and cost trade-offs); communications; and control.

BADM 369 Business Process Improvement credit: 3 Hours.  
The survival and growth of any organization requires the continuous improvement of its processes. This course focuses on philosophies and tools for enhancing customer-defined value created through processes. Contemporary process improvement programs are emphasized along with conventional ideas - topics include Statistical Quality Control, Value Stream Mapping, Total Quality Management, and Six Sigma.

BADM 370 International Business credit: 3 Hours.  
Introduces the field of international business and management. Examines the economic, political, and legal environments of international business. Analyzes differences in financial management, marketing, and management practices for firms doing business abroad.
BADM 381 Multinational Management credit: 3 Hours.
Examines critical issues facing managers who work in multinational firms. Designed to develop students' skills for working in a global business environment. Topics include foreign market entry strategies, global management of the functional areas of business, and management and control of multinational firms in the global marketplace.

BADM 382 International Marketing credit: 3 Hours.
Analyzes marketing strategy across national boundaries, the problems of marketing within foreign countries, and the coordination of global marketing programs. Includes problems faced by the exporter, licensor, joint venture, and multinational firm. The full range of market activities are discussed from a global perspective. Prerequisite: BADM 320.

BADM 394 Senior Research I credit: 2 to 4 Hours.
Research and readings course for students majoring in business administration. May be taken by students in the college honors program in partial fulfillment of the honors requirements. May be repeated in the same or separate terms for unlimited undergraduate hours. Not applicable to graduate or professional hours.

BADM 395 Senior Research II credit: 1 to 4 Hours.
Research and readings course for students majoring in business administration. May be taken by students in the college honors program in partial fulfillment of the honors requirements. Additional fees may apply. See Class Schedule. May be repeated in the same or separate term for unlimited undergraduate hours. Not applicable to graduate or professional hours.

BADM 403 Principles of Business Law credit: 4 Hours.
Contracts, sales, debtor-creditor relations, negotiable instruments, property, business organizations. 4 undergraduate hours. 4 graduate hours.

BADM 420 Advanced Marketing Management credit: 3 Hours.
Integrative study of methods and models for marketing decision-making; emphasizes the application of analytical tools and behavioral and quantitative models to marketing decision-making. Uses lectures, case studies and simulation exercises. 3 undergraduate hours. No graduate credit. Prerequisite: BADM 320.

BADM 436 Intl Business Immersion credit: 4 Hours.
Same as ACE 436. See ACE 436.

BADM 438 Agri-food Strategic Management credit: 3 Hours.
Same as ACE 431. See ACE 431.

BADM 445 Small Business Consulting credit: 4 Hours.
Through guided experience, students identify and offer advice to local small business firms; exposes students, serving as consultants, to the wide variety of problems facing the smaller firm as well as enables them to apply current business methods to real problems. Students work in teams. 4 undergraduate hours. 4 graduate hours. Credit is not given for both BADM 445 and ENG 465.

BADM 446 Entrepreneurship Sm Bus Form credit: 4 Hours.
Studies entrepreneurship for those with a serious interest in owning their own business within five years of graduation; students prepare a comprehensive business plan for starting or acquiring such a business; also studies the problems of an existing small business. 4 undergraduate hours. 4 graduate hours.

BADM 447 Legal Strat for Entrepire Firm credit: 4 Hours.
Addresses the legal and managerial strategies important to the emerging firm, with particular focus on defensive legal strategies in the context of entrepreneurship. From the entrepreneur's perspective, examines the law of partnerships, sole proprietorships, corporations, joint ventures, agency, and defensive strategies to thwart takeovers. 4 undergraduate hours. 4 graduate hours.

BADM 449 Business Policy and Strategy credit: 3 Hours.
Analysis of policy formulation and implementation from a company-wide standpoint; emphasis on integration of knowledge and approaches across functional areas; both endogeneous and exogeneous factors which affect company policies; and the role of the firm in society. 3 undergraduate hours. No graduate hours.

BADM 451 E-com Apps & Web-based Systems credit: 3 or 4 Hours.
Provides students with technical skills for building web-based e-commerce applications using the Microsoft.NET framework as well as knowledge of web services. Topics include: ActiveServerPages.NET (ASP.NET), VisualBasic.NET (VB.NET), XML, web services, the Microsoft.NET framework. 3 undergraduate hours. 4 graduate hours. Prerequisite: BADM 350.

BADM 453 Decision Support Systems credit: 3 Hours.
This advanced course examines recent developments in information technology for managerial decision support with an emphasis on Internet-based and mobile information technologies. Real-world cases will be used to discuss the application of these technologies to management information systems. 3 undergraduate hours. No graduate credit. Prerequisite: BADM 350.

BADM 454 Enterprise Computing Mgmt credit: 3 Hours.
Aims to prepare students with programming skills for building and managing enterprise applications. Java is used as the language for implementation. C and C++ are also introduced briefly. General principles of computing are emphasized over specific languages. 3 undergraduate hours. No graduate hours. Prerequisite: BADM 350.
BADM 458 IT Governance credit: 3 or 4 Hours.
Provides students with a core body of knowledge concerning the state of development, research and business practice of IT governance on topics such as: managerial issues for the prevention of business frauds and threats; the key technology for IT governance for users and businesses; issues concerning integrity control, privacy, ethics, risk management, and reliability; best practices concerning regulatory compliance requirements; and enterprise information management issues, policies and practices. 3 undergraduate hours. 4 graduate hours. Prerequisite: BADM 350.

BADM 460 Business Process Modeling credit: 3 Hours.
Introduces the identification and analysis of various aspects of business processes. The course defines business processes and provides tools for designing and analyzing them. Same as TMGT 460. 3 undergraduate hours. No graduate credit. Prerequisite: BADM 367.

BADM 461 Tech, Eng, & Mgt Final Project credit: 2 Hours.
Course is the capstone interdisciplinary new product development project course for the Technology & Management Program. Students work in cross-functional teams (joint business and engineering teams) to solve new product development project problems provided by client firms. Because the client firms differ each year, so do the problems. Same as TMGT 461. 2 undergraduate hours. No graduate credit. May be repeated up to 4 hours. Prerequisite: BADM 366, BADM 367, BADM 460.

BADM 503 Classics in Business Admin credit: 2 Hours.
Graduate seminar. Presents foundational literature to introduce the theoretical origins of the different areas of Business Administration and explores the linkages among these areas. Outlines the impact of the foundational works on subsequent research. Approved for S/U grading only. Prerequisite: Ph.D. standing in BADM or consent of instructor.

BADM 504 Phil of Science and Bus Admin credit: 2 Hours.
Introduction to philosophy of science that focuses on the nature of discovering and justifying knowledge in the business disciplines. Specific issues of interest are the nature of scientific truth, validation of theories, prediction and explanation. Discusses applications to research in various business disciplines. Prerequisite: Ph.D. standing in BADM or consent of instructor.

BADM 505 Stat Analysis w/Business App credit: 4 Hours.
This topics course introduces the student to the theory and applications of probability (deduction), statistics (inference) and data analysis (linear models) that are relevant for the conduct of research in Business Administration. May be repeated to a maximum of 8 hours. Students may take each section (A and B) once for credit towards degree requirements. Prerequisite: Ph.D. standing in BADM or consent of instructor.

Research methodology for the study of administrative, industrial, and consumer behavior and organizations; Foundations of measurement - Construct definition, Domain delineation, Reliability, Dimensionality, and Validity. Reliability analysis, Exploratory and Confirmatory factor analysis; Alternative methods of data collection - laboratory experimentation, survey research design, and qualitative research. A completed individual research project involving the development of an entire method is formally presented in class and submitted as a paper. Prerequisite: Ph.D. standing in BADM or consent of instructor.

BADM 508 Leadership and Teams credit: 2 or 4 Hours.
Develops and integrates fundamental behavioral concepts and theory having administrative applications; initially focuses on the individual decision maker and ultimately includes interpersonal, organizational, and social structures and influences; and develops strategies and methods of research on behavioral applications in business.

BADM 509 Managing Organizations credit: 2 or 4 Hours.
Examines and analyzes the organization as a social system and the impact of its various components on work attitudes and behavior; topics include the development of organizational structures, organizational effectiveness, decision making and policy formulation, leadership, and change.

BADM 510 Founds of Organizational Behav credit: 4 Hours.
Introduction to the principal theories and important empirical research in various disciplines that study organizations; in addition to examination of the subject matter content of various disciplines, students critically examine the capacities and limitations of the various fields to make contributions to the study of organizations. Same as PS 514, PSYC 553, and SOC 575. Prerequisite: Enrollment as a major in organizational sciences in a cooperating program or consent of instructor.

BADM 511 Topics in Personnel Mgmt credit: 4 Hours.
Examines the organization and administration of the personnel function in management; the relations of personnel administration to operating departments and the scope of business and industrial personnel services; analytical appraisal of policies and practices in selected areas of personnel administration, such as selection and training, carried out through case studies and direct industrial contracts; and specific consideration given to problems up to and including placing the person on a job. Same as LER 548. Prerequisite: Consent of instructor.

BADM 512 HR Management and Strategy credit: 4 Hours.
Same as LER 565. See LER 565.

BADM 514 Managing Innovation credit: 2 Hours.
Provides a solid grounding to students interested in managing various aspects of the innovation process that facilitate the creation, synthesis, and organization of knowledge for the development of economically valued products, processes, and services within organizations. Covers both the analytic frameworks for understanding the innovation process as well as the strategic and organizational challenges involved in managing technological innovation. Specifically focuses on managerial actions that create the organizational environment in which new opportunities are identified and new business models are developed to create value. Prerequisite: BADM 508 or consent of the instructor.
BADM 518 Adv Topics in Org Behavior credit: 2 Hours.
Review and analysis of major organization theory topics stressing the sociological, economic and managerial foundations or macro organizational behavior. Topics include: the role of the social and economic environment on the functions, evolution and transformation of individual organizations; and inter-organizational relations, the ecology of organizations and institutional factors that shape organization action. May be repeated in the same or separate terms to a maximum of 4 hours. Students may take multiple topics under the course designation, but can only take each topic once for credit towards degree requirements. Prerequisite: Ph.D. standing in BADM or consent of instructor.

BADM 519 Adv Topics in Org Theory credit: 4 Hours.
Seminar in topics of organizational behavior and organizational theory. Topics include: Seminar in Organizational Behavior (explores the most recent research in the field of Organizational Behavior); and Seminar in Organizational Theory (explores the most recent research in the field of Organizational Theory). May be repeated in the same or separate terms to a maximum of 8 hours. Students may take multiple topics under the course designation, but can only take each topic once for credit towards degree requirements. Prerequisite: Ph.D. standing in BADM or consent of instructor.

BADM 520 Marketing Management credit: 2 or 4 Hours.
Introduces concepts useful in understanding marketing systems and buyer behavior in addition to developing skills in making marketing decisions; the orientation is primarily managerial and uses examples from both business and non-business contexts.

BADM 521 Marketing Strategy credit: 4 Hours.
Formal analysis of strategy drawing on concepts from the theory of games, decision theory, value theory, and information theory; topics cover elements of game models, classes of decision problems, games against nature, modern utility theory, information theory, group decision making, statistical decision theory, and linear and nonlinear optimization.

BADM 522 Marketing Models credit: 4 Hours.
Concepts, methods, and applications of decision modeling to marketing issues including segmentation, targeting and positioning, new product design and development, advertising, sales force and promotion planning, and sales forecasting. Assists students to build “smart” spreadsheets to improve marketing decisions.

BADM 523 Consumer Behavior credit: 4 Hours.
Studies alternative models of buyer behavior; focuses attention on psychological, sociological, and economic factors including motivation, learning, attitudes, personality, reference groups, social stratification, demographics, life-styles, and cross-cultural differences and their impact on purchasing, consumption, and choice decisions.

BADM 524 Pricing Strategy and Tactics credit: 4 Hours.
Develops concepts and techniques for formulating and administering prices in a variety of business situations. Focuses on understanding the internal and external environment through relevant information acquisition and analysis for developing appropriate pricing strategies and tactics.

BADM 525 New Product Development credit: 2 or 4 Hours.
The decisions on the firm's total market offer, including such topics as use of market analysis in making decisions on assortment, product development, pricing, packaging, branding, and sales forecasting; coordination of these decisions and actions with market communications, physical movement, production, finance, and the overall goals and policies of the firm; and emphasizes the use of analytic and research methods in making assortment and product decisions.

BADM 526 Marketing to Organizations credit: 4 Hours.
Case and discussion-based course that focuses on how firms that are engaged in marketing to organizations. Examines how to identify competitive marketing advantages, assess market needs, and leverage or sustain these advantages.

BADM 527 Sales Force Management credit: 4 Hours.
Examines primary elements and problems in the area of sales force management; studies such topics as the dyadic interaction between the buyer and seller, the sales presentation, important salesperson characteristics, the selection, training, assignment, motivation, and compensation of salespeople, supervision and evaluation of the sales force, and coordination of the sales force with other elements in a firm's marketing program. Uses case studies.

BADM 528 Promotional Strategy credit: 4 Hours.
Management orientation to promotional strategy for the medium and large size organization: includes analyses of the primary elements of the promotional function from both qualitative and quantitative perspectives emphasizing such factors as (1) selection among alternative promotional tools, (2) the promotional budgeting and allocation process, and (3) determination of appropriate messages and media schedules for given product/market situations. Explores widely used models in depth for strategic usefulness; emphasizes case analysis and contemporary situations.

BADM 529 Marketing Research credit: 4 Hours.
Examines the collection and analysis of information applied to marketing decisions; stresses quantitative methods including samplings, scalings, experimental design, forecasting, and multivariate procedures through the use of class projects on actual market research problems.

BADM 531 Survey Methods in Mkt Res credit: 4 Hours.
Analysis of survey methods in marketing with emphasis on sample design, data collection, and data processing; an advanced course in the methods required to design, implement, and evaluate a research project. Same as SOC 576.
BADM 532 Sust Products for Subsistence credit: 4 Hours.
Focuses on sustainable product and market development for subsistence marketplaces; virtual immersion in subsistence contexts; emersion of principles for business, design, and engineering; idea generation and evaluation by groups of business, engineering, and design students; optional international field trip over winter break; option to enroll in a spring course on developing product prototype and business plan. Prerequisite: Application process.

BADM 533 Sustainable Prod & Bus Plans credit: 4 Hours.
Project based course focusing on systematic approach for designing sustainable products and developing business plans that address the issues of economic, social and ecological sustainability; covers concept generation and evaluation, detailed design, cost modeling, testing & prototyping, and sustainable business plan development; also a continuing course for students enrolled in sustainable product and market development for subsistence marketplaces. Prerequisite: Application Process.

BADM 534 Marketing Theory and Systems credit: 2 Hours.
Detailed review of approaches to marketing theory. Specific emphasis on understanding the development of marketing theory and current trends in marketing thought. By a comprehensive review of selected literature, the student will be prepared to interpret and conduct research in marketing. Prerequisite: Ph.D. standing in BADM or consent of instructor.

BADM 537 Advanced Topics in Marketing credit: 4 Hours.
Seminar on topics associated with the development of marketing theory. Topics may vary from year to year, and include classics in marketing exchange, development, and thought as well as current research frontiers involving product usage, market definition, data base modeling, and pricing. May be repeated to a maximum of 8 hours. Students may take multiple topics under the course designation, but can only take each topic once for credit towards degree requirements. Prerequisite: Ph.D. standing in BADM or consent of instructor.

BADM 538 Res Sem in Consumer Behavior credit: 4 Hours.
Advanced doctoral level seminar which critically examines the relevance of behavioral and social constructs for generating consumer behavior theories. It specifically discusses the need for, and procedures with which to modify behavioral/social processes. Prerequisite: Ph.D. standing in BADM or consent of instructor.

BADM 539 Math Models in Marketing credit: 4 Hours.
Seminar in model building as a tool for research in marketing. Application of the mathematics of optimization, dynamics, linear algebra and games to marketing topics including consumer choice, retailing, price promotions, advertising, personal selling, positioning, new product diffusion. Research project using marketing models required. Prerequisite: Ph.D. standing in BADM or consent of instructor.

BADM 542 Competitive Analysis credit: 4 Hours.
Develops concepts and techniques critical for formulating competitive strategy in a variety of business environments. Focuses on analyzing the structure of industries, the evolution of this structure, the pattern of interaction among competitors, and the competitive position and advantage of firms in the industry.

BADM 543 Technology Strategy credit: 2 or 4 Hours.
Develops concepts and analytical frameworks for evaluating the role of technology in the competitive advantage of the firm. Focuses on the technological environment of the firm, the use of technology to secure competitive advantage, and the management of innovation. Emphasizes the products, processes, and people of technology and innovation management.

BADM 544 Strategic Management credit: 2 or 4 Hours.
Policy construction and planning of policy implementation at the executive level; case studies of company-wide situations from the management point of view; and integration and application of material from previous courses. Credit is not given for both BADM 544 and BADM 339. Prerequisite: BADM 509, BADM 520, and BADM 567, FIN 520, or equivalent.

BADM 545 Found of Strategy Research credit: 2 Hours.
Seminars on topics in the development of strategic management theory. Topics include: Classics in Strategic Management (explores the historical development of the foundational literature of strategic management); and Theory Development and Assessment in Strategic Management (focuses on the process of conducting and critiquing research in the field). May be repeated in the same or separate terms to a maximum of 4 hours. Students may take multiple topics under the course designation, but can only take each topic once for credit towards degree requirements. Prerequisite: Ph.D. standing in BADM or consent of instructor.

BADM 546 Strategy Content Research credit: 2 Hours.
Seminar covering the foundations of strategy content and formulation research. Topics include: Economic Theories in Strategic Management (including strategic management applications of industrial organization economics); and Economic Approaches to Strategic Management Research (including transaction costs, resource-based and property rights research). May be repeated in the same or separate terms to a maximum of 4 hours. Students may take multiple topics under the course designation, but can only take each topic once for credit towards degree requirements. Prerequisite: Ph.D. standing in BADM or consent of instructor.

Information listed in this catalog is current as of 11/2014
BADM 547 Strategy Process Research credit: 2 Hours.
Seminar on research into strategy formulation and implementation processes. Topics include: Behavioral Theories in Strategic Management (theoretical and empirical research on complex organizations and their environments); and Behavioral Approaches to Strategic Management Research (behavioral research into strategy formulation and implementation processes). May be repeated in the same or separate terms to a maximum of 4 hours. Students may take multiple topics under the course designation, but can only take each topic once for credit towards degree requirements. Prerequisite: Ph.D. standing in BADM or consent of instructor.

BADM 548 Corp & Comp Strategy Research credit: 2 Hours.
Research seminars on topics in firm-level and business-level strategy. Topics include: Corporate Strategy (explores issues associated with the scope of the firm, corporate governance and value creation), and Competitive Strategy (focuses on strategic positioning, timing, competitive advantage and sustainability). May be repeated in the same or separate terms to a maximum of 4 hours. Students may take multiple topics under the course designation, but can only take each topic once for credit towards degree requirements. Prerequisite: Ph.D. standing in BADM or consent of instructor.

BADM 549 Current Strategy Research credit: 2 Hours.
Seminar on current theoretical and empirical research relating to emerging areas of knowledge in the strategic management field. Reflecting the emphasis of current research on strategic and organizational phenomena, topics vary from year to year. May be repeated in the same or separate terms to a maximum of 4 hours. Students may take multiple topics under the course designation, but can only take each topic once for credit towards degree requirements. Prerequisite: Ph.D. standing in BADM or consent of instructor.

BADM 551 Managing Intellectual Property credit: 2 Hours.
How do firms compete with ideas? How do they create, exploit and vindicate intellectual property ("IP") assets and capabilities in competition with others at home and abroad? We will address these critical questions, and gain a better understanding of what IP is, how firms nurture its creation, protect and meter its use, and integrate it into the broader competitive strategy of the firm. We will also investigate different types of IP legal regimes around the world, and investigate how multinational firms manage these regime differences for competitive advantage globally. We will do this through review and discussion of published legal decisions, international agreements and business case studies designed to highlight practical challenges that managers face when deciding how best to protect, transfer and or exploit IP within and across markets. Students should come away from this course with practical management insights and techniques for dealing with IP issues and helping the firm compete with ideas more effectively.

BADM 552 Legal Aspects of Mgt Decisions credit: 4 Hours.
The legal environment in which business decisions are made, including the legal system and the role of courts, government taxation and regulation of business, administrative law, antitrust law, labor law, and trends in the law affecting business policy.

BADM 553 Ethical Dilemmas in Business credit: 4 Hours.
Examines business decision making and the role ethics plays in that process. Analysis of how managers behave and whether ethical choices are knowingly made or only realized thereafter.

BADM 554 Enterprise Database Management credit: 4 Hours.
Examines the design and management of enterprise-wide data base systems. Topics include: (1) information modeling and presentation; (2) computerized methods for organizing information; (3) object-oriented information representation; (4) web-based enterprise information systems; and (5) business application and management of enterprise data base systems. Credit is not given for both BADM 554 and BADM 352.

BADM 555 Info Sys Development and Mgt credit: 4 Hours.
Addresses issues relevant to the development of large-scale information systems including systems concepts and thinking, systems development life cycle, objectives, methodology and deliverables in each phase, behavioral implications of systems development and integration information systems with business processes. Credit is not given for both BADM 555 and BADM 353.

BADM 556 Electronic Commerce credit: 4 Hours.
Graduate seminar in Electronic Commerce (EC), focusing on the integration of IT and business models. Topics include: (1) business-to-consumer EC; (2) business-to-business EC; (3) enterprise information management; (4) infrastructure development; (5) knowledge management; and (6) EC strategy.

BADM 557 Dec Support and Knowledge Mgt credit: 4 Hours.
This graduate level course examines emerging information technologies, in particular based on the Internet and mobile applications, to support management decisions. This course combines the technical, business and managerial aspects of developing advanced electronic business systems. Credit is not given for both BADM 557 and BADM 453.

BADM 558 Software Prog Dev and Mgmt credit: 4 Hours.
Graduate level course. Covers software development principles and implementations. Course topics include: Object-oriented programming, Java, C, C++, C#, with Java as the main language of implementation.

BADM 559 Enterprise IT Governance credit: 4 Hours.
Addresses enterprise IT governance, with a focus on (1) IT governance strategy, including strategic mapping, IT portfolio management, and IT risks assessment; (2) IT control frameworks for organizing IT processes and defining management control objectives, and (9) Trustworthy information management.

BADM 561 Found of IS/IT Research credit: 4 Hours.
Doctoral seminar aimed at preparing students for conducting research in the IS/IT area. Topics covered include: IS/IT research methods, approaches, and applications. Different research perspectives are surveyed. Emphasizes the scholarly process and the development of IS/IT research programs for an academic career. Prerequisite: Ph.D. standing in BADM or consent of instructor.
BADM 565 Design & Mgt of Service Sys credit: 4 Hours.
Focuses on unique challenges arising in services because customers cannot be separated from service creation and delivery processes; emphasizes integration of operations, marketing, and human resources management; and includes topics such as design/delivery of services, service quality/ productivity, and strategic role of information technology in services.

BADM 566 Supply Chain Management credit: 2 or 4 Hours.
Focuses on how to manage flows of products and services from raw material sources to final customers and associate flows of information. Helps students to develop a system view of measuring channel performance, integrating cross-functional activities, and coordinating processes across organizations.

BADM 567 Process Management credit: 2 or 4 Hours.
Introductory course in decision-making problems in production; includes the theoretical foundations for production management as well as the applications of decision-making techniques to production problems in the firm; and considers production processes, plant layout, maintenance, scheduling, quality control, and production control in particular.

BADM 568 Planning and Control Systems credit: 4 Hours.
In-depth treatment of concepts involved in designing and implementing planning and control systems within the context of a dynamic environment; particular emphasis on the systematic use of information to maintain the efficient flow of materials, utilization of people and technology, coordination with suppliers, and communication with customers.

BADM 569 Res Topics in Operations Mgt credit: 4 Hours.
Current and classical literature in the area of Operations Management. The topics covered may vary from year to year and may include performance measures, inventory management, planning, scheduling, location, layout, product design, process design, and forecasting. May be repeated in the same or separate terms to a maximum of 12 hours. Prerequisite: Ph.D. standing in BADM or consent of instructor.

BADM 570 Stat for Mgt Decision Making credit: 2 or 4 Hours.
The application of classical and modern statistics for business decision making. The level of the course assumes some prior knowledge of basic statistics as well as facility with elementary calculus.

BADM 572 Stat for Mgt Decision Making credit: 2 or 4 Hours.
Introduction to operations research techniques; topics include the construction and solution of linear models under certainty, and the construction of probabilistic models, specifically queuing theory, Markov chains, and sequential decisions.

BADM 573 Quant Analysis of Decisions credit: 2 or 4 Hours.
Elements of computer simulations, including modeling deterministic and stochastic systems, generation of random numbers and variables, and probability and statistics related to modeling, validating, running, and of interpreting computer simulations. Same as CS 545. Prerequisite: CS 105 or CS 125 and STAT 400, or equivalent background in computer and statistical principles, or consent of the instructor.

BADM 574 Simulation and Risk Analysis credit: 2 Hours.
This course provides quantitative tools for solution of management problems involving risk, competing objectives, and complex constraints. The course will provide hands-on experience with techniques for solving these problems, with a particular emphasis on models and methods that enable managers to proactively manage and mitigate risk, obtain insight, and support decision making. Models are illustrated with applications to operations management, finance, and marketing, with a particular emphasis on issues associated with project portfolio management. Hands-on modeling skills are developed using spreadsheet-based software tools. We will consider challenges that executives and organizations encounter when implementing these approaches, and demonstrate how mathematical models can improve on “seat of the pants” methods.

BADM 575 Systems Modeling & Simulation credit: 4 Hours.
Application of Markov processes to describe, analyze, and design systems of interest in management science, including queues, inventory, production, brand loyalty, stock market, and other applications. Prerequisite: BADM 569 or consent of instructor.

BADM 576 Math Prog for Mgmt Science credit: 4 Hours.
Mathematical programming models (linear, integer, quadratic, nonlinear, dynamic, and combinatorial) used to describe, analyze, and design systems such as production, transportation, scheduling, and planning. Prerequisite: MATH 415 or equivalent.

BADM 577 Multinational Management credit: 4 Hours.
Examines critical issues facing managers who work in multinational firms. Designed to develop students’ skills for working in a global business environment. Topics include foreign market entry strategies, global management of the functional areas of business, and management and control of multinational firms in the global marketplace.

BADM 578 Current Topics in Intl Bus credit: 4 Hours.
Continuation of BADM 577. Examines topics related to management and integration of multinational firms not covered in BADM 577. Possible topics include foreign investment decisionmaking, global manufacturing and supply chain management, international joint ventures and strategic alliances, cross-border mergers, global R&D, and global strategic human resource management. May be repeated.

BADM 579 Global Marketing credit: 4 Hours.
Analyzes marketing strategy across national boundaries, the problems of marketing within foreign countries, and the coordination of global marketing programs. Includes problems faced by the exporter, licensor, joint venture, and multinational firm. The full range of market activities are discussed from a global perspective.

Information listed in this catalog is current as of 11/2014
BADM 586 Intl Comparative Management credit: 4 Hours.
Compares and contrasts different regional/national business systems and organizational practices including those from both developed and developing countries. Designed to advance students’ global management knowledge and cross-cultural skills for functioning effectively in a transnational economy. Includes an optional overseas study trip to visit local companies and subsidiaries of multinational firms.

BADM 589 Project Management credit: 2 Hours.
The objective of this course is to master the principles of efficient project planning and control - needs analysis, work breakdown, scheduling, resource allocation, risk management, and performance tracking and evaluation - within the timeframe and cost projections stated in the overview section. Concepts and techniques will be developed by navigating through a recent textbook in project management and through a popular project management software package. In addition, task teams of five members each will have the opportunity to hone skills through homework problem sets and a comprehensive project plan.

BADM 590 Seminar in Business Admin credit: 0 to 4 Hours.
Special topics in the general area of business. Topics are selected by the instructor at the beginning of each term. Approved for letter and S/U grading. May be repeated if topics vary; unlimited credit hours for graduate and professional students.

BADM 591 Proseminar in Business Admin credit: 0 to 4 Hours.
Lectures in topics of current interest not covered by regular course offerings. Subjects are announced in the Class Schedule. Approved for letter and S/U grading. May be repeated in the same term and/or separate terms as topics vary; unlimited credit hours for graduate and professional students.

BADM 593 Research in Special Fields credit: 1 to 8 Hours.
Approved for both letter and S/U grading.

BADM 594 Independent Study and Research credit: 2 or 4 Hours.
Directed reading and research. Approved for both letter and S/U grading. May be repeated in the same term and/or separate terms as topics vary; unlimited credit hours for graduate and professional students.

BADM 595 Business Fundamentals credit: 2 Hours.
Designed to provide a cohesive understanding of marketing from a managerial perspective. Students will learn how to develop a coherent and comprehensive marketing strategy for a product or service. Specifically, it provides the conceptual frameworks and tools necessary to create superior customer value, capture the value through appropriate pricing mechanisms, persuasively communicate and profitably deliver that value, and sustain both the value and the performance in the face of ever-changing customer needs and competitive offerings. Students examine companies by matching their internal strengths and weaknesses with opportunities and threats posed by their environments. Students learn to spot and evaluate opportunities for new ventures and examine the totality of a business proposal.

BADM 596 Entrship for Prof Scientists credit: 1 Hour.
Focuses on how to start and grow a business. The first part of the course concentrates on opportunity evaluation and business plan development. The second part explores the strategic challenges of managing growth and realizing value.

BADM 597 Global Strategy credit: 1 Hour.
Provides an overview of competition in the global environment. Introduces several key frameworks for understanding how firms create value by matching their internal strengths and weaknesses with the opportunities and threats posed by their environments. Examines how value creation differs as firms compete in a global setting. The course builds on innovative managerial theory, and applies key learning using cases and managerial exercises.

BADM 598 Managing Tech & Innovation credit: 1 Hour.
Innovation and technology management deals with understanding how innovation affects the competitive dynamics of markets and how firms can strategically manage innovation. Introduces and employs various tools, concepts, and analytical frameworks that enhance our ability to define and analyze strategic problems that stem from innovation and technological change, and to identify sources of competitive advantage from both an industry and firm-level perspective.

BADM 599 Dissertation Research credit: 0 to 16 Hours.
Required of all students writing doctoral dissertations in business administration; guidance in writing theses and seminar discussions of interim progress reports. Approved for S/U grading only. May be repeated in the same term and/or separate terms as topics vary; unlimited credit hours for graduate and professional students.

Business and Technical Writing (BTW)

BTW Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/BTW)

Courses

BTW 199 Undergraduate Open Seminar credit: 1 to 5 Hours.
May be repeated.

BTW 220 Desktop Publishing and Design credit: 2 Hours.
Design and preparation of documents using desktop publishing technology. Students will learn and apply principles governing page design, style sheets, document layout, effective graphics, managing the design process, and usability testing. Students will create a portfolio of design projects.
BTW 250 Principles Bus Comm credit: 3 Hours.
Teaches students to apply the principles of successful professional communication to workplace writing tasks. Students will also practice editing and supervising the writing of others. Assignments replicate typical business cases and situations, including a report that requires students to compile and interpret research. Credit is not given for both BTW 250 and either BTW 261 or BTW 263. Prerequisite: Junior standing and completion of campus Composition I requirement.
This course satisfies the General Education Criteria for:
UIUC: Advanced Composition

BTW 261 Principles Tech Comm credit: 3 Hours.
Teaches students to apply the principles of successful professional writing to a range of realistic cases in technical communication. Emphasizes flexible problem-solving skills and a clear style for communicating technical information to a range of readers. Assignments will include correspondence, instructions, proposals, and a technical report or similar project. Credit is not given for both BTW 261 and BTW 250 or BTW 263. Prerequisite: Junior standing and completion of campus Composition I requirement.
This course satisfies the General Education Criteria for:
UIUC: Advanced Composition

BTW 263 Writing in the Disciplines credit: 3 Hours.
Teaches students to apply principles of professional communication to the writing tasks typical of specific disciplines or professions. Assignments will vary, depending on the focus of the course, but will include a substantial report or project. Credit is not given for both BTW 263 and either BTW 250 or BTW 261. Prerequisite: Junior standing and completion of campus Composition I requirement.
This course satisfies the General Education Criteria for:
UIUC: Advanced Composition

BTW 271 Persuasive Writing credit: 3 Hours.
Students will study principles of persuasion as applied to writing and designing written communications for business and the professions. Included are ads, direct-mail campaigns, argumentative essays, proposals, and other types of writing designed to move readers to action. Prerequisite: Sophomore standing and completion of Composition I requirement.

BTW 272 Report Writing credit: 3 Hours.
Personal direction in a report writing project which can be integrated with research in another course; study of report-writing principles and practices. Classes meet for the first month after which the student and the instructor arrange a conference schedule. Small group meetings are arranged for presentation of proposals, progress reports, and summary reports. Prerequisite: Completion of campus rhetoric requirement and sophomore standing.

BTW 290 Individual Study credit: 0 to 3 Hours.
Independent research with a chosen tutor leading to the writing of a formal report or preparation of some other type of major presentation of information. Enroll in BTW office, 294 English Building. Approved for both letter and S/U grading. May be repeated to a maximum of 6 hours. Prerequisite: Consent of instructor.

BTW 402 Descriptive English Grammar credit: 3 or 4 Hours.
Same as ENGL 402. See ENGL 402.

BTW 490 Special Topics Prof Writing credit: 3 or 4 Hours.
Study of the forms, situations, and social practices that define writing in particular disciplines or professions. Each class will focus on a specific topic such as science writing, writing in the environmental movement, legal writing, writing in the social sciences, public policy in the popular media, and so on. Assignments will vary with the topic. 3 undergraduate hours. 4 graduate hours. May be repeated to a maximum of 6 undergraduate hours or 8 graduate hours. Prerequisite: Junior standing.

Campus Honors Program (CHP)
CHP Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/CHP)

Courses
CHP 395 Interdisciplinary Seminar credit: 3 Hours.
Seminar on interdisciplinary topics in the natural sciences, social sciences, humanities, and arts. Open to Chancellor’s Scholars and other honors students. May be repeated to a maximum of 6 hours. Prerequisite: Junior standing in the Campus Honors Program.

CHP 396 Interdisciplinary Seminar ACP credit: 3 Hours.
Course is identical to CHP 395 except for the additional writing component. May be repeated to a maximum of 6 hours. Prerequisite: Junior standing in or permission of the Campus Honors Program. Completion of campus Composition I general education requirement.
This course satisfies the General Education Criteria for:
UIUC: Advanced Composition

Catalan (CATL)
CATL Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/CATL)

Information listed in this catalog is current as of 11/2014
Courses

**CATL 401 Intensive Catalan Language credit: 3 Hours.**
Intensive introduction to the Catalan language, appropriate for students familiar with another Romance language; emphasizes acquisition of the four basic skills, listening, speaking, writing, and reading, in order to achieve competence in the language. 3 undergraduate hours. 3 graduate hours. Prerequisite: Basic reading knowledge of another Romance language is helpful but not absolutely necessary.

**CATL 402 Studies in Catalan Literature credit: 3 Hours.**
Studies selected aspects of Catalan literature; taught in Catalan. Topics will be selected from among the major chronological periods and genres of Catalan literature; such as 20th century novel, Ramon Llull and Ausias March. The intention is to offer the student an in-depth view instead of an introductory overview. 3 undergraduate hours. 3 graduate hours. May be repeated to a maximum of 6 hours if topics vary. Prerequisite: CATL 401 or equivalent.

**Cell and Developmental Biology (CDB)**

CDB Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/CDB)

Courses

**CDB 590 Individual Topics credit: 1 to 16 Hours.**
Individual topics in research and/or reading for graduate students, to be conducted under the supervision of faculty members in cell and structural biology; designed to allow students to become more familiar with specialized fields of study prior to committing themselves to a specific area for their graduate degree. Approved for S/U grading only. May be repeated. Prerequisite: Consent of instructor.

**CDB 595 Graduate Sem Cell Devel Biol credit: 1 Hour.**
Invited speakers, faculty, and student presentations and discussions on current research topics. Approved for both letter and S/U grading. May be repeated to a maximum of 8 hours. Prerequisite: MCB 400; or consent of instructor.

**CDB 599 Thesis Research credit: 0 to 16 Hours.**
Research on the thesis and preparation of the thesis. Course Information:Approved for S/U grading only. May be repeated to a maximum of 16 hours. Summer: 0 to 8 hours. (Summer session may be repeated to a maximum of 8 hours.).

**Center for Advanced Study (CAS)**

CAS Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/CAS)

Courses

**CAS 587 Advanced Study: Special Topics credit: 4 Hours.**
Course is an upper-level graduate course in multi-disciplinary studies with topic material that will vary term to term. Interested graduate students should contact the instructors. May be repeated to a maximum of 12 hours. Prerequisite: Consent of instructor.

**Chemical and Biomolecular Engr (CHBE)**

CHBE Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/CHBE)

Courses

**CHBE 101 Hidden World of Engineering credit: 3 Hours.**
Tells the stories of everyday objects: bathtubs, pop cans and screws. These simple objects shape our lives, yet are engineering masterpieces. To unveil this hidden world the course uses a humanistic approach. Designed to appeal to all majors, it uses human stories - filled with failures and triumphs - to reveal the methods of engineers. The course enchants with tales of ancient steel making, today's pop cans, huge stone monuments, and salt. The course will change how a student looks at his or her world. Several sessions focus on women engineers and the environment. This course satisfies the General Education Criteria for:
UIUC: Physical Sciences

**CHBE 121 CHBE Profession credit: 1 Hour.**
Lectures and problems on the history and scope of chemical engineering endeavors; decisions and criteria for process development and plant design. Approved for S/U grading only. Prerequisite: CHEM 102 or CHEM 202.

**CHBE 199 Undergraduate Open Seminar credit: 1 to 5 Hours.**
Approved for letter and S/U grading. May be repeated.

**CHBE 201 Cooperative Education Planning credit: 0 Hours.**
Same as CHEM 291. See CHEM 291.
CHBE 202 Cooperative Education Practice credit: 0 Hours.
Same as CHEM 293. See CHEM 293.

CHBE 210 CHBE Internship credit: 0 Hours.
Full-time practice of chemical science in an off-campus industrial setting or research laboratory environment. Summary report required. Approved for S/U grading. May be repeated. Prerequisite: Completion of freshman year or equivalent, or consent of Director of Cooperative Education in Chemical and Biomolecular Engineering.

CHBE 221 Principles of CHE credit: 3 Hours.
Lectures and problems on material and energy balances. Prerequisite: CHEM 104 or CHEM 204; credit or concurrent registration in CS 101.

CHBE 297 Individual Study Sophomores credit: 1 to 3 Hours.
Individual study of problems related to Chemical and Biomolecular Engineering. May be repeated to a maximum of 6 hours. Prerequisite: Sophomore standing and consent of instructor.

CHBE 321 Thermodynamics credit: 4 Hours.
Fundamental concepts and the laws of thermodynamics; the first and second law applications to phase equilibrium and chemical equilibrium and other applications in the Chemical and Biomolecular Engineering profession. Prerequisite: CHBE 221.

CHBE 397 Individual Study for Juniors credit: 1 to 3 Hours.
Individual study of problems related to Chemical and Biomolecular Engineering. May be repeated to a maximum of 6 hours. Prerequisite: Junior standing and consent of instructor.

CHBE 421 Momentum and Heat Transfer credit: 4 Hours.
Introduction to fluid statics and dynamics; dimensional analysis; design of flow systems; introduction to heat transfer; conduction, convection, and radiation. 4 undergraduate hours. 4 graduate hours. Credit is not given for both CHBE 421 AND ABE 341. Prerequisite: CHBE 221.

CHBE 422 Mass Transfer Operations credit: 4 Hours.
Introduction to mass transfer processes and design methods for separation equipment. 4 undergraduate hours. 4 graduate hours. Prerequisite: CHBE 421.

CHBE 424 Chemical Reaction Engineering credit: 3 Hours.
Chemical kinetics; chemical reactor design; the interrelationship between transport, thermodynamics, and chemical reaction in open and closed systems. 3 undergraduate hours. 3 graduate hours. Prerequisite: Credit or registration in CHBE 422.

CHBE 430 Unit Operations Laboratory credit: 4 Hours.
Experiments and computation in fluid mechanics, heat transfer, mass transfer, and chemical reaction engineering. Exercises in effective Chemical and Biomolecular Engineering communications. 4 undergraduate hours. 4 graduate hours. Prerequisite: CHBE 422; credit or concurrent registration in CHBE 424; senior standing in Chemical and Biomolecular Engineering.
This course satisfies the General Education Criteria for:
UIUC: Advanced Composition

CHBE 431 Process Design credit: 4 Hours.
Capstone design course where students apply principles from previous courses to the design of complete chemical process systems. Topics include: techniques used in the synthesis and analysis of chemical processes, process simulation and optimization, effective communication in a chemical process engineering environment. 4 undergraduate hours. 4 graduate hours. Prerequisite: CHBE 422; credit or concurrent registration in CHBE 424.
This course satisfies the General Education Criteria for:
UIUC: Advanced Composition

CHBE 440 Process Control and Dynamics credit: 3 Hours.
Techniques used in the analysis of process dynamics and in the design of process control systems. Laplace transforms, stability analysis, and frequency response methods. 3 undergraduate hours. 3 graduate hours. Prerequisite: CHBE 421 and senior standing in Chemical and Biomolecular Engineering; MATH 285; CS 101.

CHBE 451 Transport Phenomena credit: 3 Hours.
Unifying treatment of physical rate processes with particular emphasis on the formulation and solution of typical boundary value problems associated with heat, mass, and momentum transport. 3 undergraduate hours. 3 graduate hours. Prerequisite: CHBE 421; MATH 285.

CHBE 452 Chemical Kinetics & Catalysis credit: 3 Hours.
Problems in chemical kinetics; techniques for the prediction and measurement of rates of reactions; homogeneous and heterogeneous catalysis chain reactions. 3 undergraduate hours. 3 graduate hours. Prerequisite: CHEM 442 or CHBE 321.

CHBE 453 Electrochemical Engineering credit: 2 or 3 Hours.
Fundamentals of analysis, design, and optimization of electrochemical systems. 2 or 3 undergraduate hours. 2 or 3 graduate hours. Prerequisite: Senior standing in physical science or engineering.

CHBE 454 CHBE Projects credit: 2 Hours.
Laboratory; development of an individual project. 2 undergraduate hours. 2 graduate hours. Prerequisite: Senior standing in Chemical and Biomolecular Engineering.

Information listed in this catalog is current as of 11/2014
CHBE 456 Polymer Science & Engineering credit: 3 Hours.
Fundamentals of polymer science and engineering: polymerization mechanisms, kinetics, and processes; physical chemistry and characterization of polymers; polymer rheology, mechanical properties, and processing. 3 undergraduate hours. 3 graduate hours. Credit is not given for both CHBE 456 and MSE 450. Prerequisite: CHBE 321; credit or concurrent registration in CHBE 421; CHEM 444.

CHBE 457 Microelectronics Processing credit: 3 Hours.
Introductory survey of chemical processing principles applied to microelectronic fabrication. Key concepts originate from chemical kinetics; thermodynamics; mass and energy balances; transport of mass, momentum and heat; and process synthesis and integration. 3 undergraduate hours. 3 graduate hours. Prerequisite: Junior or senior standing in Chemical and Biomolecular Engineering, Electrical and Computer Engineering, or Materials Science and Computer Engineering.

CHBE 471 Biochemical Engineering credit: 3 or 4 Hours.
Applications of chemical engineering principles to biological processes. Topics include enzyme mechanisms and kinetics, bioreactor design, cellular growth and metabolism, fermentation, and bioseparations. 3 undergraduate hours. 4 graduate hours. Prerequisite: Junior, senior, or graduate standing, or consent of instructor.

CHBE 472 Techniques in Biomolecular Eng credit: 3 or 4 Hours.
Engineering principles that underlie many of the powerful tools in biotechnology and how scientific discoveries and engineering approaches are used in current industrial applications. Physical principles that govern self-organization and repair in biological systems; tools developed to characterize, manipulate, and quantify biomolecules; use of analytical tools and genetic manipulation in modern bioengineering and biotechnology applications. 3 undergraduate hours. 4 graduate hours. Prerequisite: CHEM 202, CHEM 203, CHEM 204 or equivalent; MATH 220 or MATH 221; PHYS 211, PHYS 214 or equivalent; MCB 450.

CHBE 473 Biomolecular Engineering credit: 3 or 4 Hours.
Fundamental principles of biomolecular engineering and its applications in pharmaceutical, agriculture, chemical and food industries. Topics include gene discovery, rational design, directed evolution, pathway engineering, and functional genomics and proteomics. 3 undergraduate hours. 4 graduate hours.

CHBE 474 Metabolic Engineering credit: 3 or 4 Hours.
Introduction to the principles and methodology of metabolic engineering. Experimental and mathematical techniques for the quantitative description, modeling, control, and design of metabolic pathways. Same as BIOE 474. 3 undergraduate hours. 4 graduate hours. Prerequisite: MATH 225 and MATH 285.

CHBE 475 Tissue Engineering credit: 3 Hours.
Principles and practices of Chemical Engineering will be applied to the topic of tissue engineering. Topics include: methods for employing selected cells, biomaterial scaffolds, soluble regulators or their genes, and mechanical loading and culture conditions for regenerative repair of tissues and organs in vitro and in vivo; understanding intrinsic wound healing processes; quantifying cell behaviors/phenotypes; regulatory compliance and clinical translation. 3 undergraduate hours. 3 graduate hours. Prerequisites: CHBE 421 and CHBE 422, or consent of instructor.

CHBE 476 Biotransport credit: 3 Hours.
Investigates the critical roles the transports of mass, energy and momentum play in the function of living systems at varied levels (e.g., cells, tissues, and organs) and time scales. Transport phenomena are also central to the design and operation of devices for biological research, imaging, biochemical processes, and therapeutic interventions including drug delivery, gene therapy and tissue engineering. Students will explore conservation laws of mass, energy, and momentum to mathematically describe cell and molecular biology, immunology, physiology and biomedical engineering systems. 3 undergraduate hours. No graduate credit. Prerequisites: CHBE 421 and CHBE 422, or consent of instructor.

CHBE 478 Bioenergy Technology credit: 3 Hours.
Introduction to emerging bioenergy technologies including: world energy consumption and greenhouse gas concerns; fundamental biochemistry of biomass conversion; structural chemistry of lignocelluloses; pretreatment of biomass; enzymatic deconstruction; bioethanol production and fermentation; metabolic engineering for improved biofuels production; feedstock development; industrial fermentation and fermentor design; economics of bioethanol; alternative biofuels, including biodiesel, syngas, Fischer-Tropsch diesel, butanol, ABE fermentation and biohydrogen; anaerobic microbiology; and the biorefinery concept. 3 undergraduate hours. No graduate credit. Prerequisites: CHBE 321; MCB 450.

CHBE 494 Special Topics credit: 1 to 3 Hours.
Study of topics in chemical engineering; content varies from term to term. Typical topics include optimization, chemical kinetics, phase equilibrium, biochemical engineering, kinetic theory, and transport properties. 1 to 3 undergraduate hours. 1 to 3 graduate hours. May be repeated. Prerequisite: Senior standing in Chemical and Biomolecular Engineering or consent of instructor.

CHBE 496 Undergraduate Research Abroad credit: 1 to 3 Hours.
Study assist in research under faculty supervision at a location outside of the United States. Topic and type of assistance vary. 1 to 3 undergraduate hours. No graduate credit. May be repeated in separate terms up to 6 hours. Research credit hours in the course are included under department limits for maximum hours of research/independent study credit allowed toward degree requirements. Prerequisite: Evidence of adequate preparation for such study; consent of faculty member supervising the work (who will have examined the proposed research plan); and approval of the department. Not available to freshman.
CHBE 497 Individual Study for Seniors credit: 1 to 3 Hours.
Individual study of problems related to Chemical and Biomolecular Engineering. 1 to 3 undergraduate hours. No graduate credit. May be repeated to a maximum of 6 hours. Prerequisite: Senior standing and consent of instructor.

CHBE 499 Senior Thesis credit: 1 to 6 Hours.
Limited in general to seniors in the curriculum in chemical and biomolecular engineering. Any others must have the consent of the head of the department. Each student taking the course must register in a minimum of 5 hours either in one term or divided over two terms. A maximum registration of 10 hours in two terms is permitted. 1 to 6 undergraduate hours. No graduate credit. In order to receive credit, a thesis must be presented by each student registered in CHBE 499.

CHBE 521 Applied Mathematics in CHBE credit: 3 or 4 Hours.
Development of mathematical models and a survey of modern mathematical methods currently used in the solution of chemical and biomolecular engineering problems; topics include the application of vectors and matrices, partial differential equations, numerical analysis, and methods of optimization in Chemical and Biomolecular Engineering. Prerequisite: Consent of instructor.

CHBE 522 Fluid Dynamics credit: 4 Hours.
Basic concepts in fluid dynamics with special emphasis on topics of interest to chemical and biomolecular engineers. Derivation of the Navier-Stokes equations; solutions for creeping flow, perfect fluids, and boundary layers; non-Newtonian fluids; turbulence. Prerequisite: Consent of instructor.

CHBE 523 Heat and Mass Transfer credit: 3 or 4 Hours.
Principles of transfer operations developed in terms of physical rate processes; boundary layer heat and mass transfer, phase changes, and separation processes. Prerequisite: Consent of instructor.

CHBE 551 Chemical Kinetics & Catalysis credit: 4 Hours.
Rates and mechanisms of chemical reactions, treatment of data, steady state and unsteady behavior predictions of mechanisms, prediction of rate constants and activation barriers. Introduction to catalysis. Catalysis by solvents, metals, organometallics, acids, enzymes, semiconductors. Same as CHEM 582. Prerequisite: An undergraduate course in chemical kinetics.

CHBE 553 Surface Chemistry credit: 4 Hours.
Introduction to the behavior of molecules adsorbed on solid surfaces; the structure of surfaces and adsorbate layers. The bonding of molecules to surfaces; adsorbate phase transitions; trapping and sticking of molecules on surfaces. An introduction to surface reactions; kinetics of surface reactions. A review of principles of chemical reactivity; reactivity trends on surfaces; prediction of rates and mechanisms of reactions on metals, semiconductors, and insulators. Same as CHEM 586. Prerequisite: CHEM 444.

CHBE 555 Surface Chemistry credit: 4 Hours.
Introduction to the behavior of molecules adsorbed on solid surfaces; the structure of surfaces and adsorbate layers. The bonding of molecules to surfaces; adsorbate phase transitions; trapping and sticking of molecules on surfaces. An introduction to surface reactions; kinetics of surface reactions. A review of principles of chemical reactivity; reactivity trends on surfaces; prediction of rates and mechanisms of reactions on metals, semiconductors, and insulators. Same as CHEM 586. Prerequisite: CHEM 444.

CHBE 565 CHBE Seminar credit: 1 Hour.
Required of all graduate students whose major is Chemical and Biomolecular Engineering. Approved for letter and S/U grading. Prerequisite: CHBE 422.

CHBE 571 Bioinformatics credit: 4 Hours.
Same as ANSC 543, MCB 571, and STAT 530. Prerequisite: MATH 225; MATH 241 and MATH 461.

CHBE 572 Metabolic Systems Engineering credit: 4 Hours.
Prerequisite: MATH 225; MATH 241, and 285; or consent of instructor.

CHBE 580 Lab Techs in Bioinformatics credit: 2 Hours.
Prerequisite: MCB 150 and MCB 151; or consent of instructor.

CHBE 593 Individual Study credit: 0 to 4 Hours.
Study under the supervision of a staff member in areas not covered in established course offerings. Approved for both letter and S/U grading. Prerequisite: Consent of the staff member under whom the study is to be made.

CHBE 594 Special Topics credit: 1 to 4 Hours.
Various advanced topics; generally taken during the second year of graduate study. Typical topics include turbulence, hydrodynamic instability, process dynamics, interfacial phenomena, reactor design, cellular bioengineering, properties of matter at high pressure, and phase transitions. May be repeated. Prerequisite: Consent of instructor.

CHBE 597 Special Problems credit: 2 to 16 Hours.
Individual work on problem-oriented projects not included in theses. This could be research, engineering design, or professional work in chemical and biomolecular engineering which has educational values. The work must be done under the supervision of a staff member with the approval of the department head.

CHBE 598 Research Seminar credit: 0 to 4 Hours.
Discussion of recent developments of importance to different areas of chemical and biomolecular engineering research. The course is divided into a number of sections, and subject matter differs from section to section and from time to time. Approved for S/U grading only. May be repeated. Prerequisite: Consent of instructor.

CHBE 599 Thesis Research credit: 0 to 16 Hours.
Candidates for the master's degree who elect research are required to write a thesis. A thesis is always required for the Doctor of Philosophy. Not all candidates for thesis work necessarily are accepted. Any student whose major is in another department must receive permission from the head of the Department of Chemical and Biomolecular Engineering to register in this course. Approved for S/U grading only.
Chemistry (CHEM)

CHEM Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/CHEM)

Courses

CHEM 101 Introductory Chemistry credit: 3 Hours.
Introduction to the basic concepts and language of chemistry; lectures, discussions, and lab. Preparatory chemistry course for students who require additional background before enrolling in CHEM 102. This course has been approved for graduation credit for all students in the College of LAS. Students in other colleges should check with their college office. Prerequisite: 2.5 years of high school mathematics, or credit or concurrent registration in MATH 012.
This course satisfies the General Education Criteria for:
UIUC: Physical Sciences

CHEM 102 General Chemistry I credit: 3 Hours.
For students who have some prior knowledge of chemistry. Principles governing atomic structure, bonding, states of matter, stoichiometry, and chemical equilibrium. Credit is not given for both CHEM 102 and CHEM 202. CHEM 102 and CHEM 103 are approved for General Education credit only as a sequence. Both courses must be completed to receive Natural Science and Technology credit. Prerequisite: Credit in or exemption from MATH 012; one year of high school chemistry or equivalent. All students enrolled in CHEM 102 should also enroll in CHEM 103.
This course satisfies the General Education Criteria for:
UIUC: Physical Sciences

CHEM 103 General Chemistry Lab I credit: 1 Hour.
Laboratory studies to accompany CHEM 102. Students may not receive credit for both CHEM 103 and CHEM 203. CHEM 102 and CHEM 103 are approved for General Education credit only as a sequence. Both courses must be completed to receive Natural Science and Technology credit. Prerequisite: Credit or concurrent registration in CHEM 102 is required.
This course satisfies the General Education Criteria for:
UIUC: Physical Sciences

CHEM 104 General Chemistry II credit: 3 Hours.
Lecture and discussions. Chemistry of materials, including organic and biological substances, chemical energetics and equilibrium, chemical kinetics, and electrochemistry. Credit is not given for both CHEM 104 and CHEM 204. Prerequisite: CHEM 102 or CHEM 202 or advanced placement credit for one semester of college-level chemistry.
This course satisfies the General Education Criteria for:
UIUC: Physical Sciences

CHEM 105 General Chemistry Lab II credit: 1 Hour.
Laboratory studies to accompany CHEM 104. Prerequisite: CHEM 102 and CHEM 103; credit or concurrent registration in CHEM 104 is required.
This course satisfies the General Education Criteria for:
UIUC: Physical Sciences

CHEM 108 Chemistry, Everyday Phenomena credit: 3 Hours.
Laboratory-based work in which students will evaluate products (such as antacids), synthesize materials (such as soap), and gain a better understanding of forensic chemistry. Credit in CHEM 108 does not count toward Chemistry requirements for students in the Specialized Curriculum in Chemistry, the Science and Letters Chemistry major, the Chemistry Teaching Option, or the Chemistry minor; however the course may be taken by students in any of these groups for general education hours. Prerequisite: Credit or concurrent registration in MATH 012 or MATH 016.
This course satisfies the General Education Criteria for:
UIUC: Physical Sciences

CHEM 197 Individual Study Freshman credit: 1 to 2 Hours.
Individual study of problems related to chemistry or research not necessarily leading to a senior thesis. May be repeated in separate terms to a maximum of 4 hours. A maximum of 2 hours may be used toward the major. A maximum of 18 hours of CHEM 197, CHEM 297, CHEM 397, CHEM 497 and/or CHEM 499 may be used toward the degree. Prerequisite: Chemistry faculty approval required to register.

CHEM 199 Undergraduate Open Seminar credit: 1 to 5 Hours.
Approved for letter and S/U grading. May be repeated.

CHEM 202 Accelerated Chemistry I credit: 3 Hours.
Lectures and discussions. Beginning chemistry course for students in the chemical sciences and others with strong high school chemistry and mathematics preparation. Chemical calculations, structure, bonding and equilibrium. Credit is not given for both CHEM 202 and CHEM 102. Prerequisite: Credit or concurrent registration in MATH 220 or MATH 221; concurrent registration in CHEM 203.
This course satisfies the General Education Criteria for:
UIUC: Physical Sciences
CHEM 203 Accelerated Chemistry Lab I credit: 2 Hours.
Companion laboratory course to CHEM 202. Comprehensive skills-oriented approach to learning laboratory technique and safety. Students may receive no more than two credit hours for both this course and CHEM 103. Prerequisite: Concurrent registration or credit in CHEM 202 or consent of instructor.

CHEM 204 Accelerated Chemistry II credit: 3 Hours.
Continuation of CHEM 202. Lectures and discussions. Emphasizes chemical thermodynamics, equilibrium, chemical kinetics, and coordination chemistry. Prerequisite: CHEM 202 and/or CHEM 203 and concurrent registration in CHEM 205, or consent of instructor. This course satisfies the General Education Criteria for: UIUC: Physical Sciences

CHEM 205 Accelerated Chemistry Lab II credit: 2 Hours.
Laboratory and discussion. Includes experiments in qualitative analysis, inorganic synthesis, and kinetics as well as an individual project. Credit is not given for both CHEM 205 and CHEM 223. Prerequisite: Concurrent registration in CHEM 204 or consent of department.

CHEM 222 Quantitative Analysis Lecture credit: 2 Hours.
Fundamentals of quantitative analysis, chemical equilibrium and kinetics. This lecture course is intended to accompany CHEM 223. Students with credit in CHEM 222 can receive credit for CHEM 203. Prerequisite: CHEM 104 and CHEM 105 or equivalent.

CHEM 223 Quantitative Analysis Lab credit: 2 Hours.
Laboratory course covers the fundamentals of quantitative analysis, equilibrium and kinetics. Credit is not given for both CHEM 223 and CHEM 205. Prerequisite: Credit or concurrent registration in CHEM 222.

CHEM 232 Elementary Organic Chemistry I credit: 3 OR 4 Hours.
Presents structural and mechanistic chemistry with emphasis on applications of this material to closely related areas. For students in agricultural, nutritional and biological sciences, as well as premedical, predental, and preveterinary programs. One-term survey course; may be followed by CHEM 332. Credit is not given for both CHEM 232 and CHEM 236. 3 hours of credit is an option for those not registered in a discussion-recitation section. 4 hours of credit requires registration in a discussion-recitation section and an online section. Prerequisite: CHEM 104 and CHEM 105, or CHEM 204.

CHEM 233 Elementary Organic Chem Lab I credit: 2 Hours.
Basic laboratory techniques in organic chemistry are presented with emphasis on the separation, isolation, and purification of organic compounds. For students in agricultural science, dairy technology, food technology, nutrition, dietetics, premedical, predental, and preveterinary programs. Credit is not given for both CHEM 233 and CHEM 237. Prerequisite: Consent of department.

CHEM 236 Fundamental Organic Chem I credit: 4 Hours.
Fundamental structural, synthetic, and mechanistic organic chemistry is presented. For students whose major is chemistry or for those in the specialized curricula in chemistry or chemical engineering. The first term of a two-term integrated sequence (to be followed by CHEM 436). This lecture course is intended to accompany CHEM 237. Credit is not given for both CHEM 236 and CHEM 232. Prerequisite: CHEM 204 or CHEM 222 through CHEM 223.

CHEM 237 Structure and Synthesis credit: 2 Hours.
Laboratory course introduces synthesis and the basic techniques for the separation, isolation and purification of organic and inorganic compounds. Credit is not given for both CHEM 237 and CHEM 233. Prerequisite: Consent of department.

CHEM 291 Cooperative Education Planning credit: 0 Hours.
On-campus planning and discussion of cooperative work-study education programs in industry and government. Each chemistry or chemical engineering student participating in the cooperative education program must register for CHEM 291/CHBE 201 or CHBE 202 each term (CHBE 201 if on-campus, CHBE 202 if off-campus). Same as CHBE 201. Approved for S/U grading only. Prerequisite: Acceptance into the School of Chemical Sciences Cooperative Education Program.

CHEM 293 Cooperative Education Practice credit: 0 Hours.
Off-campus cooperative practice of chemistry or chemical engineering in industrial or governmental facilities. Each chemistry or chemical engineering student participating in cooperative education must register for CHEM 293 for each off-campus term. Same as CHBE 202. Approved for S/U grading only. Prerequisite: Acceptance into the School of Chemical Sciences Cooperative Education Program.

CHEM 295 Chemistry Internship credit: 0 Hours.
Full-time practice of chemical science in an off-campus industrial setting or research laboratory environment. Summary report required. Approved for S/U grading only. May be repeated. Prerequisite: Completion of freshman year or equivalent, or consent of Director of Cooperative Education in Chemistry.

CHEM 297 Individual Study Sophomore credit: 1 to 3 Hours.
Individual study of problems related to chemistry or research not necessarily leading to a senior thesis. May be repeated in separate terms. A maximum of 6 hours may be used toward the major. A maximum of 18 hours of CHEM 197, CHEM 297, CHEM 397, CHEM 497 and/or CHEM 499 may be used toward the degree. Prerequisite: Chemistry faculty approval required to register.

CHEM 312 Inorganic Chemistry credit: 3 Hours.
Basic chemical bonding in molecules, introduction to symmetry, chemistry of the main group elements, coordination chemistry of the transition elements, organometallic chemistry, solid state chemistry, bioinorganic chemistry, chemistry of the lanthanide and actinide elements. Prerequisite: CHEM 232 or CHEM 236.
CHEM 315 Instrumental Chem Systems Lab credit: 2 Hours.
Laboratory course emphasizes the application of modern instrumental techniques for characterizing the kinetic behavior and equilibrium properties of chemical systems. Prerequisite: Either CHEM 237 or both CHEM 223 and CHEM 233.

CHEM 317 Inorganic Chemistry Lab credit: 3 Hours.
Emphasizes modern techniques for the synthesis, purification, and characterization of inorganic and organometallic compounds. There are three components to the course: lectures on laboratory methodology and reporting, laboratory experiments, and report writing. The final third of the course is dedicated to special individualized projects. Prerequisite: CHEM 312; completion of campus Composition I general education requirement. This course satisfies the General Education Criteria for:
UIC: Advanced Composition

CHEM 332 Elementary Organic Chem II credit: 4 Hours.
Continuation of CHEM 232 focuses on organic chemistry and its applications to biochemistry, enzyme mechanisms and the life sciences. Credit is not given for both CHEM 332 and CHEM 436. This course should not be taken by students who have completed CHEM 236. Prerequisite: CHEM 232 and CHEM 233.

CHEM 360 Chemistry of the Environment credit: 3 Hours.
Study of the chemistry of the atmosphere, the chemistry of soil and minerals in the Earth’s crust, chemistry of natural waters, agricultural chemicals and organic pollutants, and topics related to energy use. Prerequisite: One year of general chemistry (CHEM 102-105 or CHEM 202-205) and one semester of organic chemistry (CHEM 232 or CHEM 236). The organic chemistry class may be taken concurrently with CHEM 360.

CHEM 397 Individual Study Junior credit: 1 to 3 Hours.
Individual study of problems related to chemistry or research not necessarily leading to a senior thesis. May be repeated in separate terms. A maximum of 6 hours may be used toward the major. A maximum of 18 hours of CHEM 197, CHEM 297, CHEM 397, CHEM 497 and/or CHEM 499 may be used toward the degree. Prerequisite: Chemistry faculty approval required to register.

CHEM 420 Instrumental Characterization credit: 2 Hours.
Lecture course covers the fundamentals of instrumental characterization including: nuclear magnetic resonance spectroscopy, potentiometry, voltammetry, atomic and molecular spectroscopy, mass spectrometry, and gas and liquid chromatography. 2 undergraduate hours. 2 graduate hours. Prerequisite: CHEM 440; or credit or concurrent registration in CHEM 442; or consent of the instructor.

CHEM 436 Fundamental Organic Chem II credit: 3 Hours.
Course is the second term of a two-term integrated sequence and should be taken the term following enrollment in CHEM 236. 3 undergraduate hours. 3 graduate hours. Credit is not given for both CHEM 436 and CHEM 332. Prerequisite: CHEM 236 and CHEM 237; or CHEM 232 and CHEM 233 with consent of instructor.

CHEM 437 Organic Chemistry Lab credit: 3 Hours.
Laboratory experiments in organic chemistry with emphasis on synthesis, purification and spectroscopic identification of organic compounds. 3 undergraduate hours. 3 graduate hours. Prerequisite: CHEM 233 or CHEM 237 and credit or concurrent registration in CHEM 332 or CHEM 436. This course satisfies the General Education Criteria for:
UIC: Advanced Composition

CHEM 438 Advanced Organic Chemistry credit: 3 Hours.
Advanced topics in structure, synthesis and reactions of organic chemistry. Lecture only course. 3 undergraduate hours. 3 graduate hours. Prerequisite: CHEM 332 or CHEM 436.

CHEM 440 Physical Chemistry Principles credit: 4 Hours.
One-term course in physical chemistry emphasizing topics most important to students in the biological and agricultural sciences. Not open to students in the specialized curricula in chemistry and chemical engineering. Laboratory experience in this area provided by CHEM 315 to be taken preferably after CHEM 440. Same as BIOC 440. 4 undergraduate hours. 4 graduate hours. Prerequisite: CHEM 222 and CHEM 232, or equivalent; PHYS 102; and MATH 241 or equivalent calculus including partial derivatives.

CHEM 442 Physical Chemistry I credit: 4 Hours.
Lectures and problems focusing on microscopic properties. CHEM 442 and CHEM 444 constitute a year-long study of chemical principles. CHEM 442 focuses on quantum chemistry, atomic and molecular structure, spectroscopy and dynamics. 4 undergraduate hours. 4 graduate hours. Credit is not given for both CHEM 442 and PHYS 485. Prerequisite: CHEM 204 or CHEM 222; MATH 225 or MATH 415, and a minimal knowledge of differential equations, or equivalent; and PHYS 211, PHYS 212, and PHYS 214 or equivalent.

CHEM 444 Physical Chemistry II credit: 4 Hours.
Continuation of CHEM 442, focusing on thermodynamics, statistical mechanics and kinetics from single molecules to the bulk, in gases and in the condensed phase. 4 undergraduate hours. 4 graduate hours. Credit is not given for both CHEM 444 and PHYS 427. Prerequisite: CHEM 442.

CHEM 445 Physical Principles Lab I credit: 2 Hours.
Laboratory course features experiments concerning the fundamental physical nature of chemical phenomena. Experiments include infrared spectroscopy, protein folding, x-ray diffraction and laser induced fluorescence. 2 undergraduate hours. 2 graduate hours. Prerequisite: CHEM 315, and credit or concurrent registration in CHEM 444; or consent of instructor.
CHEM 47 Physical Principles Lab II credit: 2 Hours.
Laboratory course features advanced experiments concerning the fundamental physical nature of chemical phenomena. This course is a continuation of CHEM 445. Experiments include low-energy electron diffraction from surfaces, raman spectroscopy and ion cyclotron resonance mass spectroscopy. 2 undergraduate hours. 2 graduate hours. Prerequisite: CHEM 445 or consent of instructor.

CHEM 450 Astrochemistry credit: 4 Hours.
Covers the foundations of astrochemistry, a young field at the intersection between chemistry and astronomy. Topics to be discussed include the interstellar medium, atomic and molecular physics, interstellar chemistry, molecular astronomy, and unresolved enigmas in the field. Same as ASTR 450. 4 undergraduate hours. 4 graduate hours. Prerequisite: CHEM 442 and CHEM 444, or PHYS 427 and PHYS 486, or equivalent experience in quantum mechanics, thermodynamics, and statistical mechanics.

CHEM 451 Astrochemistry Laboratory credit: 3 or 4 Hours.
An active, hands-on introduction to observational astrochemistry, laboratory astrochemistry and theoretical astrochemistry. Activities will include astronomical observations of interstellar molecules at the Observatory, spectroscopy of molecules in the laboratory, quantum chemical calculations and simulations of molecular spectra, and modeling of interstellar chemistry. Same as ASTR 451. 3 or 4 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CHEM 450.

CHEM 460 Green Chemistry credit: 3 or 4 Hours.
This course seeks to reduce the environmental consequences of the chemical industry. It includes modifying engineering practices, the development of new catalytic processes, modification of existing chemical processes, and bioremediation. 3 undergraduate hours. 4 graduate hours. Prerequisite: CHEM 312, CHEM 332, CHEM 360, or consent of instructor.

CHEM 470 Computational Chemical Biology credit: 3 or 4 Hours.
Hands-on introduction to the simulation of biological molecules and bioinformatics. Topics included the principles of molecular modeling, molecular dynamics and monte carlo simulations, structure prediction in the context of structural and functional genomics, and the assembly of integrated biological systems. Course counts towards the CSE option. Same as BIOP 470. 3 or 4 undergraduate hours. 3 or 4 graduate hours. Prerequisite: One semester of undergraduate biology and organic chemistry and statistical thermodynamics or consent of instructor. Recommended: proficiency in Matlab and CS 101 or equivalent.

CHEM 472 Physical Biochemistry credit: 3 Hours.
Same as MCB 446 and BIOC 446. See BIOC 446.

CHEM 490 Polymer Chemistry credit: 3 or 4 Hours.
Same as MSE 457. See MSE 457.

CHEM 492 Polymer Physical Chemistry credit: 3 or 4 Hours.
Same as MSE 458. See MSE 458.

CHEM 493 Solid State Structural Anlys credit: 4 Hours.
Lectures and laboratory on various aspects of X-ray diffraction studies of solids; topics include the properties of crystals, symmetry, diffraction techniques, data collection methods, and the determination and refinement of crystal structures. 4 undergraduate hours. 4 graduate hours. Prerequisite: CHEM 442 or consent of instructor.

CHEM 498 Surfaces and Colloids credit: 3 or 4 Hours.
Same as MSE 480. See MSE 480.

CHEM 499 Special Topics in Chemistry credit: 1 to 3 Hours.
Open to advanced undergraduates and graduate students. Deals with subjects not ordinarily covered by regularly scheduled courses. 1 to 3 undergraduate hours. 1 to 3 graduate hours. Prerequisite: Credit or concurrent registration in any 400-level course in chemistry.

CHEM 450 Teaching Secondary Chemistry credit: 4 Hours.
Intended for undergraduates working toward certification to teach high school chemistry and graduate students working towards a Master’s degree in the Teaching of Chemistry. Course aims to provide future teachers with hands-on experience in conducting laboratory experiments, demonstrations, and teaching strategies. 4 undergraduate hours. 4 graduate hours. Course does not count toward the graduate program in chemistry required in the specialized curriculum, nor does it apply to coursework required for the Ph.D. in Chemistry. Prerequisite: Undergraduate background in general chemistry and credit or concurrent enrollment in CI 403.

CHEM 496 Undergraduate Research Abroad credit: 1 to 4 Hours.
Students assist in research under faculty supervision at a location outside of the United States. Topics and type of assistance vary. 1 to 4 undergraduate hours. No graduate credit. May be repeated in separate terms up to 6 hours. Prerequisite: Evidence of adequate preparation for such study; consent of faculty member supervising the work (who will have examined the proposed research plan); and approval of the department. Not available to freshman.

CHEM 497 Individual Study Senior credit: 1 to 3 Hours.
Individual study of problems related to chemistry or research not necessarily leading to a senior thesis. Course Information: 1 to 3 undergraduate hours. No graduate credit. May be repeated in separate terms. A maximum of 6 hours may be used toward the major. A maximum of 18 hours of CHEM 197, CHEM 297, CHEM 397, CHEM 497 and/or CHEM 499 may be used toward the degree. Prerequisite: Chemistry faculty approval required to register.

Information listed in this catalog is current as of 11/2014
CHEM 499 Senior Thesis credit: 2 to 6 Hours.
Research with thesis, under the direction of a senior staff member in chemistry. Normally the student takes two terms of CHEM 499 in the senior year. CHEM 499 is recommended for all those who plan to do research and graduate study, and it or BIOC 492 is a prerequisite for graduation with distinction in chemistry. In the term preceding their initial enrollment, those interested in taking the course should consult with their advisers and with the graduate adviser for the area of interest in which they plan to work. A maximum of 10 hours may be counted toward graduation and a thesis must be presented for credit to be received. 2 to 6 undergraduate hours. No graduate credit. May be repeated in separate terms.

CHEM 512 Advanced Inorganic Chemistry credit: 4 Hours.
Descriptive chemistry of the main group and transition elements, reactions and reaction mechanisms of inorganic systems, and electronic structure of inorganic molecules and solids. Prerequisite: CHEM 312 or approval of instructor.

CHEM 515 Inorganic Chemistry Seminar credit: 1 Hour.
Required of all Chemistry graduate students whose area is inorganic chemistry. Prerequisite: Enrollment is allowed only by second-year graduate students who are presenting their Ph.D. literature seminar during that semester. Undergraduate students are not eligible to enroll in this course.

CHEM 516 Physical Inorganic Chemistry credit: 4 Hours.
Includes group theory and use of physical methods to provide information about the geometry, electronic structures, and reactivity of inorganic compounds in solution; emphasizes NMR and ESR. Prerequisite: CHEM 444.

CHEM 517 Advanced Inorganic Chem Lab credit: 1 to 3 Hours.
Specialized laboratory techniques; more difficult inorganic syntheses. Prerequisite: Credit or concurrent registration in one of the lecture courses in inorganic chemistry in the 500 series.

CHEM 518 Topics in Inorganic Chemistry credit: 2 to 4 Hours.
Advanced course dealing with a subject not ordinarily covered by regularly scheduled courses, such as organometallic chemistry, advanced ligand field theory and molecular orbital theory of inorganic compounds, kinetics and mechanisms of inorganic reactions, etc. May be repeated. Prerequisite: CHEM 516 or consent of instructor.

CHEM 520 Advanced Analytical Chemistry credit: 4 Hours.
Treatment of the basic issues of importance in modern analytical chemistry. Topics include basic chemical and measurement concepts, measurement instrumentation and techniques, and principles, tools, and applications in spectroscopy, electrochemistry, separations, sensors, mass spectroscopy and surface characterization. Prerequisite: CHEM 315, CHEM 420, and CHEM 444.

CHEM 522 Experimental Spectroscopy credit: 4 Hours.
Principles and applications of spectroscopic measurements and instrumentation. Atomic and molecular absorption, emission, fluorescence, and scattering, emphasizing physical interpretation of experimental data. Prerequisite: General physics and chemistry equivalent to a major in physical sciences for a bachelor's degree.

CHEM 524 Electrochemical Methods credit: 4 Hours.

CHEM 525 Analytical Chemistry Seminar credit: 1 Hour.
Required of all Chemistry graduate students whose area is analytical chemistry. Prerequisite: Enrollment is allowed only by second-year graduate students who are presenting their Ph.D. literature seminar during that semester. Undergraduate students are not eligible to enroll in this course.

CHEM 526 Topics in Analytical Chemistry credit: 2 Hours.
Recent advances in measurement science and the application of analytical chemistry to other sciences; designed to acquaint students with techniques and applications not covered in other courses. May be repeated. Prerequisite: Consent of instructor.

CHEM 530 Structure and Spectroscopy credit: 4 Hours.
Advanced survey of structure determination in organic chemistry with emphasis on NMR, IR, UV and mass spectroscopy. Prerequisite: CHEM 332 or CHEM 436.

CHEM 532 Physical Organic Chemistry credit: 4 Hours.
Advanced survey of physical organic chemistry. The emphasis is on structure and bonding in organic compounds; scope of reaction mechanisms, including reactive intermediates and how these mechanisms and intermediates are studied; and writing reasonable organic reaction mechanisms. Prerequisite: CHEM 332 or CHEM 436 and one year of physical chemistry.

CHEM 534 Advanced Organic Synthesis credit: 4 Hours.
Advanced survey of organic chemistry with emphasis on synthesis of organic compounds. Course content includes survey of important synthetic reactions, construction of fundamental subunits and illustrations of strategy and synthetic analysis. Prerequisite: CHEM 332 or CHEM 436.

CHEM 535 Organic Chemistry Seminar credit: 1 Hour.
Required of all Chemistry graduate students whose area is organic chemistry. Prerequisite: Enrollment is allowed only by second-year graduate students who are presenting their Ph.D. literature seminar during that semester. Undergraduate students are not eligible to enroll in this course.

CHEM 536 Organic Chemistry Research credit: 1 Hour.
Lecture course on research techniques in organic chemistry. Approved for letter and S/U grading. Prerequisite: Consent of instructor.
CHEM 538 Topics in Organic Chemistry credit: 2 to 4 Hours.
Advanced course dealing with subject matter not ordinarily covered by regularly scheduled courses, such as natural product synthesis and biosynthesis, organic photochemistry, chemistry of special families of organic compounds, etc. May be repeated. Prerequisite: CHEM 532 and CHEM 534, both of which may be taken concurrently.

CHEM 540 Quantum Mechanics credit: 4 Hours.
The sequence, CHEM 540 and CHEM 542, is designed to give seniors and graduate students a unified treatment of quantum mechanics and spectroscopy on an advanced level. CHEM 540 covers the principles of formalism of quantum mechanics, as well as the solution of the Schrodinger equation for models and simple chemical systems. Prerequisite: CHEM 442 or equivalent.

CHEM 542 Quantum Mech and Spectroscopy credit: 4 Hours.
Continuation of CHEM 540. Focusing on molecular spectroscopy, nonlinear spectroscopy, kinetics and application of quantum mechanics to dissipative systems. Prerequisite: CHEM 540.

CHEM 544 Statistical Thermodynamics credit: 4 Hours.
Fundamentals of thermodynamics and statistical mechanics, covering equilibria, thermodynamic transforms, phase transitions, ensembles and non-equilibrium statistical mechanics, from single molecules to complex biological systems. Prerequisite: CHEM 442 and CHEM 444, or equivalent.

CHEM 545 Physical Chemistry Seminar credit: 1 Hour.
Required of all Chemistry graduate students whose area is physical chemistry. Prerequisite: Enrollment is allowed only by second-year graduate students who are presenting their Ph.D. literature seminar during that semester. Undergraduate students are not eligible to enroll in this course.

CHEM 546 Advanced Statistical Mechanics credit: 4 Hours.
Fundamentals of equilibrium statistical mechanics with selected applications to interacting classical fluids: dense gases, solutions, liquids, plasmas, and ion solutions; introduction to nonequilibrium statistical mechanics and linear response theory. Prerequisite: CHEM 540 and CHEM 544, or equivalent, or consent of instructor.

CHEM 548 Molecular Electronic Structure credit: 4 Hours.
Theoretical basis of the electronic structure of atoms and molecules; molecular orbital concepts and self-consistent field theory; angular momentum and the full rotation group; electron correlation effects; and applications to electronic spectroscopy of organic molecules, detailed descriptions of chemical reactions, and molecular properties. Prerequisite: CHEM 540.

CHEM 550 Advanced Quantum Dynamics credit: 4 Hours.
The quantum mechanical and semi-classical description of time-dependent processes, including discussions of the time-dependent Schrodinger equation, approximations, interaction of matter with radiation, wave packets, elastic and inelastic scattering, and relaxation phenomena. Prerequisite: Concurrent registration in CHEM 540 or consent of instructor.

CHEM 554 Topics in Physical Chemistry credit: 2 or 4 Hours.
Advanced course dealing with a subject not ordinarily covered by regularly scheduled courses, such as molecular spectroscopy, statistical mechanics, radiation and hot-atom chemistry, molecular quantum mechanics, radio-frequency spectroscopy, advanced experimental methods, kinetics of irreversible processes and cooperative phenomena, etc. May be repeated. Prerequisite: Consent of instructor.

CHEM 557 Concepts in Chemical Biology credit: 4 Hours.
An overview of the concepts and methods utilized in research at the interface of chemistry and biology, and their application to contemporary problems in biological chemistry. Specific topics covered include, but are not limited to, chemical genetics, bioconjugation reactions, combinatorial chemistry, high-throughput screening, identifying biological targets of small-molecule compounds, combinatorial biosynthesis, sequence-specific DNA-binding compounds, activity-based protein profiling, anti-cancer agents, targeted therapeutics, phage display, and yeast-hybrid systems. Prerequisite: One year (two semesters) of undergraduate organic chemistry is required. One semester of undergraduate biochemistry or molecular biology is preferred.

CHEM 559 Chemical Biology Laboratory credit: 4 Hours.
Laboratory course in advanced state-of-the-art experimental techniques used to investigate problems at the interface of chemistry and biology. Specific topics include, but are not limited to, solid-phase peptide synthesis, native chemical ligation and expressed protein ligation, protein expression and analysis, enzyme kinetics and inhibition, high-throughput screening, various methods for examining biomolecular interactions, radiolabeling, mammalian cell biology, fluorescence microscopy, and flow cytometry. Prerequisite: One year (two semesters) of undergraduate organic chemistry is required. One semester of undergraduate biochemistry or molecular biology is preferred.

CHEM 562 Enzyme Reaction Mechanisms credit: 3 or 4 Hours.
Introduction to the catalytic strategies used by enzymes for accelerating chemical reactions using a combination of kinetics, enzymology, and structural information. Application of gene databases to infer evolutionary relationships among catalytic mechanisms. Same as MCB 553. Prerequisite: Two semesters of undergraduate organic chemistry (CHEM 232 or CHEM 236 and CHEM 332 or CHEM 436) or consent of instructor.

CHEM 571 Chemical Biology Seminar credit: 1 Hour.
Required of all Chemistry graduate students whose area is chemical biology. Prerequisite: Enrollment is allowed only by second-year graduate students who are presenting their Ph.D. literature seminar during that semester. Undergraduate students are not eligible to enroll in this course.

CHEM 574 Combinatorial Chemistry credit: 4 Hours.
All aspects of combinatorial chemistry, the synthesis of multiple compounds in a rapid fashion, will be covered. Examples of combinatorial biology will also be discussed. Prerequisite: Chemistry graduate students or two semesters of undergraduate organic chemistry.
CHEM 582 Chemical Kinetics & Catalysis credit: 4 Hours.
Same as CHBE 551. See CHBE 551.

CHEM 584 Introduction to Materials Chem credit: 4 Hours.
Processing of ceramics, metals, polymers, and semiconductors, both traditional and advanced, and their mechanical, electrical, magnetic, optical and thermal properties.

CHEM 585 Materials Chemistry Seminar credit: 1 Hour.
Required of all Chemistry graduate students whose area is materials chemistry. Prerequisite: Enrollment is allowed only by second-year graduate students who are presenting their Ph.D. literature seminar during that semester. Undergraduate students are not eligible to enroll in this course.

CHEM 586 Surface Chemistry credit: 4 Hours.
Same as CHBE 553. See CHBE 553.

CHEM 588 Physical Methods Mat Chem credit: 4 Hours.
Includes physical techniques for characterization in materials chemistry, including thermal analysis, electron microscopy, microprobe analysis and electron spectroscopies, adsorption and surface area measurements, and X-ray powder diffraction.

CHEM 590 Special Topics in Chemistry credit: 1 to 4 Hours.
Designed for students majoring or minoring in chemistry who wish to undertake individual studies of a non-research nature under the direction of a faculty member of the department. Approved for both letter and S/U grading. Prerequisite: Consent of instructor and written approval of department head. Staff for the course is the same as for CHEM 599.

CHEM 592 Preparing Graduate Fellowships credit: 1 Hour.
This course assists first- and second-year graduate students as well as a selected few senior undergraduate students in their efforts to obtain external grants and fellowships. Using the National Science Foundation (NSF) Graduate Research Fellowship Program (GRFP) as an example, the course provides the students with general information and guidance about preparing grant applications. Each student will prepare a complete application package, which can be submitted to the NSF GRFP at the end of the course, although such submission is optional. Approved for S/U grading only. Prerequisite: For first- and second-year graduate students in Chemistry. Some senior undergraduate students who have high GPA and research experience in faculty laboratories may enroll with the instructor's approval.

CHEM 599 Thesis Research credit: 0 to 16 Hours.
Candidates for the master's degree who elect research are required to present a thesis. A thesis is always required of students working toward the degree of Doctor of Philosophy. Not all candidates for thesis work necessarily are accepted. Any student whose major is in a department other than chemistry or chemical engineering must receive permission from the head of the Department of Chemistry to register in this course. Approved for S/U grading only. May be repeated in separate terms. During Summer terms, this course can only be taken for 0 to 8 hours.

Chinese (CHIN)

CHIN Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/CHIN)

Courses

CHIN 199 Undergraduate Open Seminar credit: 1 to 5 Hours.
May be repeated.

CHIN 201 Elementary Chinese I credit: 5 Hours.
Introduction to Mandarin Chinese, including basic skills in speaking, reading, and writing. Not open to students with a background in Chinese language.

CHIN 202 Elementary Chinese II credit: 5 Hours.
Continuation of CHIN 201. Prerequisite: CHIN 201.

CHIN 203 Intermediate Chinese I credit: 5 Hours.
First term of second year of the Chinese language, including drill for more advanced conversational fluency; introduction to a greater variety of styles and levels of discourse and usage; and increasing study of the written language and more formal grammar. Prerequisite: CHIN 202 or equivalent.

CHIN 204 Intermediate Chinese II credit: 5 Hours.
Continuation of CHIN 203. Concentration on ability to engage in fluent discourse, on comprehensive grammatical knowledge, and on ability to read ordinary simple text in Chinese. Prerequisite: CHIN 203 or equivalent.

CHIN 221 Elementary Spoken Mandarin I credit: 4 Hours.
For non-majors who want to develop a basic competence in spoken Mandarin Chinese. Emphasizes the development of pronunciation, vocabulary and grammar skills with a concurrent emphasis on mastery of Pinyin phonetic orthography. Credit is not given for both this course and CHIN 201 or CHIN 202.

CHIN 222 Elementary Spoken Mandarin II credit: 4 Hours.
Continuation of CHIN 221. Emphasizes development of pronunciation, vocabulary and grammar skills, with a concurrent emphasis on mastery of Pinyin phonetic orthography. Credit is not given for both this course and CHIN 201or CHIN 202. Prerequisite: CHIN 221.
CHIN 241 Chinese Reading and Writing credit: 4 Hours.
Students with a basic background in spoken Mandarin will help develop their ability to read and write Chinese characters. This course fulfills the language requirement for those programs with a two-term sequence. Successful completion of CHIN 241 and CHIN 242 fulfills the Liberal Arts and Science foreign language requirement. Credit is not given for both this course and CHIN 201 or CHIN 202. Prerequisite: CHIN 222, or speaking proficiency as determined by placement test.

CHIN 242 Chinese Reading and Writing credit: 4 Hours.
Continuation of CHIN 241. This course fulfills the foreign language requirement for those programs with a three- or four-term requirement. Credit is not given for both this course and CHIN 203 or CHIN 204. Prerequisite: CHIN 241, or proficiency as determined by placement test.

CHIN 305 Advanced Chinese I credit: 5 Hours.
An advanced-level course that emphasizes rapid reading, vocabulary acquisition, and newspaper reading. Prerequisite: CHIN 204 or CHIN 242.

CHIN 306 Advanced Chinese II credit: 5 Hours.
Continuation of CHIN 305. This course fulfills the language requirement for the undergraduate major in Chinese. Prerequisite: CHIN 305.

CHIN 407 Intro to Classical Chinese credit: 3 or 4 Hours.
Introduction to the classical literary language, style, and structural patterns as reflected in the Confucian classics and other literary, philosophical, and historical texts. 3 undergraduate hours. 4 graduate hours. Prerequisite: CHIN 202 or equivalent.

CHIN 408 Readings in Literary Chinese credit: 3 or 4 Hours.
Readings in texts selected from the Confucian classics and other literary, philosophical, and historical texts. Attention is given to linguistic patterns and philosophical concepts and to problems of translation. 3 undergraduate hours. 4 graduate hours. Prerequisite: CHIN 407 or equivalent.

CHIN 409 Social Science Rdgs Chinese credit: 3 or 4 Hours.
Reading and translation of selected Chinese texts in the social sciences with emphasis on specialized terminology and prose style. 3 undergraduate hours. 4 graduate hours. May be repeated to a maximum of 9 undergraduate hours, or 12 graduate hours. Prerequisite: Three years of modern Chinese.

CHIN 440 Fourth-Year Chinese I credit: 3 or 4 Hours.
The focus of this course is on reading and discussing modern and pre-modern Chinese literary selections in Chinese. Students continue to develop dictionary, literary and writing skills begun at the advanced (305-306) levels. 3 undergraduate hours. 4 graduate hours. Prerequisite: CHIN 306 or equivalent.

CHIN 441 Fourth-Year Chinese II credit: 3 or 4 Hours.
Continuation of CHIN 440. 3 undergraduate hours. 4 graduate hours. Prerequisite: CHIN 440 or equivalent.

CHIN 471 Intro Second Lang Learn Tchg credit: 4 Hours.
Same as FR 471, GER 469, HUM 471, JAPN 471, LAT 471, RUSS 471, and SPAN 471. See SPAN 471.

CHIN 475 Intro to Comm Lang Tchg credit: 4 Hours.
Same as FR 475, GER 475, JAPN 475, LAT 475, RUSS 475, and SPAN 475. See SPAN 475.

CHIN 477 Chin Orth & Grm for Lng Tchg credit: 3 Hours.
Chinese orthography and grammar for language teaching. Teaching Mandarin Chinese in an English speaking environment. Covers the Chinese writing and sound systems, vocabulary, grammar, dialects and review available teaching materials. Course meets for the first six weeks of the semester only. 3 undergraduate hours. No graduate credit. Prerequisite: CHIN 441 or equivalent.

CHIN 478 Topics Secondary Lang Tchg credit: 4 Hours.
Same as FR 478, GER 478, JAPN 478, LAT 478, RUSS 478, and SPAN 478. See SPAN 478.

CHIN 490 Readings in Chinese Lit credit: 3 or 4 Hours.
Guided readings in Chinese literature in the vernacular with regular individual conferences and a paper. 3 undergraduate hours. 4 graduate hours. May be repeated to a maximum of 6 undergraduate hours or 8 graduate hours. Prerequisite: Reading knowledge of Chinese and consent of instructor.

CHIN 499 Study Abroad credit: 0 to 18 Hours.
Lectures, seminars, and practical work in Chinese language, literature, and civilization and in other academic areas appropriate to the student's course of study. 0 to 18 undergraduate hours. 0 graduate hours. May be repeated to a maximum of 32 hours per academic year. Prerequisite: Junior standing and a GPA of 2.5.

Civil and Environ Engineering (CEE)

CEE Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/CEE)

Courses

CEE 195 About Civil Engineering credit: 1 Hour.
Civil engineering orientation including historical developments, education requirements, relation to science, professional practice, and specialties within the profession.
CEE 199 Undergraduate Open Seminar credit: 1 to 5 Hours.
May be repeated.

CEE 201 Systems Engrg & Economics credit: 3 Hours.
Introduction to the formulation and solution of civil engineering problems. Major topics: engineering economy, mathematical modeling, and optimization. Application of techniques, including classical optimization, linear and nonlinear programming, network theory, critical path methods, simulation, decision theory, and dynamic programming to a variety of civil engineering problems. Credit is not given for both CEE 201 and IE 310. Prerequisite: MATH 231; credit or concurrent registration in MATH 225.

CEE 202 Engineering Risk & Uncertainty credit: 3 Hours.
Identification and modeling of non-deterministic problems in civil engineering design and decision making. Development of stochastic concepts and simulation models, and their relevance to real design and decision problems in various areas of civil engineering. Credit is not given for both CEE 202 and IE 300. Prerequisite: Recommended: Credit or concurrent registration in MATH 241.

CEE 300 Behavior of Materials credit: 4 Hours.
Macroscopic mechanical behavior in terms of phenomena at the nanometer and micrometer levels for the three types of engineering materials (metals, ceramics, and polymers) with emphasis on specific materials used in civil engineering -- steel, rocks, clay, portland cement concrete, asphaltic concrete, and wood. Same as TAM 324. Credit is not given for both CEE 300 and either ME 330 or MSE 280. Prerequisite: Completion of Composition I general education requirement; CHEM 104; TAM 251.
This course satisfies the General Education Criteria for:
UIUC: Advanced Composition

CEE 310 Transportation Engineering credit: 3 Hours.
Design, planning, operation, management, and maintenance of transportation systems; integrated multi-modal transportation systems (highways, air, rail, etc.); layout of highways, airports, and railroads with traffic flow models, capacity analysis, and safety. Design of facilities and systems with life cycle costing procedures and criteria for optimization. Prerequisite: TAM 251; credit or concurrent registration in CEE 202.

CEE 320 Construction Engineering credit: 3 Hours.
Construction engineering processes: contracting and bonding, planning and scheduling, estimating and project control, productivity models, and construction econometrics. Prerequisite: CEE 201; credit or concurrent registration in CS 101 and CEE 202.

CEE 330 Environmental Engineering credit: 3 Hours.
Sources, characteristics, transport, and effects of air and water contaminants; biological, chemical, and physical processes in water; atmospheric structure and composition; unit operations for air and water quality control; solid waste management; environmental quality standards. Prerequisite: CHEM 104.

CEE 350 Water Resources Engineering credit: 3 Hours.
Quantitative aspects of water in the earth's environment and its engineering implications, including design and analysis of systems directly concerned with use and control of water; quantitative introduction to hydrology, hydraulic engineering, and water resources planning. Prerequisite: CEE 202; credit or concurrent registration in TAM 335 and CEE 201.

CEE 360 Structural Engineering credit: 3 Hours.
Analysis, behavior, and design of trusses and framed structures under static loads; member forces in trusses, shear and moment diagrams, deflections, simple applications of the force method and slope-deflection; computer applications. Prerequisite: TAM 251.

CEE 380 Geotechnical Engineering credit: 3 Hours.
Classification of soils, compaction in the laboratory and in the field, soil exploration, boring and sampling, permeability of soils, one-dimensional settlement analyses, strength of soil, and foundations. Prerequisite: TAM 251.

CEE 398 Special Topics credit: 1 to 3 Hours.
Subject offerings of new and developing areas of knowledge in civil and environmental engineering intended to augment the existing curriculum. See Class Schedule or departmental course information for topics and prerequisites. May be repeated in the same or separate terms if topics vary.

CEE 401 Concrete Materials credit: 4 Hours.
Examination of the influence of constituent materials (cements, water, aggregates and admixtures) on the properties of fresh and hardened concrete, concrete mix design, handling and placement of concrete, and behavior of concrete under various types of loading and environment. Laboratory exercises utilize standard concrete test methods. Field trips are held during some scheduled laboratory sessions. 4 undergraduate hours. 4 graduate hours. Prerequisite: CEE 300.

CEE 405 Asphalt Materials I credit: 3 or 4 Hours.
Properties and control testing of bituminous materials, aggregates for bituminous mixtures, and analysis and design of asphalt concrete and liquid asphalt cold mixtures; structural properties of bituminous mixes; surface treatment design; recycling of mixtures. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CEE 310.

CEE 406 Pavement Design I credit: 3 or 4 Hours.
Analysis, behavior, performance, and structural design of highway flexible and rigid pavements; climate factors, drainage, traffic loading analysis, and life cycle cost analysis. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CEE 310.
CEE 407 Airport Design credit: 3 or 4 Hours.
Basic principles of airport facilities design to include aircraft operational characteristics, noise, site selection, land use compatibility, operational area, ground access and egress, terminals, ground service areas, airport capacity, and special types of airports. 3 undergraduate hours. 3 or 4 graduate hours.

CEE 408 Railroad Transportation Engrg credit: 3 or 4 Hours.
Principles and analysis of railroad transportation efficiency, economics, energy, and engineering; effect on production and markets. Railroad infrastructure; locomotive and rolling stock design, function, and operation. Computation of train speed, power, and acceleration requirements; railway traffic control and signaling. Quantitative analytical tools for rail-transportation decision-making and optimization. Field trip to observe railroad infrastructure, equipment and operations. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CEE 310.

CEE 409 Railroad Track Engineering credit: 3 or 4 Hours.
Railroad track engineering concepts including track component and system design, construction, evaluation, maintenance, load distribution, and wheel-rail interaction. Design and analysis tools for railroad track engineering and maintenance. Field trip to observe railroad track system and components. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CEE 310.

CEE 410 Railway Signaling & Control credit: 3 or 4 Hours.
Railway traffic control and signaling systems; train performance and scheduling tools; analysis of temporal and spatial separation of trains for safety and efficiency; train movement authority and operating rules, track circuit and wireless train position monitoring technology; interlocking design; railroad capacity modeling tools; economic analysis of traffic control system design, optimization, and selection. Field trip to observe signal system infrastructure and railway traffic operations control center. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CEE 310.

CEE 411 RR Project Design & Constr credit: 3 or 4 Hours.
Critical elements in the development and planning of railroad construction projects; project economic justification; route alternative analysis procedures; cost estimation; site civil design; computer-aided track design; surveying; construction management; construction procedures for typical railroad projects. Design project covering a typical railroad capital construction projects. Field trip to observe the construction of a railroad capital project. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CEE 310.

CEE 412 Geometric Design of Roads credit: 4 Hours.
Highway classification; analysis of factors in developing a transportation facility; highway geometrics design and safety standards; roadway design element; human factors in roadway design; roadway location principles; intersection, interchange, and ramp design; drainage factors. 4 undergraduate hours. 4 graduate hours. Prerequisite: CEE 310.

CEE 413 Traffic Capacity Analysis credit: 3 or 4 Hours.
Fundamentals of traffic engineering; analysis of traffic stream characteristics; capacity of urban and rural highways; design and analysis of traffic signals and intersections; traffic control; traffic impact studies; traffic accidents. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CEE 310.

CEE 414 Urban Transportation Planning credit: 3 or 4 Hours.
Same as UP 430. See UP 430.

CEE 415 Public Transportation Systems credit: 3 or 4 Hours.
Transit systems basics, demand issues, design standards, economic and sustainability implications. Transit service planning for shuttle, corridor, and network systems, hybrid hierarchical systems, paratransit and demand-responsive services. Management of transit systems, fleet operations, and crew scheduling. Operational issues, vehicle movement, headway and schedule control. Prerequisite: 3 undergraduate hours. 4 graduate hours. CEE 310 or equivalent.

CEE 416 Construction Productivity credit: 3 or 4 Hours.
Application of scientific principles to the measurement and forecasting of productivity in construction engineering. Conceptual and mathematical formulation of labor, equipment, and material factors affecting productivity. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CEE 320.

CEE 417 Construction Planning credit: 3 or 4 Hours.
Project definition; scheduling and control models; material, labor, and equipment allocation; optimal schedules; project organization; documentation and reporting systems; management and control. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CEE 320.

CEE 418 Construction Cost Analysis credit: 3 or 4 Hours.
Application of scientific principles to costs and estimates of costs in construction engineering; concepts and statistical measurements of the factors involved in direct costs, general overhead costs, cost markups, and profits; the fundamentals of cost recording for construction cost accounts and cost controls. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CEE 320.

CEE 419 Sustainable Const Methods credit: 4 Hours.
Identification of cutting edge sustainable construction materials, technologies, and project management strategies for use in the construction industry and evaluation of their potential to reduce the negative environmental impacts of construction activity. Examination of the current LEED for New Construction rating system, and case study analysis of highly successful recent "green construction projects" through student team assignments and presentations. Preparation for the LEED Green Associate professional licensing exam. 4 undergraduate hours. 4 graduate hours. Prerequisite: CEE 320; two of CEE 420, CEE 421, or CEE 422.

CEE 420 Ecological Quality Engineering credit: 2 Hours.
Characteristics of rivers and lakes which affect the management of domestic and industrial wastewaters; chemical hazards assessment, surveillance and biomonitoring, and review of regulations governing effluents. 2 undergraduate hours. 2 graduate hours. Prerequisite: CEE 330.
CEE 431 Biomonitoring credit: 3 Hours.
Theory and application of biomonitoring as a component of environmental management; review of a range of techniques to analyze effluents and assess condition and trend in the environment, using biological and ecological systems; emphasis on biomonitoring program design, selection and analysis of data, and interpretation of biomonitoring results. 3 undergraduate hours. 3 graduate hours. Prerequisite: CEE 340.

CEE 432 Stream Ecology credit: 3 Hours.
Description of physical, chemical, and biological characteristics in streams and rivers including an integrated treatment of the environmental factors affecting the composition and distribution of biota; emphasizes the application of ecological principles in aquatic ecosystem protection and management. 3 undergraduate hours. 3 graduate hours. Same as IB 450. Prerequisite: CEE 430.

CEE 434 Environmental Systems I credit: 3 Hours.
Introduction to the concepts and applications of environmental systems analysis. Application of mathematical programming and modeling to the design, planning, and management of engineered environmental systems, regional environmental systems, and environmental policy. Economic analysis, including benefit-cost analysis and management strategies. Concepts of tradeoff, non-inferior sets, single- and multi-objective optimization. Practical application to case studies to convey an understanding of the complexity and data collection challenges of actual design practice. 3 undergraduate hours. 3 graduate hours. Prerequisite: CEE 201 and CEE 330.

CEE 437 Water Quality Engineering credit: 3 Hours.
Fundamental theory underlying the unit processes utilized in the treatment of water for domestic and industrial usage, and in the treatment of domestic and industrial wastewaters. 3 undergraduate hours. 3 graduate hours. Prerequisite: CEE 330; credit or concurrent registration in TAM 335.

CEE 438 Science & Environmental Policy credit: 3 Hours.
Environmental treaties, the role of science and scientists in managing the national and global environment, effective science communication, scientific assessments, and the use of quantitative tools to inform policy decisions. 3 undergraduate hours. 3 graduate hours. Prerequisite: CEE 202 or IE 300, STAT 400, or equivalent introductory probability and statistics course. Senior and Graduate students.

CEE 440 Fate Cleanup Environ Pollutant credit: 4 Hours.
Investigation of the regulatory and technical issues affecting solid and hazardous waste management, with an emphasis on the principles governing the transport, fate, and remediation of solid and hazardous waste in the subsurface, including advection, dispersion, sorption, interphase mass transfer, and transformation reactions. 4 undergraduate hours. 4 graduate hours. Prerequisite: CEE 330.

CEE 442 Env Eng Principles, Physical credit: 3 Hours.
Analysis of the physical principles which form the basis of many water and air quality-control operations; sedimentation, filtration, inertial separations, flocculation, mixing, and principles of reactor design. 3 undergraduate hours. 3 graduate hours. Prerequisite: CEE 437.

CEE 443 Env Eng Principles, Chemical credit: 4 Hours.
Application of principles of chemical equilibrium and chemical kinetics to air and water quality. Thermodynamics, kinetics, acid-base chemistry, complexation, precipitation, dissolution, and oxidation-reduction. Applications. 4 undergraduate hours. 4 graduate hours. Prerequisite: CEE 437.

CEE 444 Env Eng Principles, Biological credit: 4 Hours.
Application of principles of biochemistry and microbiology to air and water quality, wastes, and their engineering management; biological mediated changes in water and in domestic and industrial wastewater. 4 undergraduate hours. 4 graduate hours. Prerequisite: CEE 443.

CEE 445 Air Quality Modeling credit: 4 Hours.
Practical and advanced approaches to pollutant transport and fate in the environment with emphasis on air pollution modeling, including aspects of pollutant dispersion, chemical transformation, and loss. Gaussian plume, chemical mass balance, chemical reaction, grid and trajectory models. Evaluation of models and the development of efficient air quality management strategies. Applications with use of regulatory USEPA air quality models. Same as ATMS 425. 4 undergraduate hours. 4 graduate hours. Prerequisite: CEE 330 and credit or concurrent registration in TAM 335; or ATMS 302.

CEE 446 Air Quality Engineering credit: 4 Hours.
Description and application of chemical and physical principles related to air pollutants, aerosol mechanics, attenuation of light in the atmosphere, air quality regulation, generation of air pollutants, methods to remove gaseous and particulate pollutants from gas streams, and atmospheric dispersion. 4 undergraduate hours. 4 graduate hours. Prerequisite: CEE 330; credit or concurrent registration in TAM 335.

CEE 447 Atmospheric Chemistry credit: 3 Hours.
Biochemical cycles of atmospheric trace gases, their interactions on global and regional scales, and their significance for the chemistry in the atmosphere. Important fundamental concepts central to understanding air pollutants, e.g., the formation of aerosols and the transformation and removal of species in the atmosphere. Same as ATMS 420. 3 undergraduate hours. 3 graduate hours. Prerequisite: CHEM 102; ATMS 201 or CEE 330.

CEE 449 Environmental Engineering Lab credit: 3 Hours.
Traditional analysis tools and techniques in analysis, control, and design of natural and engineered environmental systems including air, water, wastewater, solid and hazardous waste, and ecological systems. 3 undergraduate hours. 3 graduate hours. Prerequisite: CEE 437 or CEE 446.

CEE 450 Surface Hydrology credit: 3 Hours.
Descriptive and quantitative hydrology dealing with the distribution, circulation, and storage of water on the earth’s surface; principles of hydrologic processes; methods of analysis and their applications to engineering and environmental problems. 3 undergraduate hours. 3 graduate hours. Prerequisite: CEE 350.
CEE 451 Environmental Fluid Mechanics credit: 3 Hours.
Incompressible fluid mechanics with particular emphasis on topics in analysis and applications in civil engineering areas; principles of continuity, momentum and energy, kinematics of flow and stream functions, potential flow, laminar motion, turbulence, and boundary-layer theory. 3 undergraduate hours. 3 graduate hours. Prerequisite: TAM 335.

CEE 452 Hydraulic Analysis and Design credit: 3 Hours.
Hydraulic analysis and design of engineering systems: closed conduits and pipe networks; hydraulic structures, including spillways, stilling basins, and embankment seepage; selection and installation of hydraulic machinery. 3 undergraduate hours. 3 graduate hours. Prerequisite: TAM 335.

CEE 453 Urban Hydrology and Hydraulics credit: 4 Hours.
Hydraulic analysis and design of urban, highway, airport, and small rural watershed drainage problems; discussion of overland and drainage channel flows; hydraulics of storm-drain systems and culverts; determination of design flow; runoff for highways, airports, and urban areas; design of drainage gutters, channels, sewer networks, and culverts. 4 undergraduate hours. 4 graduate hours. Prerequisite: CEE 350.

CEE 457 Groundwater credit: 3 Hours.
Physical properties of groundwater and aquifers, principles and fundamental equations of porous media flow and mass transport, well hydraulics and pumping test analysis, role of groundwater in the hydrologic cycle, groundwater quality and contamination. 3 undergraduate hours. 3 graduate hours. Prerequisite: CEE 350 and TAM 335.

CEE 458 Water Resources Field Methods credit: 4 Hours.
Scientific principles of measurement technologies and protocols used for water-resources measurements and experimental design of field-scale water-resources and environmental studies. Planning field studies; instruments and protocols for surface-water, and water-quality sampling; description of data quality. One-half-day laboratory field trips to streamflow monitoring stations and groundwater monitoring wells nearby. 4 undergraduate hours. 4 graduate hours. Prerequisite: CEE 350.

CEE 460 Steel Structures I credit: 3 Hours.
Introduction to the design of metal structures; behavior of members and their connections; theoretical, experimental, and practical bases for proportioning members and their connections. 3 undergraduate hours. No graduate credit. Prerequisite: CEE 360.

CEE 461 Reinforced Concrete I credit: 3 Hours.
Strength, behavior, and design of reinforced concrete members subjected to moments, shear, and axial forces; emphasis on the influence of the material properties on behavior. 3 undergraduate hours. No graduate credit. Prerequisite: CEE 360.

CEE 462 Steel Structures II credit: 3 or 4 Hours.
Metal members under combined loads; connections, welded and bolted; moment-resistant connections; plate girders, conventional behavior, and tension field action. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CEE 460.

CEE 463 Reinforced Concrete II credit: 3 or 4 Hours.
Strength, behavior, and design of indeterminate reinforced concrete structures, with primary emphasis on slab systems; emphasis on the strength of slabs and on the available methods of design of slabs spanning in two directions, with or without supporting beams. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CEE 461.

CEE 465 Design of Structural Systems credit: 3 Hours.
Examination of the whole structural design process including definition of functional requirements, selection of structural scheme, formulation of design criteria, preliminary and computer-aided proportioning, and analysis of response, cost, and value. 3 undergraduate hours. No graduate credit. Prerequisite: Credit in either CEE 460 or CEE 461 with concurrent registration in the other.

CEE 467 Masonry Structures credit: 3 or 4 Hours.
Analysis, design, and construction of masonry structures. Mechanical properties of clay and concrete masonry units, mortar, and grout. Compressive, tensile, flexural, and shear behavior of masonry structural components. Strength and behavior of unreinforced bearing walls. Detailed design of reinforced masonry beams, columns, structural walls with and without openings, and complete lateral-force resisting building systems. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CEE 461.

CEE 468 Prestressed Concrete credit: 3 or 4 Hours.
Strength, behavior, and design of prestressed reinforced concrete members and structures, with primary emphasis on pretensioned, precast construction; emphasis on the necessary coordination between design and construction techniques in prestressing. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CEE 461.

CEE 469 Wood Structures credit: 3 or 4 Hours.
Mechanical properties of wood, stress grades, and working stresses; effects of strength-reducing characteristics, moisture content, and duration of loading and causes of wood deterioration; glued-laminated timber and plywood; behavior and design of connections, beams, and beam-columns; design of buildings and bridges; other structural applications: trusses, rigid frames, arches, and pole-type buildings; prismatic plates and hyperbolic paraboloids. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CEE 460 or CEE 461.

CEE 470 Structural Analysis credit: 4 Hours.
Direct stiffness method of structural analysis; fundamentals and algorithms; numerical analysis of plane trusses, grids and frames; virtual work and energy principles; finite element method for plane stress and plane strain. 4 undergraduate hours. 4 graduate hours. Credit is not given for both CEE 470 and ME 471. Prerequisite: CEE 360.
CEE 471 Structural Mechanics credit: 3 or 4 Hours.
Beams under lateral load and thrust; beams on elastic foundations; virtual work and energy principles; principles of solid mechanics, stress and strain in three dimensions; static stability theory; torsion; computational methods. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: MATH 285 and TAM 251.

CEE 472 Structural Dynamics I credit: 3 or 4 Hours.
Analysis of the dynamic response of structures and structural components to transient loads and foundation excitation; single-degree-of-freedom and multi-degree-of freedom systems; response spectrum concepts: simple inelastic structural systems; systems with distributed mass and flexibility. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CEE 360, MATH 285, and TAM 212.

CEE 480 Foundation Engineering credit: 3 Hours.
Analysis and design of foundations, bearing capacity and settlement of foundations; stability of excavations and slopes; ground movements due to construction; analysis and design of excavations, retaining walls, slopes, and underground structures in soil and rock. 3 undergraduate hours. No graduate credit. Prerequisite: CEE 380.

CEE 483 Soil Mechanics and Behavior credit: 4 Hours.
Composition and structure of soil; water flow and hydraulic properties; stress in soil; compressibility behavior and properties of soils; consolidation and settlement analysis; shear strength of soils; compaction and unsaturated soils; experimental measurements. 4 undergraduate hours. 4 graduate hours. Prerequisite: CEE 380.

CEE 484 Applied Soil Mechanics credit: 4 Hours.
Application of soil mechanics to earth pressures and retaining walls, stability of slopes, foundations for structures, excavations; construction considerations; instrumentation. 4 undergraduate hours. 4 graduate hours. Prerequisite: CEE 483.

CEE 490 Computer Methods credit: 3 or 4 Hours.
Review of programming concepts; formulation and programming of numerical, data processing, and logical problems with applications from various branches of civil engineering; organization of programs and data; development and use of problem-oriented programming languages in civil engineering. Same as CSE 491. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CS 101.

CEE 491 Decision and Risk Analysis credit: 3 or 4 Hours.
Development of modern statistical decision theory and risk analysis, and application of these concepts in civil engineering design and decision making; Bayesian statistical decision theory, decision tree, utility concepts, and multi-objective decision problems; modeling and analysis of uncertainties, practical risk evaluation, and formulation of risk-based design criteria, risk benefit trade-offs, and optimal decisions. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CEE 202.

CEE 495 Professional Practice credit: 0 Hours.
Series of lectures by outstanding authorities on the practice of civil engineering and its relations to economics, sociology, and other fields of human endeavor. 0 undergraduate hours. 0 graduate hours. Approved for S/U grading only.

CEE 497 Independent Study credit: 1 to 16 Hours.
Individual investigations or studies of any phase of civil engineering selected by the student and approved by the department. 1 to 4 undergraduate hours. 1 to 16 graduate hours. May be repeated. Prerequisite: Consent of instructor.

CEE 498 Special Topics credit: 1 to 4 Hours.
Subject offerings of new and developing areas of knowledge in civil and environmental engineering intended to augment the existing curriculum. See Class Schedule or departmental course information for topics and prerequisites. 1 to 4 undergraduate hours. 1 to 4 graduate hours. May be repeated in the same or separate terms if topics vary.

CEE 501 Constr Matls Characterization credit: 4 Hours.
Laboratory methods such as thermal analysis, optical microscopy, scanning electron microscopy, and x-ray diffraction used to characterize civil engineering materials. Theoretical background, calculation methods, models, underlying assumptions, and operation of the instrument are examined for each method. Prerequisite: CEE 300; one of CEE 401, CEE 405, CEE 483.

CEE 502 Advanced Cement Chemistry credit: 4 Hours.
Advanced topics in chemistry of portland cement, chemistry and microstructure of cements, chemical reactions that lead to hardening, chemistry and microstructure of hydrated cements, effects of chemical and mineral admixtures, and chemical issues involved in the engineering behavior of the cements. Prerequisite: CEE 401.

CEE 503 Constr Matls Deterioration credit: 4 Hours.
Fundamental processes for deterioration mechanisms of infrastructure materials: corrosion of metals including thermodynamics, kinetics, passivity and rate measurements; degradation of cement-based materials including freezing and thawing, ASR, sulfate attack, fire attack and steel reinforcement corrosion; degradation of organic materials including photo-oxidation and ageing. A research literature review exercise related to material degradation. Prerequisite: CEE 401 or CEE 405.

CEE 504 Infrastructure NDE Methods credit: 4 Hours.
Fundamental bases and methodologies of non-destructive evaluation (NDE) techniques for infrastructure materials: methods for steel including ultrasound, radiography, eddy-current and magnetic-particles; methods for concrete including sounding, semi-destructive, ultrasound, seismic, impact-echo, impulse-response, ground-penetrating radar, infrared-thermography, and nuclear; planning and carrying out NDE structural investigations. Weekly laboratory sessions, a research paper, and an associated presentation related to NDE required. Prerequisite: CEE 401 or CEE 405.
CEE 506 Pavement Design II credit: 4 Hours.
Development of layered elastic and plate theory models for area analysis of pavement systems; performance prediction of flexible and rigid pavements; characterization of aircraft traffic; design of airfield pavement systems; construction material fatigue and failure criteria (strength theory and fracture mechanics); industrial floor and reinforced concrete slab design; climatic factors. Prerequisite: CEE 406.

CEE 508 Pavement Evaluation and Rehab credit: 4 Hours.
Concepts and procedures for condition survey assessment; pavement evaluation by nondestructive testing and data analysis (roughness, friction, structural capacity, internal flaws, and thickness measurements); destructive testing, maintenance strategies, rehabilitation techniques of pavement systems for highways and airfields, cost analysis, preservation techniques. Prerequisite: CEE 406.

CEE 509 Transportation Soils credit: 4 Hours.
Occurrence and properties of surficial soils, soil classification systems, soil variability; subgrade evaluation procedures, repeated loading behavior of soils; soil compaction and field control; soil moisture, soil temperature, and frost action; soil trafficability and subgrade stability for transportation facility engineering. Prerequisite: CEE 483.

CEE 512 Logistics Systems Analysis credit: 4 Hours.
Planning, design and operations of complex logistics systems: logistics costs; production, transportation and distribution systems; lot-sizing; traveling salesman problem (TSP) and vehicle routing problem (VRP); transshipments; facility location problem; supply chain management and inventory control; order instability; analytical methods and practical solution techniques. Prerequisite: CEE 310 and IE 310.

CEE 515 Traffic Flow Theory credit: 4 Hours.
Fundamentals of traffic flow, traffic flow characteristics, statistical distributions of traffic flow parameter, traffic stream models, car following models, continuum follow models, shock wave analysis, queueing analysis, traffic flow models for intersections, network flow models and control, traffic simulation. Prerequisite: CEE 416 and knowledge of probability and statistics.

CEE 517 Traffic Signal Systems credit: 4 Hours.
Theory and application of concepts in traffic signal systems control, signal timing design, signal cabinet components, signal controllers, traffic signal theory and control, vehicle detection technologies, communication methods, interconnected rail-highway crossing signals, signal coordination, and signal systems network. Field trips to observe or utilize equipment in the Traffic Operations Lab (TOL) in ATREL or similar facilities. Prerequisite: CEE 416.

CEE 524 Construction Law credit: 4 Hours.
Legal aspects of the construction process and the potential liability that engineers can incur through the design, and post-construction processes. Organization and operation of the American court system, contact formation, defenses, remedies, and typical areas of dispute, and design services contracts, torts, product liability, agency, business organizations, intellectual property, and risk managements. Mock trial of a recent construction-related case with the class serving as plaintiffs and defendants. Prerequisite: CEE 420, CEE 421, and CEE 422.

CEE 525 Construction Case Studies credit: 4 Hours.
Case studies of bridges, tunnels, buildings, transportation systems, heavy industrial construction, waterways, and marine structures in the context of construction engineering and management. Research, a team-oriented term project, presentations, and discussions in studio-style format. Prerequisite: Two of CEE 420, CEE 421, and CEE 422.

CEE 527 Constr Conflict Resolution credit: 4 Hours.
Basic theories and applications of dispute avoidance and resolution techniques in the construction industry. Mechanisms to promote collaborative environments and resolve disputes in construction projects; the different steps in the Dispute Resolution Ladder and the main features of a conflict management plan; case studies of practical applications of disputes avoidance and resolution techniques in the construction industry throughout the world. Prerequisite: One of CEE 420, CEE 421, CEE 422.

CEE 528 Construction Data Modeling credit: 4 Hours.
State-of-the-art research and literature in the construction data modeling domain. Fundamental techniques of construction data modeling; existing construction data representation approaches and specifications for the architecture, engineering, and construction domain; building information models; capabilities and limitation of data process models and representation approaches and techniques. Prerequisite: Two of CEE 420, CEE 421, CEE 422.

CEE 534 Surface Water Quality Modeling credit: 4 Hours.

CEE 535 Environmental Systems II credit: 4 Hours.
Fundamental concepts of uncertainty, risk, and reliability applied to environmental and water resources decision making. Chance constraints, Markov and Monte Carlo modeling, geostatistics, unconditional and conditional simulation, genetic algorithms, neural networks, simulated annealing, and a review of relevant portions of basic probability and statistical theory. Many techniques are applied to a real-world environmental decision making problem initially developed in CEE 434. Prerequisite: CEE 202 and CEE 434.
CEE 537 Water Quality Control Proc I credit: 4 Hours.
Theory and basic design of processes used in water and wastewater treatment, including adsorption, ion exchange, chemical oxidation and reduction, disinfection, sedimentation, filtration, coagulation, flocculation, and chemical precipitation. Prerequisite: Credit or concurrent registration in CEE 442 and CEE 443.

CEE 538 Water Quality Control Proc II credit: 4 Hours.
Theory and its application for design and operation of processes used in water and wastewater treatment; emphasis is on biological treatment processes and related processes for gas transfer, sludge dewatering, sludge disposal, and solids separations. Prerequisite: CEE 442 and CEE 443; credit or concurrent registration in CEE 444.

CEE 540 Remediation Design credit: 4 Hours.
Evaluation and design of alternative treatment processes for hazardous waste sites contaminated with organic or metal wastes. Group design project due at the end of the term. Prerequisite: CEE 440.

CEE 543 Env Organic Chemistry credit: 4 Hours.
Molecular-scale processes that control the fate of organic contaminants in natural environments and engineered treatment systems, including partitioning between environmental phases (water, air, organic, and biological phases), sorption onto solids (soils, sediments, aerosol particles), and transformation reactions (chemical, photochemical, and biochemical). Emphasis on quantitative approaches for predicting contaminant fate using thermodynamic principles and molecular property descriptors. Prerequisite: CEE 443 or NRES 490.

CEE 545 Aerosol Sampling and Analysis credit: 4 Hours.
Principles of sampling for particles and gases in the field of air pollution; instrumental techniques relevant to the design of sampling systems used in process control, ambient air monitoring, and laboratory experiments; methods of sample analysis and their limitations. Same as ATMS 535. Prerequisite: CEE 446 and MATH 285.

CEE 546 Air Quality Control credit: 4 Hours.
Application of principles describing the generation, separation, and removal of air contaminants from gas streams generated by stationary sources. Typically includes local field trips to observe applications of the air quality control devices. Prerequisite: CEE 442 and CEE 446.

CEE 548 Scientific Writing in CEE credit: 3 Hours.
Advanced writing course covering topics specific to scientific writing, with emphasis on proposals, manuscripts, and peer review. Prerequisite: CEE 444, CEE 599.

CEE 550 Hydroclimatology credit: 4 Hours.
Application of deterministic and probabilistic concepts to simulate and analyze hydrologic systems; discussion of the theory and application of linear and nonlinear, lumped, and distributed systems techniques in modeling the various phases of the hydrologic cycle. Prerequisite: CEE 450.

CEE 551 Open-Channel Hydraulics credit: 4 Hours.
Advanced hydraulics of free surface flow in rivers and open channels; discussion of theory, analytical and numerical solution techniques, and their applications to gradually and rapidly varied nonuniform flows, unsteady flow, and flow in open-channel networks. Prerequisite: CEE 451.

CEE 552 River Basin Management credit: 4 Hours.
Multidisciplinary knowledge (hydrology, economics, systems engineering, etc.) and methodological skills (optimization, simulation, etc.) for river basin management. River basin characterization-natural and social features; water availability assessment based on hydrology, infrastructure, and policy; environmental flow requirements; water demand management and microeconomics theory; integrated river basin management modeling. Prerequisite: CEE 350 and CEE 434.

CEE 553 River Morphodynamics credit: 4 Hours.
River morphology and characteristics of river sediment. Response of alluvial and bedrock rivers to changes in sediment supply, hydrology, and tectonics. Numerical modeling of river morphodynamics in gravel and sand bed rivers and deltas. Same as GEOL 573. Prerequisite: TAM 335.

CEE 554 Hydrologic Variability credit: 4 Hours.
Advanced quantitative treatment of catchment hydrology, focusing on analysis of observed hydrologic and hydroclimatic variability, and their interpretation in terms of the underlying processes. Concepts of heterogeneity and variability, scale and scaling, process change and process interactions will be emphasized. Theoretical foundations of hydrologic applications, such as flood estimation, water balance analyses, hydrologic modeling and associated scale problems will be discussed in sufficient detail to prepare students to undertake advanced research and professional practice. Prerequisite: CEE 450.

CEE 555 Mixing in Environmental Flows credit: 4 Hours.
Physical processes involved in transport of pollutants by water; turbulent diffusion and longitudinal dispersion in rivers, pipes, lakes, and the ocean; diffusion in turbulent jets, buoyant jets, and plumes. Prerequisite: MATH 285 and TAM 335.

CEE 557 Groundwater Modeling credit: 4 Hours.
Theory and application of numerical methods, finite differences and finite element, for solving the equations of groundwater flow and solute transport; transport of chemically reacting solutes; model calibration and verification. Prerequisite: CEE 457 and MATH 285.

CEE 559 Sediment Transport credit: 4 Hours.
Physical processes of transportation and deposition of sediment particles in liquid bodies with particular emphasis on fluvial sediment problems; sediment in desilting basins; reservoirs and delta formation; erosion; stable channel design; river morphology. Prerequisite: CEE 551.
CEE 560 Steel Structures III credit: 4 Hours.
Theories of ultimate behavior of metal structural members with emphasis on buckling and stability of members and frames; theory of torsion applied to beam torsion, lateral-torsional buckling, curved beams with emphasis on design criteria; post-buckling strength of plates and post-buckling versus column behavior. Prerequisite: CEE 462.

CEE 561 Reinforced Concrete III credit: 4 Hours.
Behavior of reinforced concrete members, including the relationships between behavior and building code requirements. Prerequisite: CEE 463.

CEE 570 Finite Element Methods credit: 4 Hours.
Theory and application of the finite element method; stiffness matrices for triangular, quadrilateral, and isoparametric elements; two- and three-dimensional elements; algorithms necessary for the assembly and solution; direct stress and plate bending problems for static, nonlinear buckling and dynamic load conditions; displacement, hybrid, and mixed models together with their origin in variational methods. Same as CSE 551. Prerequisite: CEE 471 or TAM 551.

CEE 572 Earthquake Engineering credit: 4 Hours.
Source mechanisms, stress waves, and site response of earthquake shaking; effect on the built environment; nature of earthquake actions on structures; fundamental structural response characteristics of stiffness, strength, and ductility; representation of the earthquake input in static and dynamic structural analysis; modeling of steel and concrete structures under earthquake effects; outputs for safety assessment; comprehensive source-to-design actions project. Prerequisite: CEE 472.

CEE 573 Structural Dynamics II credit: 4 Hours.
Advanced concepts in structural dynamics and fundamentals of experimental structural dynamics. Modern system theory; data acquisition and analysis; digital signal processing; experimental model analysis theory and implementation; random vibration concepts; system identification; structural health monitoring and damage detection; pseudo-dynamic testing and model-based simulation; smart structures technology (e.g., smart sensors; passive, active, and semi-active control). Prerequisite: CEE 472.

CEE 574 Probabilistic Loads and Design credit: 4 Hours.
Application of probabilistic methods in describing and defining loads on structures with emphasis on the random fluctuation in time and space. Random vibration methods and applications to dynamic response of structures under wind and earthquake loads. Computer simulation of structural loads and responses. Probability-based safety criteria and review of current methods of selection of design loads and load combinations. Prerequisite: CEE 202 and CEE 472.

CEE 575 Fracture and Fatigue credit: 4 Hours.
Fatigue and fracture behavior of metallic structures and connections; fatigue and fracture mechanics theory; generation and use of laboratory data; background and application of international testing and assessment standards. Same as AE 521. Prerequisite: One of CEE 471, TAM 451, TAM 551.

CEE 576 Nonlinear Finite Elements credit: 4 Hours.
Nonlinear formulations in solid mechanics and nonlinear equation solving strategies; finite deformation (hyperelasticity) elastostatics and elastodynamics, semi-discrete weighted residual formulations, implicit and explicit time-stepping algorithms and stability analysis; theory of mixed finite element methods, strain-projection methods, and stabilized methods; mixed methods for nonlinear coupled-field problems. Same as CSE 552. Prerequisite: CEE 471 or TAM 445; CEE 470 or ME 471.

CEE 577 Computational Inelasticity credit: 4 Hours.
Theoretical foundations of inelasticity and advanced nonlinear material modeling techniques; constitutive models for inelastic response of metals, polymers, granular materials, biomaterials. Phenomenological models of viscoelasticity, viscoplasticity, elastoplasticity, porous plasticity and cyclic plasticity. Small-strain and finite-strain numerical implementation and code development. Same as CSE 553. Prerequisite: CEE 471 or TAM 551; CEE 570 or ME 471.

CEE 580 Excavation and Support Systems credit: 4 Hours.
Classical and modern earth pressure theories and their experimental justification; pressures and bases for design of retaining walls, bracing of open cuts, anchored bulkheads, cofferdams, tunnels, and culverts. Prerequisite: Credit or concurrent registration in CEE 484.

CEE 581 Earth Dams credit: 4 Hours.
Fundamentals of slope stability; seepage in composite sections and anisotropic materials; methods of stability analysis; mechanism of failure of natural and artificial slopes; compaction; field observations. Prerequisite: Credit or concurrent registration in CEE 484.

CEE 582 Consolidation of Clays credit: 4 Hours.
Elastic solutions relevant to soil mechanics; permeability; general application of Terzaghi’s theory of one-dimensional consolidation; advances in consolidation theories; mechanism of volume change; delayed and secondary compressibility and creep; theory of three-dimensional consolidation and solutions; radial flow and design of sand drains; analysis and control of settlement. Prerequisite: CEE 483.

CEE 583 Shear Strength of Soils credit: 4 Hours.
Physico-chemical properties of soils; fabric and structure of soil; mechanism of shearing resistance; residual shear strength of overconsolidated clays and clay shales; long-term shear strength of overconsolidated clays; Hvorslev shear strength parameters; undrained shear strength of clays. Prerequisite: CEE 483.
CEE 585 Deep Foundations credit: 4 Hours.
Ultimate capacities and load-deflection of piles and drilled shafts subjected to compressive loads, tensile loads, and lateral loads; effects of duration of load, soil-structure interaction; two- and three-dimensional analysis of pile groups with closely-spaced piles; effects of installation; inspection of deep foundations and full-scale field tests. Prerequisite: CEE 484.

CEE 586 Rock Mechanics and Behavior credit: 4 Hours.
Physical properties and classification of intact rock, theories of rock failure, state of stress in the earth’s crust, stresses and deformations around underground openings assuming elastic, plastic, and time-dependent behavior; effect of geologic discontinuities on rock strength; stability analyses in rock. Prerequisite: CEE 483 and TAM 451.

CEE 587 Applied Rock Mechanics credit: 4 Hours.
Application of rock mechanics to engineering problems; shear strength of rock masses; dynamic and static stability of rock slopes; deformability of rock masses; design of pressure tunnel linings and dam foundations; controlled blasting and blasting vibrations; tunnel support; machine tunneling; design and construction of large underground openings; field instrumentation. Prerequisite: CEE 586.

CEE 588 Geotechnical Earthquake Engrg credit: 4 Hours.
Seismic hazard analysis, cyclic response of soils and rock; wave propagation through soil and local site effects; liquefaction and post liquefaction behavior, seismic soil-structure of foundations and underground structures, seismic design of retaining walls, underground structures and tunnels. Construction and machine vibrations. Blasting. Prerequisite: CEE 472 and CEE 483.

CEE 589 Computational Geomechanics credit: 4 Hours.

CEE 590 Geotechnical Field Measurement credit: 4 Hours.
Discussion of observational method in geotechnical engineering. Historical, theoretical, experimental, and empirical development of in-situ tests and instrumentation in geotechnical engineering. Practical applications and limitation of field testing devices and instruments. Interpretation of test results and measurements for geotechnical site characterization. Discussion of data acquisition systems and data management. Introduction of emerging technologies in field testing and instrumentation. Prerequisite: CEE 483 and CEE 484.

CEE 592 Sustainable Urban Systems credit: 4 Hours.
Fundamental concepts of sustainability and resilience in urban systems, including the complex interactions among human, engineered, and natural systems. Project-based format, focusing on real-world problems solicited from government agencies, industry, and non-governmental organizations in one or more partnering cities. Students work in multidisciplinary teams with faculty advisors from multiple departments and colleges. Same as NRES 592 and UP 576. Prerequisite: One of ATMS 421, CEE 491, NRES 439, UP 456, UP 480, or equivalent course related to sustainable urban systems; and one of NRES 454, UP 418, GEOG 480, or equivalent course related to geographic information systems (GIS).

CEE 595 Seminar credit: 0 to 1 Hours.
Discussion of current topics in civil and environmental engineering and related fields by staff, students, and visiting lecturers. Approved for S/U grading only. May be repeated.

CEE 597 Independent Study credit: 1 to 16 Hours.
Individual investigations or studies of any phase of civil engineering selected by the student and approved by the adviser and the staff member who will supervise the investigation. May be repeated. Prerequisite: Consent of instructor.

CEE 598 Special Topics credit: 1 to 4 Hours.
Subject offerings of new and developing areas of knowledge in civil and environmental engineering intended to augment the existing curriculum. See Class Schedule or departmental course information for topics and prerequisites. May be repeated in the same or separate terms if topics vary.

CEE 599 Thesis Research credit: 0 to 16 Hours.
Approved for S/U grading only. May be repeated.

Classical Civilization (CLCV)

CLCV Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/CLCV)

Courses

CLCV 100 Vocab Building-GRK & LAT Roots credit: 2 Hours.
Vocabulary building assistance for students through an analysis of Greek and Latin roots, prefixes, and suffixes found in English.

CLCV 102 Medical Terms-GRK & LAT Roots credit: 3 Hours.
Introduction to the study of the Greek and Latin roots of contemporary medical terminology and to the linguistic patterns governing their combination and usage.

CLCV 111 Mythology of Greece and Rome credit: 2 Hours.
Study of the major myths of Greece and Rome and their impact upon later art, music, and literature. Credit is not given for both CLCV 111 and CLCV 115.
CLCV 114 Introduction to Greek Culture credit: 3 Hours.
Studies the social and cultural life in Greece during the classical period.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Western Compartv Cult

CLCV 115 Mythology of Greece and Rome credit: 3 Hours.
Studies the major myths of Greece and Rome and their impact upon later art, music, and literature. Shares two hours of lecture with CLCV 111; additional hour of lecture-discussion for a closer analysis of topics. Credit is not given for both CLCV 115 and CLCV 111.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Western Compartv Cult

CLCV 116 The Roman Achievement credit: 3 Hours.
Introduces Roman civilization through the study of the social and cultural life of ancient Rome.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: Western Compartv Cult

CLCV 120 The Classical Tradition credit: 3 Hours.
Survey of the Greco-Roman tradition from late antiquity to the present. Examination of pagan culture in medieval Christianity and Islam, the literary tradition of the Troy tale, the rediscovery of Greek texts and the Florentine Renaissance, classical allusions in Shakespeare and Milton, the political foundation of the U.S. constitution, and the persistence of the classical tradition in contemporary American popular culture.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Western Compartv Cult

CLCV 131 Classical Archaeology, Greece credit: 3 Hours.
Introduction to the archaeology of ancient Greece and the Aegean world.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: Western Compartv Cult

CLCV 132 Class Archaeology, Rome-Italy credit: 3 Hours.
Introduction to the archaeology of Italy and Rome to the fall of the Roman Empire.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: Western Compartv Cult

CLCV 160 Ancient Greek & Roman Religion credit: 3 Hours.
Study of Greek and Roman Paganism and the rise of Christianity within that context. Readings are confined to ancient sources in English translation. Same as RLST 160.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: Western Compartv Cult

CLCV 199 Undergraduate Open Seminar credit: 1 to 5 Hours.
Approved for both letter and S/U grading. May be repeated.

CLCV 203 Ancient Philosophy credit: 4 Hours.
Same as PHIL 203. See PHIL 203.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect

CLCV 206 Classical Allusions in Cinema credit: 3 Hours.
Examination of hundreds of contemporary films containing allusions to Greco-Roman antiquity. From the Matrix to Napoleon Dynamite, today's films often mention an ancient character, story or art object. These motifs are conscious and often essential to the theme of the film. We examine this interesting phenomenon by discussing film segments in class, reading about the history of the classical tradition in popular culture, and finally, forming into groups and examining specific types of films. Same as CWL 206. Prerequisite: CLCV 111 or CLCV 115 or consent of instructor.

CLCV 217 Greek Art credit: 3 Hours.
Same as ARTH 215. See ARTH 215.
CLCV 220 Origins of Western Literature credit: 3 Hours.
Origins and development of selected major genres in Western literature, emphasizing the relationship between classical representatives and their modern successors. Same as CWL 220. May be repeated as topic varies.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Western Compartv Cult

CLCV 221 The Heroic Tradition credit: 3 Hours.
Study of ancient epics and their relation to the social consciousness of their period; introductory and background lectures; and readings in the epic tradition of antiquity and its successors. Same as CWL 263. Prerequisite: Sophomore standing or consent of instructor.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Western Compartv Cult

CLCV 222 The Tragic Spirit credit: 3 Hours.
Readings in the tragic drama of Greece and Rome; a systematic study of the contents and development of this classical literary/dramatic genre. Same as CWL 264. Prerequisite: Sophomore standing or consent of instructor.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Western Compartv Cult

CLCV 223 Myth, History, Fiction, Tradition credit: 3 Hours.
A unique examination of several legendary figures from Greco-Roman antiquity. Employing the disciplines of mythology, historiography, and the study of popular culture, the student develops a synchronic, multi-millennial understanding of such men and women as Achilles, Medea, Alexander the Great, and Cleopatra by studying primary ancient, medieval, Renaissance, and modern sources from such diverse perspectives as those of epic, lyric, and dramatic poetry, scientific and romantic biography, political propaganda, painting, popular fiction, and documentary television, as well as feature film.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Western Compartv Cult

CLCV 225 Greco-Roman Demo, Econ, Cult credit: 3 Hours.
Greco-Roman Democracies, Economic Policies, and Cultures: Examines the ancient city-states of Athens and Rome; the creation, development and demise of their democratic governments, the relationship between their democracies and militarized empires as well as their economics and fiscal policies; and how these influenced or were represented by their cultural products - including literature, architecture, sculpture, and coinage. Examines the influence of Greco-Roman culture and political institutions on late-medieval and neo-Roman Renaissance city-states, as well as on the foundation of the United States.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: Western Compartv Cult

CLCV 231 Development of Ancient Cities credit: 3 Hours.
Monuments and archaeological remains illustrating the development of the Greek and Roman city (polis). Same as ARTH 217. Prerequisite: Sophomore standing or consent of instructor.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: Western Compartv Cult

CLCV 232 Ancient Greek Sanctuaries credit: 3 Hours.
Survey of the archaeological remains of ancient Greek sanctuaries and their importance to ancient society and religion. Same as ARTH 218, and RLST 232. Prerequisite: Sophomore standing or consent of instructor.

CLCV 240 Sex & Gender in Antiquity credit: 3 Hours.
Understanding of the place of women in ancient societies can be gained through the examination of the ways in which the ancients conceptualized sex and gender. The myths, religion, art and literature of Egypt, Greece, Rome and the Near East contain a wide array of representations of men and women, of their emotions, as well as of their social, legal and political status and relations. Same as CWL 262 and GWS 240.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Western Compartv Cult

CLCV 291 Freshman Honors Tutorial credit: 1 to 3 Hours.
Study of selected topics on an individually arranged basis. Open only to honors majors or to Cohn Scholars and Associates. May be repeated one time. Prerequisite: Consent of departmental honors advisor.
CLCV 323 The Comic Imagination credit: 3 Hours.
Study of Greek and Roman comedies in their historical context, with attention to formal elements, stylistic features, aspects of performance and central themes and ideas. Same as CWL 322 and THEA 323. Prerequisite: Sophomore standing or consent of the instructor.
This course satisfies the General Education Criteria for:
UIUC: Advanced Composition
UIUC: Literature and the Arts
UIUC: Western Civilization

CLCV 410 Ancient Egyptian & Greek Arch credit: 3 Hours.
Same as ARCH 410. See ARCH 410.

CLCV 411 Ancient Roman Architecture credit: 3 Hours.
Same as ARCH 411. See ARCH 411.

CLCV 415 Classical Rhetorics credit: 3 or 4 Hours.
Same as CMN 415 and MDVL 415. See CMN 415.

CLCV 430 History of Translation credit: 3 or 4 Hours.
Same as CWL 430, ENGL 486, GER 405, SLAV 430, SPAN 436, and TRST 431. See SLAV 430.

CLCV 440 Roman Republic to 44 B.C. credit: 3 or 4 Hours.
Same as HIST 440. See HIST 440.

CLCV 443 The Archaeology of Greece credit: 3 Hours.
Monuments, material remains, and sculpture and other arts illustrating the development of Greek civilization to 323 B.C. Same as ARTH 415. 3 undergraduate hours. 3 graduate hours. Prerequisite: A course in ancient history, art, or language, or consent of instructor.

CLCV 444 The Archaeology of Italy credit: 3 Hours.
Monuments, material remains, and sculpture and other arts illustrating the development of Greco-Roman and other ancient Italian civilizations to 330 A.D. Same as ARTH 416. 3 undergraduate hours. 3 graduate hours. Prerequisite: A course in ancient history, art, or language, or consent of instructor.

CLCV 490 Topics in Classical Literature credit: 3 or 4 Hours.
Study of selected topics in Greek and Latin literature in translation; content is variable. Same as CWL 490. 3 or 4 undergraduate hours. 3 or 4 graduate hours. May be repeated. Prerequisite: Consent of instructor.

CLCV 491 Topics Classic Architecture credit: 1 to 4 Hours.
Study of selected topics; variable content. 1 to 4 undergraduate hours. 1 to 4 graduate hours. May be repeated. Prerequisite: Consent of instructor.

CLCV 492 Senior Thesis credit: 2 to 4 Hours.
Thesis and honors; for candidates for departmental distinction in classical civilization and for other seniors. 2 to 4 undergraduate hours. No graduate credit. Prerequisite: Senior standing and consent of Classics Honors Program.

CLCV 498 Senior Survey credit: 2 to 4 Hours.
For candidates for departmental distinction in the classics major. 2 to 4 undergraduate hours. No graduate credit. Prerequisite: Senior standing and consent of Classics Honors Program.

CLCV 515 Seminar in Ancient Art credit: 4 Hours.
Same as ARTH 515. See ARTH 515.

CLCV 520 Seminar in Classical Archaeology credit: 4 Hours.
Problems in classical archaeology. Various topics in all fields of classical archaeology such as ancient topography, agricultural practices, ancient industries and crafts, and trade patterns as documented by pottery, will be offered in separate terms. Same as ARTH 520. May be repeated to a maximum of 12 hours. Prerequisite: Graduate standing in Classics, Art History, Anthropology, Architecture, or History, or consent of instructor.

CLCV 550 Intro to Teaching of Classics credit: 4 Hours.
An introduction, designed for Classics Teaching Assistants, to teaching ancient Greek, Latin, and Classical Civilization courses. Prerequisite: Appointment as a Teaching Assistant in Classics or consent of instructor.

Committee on Inst Cooperation (CIC)

CIC Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/CIC)

Courses
CIC 390 CIC Intercampus Reg credit: 0 to 18 Hours.
CIC 500 CIC Traveling Scholar credit: 0 to 20 Hours.
Communication (CMN)

CMN Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/CMN)

Courses

CMN 101 Public Speaking credit: 3 Hours.
Preparation and presentation of short informative and persuasive speeches; emphasis on the selection and organization of material, methods of securing interest and attention, and the elements of delivery. Credit is not given for both CMN 101 and either CMN 111 or CMN 112.

CMN 102 Intro to Comm Theory & Res credit: 4 Hours.
Survey of the questions probed, the methods employed, and the current status of knowledge in the study of communication.
This course satisfies the General Education Criteria for:
UIUC: Behavioral Sciences

CMN 111 Oral & Written Comm I credit: 3 Hours.
Principles and practice in communication; stress on fundamentals of critical thinking in writing and speaking. The campus rhetoric requirement is fulfilled by this course in conjunction with CMN 112. Credit is not given for both CMN 111 + CMN 112, and other courses that fulfill the Composition I requirement (i.e., RHET 100, RHET 101+RHET 102, RHET 103+RHET 104, RHET 105, ESL 114+ESL 115). Credit is also not given for both CMN 111+CMN 112, and CMN 101. CMN 111+CMN 112 cannot be taken by students who have completed the University's Composition I requirement.
This course satisfies the General Education Criteria for:
UIUC: Freshman Composition I

CMN 112 Oral & Written Comm II credit: 3 Hours.
Continuation of Oral & Written Comm I; stress on deliberation and fundamentals of communication and public argument through speaking and writing. The campus rhetoric requirement is fulfilled by this course in conjunction with CMN 111. Credit is not given for both CMN 111+CMN 112 and other courses that fulfill the Composition I requirement (i.e., RHET 100; RHET 101+ RHET 102; RHET 103+RHET 104; RHET 105; ESL 114+ESL 115). Credit is also not given for both CMN 111+CMN 112 and CMN 101. CMN 111+CMN 112 may not be taken by students who have completed the University's Composition I requirement. Prerequisite: CMN 111.
This course satisfies the General Education Criteria for:
UIUC: Freshman Composition I

CMN 113 Small Group Communication credit: 3 Hours.
Study of leadership, group process, and interpersonal relations in the small group, conference, and the public forum; emphasis on practice in leading and participation in various types of public discussion and conference, with materials drawn from current public questions.

CMN 115 Interviewing credit: 3 Hours.
Describes theory and research on interviews in interpersonal and organizational settings; emphasis on practice in conducting and participating in different types of interviews, with materials drawn from various interview settings (i.e., employment, evaluation, medical).

CMN 191 Freshman Honors Tutorial credit: 1 to 3 Hours.
Study of selected topics on an individually arranged basis. Open only to Chancellors Scholars, Cohn Scholars and James Scholars. May be repeated one time. Prerequisite: Consent of departmental honors advisor.

CMN 199 Undergraduate Open Seminar credit: 0 to 5 Hours.
May be repeated to a maximum of 6 hours.

CMN 204 Internship in Teaching Comm credit: 3 Hours.
Supervised experience in assisting in the teaching of an undergraduate course in communication; practice in preparing and presenting brief lectures, conducting activities within class, and assisting students outside of class. Prerequisite: Junior standing, cumulative 3.0 grade-point average, 3.5 grade-point average in Communication coursework, recommendation from an instructor, and approval by application.

CMN 210 Public Comm in Everyday Life credit: 3 Hours.
Introduces concepts useful for the critical analysis of public communication in everyday life. Drawing on communication theory and practice, especially theories of rhetoric, the course investigates techniques of persuasion, offers tools for critical analysis of public discourse, and considers the political and ethical implications of various forms of public communication.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: Western Compartv Cult

CMN 211 Business Communication credit: 3 Hours.
Focus on relevant theory and research on communication strategies and skills vital to diverse business contexts. Topics will include communication in civic engagement and in multinational corporations, cross-cultural communication, ethics, telecommuting, virtual work teams, and effective writing. Study, preparation, and presentation of the chief types of business speeches and other forms of communication; special attention to conferences, sales talks, interviews, and job applications are included. Prerequisite: CMN 101.

CMN 212 Intro to Organizational Comm credit: 3 Hours.
Considers major theories, research questions, and approaches to organizational communication.
CMN 220 Communicating Public Policy credit: 3 Hours.
Study of the nature of policy-oriented communication; analysis and formulation of positions on issues of professional, personal, or public interest; design and presentation of public policy messages addressed to varying tasks and audiences, with special emphasis on advanced writing skills. Prerequisite: Completion of campus Composition I general education requirement. This course satisfies the General Education Criteria for:
UIUC: Advanced Composition

CMN 230 Intro to Interpersonal Comm credit: 3 Hours.
Study of communication theory and its application to interpersonal relationships: extensive discussion of problems of conflict and misunderstanding in personal affairs to facilitate the development of knowledge, insights, and skills in the processes of face-to-face interaction. This course satisfies the General Education Criteria for:
UIUC: Social Sciences

CMN 231 Communication and Conflict credit: 3 Hours.
Examines how people experience and manage conflict in both private and public settings. Units focus on conflict in interpersonal, small group, and organizational contexts. This course satisfies the General Education Criteria for:
UIUC: Behavioral Sciences

CMN 232 Intro to Intercultural Comm credit: 3 Hours.
Introduction to the study of intercultural communication in a variety of contexts, including domestic and international; examines theory and research to explain what happens when people from different cultural and linguistic backgrounds interact. Requires students to think critically about the ways in which "taken-for-granted" ways of thinking, acting, and interacting are culturally specific. This course satisfies the General Education Criteria for:
UIUC: Non-Western Cultures
UIUC: Social Sciences

CMN 260 Intro to Health Communication credit: 3 Hours.
Introduces theory and research on communication in health and illness contexts. Explores how messages from media, interpersonal, and organizational sources affect health beliefs and behaviors. This course satisfies the General Education Criteria for:
UIUC: Behavioral Sciences
UIUC: Western Compartv Cult

CMN 275 Media, Money and Power credit: 4 Hours.
Describes the political economy of the media in the U.S. Acquaints students with a core understanding of how the media system operates, and with what effects, in a capitalist society. Examines the role of advertising, public relations, corporate concentration, and government regulation upon news reporting, entertainment, culture, and participatory democracy. Also examines issues related to the Internet, globalization, and public broadcasting. This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: Western Compartv Cult

CMN 277 Intro to Mediated Comm credit: 4 Hours.
Survey of the history, structure, forms, and social effects of the American mass media. This course satisfies the General Education Criteria for:
UIUC: Social Sciences

CMN 280 Comm Technology & Society credit: 3 Hours.
Introduction to theory and research on both old and new communication technologies; focus will be on how these technological systems develop and are used, and what implications of these systems have for culture and society. This course satisfies the General Education Criteria for:
UIUC: Social Sciences

CMN 304 Communication Internship credit: 1 to 3 Hours.
Directed internship experience for Communication majors. Students must have consent of the Internship Coordinator. May be repeated in separate terms to a maximum of 6 hours.

CMN 310 The Rhetorical Tradition credit: 3 Hours.
Survey of major trends in the development of rhetorical theory from Homer to the present.

CMN 320 Comm Controversy Public Policy credit: 3 Hours.
Examines how public policy shapes American life, by providing an advanced analysis of the controversies, discourses and effects of public policy with a focus on sustainability issues. Explores the American landscape, energy sources, environment, food systems, political process, and government lobbying rules and reform. Provides in-depth analysis of the definitions and histories of public policy and the tensions between public and private spheres that shape it. Develops a fundamental understanding of public versus private spheres; analyzes and critiques how public policy shapes American historical and cultural landscapes; increases skillfulness in oral and written analysis of controversies, institutions, political and economic power brokers, and social norms. Prerequisite: CMN 220 or consent of instructor.
CMN 321 Strategies of Persuasion credit: 3 Hours.
Studies of powerful instances of public persuasion; students examine key means of public influence. Prerequisite: CMN 101.

CMN 323 Argumentation credit: 3 Hours.
Study of the theory of argument, e.g., evidence, reasoning, and construction of briefs; practice in formal and informal forms of debate and public discourse on current public questions. Prerequisite: CMN 101.

CMN 325 Politics and the Media credit: 3 Hours.
Same as MACS 322 and PS 312. See PS 312.

CMN 326 Mass Media and the Audience credit: 3 Hours.
Provides information on how to conceptualize audiences, mass media use, and reception of media messages. Also examines the character of the audience experience, uses and gratifications of mass media, social cognition, and studies of audiences as interpretive communities.

CMN 336 Family Communication credit: 3 Hours.
Examines the nature and functions of communication in various family configurations (e.g., nuclear families, single-parent families, stepfamilies); discusses both problematic interaction patterns and links between family interaction and strong families.

CMN 340 Visual Politics as Communication credit: 3 Hours.
Explores the role of visual images in U.S. culture, paying special attention to the ways that images function persuasively as political communication. Provides tools for analyzing historical and contemporary images and artifacts, such as photographs, prints, paintings, advertisements, and memorials. Emphasis on how visual images are used for remembering and memorializing; confronting and resisting; consuming and commodifying; governing and authorizing; and visualizing and informing.

CMN 357 Intro to Conversation Analysis credit: 3 Hours.
Same as LING 357. See LING 357.

CMN 361 Oral Narr: Social Use of Story credit: 3 Hours.
Explores the role of traditional oral narrative in contemporary social life. Examines some major genres: sacred narratives, family stories, crime stories, legends of the supernatural, and jokes. Each of these genres will be examined in terms of content and context in a larger community of discourse. Cases and examples will be drawn largely from the English-speaking world.

CMN 362 Folklore as Communication credit: 3 Hours.
Study of unofficial, noncommercial and face-to-face modes of communication, called “folklore” or “vernacular culture.” For purposes of this course, “folklore” includes speech, stories, legends, sayings, proverbs, customs, rituals and performances. Students will be asked to develop and use a variety of cultural description and documentation skills. The goal is to give students a strong sense of variety, persistence, and flexibility of traditional culture as it lives in the present, and practice in recording it, writing about it, and analyzing it.

CMN 368 Sexual Communication credit: 3 Hours.
Describes sex as a fundamental activity in the development and maintenance of human relationships. Communication about sex happens in a variety of interpersonal, group, organizational, and mediated contexts. Explores the many ways in which sexual communication intersects our personal, relational, cultural, and institutional norms and values. Topics will include social norms about sexual communication, sexual harassment, family communication about sex, sexual health education, doctor-patient communication about sex, and sex in the media and in advertising. Theory and research on communication processes will be used to elaborate how talk about sex can achieve multiple goals.

CMN 375 Popular Media and Culture credit: 3 Hours.
Using the critical lens of theories on race, class, gender, and sexuality, this class will investigate the complicated relations among popular media and culture, including how our everyday life and attitudes are thought to be shaped by the media, and how cultural systems can be said to inform the media. By exploring a wide range of media (e.g., film, television, music, the internet, and computer games), students will investigate the national, political, and personal dimensions of popular media and the varied ways in which media construct, reflect and intersect with specific cultural systems, identities, and classifications. May be repeated in separate terms to a maximum of 6 hours.

CMN 377 Propaganda and Modern Society credit: 3 Hours.
Traces the social, economic, and political underpinnings of propaganda and public relations. Examines the rise of corporate propaganda in the early 20th century and explores how these strategies were adapted by a wide range of social and political actors. The second part of the course discusses the above issues from contemporary perspectives. The role of WWI, WWII, and the more recent Iraqi war, in solidifying the role of government and commercial propaganda in society and the frequently blurry distinctions between government propaganda and commercial public relations will also be discussed. The relationship between propaganda, PR and the mass media will constitute a constant site of inquiry. This course focuses on theory, especially critical theory.

CMN 390 Individual Study credit: 1 to 3 Hours.
Individual investigation of special problems. May be repeated to a maximum of 6 hours. Prerequisite: Twelve hours of communication coursework; a grade-point average of 3.25; and consent of head of department.

CMN 396 Special Topics in Comm credit: 3 Hours.
Special topics in communication not treated in regularly scheduled courses. See Class Schedule for current topics. May be repeated as topics vary.
CMN 410 Workplace Comm Technology credit: 3 or 4 Hours.
Focuses on how communication technologies shape the creation, content, and flow of information within and between organizations. Special attention will be given to the characteristics of the technology; social and organizational practices; economic considerations; and policy issues. 3 undergraduate hours. 4 graduate hours.

CMN 411 Organizational Comm Assessment credit: 3 or 4 Hours.
Organizational communication theory applied to the assessment of communication practices in organizations; systematic procedures for diagnosing communication problems and facilitating effective communication in organizations. Extensive use of case studies. 3 undergraduate hours. 4 graduate hours. Prerequisite: CMN 212.

CMN 412 Adv Organizational Comm credit: 3 or 4 Hours.
Advanced study of theory and research in organizational communication; considers such topics as communication networks, superior-subordinate communications, task-related and social information processing, and communicating with the external environment. 3 undergraduate hours. 4 graduate hours. Prerequisite: CMN 212.

CMN 413 Adv Small Group Communication credit: 3 or 4 Hours.
Advanced study of theory, research, techniques, and training methods in interviewing and group discussion; emphasis on empirical research findings concerning communication processes in face-to-face groups. 3 undergraduate hours. 4 graduate hours.

CMN 415 Classical Rhetorics credit: 3 or 4 Hours.
Survey of the contributions to the theory and practice of rhetoric from Homer to the Renaissance. Same as CLCV 415 and MDVL 415. 3 undergraduate hours. 4 graduate hours.

CMN 416 Early Modern Rhetorics credit: 3 or 4 Hours.
Significant developments in European rhetorical theory from 1500 to the 20th Century. 3 undergraduate hours. 4 graduate hours.

CMN 417 Contemporary Rhetorics credit: 3 or 4 Hours.
Major contributors to rhetorical theory from I.A. Richards to the present. 3 undergraduate hours. 4 graduate hours.

CMN 421 Persuasion Theory & Research credit: 3 or 4 Hours.
Survey of major theories of persuasion, research on factors influencing persuasive effectiveness, and application to problems of persuasive discourse. 3 undergraduate hours. 4 graduate hours.

CMN 423 Rhetorical Criticism credit: 3 or 4 Hours.
Methods of interpreting and judging persuasive discourse with emphasis on political speaking and writing; extensive practice in criticism of rhetorical texts. 3 undergraduate hours. 4 graduate hours.

CMN 424 Campaigning to Win credit: 3 or 4 Hours.
Using a case study approach to illustrate how campaigns attempt to persuade and mobilize voters, students learn how to plan and manage effective political campaigns. Same as PS 411. 3 undergraduate hours. 4 graduate hours.

CMN 427 Children and the Media credit: 3 or 4 Hours.
Examines the role of the mass media in the lives of children. Focuses on how developmental differences influence how children process and respond to the media. Topics include media violence, media advertising, stereotypes in the media, and educational content. 3 undergraduate hours. 4 graduate hours.

CMN 429 Race and the Mass Media credit: 3 or 4 Hours.
Presents an overview of racial stereotypes in the mass media and the effects of stereotypical imagery on viewers. Discussion of the structural and social origins of stereotypic media from multiple perspectives focusing on published scholarship that systematically assesses the content and effects of racial representations from a social scientific perspective. Intersections between race, ethnicity, class, and gender also will be explored. 3 undergraduate hours. 4 graduate hours.

CMN 432 Gender and Language credit: 3 or 4 Hours.
Study of actual and perceived differences and similarities in the use of language by women and by men; emphasizes the social contexts of speech. Same as GWS 432, and LING 432. 3 undergraduate hours. 4 graduate hours.

CMN 435 Adv Interpersonal Comm credit: 3 or 4 Hours.
Study of the major processes involved in an individual's adjustment to the communication situations of everyday life; emphasis on the development of interpersonal competency and orientations, social perception, interpersonal sentiment and hostility, trust, and the social context as factors influencing the understanding and evaluation of interpersonal messages. 3 undergraduate hours. 4 graduate hours. Prerequisite: CMN 230 or consent of instructor.

CMN 437 Comm in Personal Relationships credit: 3 or 4 Hours.
Examines theories of communication within personal relationships, including family, friendship, and romantic associations. Specific topics include relationship development, conflict, power, self-disclosure, and relational uncertainty. 3 undergraduate hours. 4 graduate hours.

CMN 450 Adv Topics in Public Discourse credit: 3 or 4 Hours.
Study of selected periods and genres of public discourse in historical context, including British, American, French, Russian, German, Chinese, and Japanese. 3 undergraduate hours. 4 graduate hours. May be repeated as topics vary to a maximum of 12 undergraduate hours or 16 graduate hours. Prerequisite: One course in rhetorical criticism or consent of instructor.

Information listed in this catalog is current as of 11/2014
CMN 462 Interpersonal Health Comm credit: 3 or 4 Hours.
Examines the role of communication in the management of mental and physical health. Focuses on topics such as communication and illness identity, health and interpersonal relationships, health care provider-patient interactions, impacts of technology on health communication, and health education and prevention efforts. 3 undergraduate hours. 4 graduate hours.

CMN 463 Organizational Health Comm credit: 3 or 4 Hours.
Focuses on organizational issues shaping communication between providers, patients, and consumers of health care and information, including background on financing personal medical services; organizations, professions, and their interrelationships involved in providing medical services; theorizing communication and organization in personal medical services; and communication between organizations and the public on health issues. Topics include managed care, professional communication, the hospital as a unique communication site, ethics in health communication, direct-to-consumer drug advertising, and health crisis communication. 3 undergraduate hours. 4 graduate hours.

CMN 464 Health Communication Campaigns credit: 3 or 4 Hours.
Focuses on the theoretical principles behind designing, implementing, and evaluating a health communication campaign. Students will be exposed to campaigns pertaining to alcohol abuse, illicit drug use, organ donation, safe sex, tobacco use, among others. The first part of the course reviews theories used in health communication campaigns, derived from the disciplines of communication, social psychology, and public health. The second part of the course focuses on designing campaigns and creating messages as well as evaluating the effects of those campaigns and messages. 3 undergraduate hours. 4 graduate hours.

CMN 465 Social Marketing Health & Behav credit: 3 or 4 Hours.
Applies marketing concepts and practices to bring about behavior change for a social good. Social marketing is an approach to planning and implementing projects and programs that emphasizes a customer-centered mindset to learn what people want and need to change their behavior. Designed to give students a thorough orientation to the discipline of social marketing and its application to a range of problems with an emphasis on issues in health contexts. Topics will include audience research, segmentation strategies, communication channels, marketing mix, and the application of behavioral theory. Students will acquire practical skills in the design, implementation, and evaluation of health intervention initiatives that use social marketing. Same as CHLH 465. 3 undergraduate hours. 4 graduate hours.

CMN 476 Commercialism and the Public credit: 3 or 4 Hours.
Explores the influences of advertising and commercialism and their role in defining our political culture, social institutions, and personal lives. Through readings, written reflection, visual presentations, and class discussions, the course explores a wide range of advertising and consumer issues and discusses how consumers negotiate these forces. The first part of the course is devoted to a historical overview; discussing the risk and evolving nature of advertising throughout the 20th century. Having established a historical framework, the course offers six contemporary topics to be discussed in the remainder of the semester. Topics may include, but not be limited to: the commercial mass media; the public relations industry; gender in advertising; commercialization of childhood; the commercialization of medicine and science; contemporary consumer society; advertising in schools; and food, advertising, and body image. 3 undergraduate hours. 4 graduate hours.

CMN 491 Honors Individual Study credit: 2 Hours.
Individual investigation of special problems. 2 undergraduate hours. No graduate credit. May be repeated to a maximum of 4 undergraduate hours. Prerequisite: Twelve hours of communication; a grade-point average of 3.50; and consent of head of department.

CMN 493 Honors Senior Thesis credit: 2 Hours.
Individual study leading to a thesis for honors in the Department of Communication. 2 undergraduate hours. No graduate credit. May be repeated to a maximum of 4 undergraduate hours. Prerequisite: Senior standing; a grade-point average of 3.50; and consent of head of department.

CMN 496 Adv Topics in Communication credit: 3 or 4 Hours.
Advanced topics in communication not treated in regularly scheduled courses; see Class Schedule for current topics. 3 undergraduate hours. 4 graduate hours. May be repeated as topics vary.

CMN 501 Intro to Health Communication credit: 4 Hours.
Introduction to theory and research on communication in health and illness contexts, focusing on how messages from interpersonal, organizational, cultural and media sources affect health beliefs and behaviors. Some topics to be explored include: the theoretical foundations underlying differences in the ways individuals communicate about health, health campaign strategies and organizational influences on health and strategies for generating successful or beneficial health-related communication (as well as recognize problematic communicative trends).

CMN 502 Health Comm Research Methods I credit: 2 Hours.
Introduction to social scientific methods for research on health communication and health outcomes. These methods may be used either to build general (theoretical) knowledge about communication or to aid in design and evaluation of actual messages and campaigns. Spring terms only. Prerequisite: Only for students enrolled in the MS in Health Communication degree program.

CMN 503 Health Comm Research Methods II credit: 2 Hours.
Focuses on analytic strategy in both qualitative and quantitative analysis. Complements and expands upon the social scientific methods for collecting data introduced in CMN 502. Prerequisite: CMN 502 strongly recommended.

CMN 504 Health & Family Communication credit: 4 Hours.
Exploration of current perspectives on the interplay between family communication processes and health-related issues. Using theoretical foundations such as systems theory, communication privacy management theory, narrative theory and family communication patterns theory, students will explore the ways that family members communicate about health, cope with health-related problems, and influence one another’s health-related behaviors.
CMN 505 Provider-Patient Communication credit: 2 Hours.
Study of theoretical bases for understanding social interactions in health care settings focusing on three general areas: (a) communication and identity, (b) health and personal relationships, and (c) health care provider-patient interaction.

CMN 506 Health Informatics credit: 4 Hours.
Explores: (1) contexts of health informatics applications; (2) reciprocal relationships among people, activities, and health informatics applications; and (3) consequences surrounding the design, implementation, and use of health informatics applications. Course content includes: an introduction to health informatics and associated theoretical perspectives; health information as a strategic resource; provider health informatics applications; the e-health movement and consumer health informatics applications; and the intersection of health informatics with current challenges in health care.

CMN 507 Hlth Comm Orgs Profs & Policy credit: 4 Hours.
Study of the organizational features of the U.S. health care systems, generating a comprehensive image of the context in which communication between patients and providers, health care consumers and organizations, and public health care messages are sent, received, exchanged, interpreted, and circulated. Offered Fall terms only. Prerequisite: Only for students enrolled in the MS in Health Communications degree program.

CMN 508 Successful Health Campaigns credit: 4 Hours.
Introduction to theoretical frameworks, research, and applications of health campaigns. Literature from contributing disciplines will be reviewed (e.g., advertising, communication, marketing, public health, political science, psychology and sociology) and key aspects of campaign development will be discussed (e.g., formative research, audience segmentation, message tailoring and evaluation). Offered Spring terms only. Prerequisite: Only for students enrolled in the MS in Health Communication degree program.

CMN 509 Soc Mkting & Health Behavior credit: 2 Hours.
Orientation to the discipline of social marketing with some application to a range of problems, emphasizing issues with a health context. Topics will include audience research, segmentation strategies, communication channels, and the marketing mix. Students will acquire practical skills in audience research and learn about the design, implementation, and evaluation of health intervention initiatives that use social marketing. Offered Spring terms only. Prerequisite: Only for students enrolled in the MS in Health Communication degree program.

CMN 529 Seminar Communication Theory credit: 4 Hours.
Special topics in communication theory and research. May be repeated to a maximum of 16 hours. Prerequisite: Consent of instructor.

CMN 530 Family Communication Theory credit: 4 Hours.
Graduate seminar that examines theory and research on the development of families, communication in various types of families and family relationships, and current issues that affect family communication.

CMN 531 Narr in Interdisc Perspective credit: 4 Hours.
Engages fresh interdisciplinary perspectives on narrative and identifies aspects of narrative that are not illuminated by current thinking. Identifies gaps and absences in the literature on the social creation of reality through narrative. Of particular interests are the dream, the relationship between personal oral history and myth, people who have “no stories” or have untellable stories, and the trauma narrative as compulsory testimony. Approaches these issues from the perspective of scholarship in folklore, sociolinguistics, developmental psychology, communication, cultural psychology, and anthropology.

CMN 538 Seminar Rhetorical Theory credit: 4 Hours.
Study of special topics in the history of rhetorical theory. May be repeated to a maximum of 16 hours.

CMN 550 Intro to Comm Grad Study credit: 1 Hour.
Orientation to discipline of Communication and too departmental research areas. Discusses disciplinary norms, research ethics/IRB, academic writing, and professional conduct. Advice on choosing areas of research, identifying suitable graduate advisor, time management, and career planning. Faculty visitors discuss their research and professional development topics. Approved for S/U grading only. Prerequisite: Communication graduate students only.

CMN 574 Communication Research Methods credit: 4 Hours.
Introduction to content analysis, survey, and experimental research designs and quantitative and qualitative analysis in communication research.

CMN 575 Capstone Individual Study credit: 4 Hours.
Provides capstone experience for students in the MS in Health Communication degree program.

CMN 595 Special Problems credit: 1 to 12 Hours.
Individual investigation of special projects not included in theses. May be repeated in separate terms. Open to master's candidates for a maximum of 4 graduate hours and to doctoral candidates for a maximum of 12 graduate hours. Prerequisite: Consent from head of department.

CMN 599 Thesis Research credit: 0 to 16 Hours.
Approved for S/U grading only. May be repeated.

Community Health (CHLH)

CHLH Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/CHLH)
Courses

CHLH 100 Contemporary Health credit: 3 Hours.
Examines concepts of health and health promotion in contemporary society with emphasis on a healthy lifestyle for individuals and groups. Topics include self care, health insurance, exercise, nutrition and weight control, sexuality, contraception, tobacco, alcohol, cardiovascular health, infectious diseases, and cancer.
This course satisfies the General Education Criteria for:
UIUC: Social Sciences

CHLH 101 Introduction to Public Health credit: 3 Hours.
Introduction to the nation’s public health system; includes an overview of the basic concepts and core functions of public health practice, the scope of applications, and the variety of service organizations (both public and private) that shape public health.
This course satisfies the General Education Criteria for:
UIUC: Social Sciences

CHLH 125 Orientation KIN & Comm Health credit: 1 Hour.
Serves as an introduction to the Kinesiology and Community Health Department and provides an overview of the Kinesiology and Community Health curricula, areas of study, and opportunities available for careers in the field. Enrollment required for Community Health freshmen and transfer students. Credit is not given for both CHLH 125 and KIN 125.

CHLH 199 Undergraduate Open Seminar credit: 1 to 5 Hours.
Approved for both letter and S/U grading. May be repeated up to a maximum of 10 hours.

CHLH 200 Mental Health credit: 2 Hours.
Introduction to the science of mental health and illness including personality development, the genesis and manifestations of mental illness, and the maintenance of mental health; taught with an emphasis on the preventive and medical aspects of mental health.

CHLH 206 Human Sexuality credit: 2 Hours.
Emphasizes the behavioral aspects of human sexuality. Topics include: birth control; prenatal care, pregnancy and childbirth; sex roles; premarital sex; lifestyles; marriage and divorce.

CHLH 210 Community Health Organizations credit: 2 Hours.
Overview of institutions and agencies which provide health information, education, services, and care. Includes historical foundations, constituencies, organizational goals and structure, funding and expenditures, modes of service delivery, political and ethical issues.

CHLH 243 Drug Use and Abuse credit: 2 Hours.
Introduction to the biological, psychological, pharmacological, and legal aspects of drug use and abuse; surveys community and university resources concerned with drug use and abuse; emphasizes personal and social actions for responsible drug use.

CHLH 244 Health Statistics credit: 3 Hours.
Introduction to biostatistics. Students learn concepts necessary to understand statistical inference as applied to health issues.
This course satisfies the General Education Criteria for:
UIUC: Quant Reasoning I

CHLH 250 Health Care Systems credit: 3 Hours.
Overview of the major issues confronting health care systems from a macro perspective. Identification and analysis of the functions, major participants and trends in health care systems in the United States and abroad. Attention on current and emerging issues having implications for health care systems in industrialized nations.

CHLH 260 Introduction to Medical Ethics credit: 3 Hours.
Course stresses normative bioethics: decisions about what is ethical behavior in a variety of real and practical issues. Analysis of medical ethical cases at the individual, community and wider national and international levels will be addressed. Approved for both letter and S/U grading.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect

CHLH 274 Introduction to Epidemiology credit: 3 Hours.
Basic concepts and methods of epidemiology; patterns of disease occurrence; applications of epidemiology to health education, health services administration and planning, health policy, and environmental health.
This course satisfies the General Education Criteria for:
UIUC: Quant Reasoning I
CHLH 304 Foundations of Health Behavior credit: 4 Hours.
Examination of the application of the social and behavioral sciences to health and health behavior. Psychological, social psychological, and sociological approaches to health behavior are analyzed. Topics covered include development of health attitudes and behaviors, perceptions of health and illness, methods of changing health behavior and patient-provider interaction. Prerequisite: CHLH 100, or consent of instructor; completion of the campus Composition I requirement.
This course satisfies the General Education Criteria for:
UIUC: Behavioral Sciences
UIUC: Advanced Composition

CHLH 314 Introduction to Aging credit: 3 Hours.
A multidisciplinary introduction to the study of aging; the social, psychological and physiological context of changing roles in later life; public and private policies that affect older people and their families. Same as HDFS 314, RST 314, PSYC 314, and REHB 314.

CHLH 330 Disability in American Society credit: 3 Hours.
Same as REHB 330. See REHB 330.
This course satisfies the General Education Criteria for:
UIUC: Social Sciences

CHLH 336 Tomorrow's Environment credit: 3 Hours.
Same as CPSC 336 and ENVS 336. See CPSC 336.

CHLH 340 Health Promotion Practicum credit: 3 Hours.
Preparation and presentation of lifestyle workshops to campus community groups. Practica selected from one or more of the following topics: chemical education, sexuality, stress management or campus acquaintance rape education (CARE). Same as SOCW 350. Approved for both letter and S/U grading. May be repeated to a maximum of 6 hours. Prerequisite: Junior standing or consent of instructor.

CHLH 365 Civic Engagement in Wellness credit: 3 Hours.
Same as AHS 365, KIN 365, RST 365, and SHS 370. See KIN 365.

CHLH 380 Orientation to Internship credit: 1 Hour.
Provides students with information concerning placement in internship. Topics include internship requirements; student responsibilities; preparation of resumes and cover letters; selecting an organization or site; interviewing; issues of professional development. Prerequisite: Junior standing.

CHLH 390 Honors credit: 2 Hours.
Same as KIN 390 and RST 390. See KIN 390.

CHLH 393 Special Projects credit: 2 or 3 Hours.
Special projects in research and independent investigation in any phase of health, kinesiology, recreation, and related areas selected by the students. May be repeated to a maximum of 12 hours.

CHLH 404 Gerontology credit: 3 or 4 Hours.
Interdisciplinary approach to the study of aging and the aged from physiological, psychological, and social perspectives. Same as HDFS 404. 3 or 4 undergraduate hours. 3 or 4 graduate hours.

CHLH 407 Disability, Culture & Society credit: 3 or 4 Hours.
Examines the cultural and social contexts of disability, their consequences for the experience and management of disability, and implications for cultural competence in disability-related research and practice. Same as ANTH 404, KIN 407, and REHB 407. 3 or 4 undergraduate hours. 3 or 4 graduate hours.

CHLH 409 Women's Health credit: 3 Hours.
Examines the culture of women in relation to their health. Study is devoted to selected health care issues, developmental and physiological changes in the life cycle, health problems that affect women, and the maintenance of health. Same as GWS 409. 3 undergraduate hours. 3 graduate hours. Prerequisite: CHLH 100 or equivalent; or consent of instructor.

CHLH 410 Public Health Practice credit: 4 Hours.
Theory and practice of public health promotion as they relate to educational approaches in solving community health problems. 4 undergraduate hours. 4 graduate hours. Prerequisite: CHLH 210 or consent of instructor.

CHLH 415 International Health credit: 3 or 4 Hours.
Explores the various factors that impact the health of populations around the world. Political, cultural, social, environmental and other domains will be examined in relation to how they affect the health of residents of various countries. 3 or 4 undergraduate hours. 3 or 4 graduate hours.

CHLH 421 Health Data Analysis credit: 3 or 4 Hours.
Introduces health data analysis, sources and uses of health data, collection techniques and classification procedures, commonly used health indices, techniques of rate adjustment, graphic presentation of data as they relate to the planning, conducting, and evaluating of community health programs. 3 or 4 undergraduate hours. 3 or 4 graduate hours. Prerequisite: Quantitative Reasoning I course or equivalent.
This course satisfies the General Education Criteria for:
UIUC: Quant Reasoning II
CHLH 429 Research Techniques credit: 4 Hours.
Study of the ethics of research, research literature, research designs, and health measurement techniques utilized in the public health sciences. Emphasizes developing skills in analyzing research and assessment of health behaviors, and problem identification and research design for individual student research projects. 4 undergraduate hours. 4 graduate hours. Prerequisite: CHLH 590, or SOC 485, or EPSY 480; or equivalent.

CHLH 439 Health Applications of GIS credit: 3 Hours.
Same as GEOG 439 and PATH 439. See PATH 439.

CHLH 444 LGBT Indiv, Fam & Community credit: 3 or 4 Hours.
Same as HDFS 444. See HDFS 444.

CHLH 448 Exercise & Health Psychology credit: 3 or 4 Hours.
Same as KIN 448. See KIN 448.

CHLH 455 Health Services Financing credit: 3 Hours.
Examines major topics and emerging trends in health financing, including sources of revenue, public and private financing organizations, reimbursement and sources of revenue to health providers, and capital financing in the health care industry. 3 undergraduate hours. 3 graduate hours. Prerequisite: Junior standing.

CHLH 456 Organization of Health Care credit: 2 to 4 Hours.
Examines types and performance of health care organizations (e.g., doctors' offices, clinics, hospitals, and nursing homes), networks of health services, evaluation of health care, and social policy issues relating to organizations in the U.S. health care system. Same as SOC 476. 2 to 4 undergraduate hours. 2 to 4 graduate hours.

CHLH 457 Health Planning credit: 3 Hours.
Survey of the history and objectives of health planning as related to medical care delivery in the United States; methods of health, institutional and community planning; planning and marketing concepts and methods; analysis of consumer behavior, public policies, and private competitive forces. Same as SOCW 457. 3 undergraduate hours. 3 graduate hours. Prerequisite: CHLH 250 and junior standing.

CHLH 458 Health Administration credit: 3 Hours.
Examines management principles relative to health care institutions emphasizing goal setting, decision making, system analysis, organizational structure, conflict resolution, and leadership theories. 3 undergraduate hours. 3 graduate hours. Prerequisite: CHLH 274 or equivalent.

CHLH 461 Environ Toxicology & Health credit: 3 Hours.
Same as ENVS 431 and IB 485. See IB 485.

CHLH 465 Social Marketing Health&Behav credit: 3 or 4 Hours.
Same as CMN 465. See CMN 465.

CHLH 469 Environmental Health credit: 3 or 4 Hours.
Appreciation of the concepts and mechanisms used to prevent or control environmental conditions that may lead to infectious or other environmentally induced diseases. Presents topics from a public health perspective that include air pollution, water supply management, waste management, radiation protection, food hygiene, occupational health and disaster management. Same as ENVS 469. 3 or 4 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CHLH 274 or equivalent.

CHLH 473 Immigration, Health & Society credit: 3 or 4 Hours.
Same as LLS 473, SOC 473, and SOCW 473. See LLS 473.

CHLH 474 Principles of Epidemiology credit: 4 Hours.
Investigation of descriptive epidemiologic techniques (comparisons of disease rates in different populations) and analytic study designs (case-control and cohort studies and randomized trials). Applications to and examples from infectious and chronic diseases are presented. Group exercises involving the investigation of epidemiologic problems and application of analytic epidemiologic techniques are performed. Same as ENVS 474 and PATH 474. 4 undergraduate hours. 4 graduate hours. Prerequisite: One statistics course.

CHLH 485 Community Health Internship credit: 8 Hours.
Supervised field experience in official, voluntary and professional health agencies; designed to provide students with work experience in actual field situations. Students work in University approved health agencies for a minimum of 320 undergraduate hours. 8 undergraduate hours. 8 graduate hours. Approved for S/U grading. Prerequisite: Senior standing in Community Health.

CHLH 494 Special Topics credit: 1 to 4 Hours.
Lecture course in topics of current interest; specific subject matter announced in the Class Schedule. 1 to 4 undergraduate hours. 1 to 4 graduate hours. May be repeated.

CHLH 501 Issues in Health Education credit: 4 Hours.
Analyzes current developments, trends, and controversies in health education with emphasis on developing student competencies for intervention planning, implementation and analyses; and examines issues affecting the health educator in various work settings, including patient care, public health, school health, and higher.
CHLH 502 Cancer Epidemiology credit: 4 Hours.
Class on cancer epidemiology will address the investigation of the descriptive and analytic epidemiology of cancer. It will include information on the development of malignancy and characteristics of tumor cells. The advanced investigation of the relationship between various risk and protective factors and the development of different types of cancer will be discussed in an epidemiologic context. The role of primary prevention and secondary prevention (screening) will also be covered. Prerequisite: Previous or concurrent class in epidemiology or consent of instructor.

CHLH 510 Public Health Dev credit: 4 Hours.
Advanced study of the principles, practice and current issues of public health at the local, state, national and international levels, including the relationships between public health departments, voluntary health agencies, and other community organizations.

CHLH 517 Principle/Method Epidemiology credit: 4 Hours.
Same as PATH 517. See PATH 517.

CHLH 527 Statistics in Epidemiology credit: 4 Hours.
Description and application of quantitative issues and statistical techniques prominent in the analysis of classification data arising from epidemiologic cohort or case-control etiologic studies; studies of preventive public health; and therapeutic clinical interventions. Practice using available computing software for implementation is stressed. Same as ENVS 527 and PATH 525. Prerequisite: CHLH 474 and minimum of two statistics courses covering multiple regression and correlation.

CHLH 530 Childhood Obesity I credit: 3 Hours.
Same as FSHN 530, HDFS 551, KIN 530, NUTR 530, SOCW 570. See NUTR 530.

CHLH 531 Childhood Obesity II credit: 4 Hours.
Same as FSHN 531, HDFS 552, KIN 531, NUTR 531, SOCW 571. See NUTR 531.

CHLH 540 Health Behavior: Theory credit: 4 Hours.
Analysis of social science theories and perspectives that comprise the foundation of health education theory and practice. Includes development of a conceptual frame of reference for understanding, predicting, and facilitating change in health behaviors. Same as KIN 540. Prerequisite: Graduate standing.

CHLH 550 Health Policy: United States credit: 4 Hours.
Comprehensive analysis of the policy process in health care in the United States; systematic and critical review of health policy development, implementation, and evaluation; impact of government at all levels and the role of providers, industry, labor, and consumer in health policy. Prerequisite: Admission to graduate program in community health or the MBA Administration Program; CHLH 429; or consent of instructor.

CHLH 557 Teaching in the Professoriate credit: 4 Hours.
Same as KIN 565, RST 560, and SHS 565. See KIN 565.

CHLH 570 Intro Public Hlth Practice credit: 1 Hour.
An introduction to principles of public health practice, covering a range of topics including history of public health, determinants of health, structure and function of the public health system, ethics, and public health approaches to prevention and to improving population health. Approved for S/U grading only. Prerequisite: MPH student or consent of the instructor.

CHLH 572 Principles of Epidemiology credit: 4 Hours.
Advanced course designed to provide an introduction to the fundamental concepts and principles of epidemiology and demonstrate their applicability in the field of public health. Emphasizes the use of epidemiologic data and research to a) describe the pattern of diseases in communities, and b) identify risk factors for diseases and for health disparities. Prerequisite: Completion or concurrent enrollment of basic statistics course is encouraged.

CHLH 573 Biostatistics in Public Health credit: 4 Hours.
Introduction to fundamental topics in biostatistics in public health, covering univariate and bivariate statistics as well as basic topics in multivariate analysis. Including practice in analyzing health data through computer laboratory sessions.

CHLH 575 Chronic Disease Prevention credit: 4 Hours.
Advanced course in population-based approaches to chronic disease prevention, with emphasis on policy and environmental strategies affecting lifestyle risk factors. Provides an understanding of common diseases, screen tests, community assessment, systematic evidence reviews, and evidence-based community interventions. Prerequisite: MPH students or consent of instructor.

CHLH 577 Health Program Evaluation credit: 4 Hours.
Use of research methods and theory for evaluation of initiatives and programs in public health and medical care. Emphasis on acquiring skills in evaluation and conducting evaluations whose results have impact on public health practice. Covers different theories and perspectives on health evaluation. Review of published evaluations used to illustrate research methods and practical issues in program evaluation. Prerequisite: MPH student or consent of instructor.

CHLH 578 Applied Epidemiology credit: 4 Hours.
Advanced epidemiologic analysis of disease problems. Covers research designs including cohort, case-control, and intervention trials; methods of analysis including multivariate adjustment for confounding and description of effect modification; and application of statistical computer software with emphasis on chronic diseases. Same as PATH 520. Prerequisite: CHLH 474, PATH 517, or equivalent and advanced course work in statistics through multivariate analysis.

Information listed in this catalog is current as of 11/2014
CHLH 585 Community Health Internship credit: 4 Hours.
Observation, study, and practical work in student's area of specialization under supervision in professional field situations; student works for a minimum of 12 weeks in a University-approved agency or site. Prerequisite: CHLH 429, CHLH 474 and CHLH 510; or graduate standing in community health; or consent of the department.

CHLH 587 MPH Practicum credit: 1 to 4 Hours.
Provides MPH students with planned, supervised and evaluated field experience in a public health practice setting where students will synthesize knowledge and skills acquired through the course of MPH study. Approved for letter and S/U grading. May be repeated up to 4 hours in separate terms. Prerequisite: Completion of all Core MPH Courses.

CHLH 589 Public Health Capstone Experience credit: 2 Hours.
Provides MPH students an opportunity to synthesize, integrate, and apply knowledge and skills acquired in MPH coursework, through work on a project relevant to public health practice. Generally offered for MPH students in their last semester of study in the MPH program. Prerequisite: MPH student.

CHLH 591 Seminar credit: 1 Hour.
Lecture, discussions, and critiques on kinesiology and community health related subjects by faculty members and visiting professional leaders; presentation and criticism of student research. Approved for S/U grading only. May be repeated in subsequent terms as topics vary.

CHLH 593 Special Projects credit: 2 to 4 Hours.
Independent research on special projects. May be repeated to a maximum of 8 hours. Prerequisite: EPSY 480, KIN 501, and CHLH 540 or equivalent.

CHLH 594 Special Topics credit: 1 to 4 Hours.
Lecture course in topics of current interest; specific subject matter announced in the Class Schedule. May be repeated.

CHLH 599 Thesis Research credit: 0 to 16 Hours.
Preparation of theses in community health. Approved for S/U grading only. May be repeated to a maximum of 16 hours.

Comparative & World Literature (CWL)

CWL Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/CWL)

Courses

CWL 111 Bible as Literature credit: 3 Hours.
Same as ENGL 114 and RLST 101. See RLST 101.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts

CWL 112 Literature of Global Culture credit: 3 Hours.
Same as ENGL 112. See ENGL 112.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Non-Western Cultures
UIUC: Western Comparative Cult

CWL 114 Global Consciousness and Lit credit: 3 Hours.
Exploration of the cultural and historical roots of globalization and the development of global consciousness from ancient Greece to the present, as reflected primarily in literature, but also with reference to historiography, cartography, religion, art, politics, economics, and popular culture. Course materials including literary texts, articles, historical accounts, political tracts, films, and paintings focus on the mutual perception of, and historical relationships among Europe, the Arab world, Africa, Asia, and the Americas. This course can be used to fulfill either Western or non-Western general education categories, but not both.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Non-Western Cultures
UIUC: Western Comparative Cult

CWL 117 Russ & E Euro Science Fiction credit: 3 Hours.
Same as SLAV 117. See SLAV 117.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts

CWL 119 Literature of Fantasy credit: 3 Hours.
Same as ENGL 119. See ENGL 119.
CWL 151 Cross-Cultural Thematics credit: 3 Hours.
Explores a combination of western and non-western literature through the focus on a shared theme, exploring differences in treatment both within and among different cultures. Two such thematic focuses are offered in rotation; one on concepts of love and one on ways of writing about death. Both themes introduce students to a wide array of famous texts from different cultures and also offer some varied perspectives for their own inevitable thoughts on these major topics. May be repeated to a maximum of 6 hours if topics vary. Students may register in more than one section per term. This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts

CWL 189 Lit of Asia & Africa I credit: 3 Hours.
Comparative study of major works from Africa, the Middle East, South and East Asia, from ancient times through the medieval period, emphasizing literary, cultural, philosophical, and religious traditions, and cross-cultural contact. Topics studied may include Egyptian and Mesopotamian mythology, Hinduism, Buddhism, Confucianism, Daoism, and the Abrahamic tradition. All readings in English. This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Non-Western Cultures

CWL 190 Lit of Asia & Africa II credit: 3 Hours.
Comparative study of major works from Africa, the Middle East, South and East Asia, from the early modern to the contemporary period, emphasizing literary, cultural, philosophical, and religious traditions and cross-cultural contact. Topics studied may include Hinduism, Buddhism, Confucianism, Daoism, Islam, colonialism and globalization. All readings in English. This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Non-Western Cultures

CWL 191 Freshman Honors Tutorial credit: 1 to 3 Hours.
Study of selected topics on an individually arranged basis. Open only to honors students or to Cohn Scholars and Associates. May be repeated one time. Prerequisite: Consent of departmental honors advisor.

CWL 199 Undergraduate Open Seminar credit: 1 TO 5 Hours.
Credit: 1 to 5 hours. Approved for both letter and S/U grading. May be repeated.

CWL 201 Comparative Lit Studies credit: 3 Hours.
Introduction to various methods in comparative literary study, including genres, thematics, literary relations, literary movements, and interdisciplinary approaches. Prerequisite: One semester of college literature or consent of instructor. This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts

CWL 202 Literature and Ideas credit: 3 Hours.
Analysis of several important world-views in Western civilization (such as classical, Romantic, modern, and so forth), studied comparatively and in relation to selected figures in Western literature. Prerequisite: CWL 241 and CWL 242; or one year of college literature; or consent of instructor. This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Western Compartv Cult

CWL 205 Islam & West Through Lit credit: 3 Hours.
Organized around major cultural/historical/religious topics presented in literature through Western and Islamic eyes, beginning with the Crusades and proceeding into the present. This course will examine stereotypes, fantasies, identifications and political opportunism promoted by the encounter between the West and the Islamic World. Prerequisite: CWL 241 and CWL 242 or one year of college literature.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts

CWL 206 Classical Allusions in Cinema credit: 3 Hours.
Same as CLCV 206. See CLCV 206.

CWL 207 Indian Cinema in Context credit: 3 Hours.
Introduction to Indian mainstream (mainly Bollywood) cinema and its evolution through the last seven decades. Topics to be explored include, but not limited to, the relation between Indian society/culture and its cinematic representations, cinema's resistance to dominant nationalist and patriarchal ideologies, its interactions with the postcolonial nation-state of India, how globalization has changed the industry. All films will be screened with subtitles. No knowledge of Hindi or any other Indian language is required. Same as MACS 207.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Non-Western Cultures

Information listed in this catalog is current as of 11/2014
CWL 208 Cultures & Lits of South Asia credit: 3 Hours.
Same as ASST 208, RLST 208 and SAME 208. See RLST 208.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Non-Western Cultures

CWL 210 Intro to Mod African Lit credit: 3 Hours.
Same as AFST 210 and ENGL 211. See AFST 210.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Non-Western Cultures

CWL 211 War & Peace in Israeli Lit credit: 3 Hours.
War has been a constant shadow over the lives of Israelis. We will examine the history of attitudes to war and peace in Israel as presented through poetry, film and short stories, and explores the plurality of voices and experiences in Israel. Same as JS 211 and SAME 211.

CWL 215 Madness, Myth, and Murder credit: 3 Hours.
Same as SCAN 215. See SCAN 215.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts

CWL 218 Survey of Ukrainian Literature credit: 3 Hours.
Same as UKR 218. See UKR 218.

CWL 220 Origins of Western Literature credit: 3 Hours.
Same as CLCV 220. See CLCV 220.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Western Compartv Cult

CWL 221 Jewish Storytelling credit: 3 Hours.
Same as ENGL 223, RLST 220, and YDSH 220. See YDSH 220.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Western Compartv Cult

CWL 223 Qur’an Structure and Exegesis credit: 3 Hours.
Same as RLST 223, SAME 223. See RLST 223.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Non-Western Cultures

CWL 224 German Literature in Trans credit: 3 Hours.
Same as GER 200. See GER 200.

CWL 225 Constr Afr and Carib Identity credit: 3 Hours.
Same as AFST 209, FR 240, and LAST 240. See FR 240.
This course satisfies the General Education Criteria for:
UIUC: Non-Western Cultures

CWL 226 Humanist Persp of Afro-Am Exp credit: 3 Hours.
Same as AFRO 224. See AFRO 224.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: US Minority Culture(s)

CWL 227 Golden Age of Russian Lit credit: 3 Hours.
Same as RUSS 220. See RUSS 220.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts

CWL 240 Italy Middle Ages & Renaiss credit: 3 Hours.
Same as ITAL 240 and MDVL 240. See ITAL 240.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
CWL 241 Lit Europe & the Americas I credit: 3 Hours.
Comparative study of major works from Europe and the Americas from ancient times to the Renaissance, emphasizing literary, cultural, and philosophical traditions, and cross-cultural contact. Authors studies may include Homer, Virgil, Dante, Petrarch, Cervantes, Las Casas, and Shakespeare. Prerequisite: Completion of campus Composition I general education requirement.
This course satisfies the General Education Criteria for:
UIUC: Advanced Composition
UIUC: Literature and the Arts
UIUC: Western Compartv Cult

CWL 242 Lit Europe and the Americas II credit: 3 Hours.
Comparative study of major works from Europe and the Americas from Enlightenment to the contemporary period, emphasizing literary, cultural, and philosophical traditions, and cross-cultural contact. Authors studied may include Voltaire, Goethe, Melville, Flaubert, Dostoevsky, Joyce, Kafka, and Calvino. Prerequisite: Completion of campus Composition I general education requirement.
This course satisfies the General Education Criteria for:
UIUC: Advanced Composition
UIUC: Literature and the Arts
UIUC: Western Compartv Cult

CWL 245 Survey of Polish Literature credit: 3 Hours.
Same as POL 245. See POL 245.

CWL 249 Russian Lit and Revolution credit: 3 Hours.
Same as RUSS 225. See RUSS 225.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts

CWL 250 Grimms’ Fairy Tales - ACP credit: 3 Hours.
Same as ENGL 267 and GER 250. See GER 250.
This course satisfies the General Education Criteria for:
UIUC: Advanced Composition
UIUC: Literature and the Arts
UIUC: Western Compartv Cult

CWL 251 Viking Mythology credit: 3 Hours.
Same as MDVL 251, RLST 251, and SCAN 251. See SCAN 251.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: Western Compartv Cult

CWL 252 Viking Sagas in Translation credit: 3 Hours.
Same as MDVL 252 and SCAN 252. See SCAN 252.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Western Compartv Cult

CWL 253 Medieval Lit and Culture credit: 3 Hours.
Same as ENGL 202 and MDVL 201. See ENGL 202.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Western Compartv Cult

CWL 254 Grimm’s Fairy Tales in Context credit: 3 Hours.
Same as ENGL 266 and GER 251. See GER 251.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Western Compartv Cult

CWL 255 Renaissance Lit and Culture credit: 3 Hours.
Same as ENGL 204. See ENGL 204.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Western Compartv Cult
CWL 257 Enlightenment Lit and Culture credit: 3 Hours.
Same as ENGL 206. See ENGL 206.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Western Compartv Cult

CWL 259 Afro-American Literature I credit: 3 Hours.
Same as AFRO 259 and ENGL 259. See ENGL 259.
This course satisfies the General Education Criteria for:
UIUC: US Minority Culture(s)

CWL 260 Afro-American Literature II credit: 3 Hours.
Same as AFRO 260 and ENGL 260. See ENGL 260.
This course satisfies the General Education Criteria for:
UIUC: US Minority Culture(s)

CWL 262 Sex & Gender in Antiquity credit: 3 Hours.
Same as CLCV 240 and GWS 240. See CLCV 240.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Western Compartv Cult

CWL 263 The Heroic Tradition credit: 3 Hours.
Same as CLCV 221. See CLCV 221.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Western Compartv Cult

CWL 264 The Tragic Spirit credit: 3 Hours.
Same as CLCV 222. See CLCV 222.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Western Compartv Cult

CWL 265 Modern Drama I credit: 3 Hours.
Same as ENGL 243. See ENGL 243.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts

CWL 266 Modern Drama II credit: 3 Hours.
Same as ENGL 244. See ENGL 244.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts

CWL 267 The Short Story credit: 3 Hours.
Same as ENGL 245. See ENGL 245.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts

CWL 269 Brit, Amer & Contin Fiction credit: 3 Hours.
Same as ENGL 248. See ENGL 248.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts

CWL 271 The Holocaust in Context - ACP credit: 3 Hours.
Same as ENGL 268 and GER 260. See GER 260.
This course satisfies the General Education Criteria for:
UIUC: Advanced Composition
UIUC: Literature and the Arts
UIUC: Western Compartv Cult

CWL 272 Sexuality and Literature credit: 3 Hours.
Same as GER 270 and GWS 270. See GER 270.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
CWL 273 The Holocaust in Context credit: 3 Hours.
Same as ENGL 269 and GER 261. See GER 261.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Western Compartv Cult

CWL 275 Masterpieces of East Asian Lit credit: 3 Hours.
Same as EALC 275. See EALC 275.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Non-Western Cultures

CWL 277 Slavic Literature Survey credit: 3 Hours.
Same as SLAV 277. See SLAV 277.

CWL 282 Arctic Narratives credit: 3 Hours.
Same as EURO 240, SCAN 240. See SCAN 240.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Western Compartv Cult

CWL 283 Jewish Sacred Literature credit: 3 Hours.
Same as ENGL 283 and RLST 283. See RLST 283.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts

CWL 284 Modern Jewish Literature credit: 3 Hours.
Same as ENGL 284 and RLST 284. See ENGL 284.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts

CWL 307 Classical Chinese Lit credit: 3 Hours.
Same as EALC 307. See EALC 307.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Non-Western Cultures

CWL 308 Chinese Popular Lit credit: 3 Hours.
Same as EALC 308. See EALC 308.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Non-Western Cultures

CWL 311 Japan Lit in Translation I credit: 3 Hours.
Same as EALC 305. See EALC 305.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Non-Western Cultures

CWL 312 Japan Lit in Translation II credit: 3 Hours.
Same as EALC 306. See EALC 306.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Non-Western Cultures

CWL 317 Intro to Francophone Lit credit: 3 Hours.
Same as FR 319. See FR 319.

CWL 320 Lit Responses to the Holocaust credit: 3 Hours.
Same as ENGL 359, RLST 320, and YDSH 320. See YDSH 320.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Western Compartv Cult

CWL 321 Russian Writers credit: 3 Hours.
Same as RUSS 320. See RUSS 320.
CWL 322 The Comic Imagination credit: 3 Hours.  
Same as CLCV 323 and THEA 323. See CLCV 323.  
This course satisfies the General Education Criteria for:  
UIUC: Advanced Composition  
UIUC: Literature and the Arts  
UIUC: Western Compartv Cult  
CWL 323 Tolstoy credit: 3 Hours.  
Same as RUSS 323. See RUSS 323.  
CWL 324 Dostoevsky credit: 3 Hours.  
Same as RUSS 322. See RUSS 322.  
CWL 325 Chekhov credit: 3 Hours.  
Same as RUSS 325 and THEA 362. See RUSS 325.  
CWL 328 Special Topics German Studies credit: 3 Hours.  
Same as GER 396. See GER 396.  
CWL 335 Nabokov credit: 3 Hours.  
Same as RUSS 335. See RUSS 335.  
CWL 341 Love & Sex in Hebrew Lit credit: 3 Hours.  
Love and Sex have been literary themes from the bible, through the modern ages and into the present day in Hebrew Literature. This course will examine the treatments of these themes in different historical periods, paying attention to external influences and literary forms such as poems, stories, films and novels. This course will consider treatments of the erotic, devotional, affectionate, romantic and sexual; including heterosexual and homosexual representations, as well as love of God and Israel. Same as JS 341, RLST 340 and SAME 341. Prerequisite: Completion of Advanced Composition requirement or a prior college-level literature course is recommended.  
CWL 350 South Asian Goddesses credit: 3 Hours.  
Same as RLST 350 and SAME 350. See RLST 350.  
CWL 375 Scandinavian Sexualities credit: 3 Hours.  
Same as GWS 375 and SCAN 375. See SCAN 375.  
CWL 387 French & Comparative Cinema I credit: 3 Hours.  
Same as FR 387, HUM 387, and MACS 382. See FR 387.  
CWL 389 French & Comparative Cinema II credit: 3 Hours.  
Same as FR 389, HUM 389, and MACS 383. See FR 389.  
CWL 395 Special Topics Comp Lit I credit: 3 Hours.  
Presentation and discussion of subjects relating literature to other disciplines; topic varies. May be repeated to a maximum of 6 hours.  
CWL 400 African Diasporic Lit Americas credit: 3 or 4 Hours.  
Same as AFRO 400. See AFRO 400.  
This course satisfies the General Education Criteria for:  
UIUC: US Minority Culture(s)  
CWL 410 Modern African Fiction credit: 3 or 4 Hours.  
Same as AFST 410, ENGL 470, and FR 410. See AFST 410.  
CWL 411 The Chinese Novel credit: 3 or 4 Hours.  
Same as EALC 411. See EALC 411.  
CWL 412 Mod Chinese Lit in Translation credit: 3 or 4 Hours.  
Same as EALC 412. See EALC 412.  
CWL 413 Dante credit: 3 or 4 Hours.  
Same as ITAL 413 and MDVL 413. See ITAL 413.  
CWL 414 Petrarch & Boccaccio credit: 3 or 4 Hours.  
Same as ITAL 414 and MDVL 414. See ITAL 414.  
CWL 415 Mod Japan Lit in Translation credit: 2 to 4 Hours.  
Same as EALC 415. See EALC 415.  
CWL 416 Premodern Chinese Drama credit: 3 or 4 Hours.  
Same as EALC 413 and THEA 488. See EALC 413.  
CWL 417 Topics in Medieval Brit Lit credit: 3 or 4 Hours.  
Same as ENGL 412 and MDVL 410. See ENGL 412.
CWL 420 Masterpieces Renaiss Lit credit: 3 or 4 Hours.
Same as ITAL 420 and MDVL 420. See ITAL 420.

CWL 421 Jewish Life-Writing credit: 3 or 4 Hours.
Same as HIST 436, RLST 420, SLAV 420, and YDSH 420. See YDSH 420.

CWL 428 Japan at War and Peace credit: 3 or 4 Hours.
Same as EALC 428. See EALC 428.

CWL 430 History of Translation credit: 3 or 4 Hours.
Same as CLCV 430, ENGL 486, GER 405, SLAV 430, SPAN 436, and TRST 431. See SLAV 430.

CWL 434 Studies in Francophonie credit: 3 or 4 Hours.
Same as FR 479. See FR 479.

CWL 436 Problems of Polish Literature credit: 3 or 4 Hours.
Same as POL 446. See POL 446.

CWL 440 Russian Culture Studies credit: 3 or 4 Hours.
Same as RUSS 460. See RUSS 460.

CWL 441 Themes in Narrative credit: 3 or 4 Hours.
Analysis of literary themes and types in narratives of Western and non-Western literature (e.g., the hero, east and west, dream visions), emphasizing comparative perspectives. 3 undergraduate hours. 3 or 4 graduate hours. May be repeated to a maximum of 9 undergraduate hours or 12 graduate hours. Prerequisite: One year of college literature or consent of instructor.

CWL 443 Problems in Romanticism credit: 3 or 4 Hours.
Same as RUSS 444. See RUSS 444.

CWL 445 Problems in Realism credit: 3 or 4 Hours.
Same as RUSS 445. See RUSS 445.

CWL 450 Topics in Bodies and Genders credit: 3 Hours.
How do gender, sexuality, and the body emerge through cultural representations and across artistic forms? How do literature, film, and the visual arts construct gender identities in various times and places? Topics and regions vary by semester and instructor. All readings in English. Same as GWS 450. 3 undergraduate hours. 3 graduate hours. May be repeated up to 6 hours maximum. Prerequisite: Consent of instructor.

CWL 453 Slavic Cultural Studies credit: 3 or 4 Hours.
Same as SLAV 452. See SLAV 452.

CWL 454 Topics in Israeli Lit &Culture credit: 3 or 4 Hours.
Seminar covering advanced topics in Israeli literature and culture. Same as JS 454 and SAME 454. 3 undergraduate hours. 4 graduate hours. May be repeated up to 6 undergraduate hours or 8 graduate hours in separate terms if topics vary. Prerequisite: One year of college literature or consent of instructor.

CWL 457 Russian Modernism credit: 3 or 4 Hours.
Same as RUSS 424. See RUSS 424.

CWL 461 Lit Genres and Forms credit: 3 or 4 Hours.
Structure and development of literary genres and forms in historical perspective (for instance, drama, parody and the grotesque, poetry, fables and fabulists, and modern fiction); essential international components and significant national variations of such genres and forms. Emphasis changes from term to term. 3 undergraduate hours. 3 or 4 graduate hours. May be repeated to a maximum of 9 undergraduate hours or 12 graduate hours. Prerequisite: One year of college literature or consent of instructor.

CWL 463 Ibsen in Translation credit: 3 or 4 Hours.
Same as SCAN 463 and THEA 483. See SCAN 463.

CWL 464 Strindberg in Translation credit: 3 or 4 Hours.
Same as SCAN 464 and THEA 484. See SCAN 464.

CWL 465 Topics in Drama credit: 3 or 4 Hours.
Same as ENGL 465. See ENGL 465.

CWL 471 International Lit Relations credit: 3 or 4 Hours.
Study of specific relations between authors of different countries; influences of certain works, concepts, or tastes on another work, author, or country; and literary interaction between Eastern and Western cultures. Emphasis changes from term to term. 3 undergraduate hours. 3 or 4 graduate hours. May be repeated to a maximum of 9 undergraduate hours or 12 graduate hours. Prerequisite: One year of college literature or consent of instructor.

CWL 477 Post-Communist Fiction credit: 3 or 4 Hours.
Same as SLAV 477 and REES 477. See SLAV 477.

CWL 478 Classical Chinese Thought credit: 3 or 4 Hours.
Same as EALC 476 and HIST 425. See EALC 476.
CWL 490 Topics in Classical Literature credit: 3 or 4 Hours.
Same as CLCV 490. See CLCV 490.

CWL 493 Senior Thesis and Honors credit: 3 to 6 Hours.
Independent research guided by tutor(s), leading to the writing of a comparative thesis. Intended primarily for candidates for honors in comparative literature, but open to other seniors. 3 to 6 undergraduate hours. No graduate credit. May be repeated to a maximum of 12 hours.

CWL 496 Special Topics in Comp Lit II credit: 3 to 4 Hours.
Selected literary topics of international significance in relation to other cultural expressions. 3 undergraduate hours. 3 or 4 graduate hours. May be repeated to a maximum of 9 undergraduate or 12 graduate hours. Prerequisite: Consent of instructor.

CWL 501 Theory of Literature credit: 4 Hours.
Major issues of literary theory, critical approaches, and comparative research.

CWL 502 Methods of Comparative Lit credit: 4 Hours.
Problems and methods of cross-cultural literary studies, concentrating on the effects of historical encounters between different civilizations and on theoretical issues in comparing literatures across cultures. Prerequisite: Knowledge of two languages other than English or (with instructor's consent) advanced knowledge of one foreign language.

CWL 503 Historiography of Cinema credit: 4 Hours.
Same as ENGL 503 and MACS 503. See MACS 503.

CWL 504 Theories of Cinema credit: 4 Hours.
Same as ENGL 504 and MACS 504. See MACS 504.

CWL 535 Nabokov credit: 4 Hours.
Same as RUSS 535. See RUSS 535.

CWL 551 Seminar Lit Movements credit: 4 Hours.
Investigation of the development and mutation of literary movements (classicism, romanticism, symbolism, etc.) through a study of critical texts and their reception in various countries. May be repeated to a maximum of 12 hours if topics vary.

CWL 552 Studies French & Comp Cinema credit: 4 Hours.
Same as FR 552. See FR 552.

CWL 561 Seminar Genres - Forms credit: 4 Hours.
Study of a form (the lyric, the novel, the drama, etc.) to discover its essential components in all the literatures studied and the significance of national variations. May be repeated to a maximum of 12 hours if topics vary.

CWL 562 Sem Spanish-American Lit credit: 4 Hours.
Same as SPAN 535. See SPAN 535.

CWL 570 Studies in Critical Theory credit: 4 Hours.
Same as GER 570. See GER 570.

CWL 571 Seminar in Literary Relations credit: 4 Hours.
Investigation of the impact of one literature upon another, or of some specific works upon others (the role of English literature in continental Europe, the influence of Russian novelists on French and German writers, etc.). May be repeated to a maximum of 12 hours if topics vary.

CWL 576 Methods in Slavic Grad Study credit: 4 Hours.
Same as SLAV 576. See SLAV 576.

CWL 578 Seminar 20thC French Lit credit: 4 Hours.
Same as FR 578. See FR 578.

CWL 581 Seminar Lit Themes credit: 4 Hours.
Study of a theme or type (the Faust myth, the romantic hero, etc.) to discover its essential components in all the literatures studied and the significance of national variations. The subject of the seminar varies each term. May be repeated to a maximum of 12 hours if topics vary.

CWL 582 Proseminar credit: 4 Hours.
Introduction to comparative literature as a discipline, history and philosophy of comparative literature, and training in practical professional skills, including conference presentations, grant writing, and course development. Prerequisite: Graduate standing.

CWL 583 Special Studies credit: 1 to 4 Hours.

CWL 599 Thesis Research credit: 0 to 16 Hours.
Intended for students engaged in writing a thesis as a partial requirement for the M.A. or Ph.D. degree in comparative literature. Approved for S/U grading only. May be repeated to a maximum of 8 graduate hours.

Comparative Biosciences (CB)

CB Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/CB)
Courses

CB 290 Independent Research credit: 1 to 10 Hours.
Supervised scholarly laboratory work and/or reading in fields selected in consultation with an appropriate faculty member. May be repeated to a maximum of 10 hours in separate terms. Prerequisite: Permission of the instructor.

CB 420 Stem Cell Journal Club credit: 1 Hour.
This course will consist of a weekly journal club that will meet to discuss published journal articles related to stem cells. The focus will be primarily on clinical applications of stem cells, both adult and embryonic. Journal articles will be selected on a weekly basis to facilitate review of the most recent work in the field. Faculty, staff, post-doctoral fellows, and students from labs conducting stem cell research at the Veterinary School will attend and participate in the discussion. 1 undergraduate hour. 1 graduate hour. Approved for both letter and S/U grading. May be repeated in separate terms to a maximum of 2 undergraduate hours or 6 graduate hours.

CB 422 Neurobio of Physical Activity credit: 4 Hours.
Course survey of the neural mechanisms underlying physical activity. Includes both basic science and consideration of the effects of disease and trauma conditions. 4 undergraduate hours. 4 graduate hours. Prerequisite: Graduate or Professional (DVM), or senior standing in Kinesiology or Bioengineering; or MCB 103 or MCB 402, or consent of instructor.

CB 434 Pesticide Toxicology credit: 3 or 4 Hours.
Same as ENVS 433 and IB 486. See IB 486.

CB 449 Basic Toxicology credit: 3 Hours.
Same as CPSC 433, ENVS 480 and FSHN 480. See FSHN 480.

CB 454 Systems Toxicology credit: 3 Hours.
Provides an overview of the effects of chemicals and their mechanisms of action in a variety of organ systems. Topics include toxicology of the nervous, developmental, reproductive, thyroid, renal, hepatic, immune, pulmonary, and gastrointestinal systems. 3 undergraduate hours. 3 graduate hours. Prerequisite: Completion of a course in basic toxicology or consent of instructor.

CB 467 Fund Phar Discovery & Dev credit: 2 Hours.
Examines fundamental aspects, practices and strategies utilized in the discovery and evaluation of pharmaceutical agents developed for human and animal use. The discovery, preclinical and clinical assessment of drugs is reviewed from both a chemical and biological perspective, in addition to the regulatory guidelines governing those activities and the required post-market surveillance. Also examines major ethical approaches and the strengths and limitation of various development strategies. 2 undergraduate hours. 2 graduate hours. Approved for both letter and S/U grading. Prerequisite: At least one semester of physiology (MCB 103, MCB 240, or equivalent), and biochemistry (MCB 354 or MCB 450 or equivalent) or consent of instructor.

CB 512 Advanced Endocrinology credit: 2 Hours.
Same as ANSC 530 and MCB 512. See MCB 512.

CB 514 Neurotoxicology credit: 3 Hours.
Examines toxic responses of the mammalian nervous system to xenobiotics (therapeutic agents, drugs of abuse, toxins, environmental and industrial chemicals) from the molecular and cellular levels to the behavioral level. Also covers neuroteratology, sensitive periods for neurotoxicity and the potential role of environmental factors/xenobiotics in the etiology of nervous system disorders. Same as ENVS 514 and PSYC 515. Prerequisite: Credit or concurrent registration in MCB 450 or equivalent.

CB 516 Reprod & Dev Toxicology credit: 3 Hours.
Introduction to reproductive and developmental toxicology that examines causes and manifestations both of structural malformations and of functional deficits in mammals. Topics covered include interactions between external factors and developmental gene expression, the behavioral consequences of chemical exposure, identification and regulation of reproductive and developmental toxicants. Examples emphasize reproductive and developmental toxicants that are present in the human environment. Same as ENV 514 and PSYC 515. Prerequisite: Consent of instructor.

CB 520 Models in Biomedical Research credit: 2 Hours.
Students enrolled in this course will review scientific literature pertaining to experimental models used in biomedical research, and will present selected papers to the class. faculty members who use these models in their research will attend student presentations and participates in the associated discussions. By the end of the course, student will be familiar with the uses, advantages and limits of key molecular, cellular and animal models used in a range of biomedical research fields. 2 graduate hours. 2 professional hours. May be repeated in separate terms if topics vary. Prerequisite: No prerequisites for graduate students enrolled in a Master of Science or PhD program in a biomedical field. Professional students must obtain the coordinator's authorization.

CB 533 Repro Physiology Lab Methods credit: 1 to 3 Hours.
Same as ANSC 533 and MCB 533. See ANSC 533.
CB 540 Wildlife Ecosystem Health credit: 1 or 2 Hours.
Provides veterinary professional students and graduate students with an introduction to the use of medical reasoning and technology in the investigation of problems related to conservation biology and ecosystem health. The course is an interactive, video conference assisted seminar series, jointly hosted by the University Of Illinois College Of Veterinary Medicine, Loyola University Chicago Stritch School of Medicine, and the Chicago Zoological Society/Brookfield Zoo. Together, these institutions comprise the "Conservation Medicine Center of Chicago." Topics include the evolutionary origins of HIV/AIDS, the ecology of vector-borne diseases, global amphibian population declines, wildlife epidemiology and pathology, and the role of zoos in disease surveillance and management. Approved for S/U grading only.

CB 550 Detect/Anal Gene Transcripts credit: 4 Hours.
Gives participants the background information and hands-on experience in the methodologies necessary to utilize cloned genes for the detection and quantitation of specific mRNA transcripts in RNA extracted from tissue or cell culture samples. Methodologies covered will include: recombinant plasmid propagation, cDNA probe isolation and isotopic labeling, RNA isolation, Poly A+ mRNA selection, gel separation and transfer of RNA to a membrane (Northern blot), hybridization of specific gene probes to membrane bound RNA (Northern hybridization), detection and quantitation of hybridization signal. These basic methodologies are widely applicable to different experimental systems. They allow an investigator to monitor the effects of physiological manipulations, to animals or cultured cells, at the molecular level. Prerequisite: Consent of instructor.

CB 551 Ecotoxicology North Hemisphere credit: 1 Hour.
Sources, environmental fate, and adverse effects of manmade and naturally-occurring chemicals on terrestrial and aquatic wildlife and ecological systems will be addressed. Historical and contemporary issues in wildlife health, including direct toxic effects and indirect effects of environmental contaminants will be examined. Focuses mainly on northern hemisphere with multiple examples from North America and Europe. Includes perspectives from academia, industry and public sector. Prerequisite: At least one semester of biology (IB 150 or equivalent), and biochemistry (MCB 354 or equivalent).

CB 552 Ethics in Toxicology credit: 1 Hour.
Ethical issues in the practice of toxicological research collaboration, authorship and plagiarism, professional responsibility to subjects (both human and animal), whistle-blowing, codes of ethics, legal obligations. Case Studies.

CB 554 Systems Toxicology credit: 3 Hours.
Provides an overview of the effects of chemicals and their mechanisms of action in a variety of organ systems. Topics include toxicology of the nervous, developmental, reproductive, thyroid, renal, hepatic, immune, pulmonary, and gastrointestinal systems. Prerequisite: Completion of a course in basic toxicology or consent of instructor.

CB 562 Analytical Methods Tox Pharm credit: 4 Hours.
Introduction to principles and methods of detection and quantification of toxicants, drugs, metabolites and decomposition products in biological fluids, tissues, and environment matrices; emphasis on current laboratory methods and procedures (spectroscopy, chromatography, immunoassay, sample preparation, validation, and data interpretation).

CB 564 Comp Clinical Pharmacology credit: 3 Hours.
Lecture-discussion of the clinical use in animals of human and veterinary drugs, including current literature review on pharmacodynamic species differences, novel indications, and contrast of therapeutic alternatives. Prerequisite: Graduate Veterinarian or consent of instructor.

CB 590 Seminar credit: 1 Hour.
Required of all graduate students whose major is comparative biosciences.

CB 591 Biosciences Seminar Series credit: 0 to 1 Hours.
Review and discussion of selected topics. Students are required to participate in weekly discussions and present one formal seminar per year, on a topic approved by the instructor. Approved for S/U grading. May be repeated to a maximum of 4 hours. Prerequisite: Enrollment in CB graduate program or consent of instructor.

CB 592 Special Problems credit: 1 to 12 Hours.
Basic and applied study including orientation and research on pertinent initial and continuing problems in the student's area of interest. Prerequisite: Consent of instructor.

CB 594 Comparative Bioscience credit: 1 to 4 Hours.
To be used to designate a trial or experimental course for five or more students. It is designed to be a graduate course. A course can be taught under this designation two times within a two-year period and cannot be renewed as a CB 594 course. May be repeated to a maximum of 8 hours if topics vary. Prerequisite: Consent of instructor.

CB 596 Interdisciplinary Tox Sem credit: 1 Hour.
Interdisciplinary seminar on topics within the area of toxicology; topics vary each term. Seminars are presented by faculty, visiting lecturers, and students based upon their study, research, and/or professional activities in the selected topic area. Same as ENVS 596 and PATH 596. May be repeated to a maximum of 8 hours if topics vary. Prerequisite: Consent of instructor.

CB 599 Thesis Research credit: 0 to 16 Hours.
Individual direction of research and thesis writing. Approved for S/U grading only. May be repeated.
CB 646 Advanced Therapeutics credit: 1 Hour.
Designed as an elective offering for veterinary professional students and graduate students interested in clinical pharmacology. As an extension of core veterinary pharmacology modules in the veterinary professional curriculum, case and/or problem-based discussions will be used to highlight rational therapeutic decision-making and its evidence basis. Drug classes presented in core instruction will be reviewed and new drug classes will be introduced in the context of case management discussions. 1 graduate hour. 1 professional hour. Approved for S/U grading only. May be repeated in separate terms to a maximum of 3 hours. Prerequisite: VM 607 or consent of instructor.

CB 692 Special Problems credit: 1 to 6 Hours.
Individual research on a special problem chosen in consultation with the instructor and department head. 1 to 6 graduate hours. 1 to 6 professional hours. Approved for both letter and S/U grading. May be repeated to a maximum of 6 hours. Prerequisite: Enrollment in veterinary medicine curriculum with grade-point average of 3.0 or above, or consent of instructor.

CB 694 Comparative Bioscience credit: 1 to 3 Hours.
Basic and applied study including orientation and research on pertinent initial and continuing problems for veterinary medical students. These studies are elective to the CVM professional curriculum. Approved for both letter and S/U grading. May be repeated to a maximum of 6 hours. Prerequisite: Enrollment in the veterinary medicine curriculum or consent of instructor.

Computational Science and Engr (CSE)

CSE Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/CSE)

Courses

CSE 401 Numerical Analysis credit: 3 or 4 Hours.
Same as CS 450, ECE 491 and MATH 450. See CS 450.

CSE 402 Parallel Progrmg: Sci & Engrg credit: 3 or 4 Hours.
Same as CS 420 and ECE 492. See CS 420.

CSE 408 Applied Parallel Programming credit: 4 Hours.
Same as CS 483 and ECE 408. See ECE 408.

CSE 412 Numerical Thermo-Fluid Mechs credit: 2 to 4 Hours.
Same as ME 412. See ME 412.

CSE 414 Fundamental Algorithms credit: 3 OR 4 Hours.
Same as CS 473 and MATH 473. See CS 473.

CSE 422 Computer System Organization credit: 3 or 4 Hours.
Same as CS 433. See CS 433.

CSE 423 Operating Systems Design credit: 3 or 4 Hours.
Same as CS 423. See CS 423.

CSE 426 Software Engineering I credit: 3 or 4 Hours.
Same as CS 427. See CS 427.

CSE 427 Interactive Computer Graphics credit: 3 OR 4 Hours.
Same as CS 418. See CS 418.

CSE 429 Software Engineering II credit: 3 or 4 Hours.
Same as CS 428. See CS 428.

CSE 441 Introduction to Optimization credit: 3 or 4 Hours.
Same as ECE 490. See ECE 490.

CSE 450 Computational Mechanics credit: 3 or 4 Hours.
Same as TAM 470. See TAM 470.

CSE 451 Finite Element Analysis credit: 3 or 4 Hours.
Same as AE 420 and ME 471. See ME 471.

CSE 461 Computational Aerodynamics credit: 3 or 4 Hours.
Same as AE 410. See AE 410.

CSE 485 Atomic Scale Simulations credit: 3 or 4 Hours.
Same as MSE 485 and PHYS 466. See MSE 485.

CSE 491 Computer Methods credit: 3 or 4 Hours.
Same as CEE 490. See CEE 490.
CSE 510 Numerical Methods for PDEs credit: 4 Hours.
Same as CS 555. See CS 555.

CSE 511 Iterative & Multigrid Methods credit: 4 Hours.
Same as CS 556. See CS 556.

CSE 512 Parallel Numerical Algorithms credit: 4 Hours.
Same as CS 554. See CS 554.

CSE 513 Topics in Numerical Analysis credit: 4 Hours.
Same as CS 558. See CS 558.

CSE 515 Algorithms credit: 4 Hours.
Same as CS 573. See CS 573.

CSE 517 Adv Finite Element Methods credit: 4 Hours.
Same as TAM 574. See TAM 574.

CSE 521 Computer Architecture credit: 4 Hours.
Same as ECE 511. See ECE 511.

CSE 522 Parallel Computer Architecture credit: 4 Hours.
Same as CS 533. See CS 533.

CSE 527 Scientific Visualization credit: 4 Hours.
Same as CS 519. See CS 519.

CSE 530 Computational Electromagnetics credit: 4 Hours.
Same as ECE 540. See ECE 540.

CSE 532 Numerical Circuit Analysis credit: 4 Hours.
Same as ECE 552. See ECE 552.

CSE 543 Topics in Image Processing credit: 4 Hours.
Same as ECE 547. See ECE 547.

CSE 551 Finite Element Methods credit: 4 Hours.
Same as CEE 570. See CEE 570.

CSE 552 Nonlinear Finite Elements credit: 4 Hours.
Same as CEE 576. See CEE 576.

CSE 553 Computational Inelasticity credit: 4 Hours.
Same as CEE 577. See CEE 577.

CSE 560 Computational Fluid Mechanics credit: 4 Hours.
Same as TAM 570. See TAM 570.

CSE 561 Computational Process Modeling credit: 4 Hours.
Same as ME 554. See ME 554.

CSE 566 Numerical Fluid Dynamics credit: 4 Hours.
Same as ATMS 502. See ATMS 502.

Computer Science (CS)

CS Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/CS)

Courses

CS 100 Freshman Orientation credit: 1 Hour.
Introduction to Computer Science as a field and career for computer science majors. Overview of the field and specific examples of problem areas and methods of solution.

CS 101 Intro Computing: Engrg & Sci credit: 3 Hours.
Fundamental principles, concepts, and methods of computing, with emphasis on applications in the physical sciences and engineering. Basic problem solving and programming techniques; fundamental algorithms and data structures; use of computers in solving engineering and scientific problems. Intended for engineering and science majors. Prerequisite: MATH 220 or MATH 221.
This course satisfies the General Education Criteria for:
UIUC: Quant Reasoning II
CS 102 Little Bits to Big Ideas credit: 4 Hours.
Same as INFO 102. See INFO 102.
This course satisfies the General Education Criteria for:
UIUC: Quant Reasoning I

CS 103 Introduction to Programming credit: 3 Hours.
Same as INFO 103. See INFO 103.
This course satisfies the General Education Criteria for:
UIUC: Quant Reasoning I

CS 105 Intro Computing: Non-Tech credit: 3 Hours.
Computing as an essential tool of academic and professional activities. Functions and interrelationships of computer system components: hardware, systems and applications software, and networks. Widely used application packages such as spreadsheets and databases. Concepts and practice of programming for the solution of simple problems in different application areas. Intended for non-science and non-engineering majors. Prerequisite: MATH 012.
This course satisfies the General Education Criteria for:
UIUC: Quant Reasoning I

CS 125 Intro to Computer Science credit: 4 Hours.
Basic concepts in computing and fundamental techniques for solving computational problems. Intended as a first course for computer science majors and others with a deep interest in computing. Prerequisite: Three years of high school mathematics or MATH 012.
This course satisfies the General Education Criteria for:
UIUC: Quant Reasoning I

CS 173 Discrete Structures credit: 3 Hours.
Discrete mathematical structures frequently encountered in the study of Computer Science. Sets, propositions, Boolean algebra, induction, recursion, relations, functions, and graphs. Credit is not given for both CS 173 and MATH 213. Prerequisite: One of CS 101, CS 125, ECE 190, INFO 103; one of MATH 220, MATH 221, MATH 234.

CS 196 Freshman Honors credit: 1 Hour.
Offered for honors credit in conjunction with other 100-level computer science courses taken concurrently. A special examination may be required for admission to this course. May be repeated. Prerequisite: Concurrent registration in another 100-level computer science course (see Schedule).

CS 199 Undergraduate Open Seminar credit: 1 to 5 Hours.
May be repeated.

CS 210 Ethical & Professional Issues credit: 2 Hours.
Ethics for the computing profession. Ethical decision-making; licensing; intellectual property, freedom of information, and privacy. Credit is not given for both CS 210 and ECE 316. Prerequisite: CS 225. Junior standing required.

CS 225 Data Structures credit: 4 Hours.
Data abstractions: elementary data structures (lists, stacks, queues, and trees) and their implementation using an object-oriented programming language. Solutions to a variety of computational problems such as search on graphs and trees. Elementary analysis of algorithms. Prerequisite: CS 125 or ECE 190; CS 173 or MATH 213.
This course satisfies the General Education Criteria for:
UIUC: Quant Reasoning II

CS 233 Computer Architecture credit: 4 Hours.
Fundamentals of computer architecture: digital logic design, working up from the logic gate level to understand the function of a simple computer; machine-level programming to understand implementation of high-level languages; performance models of modern computer architectures to enable performance optimization of software; hardware primitives for parallelism and security. Prerequisite: CS 125 and CS 173; credit or concurrent enrollment in CS 225.

CS 241 System Programming credit: 4 Hours.
Basics of system programming, including POSIX processes, process control, inter-process communication, synchronization, signals, simple memory management, file I/O and directories, shell programming, socket network programming, RPC programming in distributed systems, basic security mechanisms, and standard tools for systems programming such as debugging tools. Credit is not given for both CS 241 and ECE 391. Prerequisite: CS 225; credit or concurrent registration in CS 233.

CS 242 Programming Studio credit: 3 Hours.
Intensive programming lab intended to strengthen skills in programming. Prerequisite: CS 241.

CS 296 Honors Course credit: 1 Hour.
Group projects for honors credit in computer science. Sections of this course are offered in conjunction with other 200-level computer science courses taken concurrently. A special examination may be required for admission to this course. May be repeated. Prerequisite: Concurrent registration in another 200-level computer science course (see Schedule).
CS 357 Numerical Methods I credit: 3 Hours.
Fundamentals of numerical methods for students in science and engineering; floating-point computation, systems of linear equations, approximation of functions and integrals, the single nonlinear equation, and the numerical solution of ordinary differential equations; various applications in science and engineering; programming exercises and use of high quality mathematical library routines. Same as MATH 357. Credit is not given for CS 357 if credit for CS 450 has been earned. (Counts for advanced hours in LAS). Prerequisite: A 100-level computer science course; MATH 225 or MATH 415; MATH 241.

CS 373 Theory of Computation credit: 3 Hours.
Finite automata and regular languages; pushdown automata and context-free languages; Turing machines and recursively enumerable sets; computability and the halting problem; undecidable problems. Prerequisite: CS 173 or MATH 213; CS 225. This course satisfies the General Education Criteria for:
UIUC: Quant Reasoning II

CS 397 Individual Study credit: 1 to 3 Hours.
May be repeated. Prerequisite: Consent of instructor.

CS 398 Special Topics credit: 0 TO 4 Hours.
Subject offerings of new and developing areas of knowledge in computer science intended to augment the existing curriculum. See Class Schedule or departmental course information for topics and prerequisites. May be repeated in the same or separate terms if topics vary.

CS 410 Text Information Systems credit: 3 or 4 Hours.
Theory, design, and implementation of text-based information systems. Text analysis, retrieval models (e.g., Boolean, vector space, probabilistic), text categorization, text filtering, clustering, retrieval system design and implementation, and applications to web information management. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CS 225.

CS 411 Database Systems credit: 3 or 4 Hours.
Examination of the logical organization of databases: the entity-relationship model; the hierarchical, network, and relational data models and their languages. Functional dependencies and normal forms. Design, implementation, and optimization of query languages; security and integrity; concurrency control, and distributed database systems. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CS 225.

CS 412 Introduction to Data Mining credit: 3 or 4 Hours.
Concepts, techniques, and systems of data warehousing and data mining. Design and implementation of data warehouse and on-line analytical processing (OLAP) systems; data mining concepts, methods, systems, implementations, and applications. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CS 225.

CS 413 Intro to Combinatorics credit: 3 or 4 Hours.
Same as MATH 413. See MATH 413.

CS 414 Multimedia Systems credit: 3 or 4 Hours.
Organization and structure of modern multimedia systems; audio and video encoding; quality of service concepts; scheduling algorithms for multimedia within OS and networks multimedia protocols over high-speed networks; synchronization schemes, user-interface design; multimedia teleservices. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CS 241 or ECE 391.

CS 418 Interactive Computer Graphics credit: 3 OR 4 Hours.
Basic mathematical tools and computational techniques for modeling, rendering, and animating 3-D scenes. Same as CSE 427. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CS 225; MATH 225 or MATH 415; MATH 241.

CS 419 Production Computer Graphics credit: 3 or 4 Hours.
Advanced methods for representing, displaying, and rendering two-, three-, and four-dimensional scenes. General algebraic curves and surfaces, splines, Gaussian and bump-function representation, fractals, particle systems, constructive solid geometry methods, lighting models, radiosity, advanced ray-tracing methods, surface texturing animation techniques, data visualization methods. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CS 418.

CS 420 Parallel Progrmng: Sci & Engrg credit: 3 or 4 Hours.
Fundamental issues in design and development of parallel programs for various types of parallel computers. Various programming models according to both machine type and application area. Cost models, debugging, and performance evaluation of parallel programs with actual application examples. Same as CSE 402 and ECE 492. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CS 225.

CS 421 Progrmng Languages & Compilers credit: 3 or 4 Hours.
Structure of programming languages and their implementation. Basic language design principles; abstract data types; functional languages; type systems; object-oriented languages. Basics of lexing, parsing, syntax-directed translation, semantic analysis, and code generation. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CS 233 and CS 373.

CS 422 Programming Language Design credit: 3 or 4 Hours.
Exploration of major language design paradigms using imperative and functional programming as unifying themes. Tools include both practical language processor construction and theoretical models. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CS 421.
CS 423 Operating Systems Design credit: 3 or 4 Hours.
Organization and structure of modern operating systems and concurrent programming concepts. Deadlock, virtual memory, processor scheduling, and disk systems. Performance, security, and protection. Same as CSE 423. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CS 241 or ECE 391.

CS 424 Real-Time Systems credit: 3 or 4 Hours.
Supervisory control aspects of Cyber Physical Systems (CPS): fundamentals of reliability analysis, real-time scheduling, simple feedback control, software fault tolerance architecture, wireless networking and energy saving, principles of safety critical system engineering. Student groups design and demonstrate supervisory control architecture for a robot. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CS 241.

CS 425 Distributed Systems credit: 3 or 4 Hours.
Protocols, specification techniques, global states and their determination, reliable broadcast, transactions and commitment, security, and real-time systems. Same as ECE 428. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CS 241 or ECE 391.

CS 426 Compiler Construction credit: 3 or 4 Hours.
Compiler structure, syntax analysis, syntax-directed translation, automatically constructed recognizers, semantic analysis, code generation, intermediate language, optimization techniques. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CS 421.

CS 427 Software Engineering I credit: 3 or 4 Hours.
Software process, analysis and design. Software development paradigms, system engineering, function-based analysis and design, and object-oriented analysis and design. Course will use team-projects for hands-on exercises. Same as CSE 426. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CS 225 and CS 373.

CS 428 Software Engineering II credit: 3 or 4 Hours.
Continuation of CS 427. Software development, management, and maintenance. Project and configuration management, collaborative development models, software quality assurance, interoperability domain engineering and software reuse, and software re-engineering. Same as CSE 429. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CS 427.

CS 429 Software Engineering II, ACP credit: 3 Hours.
Continuation of CS 427. Identical to CS 428 except for the additional writing component. See CS 428. 3 undergraduate hours. 3 graduate hours. Prerequisite: CS 427.
This course satisfies the General Education Criteria for: UIUC: Advanced Composition

CS 431 Embedded Systems credit: 3 OR 4 Hours.
A survey of sampled data systems and embedded architecture; key concepts in common embedded system applications; signal processing and control; embedded microprocessor and device interface; time-critical I/O handling; data communications; real-time operating systems and techniques for the development and analysis of embedded real-time software; hands-on laboratory projects. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CS 241 or ECE 391.

CS 433 Computer System Organization credit: 3 or 4 Hours.
Computer system analysis and design. Organizational dependence on computations to be performed; speed and cost of parts and overall machines; instruction set design; pipeline and vector machines; memory hierarchy design. Same as CSE 422. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CS 233.

CS 436 Computer Networking Laboratory credit: 3 or 4 Hours.
Same as ECE 435. See ECE 435.

CS 438 Communication Networks credit: 3 or 4 Hours.
Layered architectures and the OSI Reference Model; design issues and protocols in the transport, network, and data link layers; architectures and control algorithms of local-area, point-to-point, and satellite networks; standards in networks access protocols; models of network interconnection; overview of networking and communication software. Same as ECE 438. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CS 241 or ECE 391; one of ECE 313, MATH 461, MATH 463.

CS 439 Wireless Networks credit: 3 or 4 Hours.
Same as ECE 439. See ECE 439.

CS 440 Artificial Intelligence credit: 3 or 4 Hours.
Major topics in and directions of research in artificial intelligence: AI languages (LISP and PROLOG), basic problem solving techniques, knowledge representation and computer inference, machine learning, natural language understanding, computer vision, robotics, and societal impacts. Same as ECE 448. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CS 225 or ECE 391.

CS 446 Machine Learning credit: 3 or 4 Hours.
Theory and basic techniques in machine learning. Major theoretical paradigms and key concepts developed in machine learning in the context of applications such as natural language and text processing, computer vision, data mining, adaptive computer systems and others. Review of several supervised and unsupervised learning approaches: methods for learning linear representations; on-line learning, Bayesian methods; decision-trees; features and kernels; clustering and dimensionality reduction. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CS 373 and CS 440.
CS 447 Natural Language Processing credit: 3 or 4 Hours.
Part-of-speech tagging, parsing, semantic analysis and machine translation. Relevant linguistics concepts from morphology (word formation) and lexical semantics (the meaning of words) to syntax (sentence structure) and compositional semantics (the meaning of sentences). 3 undergraduate hours. 3 or 4 graduate hours. Credit is not given for both CS 447 and LING 406. Prerequisite: CS 373.

CS 450 Numerical Analysis credit: 3 or 4 Hours.
Linear system solvers, optimization techniques, interpolation and approximation of functions, solving systems of nonlinear equations, eigenvalue problems, least squares, and quadrature; numerical handling of ordinary and partial differential equations. Same as CSE 401, ECE 491, and MATH 450. 3 undergraduate hours. 3 or 4 graduate hours. Credit is not given for both CS 450 and CS 457. Prerequisite: CS 101 or CS 125; CS 357 or MATH 415; MATH 285.

CS 457 Numerical Methods II credit: 3 Hours.
Continuation of CS 357. Orthogonalization methods for least squares, Krylov subspace methods, non-linear equations and optimization in multiple dimensions, initial and boundary value problems for ordinary and partial differential equations. 3 undergraduate hours. No graduate credit. Credit is not given for both CS 457 and CS 450. Prerequisite: CS 357.

CS 460 Security Laboratory credit: 0 to 4 Hours.
Operating systems security: access control, least privilege mechanism and malware techniques. Network security: firewalls, sniffing, tunnels, intrusion detection. AAA and worm structure. System security: forensics security architectures, and attack/defend exercises. Complements CS 461 via hands-on project. Same as ECE 419. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CS 461.

CS 461 Computer Security I credit: 3 or 4 Hours.
Fundamental principles of computer and communications security and information assurance: ethics, privacy, notions of threat, vulnerabilities, and risk in systems, information warfare, malicious software, data secrecy and integrity issues, network security, trusted computing, mandatory and discretionary access controls, certification and accreditation of systems against security standards. Security mechanisms: authentication, auditing, intrusion detection, access control, cryptography, security protocols, key distribution. Same as ECE 422. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CS 241 or ECE 391.

CS 463 Computer Security II credit: 3 or 4 Hours.
Program security, trusted base, privacy, anonymity, non-interference, information flow, confinement, advanced auditing, forensics, intrusion detection, key management and distribution, policy composition and analysis, formal approaches to specification and verification of secure systems and protocols, and topics in applied cryptography. Same as ECE 424. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CS 461. Recommended: CS 475.

CS 465 User Interface Design credit: 3 or 4 Hours.
A project-focused course covering fundamental principles of user interface design, implementation, and evaluation. Small teams work on a term-long project that involves: analysis of the problem domain, user skills, and tasks; iterative prototyping of interfaces to address user needs; conducting several forms of evaluation such as cognitive walkthroughs and usability tests; implementation of the final prototype. Non-technical majors may enroll as non-programmers who participate in all aspects of the projects with the possible exception of implementation. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CS 225.

CS 466 Introduction to Bioinformatics credit: 3 or 4 Hours.
Algorithmic approaches in bioinformatics: (i) biological problems that can be solved computationally (e.g., discovering genes, and interactions among different genes and proteins); (ii) algorithmic techniques with wide applicability in solving these problems (e.g., dynamic programming and probabilistic methods); (iii) practical issues in translating the basic algorithmic ideas into accurate and efficient tools that biologists may use. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CS 225.

CS 467 Social Visualization credit: 3 or 4 Hours.
Visualizing social interaction in networked spaces: investigation of patterns in networked communications systems such as messaging (email, instant messaging), social networking sites and collaborative sites; social network theory and visualizations; exploration of how to move beyond existing visualization techniques; visualizing the network identity over compilations of online data. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CS 225.

CS 473 Fundamental Algorithms credit: 3 OR 4 Hours.
Fundamental techniques for algorithm design and analysis, including recursion, dynamic programming, randomization, dynamic data structures, fundamental graph algorithms, and NP-completeness. Intended for undergraduates in Computer Science and graduate students in other departments. Same as CSE 414 and MATH 473. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CS 373.

CS 475 Formal Models of Computation credit: 3 or 4 Hours.
Finite automata and regular languages; pushdown automata and context-free languages; Turing machines and recursively enumerable sets; linear-bounded automata and context-sensitive languages; computability and the halting problem; undecidable problems; recursive functions; Chomsky hierarchy; computational complexity. Same as MATH 475. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CS 373.

CS 476 Program Verification credit: 3 or 4 Hours.
Formal methods for demonstrating correctness and other properties of programs. Invariant assertions; Hoare axiomatics; well-founded orderings for proving termination; structural induction; computational induction; data structures; parallel programs; overview of predicate calculus. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CS 225; CS 373 or MATH 414.
CS 477 Formal Software Devel Methods credit: 3 or 4 Hours.
Mathematical models, languages, and methods for software specification, development, and verification. Same as ECE 478. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CS 225; CS 373 or MATH 414.

CS 481 Stochastic Processes & Applic credit: 3 or 4 Hours.
Same as IE 410. See IE 410.

CS 482 Simulation credit: 3 OR 4 Hours.
Same as IE 413. See IE 413.

CS 483 Applied Parallel Programming credit: 4 Hours.
Same as CSE 408 and ECE 408. See ECE 408.

CS 484 Parallel Programming credit: 3 or 4 Hours.
Techniques for the programming of all classes of parallel computers and devices including shared memory and distributed memory multiprocessors, SIMD processors and co-processors, and special purpose devices. Key concepts in parallel programming such as reactive and transformational programming, speculation, speedup, isoefficiency, and load balancing. Synchronization primitives, libraries and languages for parallel programming such as OpenMP and MPI, performance monitoring, program tuning, analysis and programming of numerical and symbolic parallel algorithms. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CS 241.

CS 491 Seminar credit: 0 to 4 Hours.
Seminar on topics of current interest as announced in the Class Schedule. 0 to 4 undergraduate hours. 0 to 4 graduate hours. Approved for S/U grading only. May be repeated in the same or separate terms if topics vary to a maximum of 4 hours. Prerequisite: As specified for each topic offering, see Class Schedule or departmental course description.

CS 492 Senior Project I credit: 3 Hours.
First part of a project course in computer science. Students work in teams to solve typical commercial or industrial problems. Work involves planning, design, and implementation. Extensive oral and written work is required both on-campus and possibly off-campus at sponsors’ locations. CS 492 must be taken as a sequence with either CS 493 or CS 494. 3 undergraduate hours. No graduate credit. Credit is not given for both CS 492 and a project course in another engineering department for the same project. Prerequisite: For Computer Science majors with senior standing.

CS 493 Senior Project II, ACP credit: 3 Hours.
Continuation of CS 492. Identical to CS 494 except for an additional writing component. See CS 494. 3 undergraduate hours. No graduate credit. Credit is not given for both CS 493 and a project course in another engineering department for the same project. Prerequisite: CS 492.
This course satisfies the General Education Criteria for:
UIUC: Advanced Composition

CS 494 Senior Project II credit: 3 Hours.
Continuation of CS 492. 3 undergraduate hours. No graduate credit. Credit is not given for both CS 494 and a project course in another engineering department for the same project. Prerequisite: CS 492.

CS 498 Special Topics credit: 0 TO 4 Hours.
Subject offerings of new and developing areas of knowledge in computer science intended to augment the existing curriculum. See Class Schedule or departmental course information for topics and prerequisites. May be repeated in the same or separate terms if topics vary.

CS 499 Senior Thesis credit: 3 Hours.
Research and thesis development experience in computer science under guidance of a faculty member. Literature search, oral presentation, analysis and implementation, paper preparation, and completion of a written thesis. 3 undergraduate hours. No graduate credit. May be repeated to a maximum of 6 hours. Prerequisite: Consent of instructor.
This course satisfies the General Education Criteria for:
UIUC: Advanced Composition

CS 511 Advanced Data Management credit: 4 Hours.
Advanced concepts in data management and information system design and implementation, and recent developments in the field. 1) Relational roots, objects and extensibility, query languages, data indexing, query processing, transaction processing, benchmarks, and 2) semi-structured data and unstructured data, information extraction, information integration, web search and mining, and other emerging directions in the field. Prerequisite: CS 411.

CS 512 Data Mining Principles credit: 4 Hours.
An advanced course on principles and algorithms of data mining. Data cleaning and integration; descriptive and predictive mining; mining frequent, sequential, and structured patterns; clustering, outlier analysis and fraud detection; stream data, web, text, and biomedical data mining; security and privacy in data mining; research frontiers. Prerequisite: CS 412.

CS 519 Scientific Visualization credit: 4 Hours.
Visualization techniques useful in analysis of engineering and scientific data. Physical models; methods of computational science; two- and three-dimensional data types; visual representation schemes for scalar, vector, and tensor data; isosurface and volume visualization methods; visual monitoring; interactive steering. Same as CSE 527. Prerequisite: CS 418.
CS 522 Programming Language Semantics credit: 4 Hours.
Theory of programming languages including functional programming, meta-circular interpreters, typed, untyped and polymorphic lambda-calculi, and denotational semantics. Prerequisite: CS 422 and CS 426.

CS 523 Advanced Operating Systems credit: 4 Hours.
Advanced concepts in operating system design and coverage of recent research directions. Resource management for parallel and distributed systems. Interaction between operating system design and computer architectures. Process management, virtual memory, interprocess communication, context switching, parallel and distributed file system designs, persistent objects, process and data migration, load balancing, security, protection. Term projects. Prerequisite: CS 423, CS 425, and CS 433.

CS 524 Concurrent Progrmg Languages credit: 4 Hours.
Theory of concurrency and concurrent programming languages. Formal models of concurrent computation such as process algebras, nets, and actors; high level concurrent programming languages and their operational semantics; methods for reasoning about correctness and complexity of concurrent programs. Prerequisite: CS 422; CS 475 or CS 476.

CS 525 Advanced Distributed Systems credit: 4 Hours.
Peer-to-peer systems, sensor networks, and fundamental theoretical distributed computing. Review of classical work in each area, and application of design methodologies to explore overlaps across them. Emphasis on protocol design, systems issues, and theory. Reading selections are roughly two-third classical to one-third contemporary. Students write critiques, make presentations, and create a conference paper in a systematic manner. Prerequisite: One of CS 423, CS 425, CS 438.

CS 526 Advanced Compiler Construction credit: 4 Hours.
Incremental and interactive compiling, error correction, code optimization, models of code generators. Prerequisite: CS 426.

CS 527 Topics in Software Engineering credit: 4 Hours.
Fault-tolerant software, software architecture, software patterns, multi-media software, and knowledge-based approaches to software engineering. Case studies. Prerequisite: CS 428 or CS 429.

CS 528 Obj-Oriented Progrmg & Design credit: 4 Hours.
Principles of object-oriented design; design patterns; use and design of frameworks; reflection, refractoring, use of unit tests as specifications. Prerequisite: CS 427.

CS 533 Parallel Computer Architecture credit: 4 Hours.
Theoretical aspects of parallel and pipeline computation; time and processor bounds on classes of computations; data alignment network speed and cost bounds; conflict-free access memories; overall computer system ideas. Same as CSE 522. Prerequisite: CS 433.

CS 536 Fault-Tolerant Dig Syst Design credit: 4 Hours.
Same as ECE 542. See ECE 542.

CS 538 Advanced Computer Networks credit: 4 Hours.
Advanced concepts in computer networks, including congestion control, quality of service, naming, routing, wireless networks, Internet architecture, measurement, network security, and selected recent research directions. Prerequisite: CS 438.

CS 541 Computer Systems Analysis credit: 4 Hours.
Same as ECE 541. See ECE 541.

CS 543 Computer Vision credit: 4 Hours.
Same as ECE 549. See ECE 549.

CS 544 Optimiz in Computer Vision credit: 4 Hours.
Applications of continuous and discrete optimization to problems in computer vision and machine learning, with particular emphasis on large-scale algorithms and effective approximations: gradient-based learning; Newton's method and variants, applied to structure from motion problems; the augmented Lagrangian method and variants; interior-point methods; SMO and other specialized algorithms for support vector machines; flows and cuts as examples of primal-dual methods; dynamics programming, hidden Markov models, and parsing: 0-1 quadratic forms, max-cut, and Markov random-fields solutions. Prerequisite: CS 450 and CS 473.

CS 545 Systems Modeling & Simulation credit: 4 Hours.
Same as BADM 575. See BADM 575.

CS 546 Machine Learning in NLP credit: 4 Hours.
Central learning frameworks and techniques that have emerged in the field of natural language processing and found applications in several areas in text and speech processing: from information retrieval and extraction, through speech recognition to syntax, semantics and language understanding related tasks. Examination of the theoretical paradigms -- learning theoretic, probabilistic, and information theoretic -- and the relations among them, as well as the main algorithmic techniques developed within each paradigm and in key natural language applications. Prerequisite: CS 446 and CS 473.
CS 548 Models of Cognitive Processes credit: 4 Hours.
Formal models and concepts in automated cognition; integrating machine learning and prior knowledge; current approaches and detailed analyses of the role of reasoning in the learning process; computational complexity and fundamental tradeoffs between expressiveness and tractability; implications for state-of-the-art artificial intelligence areas such as automated planning, the semantic web, relational learning, structured prediction, latent models, structure learning, theory formation, etc.; philosophical and psychological aspects of integrating analytic and empirical evidence. Same as ECE 548. Prerequisite: CS 440 or CS 446.

CS 549 Seminar in Cognitive Science credit: 2 or 4 Hours.
Same as PSYC 514, ANTH 514, EPSY 551, LING 570, and PHIL 514. See PSYC 514.

CS 554 Parallel Numerical Algorithms credit: 4 Hours.
Numerical algorithms for parallel computers: parallel algorithms in numerical linear algebra (dense and sparse solvers for linear systems and the algebraic eigenvalue problem), numerical handling of ordinary and partial differential equations, and numerical optimization techniques. Same as CSE 512. Prerequisite: One of CS 450, CS 457, CS 555.

CS 555 Numerical Methods for PDEs credit: 4 Hours.
Numerical techniques for initial and boundary value problems in partial differential equations. Finite difference and finite element discretization techniques, direct and iterative solution methods for discrete problems, and programming techniques and usage of software packages. Same as CSE 510. Prerequisite: CS 450 or CS 457.

CS 556 Iterative & Multigrid Methods credit: 4 Hours.
Comprehensive treatment of algebraic and multigrid iterative methods to solve systems of equations, primarily linear equations arising from discretization of partial differential equations. Same as CSE 511.

CS 558 Topics in Numerical Analysis credit: 4 Hours.
Advanced topics in numerical analysis selected from areas of current research. Same as CSE 513. May be repeated. Prerequisite: As specified for each topic offering, see Schedule or departmental course description.

CS 563 Advanced Computer Security credit: 4 Hours.
Current research trends in computer and network security. Privacy, tamper-resistance, unwanted traffic, monitoring and surveillance, and critical infrastructure protection. Subtopics will vary depending upon current research trends. Students work in teams in close coordination with the course instructor to develop one of the topics in depth by carrying out background research and an exploratory project. Same as ECE 524. Prerequisite: CS 461 or CS 463.

CS 565 Human-Computer Interaction credit: 4 Hours.
In-depth coverage of advanced topics in human-computer interaction (HCI). Applied models of human performance and attention, design tools for creative design tasks, interruptions and peripheral displays, gestures, and bimanual input, and usability evaluation techniques. Students complete a research-oriented term project of their choosing. Prerequisite: CS 465.

CS 571 Combinatorial Mathematics credit: 4 Hours.
Same as MATH 580. See MATH 580.

CS 572 Extremal Graph Theory credit: 4 Hours.
Same as MATH 581. See MATH 581.

CS 573 Algorithms credit: 4 Hours.
NP-completeness, design and analysis techniques, approximation algorithms, randomized algorithms, combinatorial optimization, linear programming. Intended for graduate students in Computer Science. Same as CSE 515. Prerequisite: CS 373.

CS 574 Randomized Algorithms credit: 4 Hours.
Basic and advanced concepts in the design and analysis of randomized algorithms. Sampling; concentration inequalities such as Chernoff-Hoeffding bounds; probabilistic method; random walks, dimension reduction; entropy; martingales and Azuma's inequality; derandomization. Randomized algorithms for sorting and searching; graphs; geometric problems. Basics of pseudorandomness and randomized complexity classes. Prerequisite: CS 473; MATH 461 or STAT 400.

CS 575 Methods of Combinatorics credit: 4 Hours.
Same as MATH 584. See MATH 584.

CS 576 Topics in Automated Deduction credit: 2 to 4 Hours.
Advanced topics in computer-aided methods for formal deduction, selected from areas of current research, such as: resolution theorem proving strategies, special relations, equational reasoning, unification theory, rewrite systems, mathematical induction, program derivation, hybrid inference systems, and programming with logic. May be repeated in separate terms. Prerequisite: As specified for each topic offering, see Schedule or departmental course description.

CS 579 Computational Complexity credit: 4 Hours.
Turing machines; determinism and non-determinism; time and space hierarchy theorems; speed-up and tape compression; Blum axioms; structure of complexity classes NP, P, NL, L, and PSPACE; complete problems; randomness and complexity classes RP, RL, and BPP; alternation, polynomial-time hierarchy; circuit complexity, parallel complexity, NC, and RNC; relativized computational complexity; time-space trade-offs. Same as ECE 579. Prerequisite: CS 473 or CS 475.
CS 583 Approximation Algorithms credit: 4 Hours.
Approximation algorithms for NP-hard problems. Basic and advanced techniques in approximation algorithm design: combinatorial algorithms; mathematical programming methods including linear and semi-definite programming, local search methods, and others. Algorithms for graphs and networks, constraint satisfaction, packing and scheduling. Prerequisite: CS 573 or consent of instructor.

CS 584 Embedded System Verification credit: 4 Hours.
Same as ECE 584. See ECE 584.

CS 591 Advanced Seminar credit: 0 to 4 Hours.
Seminar on topics of current interest as announced in the Class Schedule. Approved for S/U grading only. May be repeated in the same or separate terms if topics vary. Prerequisite: As specified for each topic offering, see Class Schedule or departmental course description.

CS 597 Individual Study credit: 2 to 16 Hours.
Individual study or reading in a subject not covered in normal course offerings. May be repeated. Prerequisite: Consent of instructor.

CS 598 Special Topics credit: 2 to 4 Hours.
Subject offerings of new and developing areas of knowledge in computer science intended to augment the existing curriculum. See Class Schedule or departmental course information for topics and prerequisites. May be repeated in the same or separate terms if topics vary.

CS 599 Thesis Research credit: 0 to 16 Hours.
Approved for S/U grading only. May be repeated.

Creative Writing (CW)

CW Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/CW)

Courses

CW 100 Intro to Creative Writing credit: 3 Hours.
Acquaint students with the technical choices a writer makes in creating a story or a poem. Mondays are given to lectures on specific elements of poetry and fiction. Wednesdays are dedicated to readings by faculty and visiting writers. Fridays allow students the opportunity to work in small group discussion sections applying the week's techniques and skills to a close reading of stories and poems.

This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts

CW 104 Introductory Narrative Writing credit: 3 Hours.
Practice in the writing of narrative prose, with primary emphasis on short fiction. Prerequisite: Completion of campus Composition I general education requirement.

CW 106 Introductory Poetry Writing credit: 3 Hours.
Practice in the writing of poetry; experimentation with a number of fixed forms and free verse, but emphasis mainly on the student's freedom to develop a personal style. Prerequisite: Completion of campus Composition I general education requirement.

CW 200 Reading for Writers credit: 3 Hours.
Emphasizes the craft of short stories and poems through the study of formal elements central to the production of creative writing (e.g., plot, character, setting, point of view in short fiction and rhythm, meter, line break, imagery, simile, metaphor, formal patterns in poetry). Prerequisite: CW 104 or CW 106.

For majors only.

CW 202 Topics in Creative Writing credit: 3 Hours.
Independent writing projects and examination of literature as the cultural basis of the student's specialized fields. May be repeated as topics vary.

CW 204 Intermediate Narrative Writing credit: 3 Hours.
Practice in the writing of fiction, with emphasis on the short story. Prerequisite: CW 104 or equivalent.

CW 206 Intermediate Poetry Writing credit: 3 Hours.
Builds upon the workshop format of CW 106, with an emphasis on prosody and poetic technique. Students will deepen their sense of craft by putting into practice their study and understanding of a variety of poetic forms (e.g., syllabic poetry, dramatic monologue, sonnet, bound/free verse) and technical concerns (e.g., voice, tone, line, line break, image). The workshop component of the course typically includes 8-12 completed poems and their revisions. Prerequisite: CW 106.

CW 208 Creative Nonfiction Writing credit: 3 Hours.
Types of nonfiction prose, including the personal essay, memoir, literary journalism, and historical writing. Prerequisite: RHET 233 or CW 243, or equivalent, or consent of instructor.

CW 243 Inter Expository Writing credit: 3 Hours.
Practice in expository types, with emphasis on style and critical analysis. Restricted to Creative Writing majors. Credit is not given for CW 243 and either RHET 243 or RHET 233. Prerequisite: Completion of campus Composition I general education requirement.

This course satisfies the General Education Criteria for:
UIUC: Advanced Composition
CW 404 Advanced Narrative Writing credit: 3 or 4 Hours.
Continued practice in the writing of fiction, with emphasis on the longer story. 3 undergraduate hours. 4 graduate hours. May be repeated for a maximum of 6 undergraduate hours or 8 graduate hours. Prerequisite: CW 204 or equivalent.

CW 406 Advanced Poetry Writing credit: 3 or 4 Hours.
Practice of the writing of poetry aided by intensive study of examples. 3 undergraduate hours. 4 graduate hours. May be repeated to a maximum of 6 undergraduate hours or 8 graduate hours. Prerequisite: CW 206 or equivalent.

CW 455 Creative Writing Tutorial credit: 3 or 4 Hours.
Personal direction in a writing project: fiction (novel or short stories), poetry or creative nonfiction. Frequency of conference to be determined by the type of project. 3 undergraduate hours. 4 graduate hours. May be repeated to a maximum of 6 undergraduate hours or 8 graduate hours. Undergraduate Rhetoric majors in Creative Writing with a 3.25 average who are working towards the degree with Distinction or High Distinction in Rhetoric may, with the consent of the Director of Creative Writing and the English honors advisor, take this course for honors credit. Prerequisite: CW 208, CW 404 or CW 406, and consent of the Director of Creative Writing.

CW 460 Intro to Literary Editing credit: 3 Hours.
Practicum in which students learn all the stages of developing and editing a literary publication. Students will solicit, read, and select poems and stories for an online supplement to the Ninth Letter literary journal. At the end of the semester, the supplement will be published on the Ninth Letter website (www.ninthletter.com). Students will gain experience in professional communications, copyediting, and marketing. 3 undergraduate hours. No graduate credit. Prerequisite: CW 104 or CW 106.

CW 500 The Craft of Fiction credit: 4 Hours.
Examination of the creative process of fiction from the perspectives of aesthetics and techniques, illustrated from the work of selected authors. Prerequisite: Graduate standing in English.

CW 502 Problems in Poetry Writing credit: 4 Hours.
Examination of the creative process of poetry from the perspective of aesthetics and techniques, illustrated from the work of selected authors. Prerequisite: Graduate standing in English.

CW 504 Writing Workshop in Fiction credit: 4 Hours.
Directed individual projects, with group discussion in fiction. May be repeated to a maximum of 16 hours. Prerequisite: Admission to the MFA program, or graduate standing in English with advanced submission of creative work and consent of instructor.

CW 506 Writing Workshop in Poetry credit: 4 Hours.
Directed individual projects, with group discussion in poetry. May be repeated to a maximum of 16 hours. Prerequisite: Admission to the MFA program, or graduate standing in English with advanced submission of creative work and consent of instructor.

CW 560 Literary Publishing & Promotion credit: 0 to 4 Hours.
A working practicum designed to teach graduate students the basics of literary journal publishing and to introduce them to career and entrepreneurial opportunities in other types of literary arts organizations. Students will attend weekly editorial meetings, complete weekly reading assignments, and will work 2 hours per week in the 'Ninth Letter' office, reading manuscript submissions and completing various clerical tasks for the journal. Approved for both letter and S/U grading. May be repeated to a maximum of 8 hours. Prerequisite: MFA candidate standing.

CW 563 Special Topics credit: 0 to 4 Hours.
Approved for both letter and S/U grading. May be repeated up to a maximum of 12 hours. Prerequisite: MFA candidate standing or consent of instructor.

CW 591 Independent Study credit: 0 to 4 Hours.
Approved for both letter and S/U grading. May be repeated up to a maximum of 12 hours. Prerequisite: MFA candidate standing.

CW 595 Final Project credit: 0 to 12 Hours.
Guidance in writing final projects. Approved for S/U grading only. May be repeated in separate terms to a maximum of 12 hours. Prerequisite: MFA candidate standing.

Crop Sciences (CPSC)

CPSC Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/CPSC)

Courses

CPSC 111 Farming Systems credit: 2 Hours.
General introduction to the equipment and practices commonly used on Midwest farms. Classes will consist of short lectures followed by demonstrations. All classes and demonstrations will be conducted at the University of Illinois Crop Sciences Research and Education Center. Includes field trips to local production and agribusiness facilities.
CPSC 112 Introduction to Crop Sciences credit: 4 Hours.
Introductory course covering principles of growth, production, protection, and improvement of crop plants. Topics covered include form, function, and uses of crops; mechanisms and factors responsible for plant growth and development; crop pests and pest protection; specific crops; and advances in crop production. Concepts are discussed in lecture and reinforced in corresponding hands-on laboratory sections.
This course satisfies the General Education Criteria for:
UIUC: Life Sciences

CPSC 113 Environment, Agric, & Society credit: 3 Hours.
Introduction to agriculture and the environment; examine the largest managed ecosystem and its influence on natural ecosystems; develop a working understanding of natural and agriculture ecosystems and their interaction; examine various agriculture management strategies that can be used to produce food for an increasing world population while maintaining or improving environmental quality.
This course satisfies the General Education Criteria for:
UIUC: Life Sciences
UIUC: Western Compartv Cult

CPSC 116 The Global Food Production Web credit: 3 Hours.
Introduces students to the global web involved in the production of food we consume on a daily basis. Selected ecosystems of plants, people, and cultures in Asia, Africa, and Latin America will be studied based on involvement with various crops. Presents the origin and biology of plants; their evolution with humankind in various cultures; the spread and economic importance of crops around the world; and considers current hunger and environmental issues resulting from the global food web. Interactive communications with selected scientists, producers, and traders around the world through the World Wide Web and email system of the INTERNET permit students to get personal exposure to information and activities.
This course satisfies the General Education Criteria for:
UIUC: Non-Western Cultures

CPSC 131 Agriculture in Mythology credit: 3 Hours.
Compare and contrast the role agriculture and plant sciences played in the development of ancient cultures. Study agricultural references in ancient global mythology. Develop an appreciation of how agricultural diversity of various ancient cultures influenced mythology in the cultures in different regions.
This course satisfies the General Education Criteria for:
UIUC: Non-Western Cultures

CPSC 180 Medicinal Plants and Herbology credit: 3 Hours.
Same as HORT 180. See HORT 180.

CPSC 199 Undergraduate Open Seminar credit: 1 to 5 Hours.
Experimental course on a special topic in crop sciences. Topic may not be repeated except in accordance with the Code. May be repeated to a maximum of 12 hours.

CPSC 213 Evolution in Action credit: 2 Hours.
Introduction to evolutionary theory. Examination of how domesticated species have evolved. Develops an appreciation of how agroecosystems have influences evolution of adjacent natural ecosystems. Elucidation of evolutionary mechanisms necessary for agricultural species to adapt to global climate change.

CPSC 215 The Prairie and Bioenergy credit: 3 Hours.
Designed for students who are interested in bioenergy and its production from prairie land. Instructors will provide information on the global trend of bioenergy production and consumption, importance of bioenergy, the role of Illinois prairie land in bioenergy production, potential U.S. bioenergy production, biofuels from plants, and socio-environmental benefits of bioenergy.

CPSC 226 Introduction to Weed Science credit: 3 Hours.
Fundamentals of weed biology, ecology, and management. Emphasis is placed on basic principles and specific management strategies that are relevant to both crop and non-crop ecosystems. Includes a laboratory/discussion. Same as HORT 226. Prerequisite: CPSC 112 or HORT 100 or IB 103.

CPSC 241 Intro to Applied Statistics credit: 3 Hours.
Introduces fundamental statistical procedures used to analyze and interpret data. General principles of descriptive and inferential statistics, measures of central tendency and dispersion, probability, correlation and regression, and tests of hypotheses are covered. An emphasis is placed on biological, environmental, and agricultural sciences, but numerous examples from other areas are discussed. Course content enhances students’ ability to critically assess statistical information encountered in professional and every day activities. Credit is not given for both CPSC 241 and STAT 100 or ACE 261.
This course satisfies the General Education Criteria for:
UIUC: Quant Reasoning I

CPSC 261 Biotechnology in Agriculture credit: 3 Hours.
Basic introduction to the techniques and application of biotechnology to a wide range of agricultural areas, and specific examples are given. May serve as either a terminal course explaining the techniques or as an introductory base for future studies. Same as HORT 261. Prerequisite: Any 100-level course in a biosciences discipline.
This course satisfies the General Education Criteria for:
UIUC: Life Sciences
CPSC 265 Genetic Engineering Lab credit: 3 Hours.
Laboratory/discussion course that provides a hands-on introduction to the techniques and principles of genetic engineering, recombinant DNA and the impact of molecular genetics on society. Students will isolate DNA from plants and clone specific genes into bacterial plasmids, perform polymerase chain reactions, DNA restriction analysis and DNA blotting, and discuss the relevance of these techniques to both medicine and agriculture. Additional fees may apply. See Class Schedule. Prerequisite: A general biology course.

CPSC 270 Applied Entomology credit: 3 Hours.
Lectures, laboratory, and field trips cover the biology of insects and the recognition and management of insect pests of agricultural, forest, and urban ecosystems. Covers insect structure and physiology, classification, life histories, behavior, and pest management. Same as IB 220 and NRES 270. This course satisfies the General Education Criteria for:

UIUC: Life Sciences

CPSC 293 Off-Campus Crop Sci Internship credit: 1 to 5 Hours.
Supervised, off-campus experience in a field directly pertaining to a subject matter in crop sciences. Approved for S/U grading only. May be repeated to a maximum of 10 hours. For registration in this course, students should contact the Department Teaching Coordinator. Prerequisite: Sophomore standing, cumulative GPA of 2.0 or above at the time the internship is arranged, and consent of instructor.

CPSC 294 On-Campus Crop Sci Internship credit: 1 to 5 Hours.
Supervised, on-campus learning experience with faculty engaged in research. Approved for S/U grading only. May be repeated to a maximum of 10 hours. For registration in this course, students should contact the Department Teaching Coordinator. Prerequisite: Sophomore standing, 2.0 GPA, consent of the advisor, and consent of the Department Teaching Coordinator.

CPSC 295 Undergrad Research or Thesis credit: 1 to 4 Hours.
Individual research, special problems, thesis, development and/or design work under the supervision of an appropriate member of the faculty. May be repeated in the same or subsequent terms. No more than 12 hours of special problems, research, thesis and/or individual studies may be counted toward degree. Prerequisite: Junior standing, cumulative GPA of 2.5 or above at the time the activity is arranged, and consent of instructor.

CPSC 336 Tomorrow's Environment credit: 3 Hours.
Introduction to interdisciplinary methods of analysis of environmental problems in a finite world; examination of the concept of the limits to growth; development of a working understanding of natural systems and environmental economics; and examination of various management strategies (technical, economic, and social) that can be used to improve environmental quality. Same as CHLH 336, and ENVS 336. Prerequisite: One course in the life sciences and one course in the social sciences, or consent of instructor.

CPSC 352 Plant Genetics credit: 4 Hours.
The principles of heredity in relation to plant improvement. Same as NRES 352. Prerequisite: IB 103 or IB 104.

CPSC 382 Organic Chem of Biol Processes credit: 4 Hours.
An overview of the structure, properties, and reactions of carbon-containing compounds relevant to biological processes and cellular structure. The chemistry of hydro carbon, aromatic, as well as oxygen-, nitrogen-, phosphorus-, and sulfur-containing compounds will be examined. Macromolecular structures including biological membranes, carbohydrates, proteins and nucleic acids will also be discussed. Prerequisites: CHEM 102 and CHEM 104 or CHEM 202 and CHEM 204.

CPSC 396 Undergrad Honors Res or Thesis credit: 1 to 4 Hours.
Individual research, special problems, thesis, development and/or design work under the direction of the Honors advisor. May be repeated in the same or subsequent terms. No more than 12 hours of special problems, research, thesis and/or individual studies may be counted toward degree. Prerequisite: Junior standing, admission to the ACES Honors Program, and consent of instructor.

CPSC 407 Diseases of Field Crops credit: 3 Hours.
Same as PLPA 407. See PLPA 407.

CPSC 412 Principles of Crop Advising credit: 3 Hours.
Fundamentals in agronomic management of field crops with emphasis on crop production and protection. Knowledge gained in this course helps students prepare for a career within commercial agriculture or provide updates enhancing knowledge on topics studied previously. Information delivered should help interested students prepare for the Certified Crop Adviser examination or provide professionals already in the field with Continuing Education Units (CEUs). 3 undergraduate hours. 3 graduate hours. Prerequisite: CPSC 112 and NRES 201, or equivalent, or consent of instructor.

CPSC 414 Forage Crops and Pasture Eco credit: 3 Hours.
Forages, their plant characteristics, ecology, and production; grasslands of farm and range as related to animal production and soil conservation. 3 undergraduate hours. 3 graduate hours. Offered in alternate years. Prerequisite: An introductory class in biology.

CPSC 415 Bioenergy Crops credit: 3 Hours.
Provides an overview and understanding of biomass feedstock production systems for sustainable biofuels production. 3 undergraduate hours. 3 graduate hours. Prerequisite: CPSC 112 or consent of instructor.

CPSC 418 Crop Growth and Management credit: 3 Hours.
Crop physiology and management as influenced by environment, plant species, and cropping system; relates plant growth processes to crop production practices based on current research. 3 undergraduate hours. 3 graduate hours. Prerequisite: IB 103 or CPSC 112 or equivalent, or consent of instructor.

Information listed in this catalog is current as of 11/2014
CPSC 419 Midwest Agricultural Practices credit: 1 Hour.
Introduces agronomic production practices in the Midwest and economics of the crop production value chain. Specifically designed for beginning graduate students in crop genetic improvement from non-agricultural backgrounds. 1 undergraduate hour. 1 graduate hour.

CPSC 426 Weed Mgt in Agronomic Crops credit: 3 Hours.
Principles of weed ecology and biology, and their application to weed management. Herbicides and their use in corn, soybeans and other agronomic crops. Specialized topics include weed management in reduced tillage, herbicide tolerant crops and management of problem weeds. 3 undergraduate hours. 3 graduate hours. Prerequisite: CPSC 226 or consent of instructor.

CPSC 428 Weed Science Practicum credit: 2 Hours.
Intensive course on field diagnostic skills in weed science. Topics include weed and weed seed identification, sprayer calibration, herbicide application, herbicide injury symptomatology, and field diagnostics. Students who complete the course will be encouraged to enter the North Central Weed Science Society weeds contest, which occurs during the summer. 2 undergraduate hours. 2 graduate hours. Prerequisite: CPSC 226 or CPSC 426 or consent of instructor.

CPSC 431 Plants and Global Change credit: 3 Hours.
The science of global atmospheric and climate change in the 21st Century. Understanding of how plants, including crops, will respond and may be adapted to these changes. Using plants to ameliorate predicted climate change. Same as IB 440 and NRES 431. 3 undergraduate hours. 3 graduate hours. Offered in alternate years. Prerequisite: CPSC 112 or IB 103.

CPSC 433 Basic Toxicology credit: 3 Hours.
Same as CB 449, ENVS 480 and FSHN 480. See FSHN 480.

CPSC 436 Conservation Biology credit: 4 Hours.
Same as ENVS 420 and IB 451. See IB 451.

CPSC 437 Principles of Agroecology credit: 3 Hours.
Examines the dynamics and function of agricultural ecosystems and reviews fundamental concepts of ecology. Agricultural systems will be compared on the basis of energy flow, nutrient cycling, diversity, stability and required inputs. 3 undergraduate hours. 3 graduate hours. Offered in alternate years. Prerequisite: IB 100 or IB 103 or equivalent.

CPSC 438 Soil Nutrient Cycling credit: 3 Hours.
Same as NRES 438. See NRES 438.

CPSC 439 Env and Sustainable Dev credit: 3 Hours.
Same as NRES 439. See NRES 439.

CPSC 440 Applied Statistical Methods I credit: 4 Hours.
Statistical methods involving relationships between populations and samples; collection, organization, and analysis of data; and techniques in testing hypotheses with an introduction to regression, correlation, and analysis of variance limited to the completely randomized design and the randomized complete-block design. Same as ABE 440, ANSC 440, FSHN 440, and NRES 440. 4 undergraduate hours. 4 graduate hours. Prerequisite: MATH 012 or equivalent.

CPSC 448 Biological Modeling credit: 3 or 4 Hours.
Same as ANSC 449, GEOG 468, and IB 491. See GEOG 468.

CPSC 452 Evol Genetics and Genomics credit: 3 Hours.
Selected contemporary topics in genetics and genomics underlying adaptation are covered with examples primarily from plants, humans and animals. Topics include nature of genes and genomes, molecular phylogeny, mutations and their analysis, allelic diversity in population, quantitative trait loci, selection, and crop domestication. Emphasis is on molecular evolution that aids plant improvement. Serves as an introduction to functional genomics, population genetics, quantitative genetics, and bioinformatics. Same as IB 478. 3 undergraduate hours. 3 graduate hours. Prerequisite: CPSC 352 or IB 204, or consent of instructor.

CPSC 453 Principles of Plant Breeding credit: 4 Hours.
Principles, concepts and tools used in plant breeding. Includes methods and breeding schemes used with different plant species. Same as HORT 453. 4 undergraduate hours. 4 graduate hours. Prerequisite: IB 103; CPSC 352 or equivalent.

CPSC 454 Plant Breeding Methods credit: 2 Hours.
Discussion of the application of current scientific tools and methods available to plant breeders for improving plants; emphasis on actual use of plant breeding methods and production of high quality seed. 2 undergraduate hours. 2 graduate hours. Offered summer only in alternate years. Prerequisite: CPSC 453.

CPSC 462 Plant Molecular Biology credit: 1 Hour.
Same as IB 472. See IB 472.

CPSC 466 Genomics for Plant Improvement credit: 2 Hours.
An overview of applying the methods of genomics to discover variation in genes and their expression, creating new genetic variation, and applying this information to the improvement of economically important plants. Emphasis is on recent advances in genomic science and activities where functional genomics information is used to efficiently create and manipulate desirable phenotypes. Same as IB 477. 2 undergraduate hours. 2 graduate hours. Prerequisite: CPSC 352 or a similar course, or consent of instructor.
CPSC 467 Plant Genomics credit: 1 Hour.
Same as IB 473. See IB 473.

CPSC 468 Plant Proteomics-Metabolomics credit: 2 Hours.
Same as IB 474. See IB 474.

CPSC 473 Mgmt of Field Crop Insects credit: 3 Hours.
Ecological principles of insect populations in agroecosystems including: sampling insect populations, threshold development, bioeconomics and decision-making, population regulation, designing management strategies for field crop insect pests, and deployment of transgenic crops for management of insect pests. Case studies describing various pest management programs in field-crop settings will be provided. 3 undergraduate hours. 3 graduate hours. Prerequisite: CPSC 270 or an equivalent course, or consent of instructor.

CPSC 475 Insect Pathology credit: 4 Hours.
Same as NRES 443 and IB 483. See IB 483.

CPSC 479 Insect Pest Management credit: 3 Hours.
Same as IB 482. See IB 482.

CPSC 482 Plant Tissue Culture credit: 4 Hours.
Same as HORT 482. See HORT 482.

CPSC 483 Outreach Education Skills credit: 3 Hours.
Provides graduate and undergraduate students interested in outreach and extension education programs with opportunities to develop their skills and effectiveness in development and presentation of outreach and extension programs. Same as ANSC 483. 3 undergraduate hours. 3 graduate hours. Prerequisite: Senior or graduate student status.

CPSC 484 Plant Physiology credit: 3 Hours.
Same as IB 420. See IB 420.

CPSC 488 Soil Fertility and Fertilizers credit: 3 Hours.
Same as NRES 488. See NRES 488.

CPSC 489 Photosynthesis credit: 3 Hours.
Same as BIOP 432 and IB 421. See IB 421.

CPSC 491 Ugrad Bioinformatics Seminar credit: 0 to 2 Hours.
Same as INFO 491 and LIS 483. See INFO 491.

CPSC 498 Crop Sci Professional Develpmt credit: 1 Hour.
Topics related to professional development including resumes, interview skills, business etiquette, ethics, and presentations on opportunities in crop sciences and horticulture. 1 undergraduate hour. No graduate credit. Prerequisite: Junior standing in Crop Sciences or Horticulture.

CPSC 499 Seminar credit: 1 TO 4 Hours.
Group discussion or an experimental course on a special topic in crop sciences. Approved for both letter and S/U grading. May be repeated to a maximum of 12 hours.

CPSC 518 Crop Growth and Development credit: 4 Hours.
Study of the physiological processes involved in growth and development of crop plants and the interaction of these processes with the environment that influences productivity. Prerequisite: CPSC 418 or CPSC 484.

CPSC 526 Herbicide Action in Plants credit: 4 Hours.
Study of various chemicals used to inhibit plant growth, including their uptake, translocation, mode of action, metabolism and resistance mechanisms in plants; and the relationship of chemical structure to the environmental fate of herbicides. Offered in alternate years. Prerequisite: CPSC 426 and CPSC 484.

CPSC 538 Environmental Plant Physiology credit: 4 Hours.
Same as IB 542. See IB 542.

CPSC 541 Regression Analysis credit: 5 Hours.
The application of regression methods to problems in agriculture and natural resources. Topics include simple linear, multiple linear, and nonlinear regression analysis and correlation analysis. Emphasis is placed on predictor variable selection, diagnostics and remedial measures and validation. Both quantitative and qualitative predictor variables are examined. The SAS system is used for all analyses. Same as ANSC 541. Prerequisite: CPSC 440 or equivalent.

CPSC 542 Applied Statistical Methods II credit: 5 Hours.
Statistical methods as tools for research. Principles of designing experiments and methods of analysis for various kinds of designs, experimental (completely randomized, randomized complete block, split plots, Latin square) and treatment (complete factorial); covariate analysis; use of SAS for all analyses. Prerequisite: CPSC 440 or equivalent.
CPSC 543 Appl. Multivariate Statistics credit: 4 Hours.
This class introduces students to statistical methods that consider several variables at once. Emphasis will be given to the applications of multivariate methods to data sets in biology and ecology. Students will develop good knowledge as to how multivariate methods work, they will be able to apply these methods using SAS and R and they will be able to make inferences on the results of the analyses for subsequent scientific publication. Same as STAT 543. Prerequisites: CPSC 440 or equivalent or consent of instructor.

CPSC 545 Statistical Genomics credit: 3 or 4 Hours.
Same as ANSC 545 and IB 507. See ANSC 545.

CPSC 553 Advanced Plant Breeding credit: 3 Hours.
A practical application of plant breeding, genetics, and statistics to devise effective approaches to meet particular breeding goals. Highlighting real life situations and key decisions facing the plant breeder, the course builds upon knowledge of plant breeding methods and quantitative genetic theory. Four specific functional areas, which reflect divisions of labor in the seed industry are addressed: population development, population evaluation, trait integration, and product commercialization and supply. Offered in alternate years. Prerequisite: CPSC 453 or equivalent; CPSC 558 or equivalent; CPSC 542 or equivalent.

CPSC 556 Plant Breeding Literature credit: 1 Hour.
Students will read a diverse group of plant breeding journal articles, will learn skills involved in evaluating a scientific paper, and will discuss articles with plant breeding faculty members. Approved for S/U grading only. May be repeated in separate terms to a maximum of 5 hours. Prerequisite: Graduate student status.

CPSC 558 Quantitative Plant Breeding credit: 4 Hours.
Studies the theoretical bases for plant breeding procedures with special emphasis on the relationship between type and source of genetic variability, mode of reproduction, and effectiveness of different selection procedures. Offered in alternate years. Prerequisite: CPSC 453 or equivalent.

CPSC 563 Chromosomes credit: 3 Hours.
Includes cytogenetic analysis of eukaryotic organisms, the role of chromosomes in genome organization and evolution, and introduction to molecular cytogenetic laboratory techniques such as mitotic analysis, chromosome banding, flow cytogenetics, somatic cell genetics, chromosomal length polymorphisms, fluorescent microscopy and in situ hybridization. Prerequisite: CPSC 352 and MCB 450, or consent of instructor.

CPSC 564 Molecular Marker Data Analyses credit: 3 Hours.
Statistical analyses and interpretation of molecular marker data including development of genetic maps, cluster analyses, quantitative trait loci analyses, and plant breeding applications of molecular marker data. Offered in alternate years. Prerequisite: CPSC 440 or equivalent, and CPSC 453 or equivalent. An advanced statistics course (e.g. ANSC 445 or equivalent) and familiarity with SAS recommended.

CPSC 565 Perl & UNIX for Bioinformatics credit: 2 Hours.
This intensive course is an introduction to high-throughput bioinformatics and genome data analysis. An introduction to programming with Perl and Bioperl will be given, and students will learn to write scripts relevant to their own research goals. We will also cover the use of UNIX and Perl for automating and customizing bioinformatics tools. Prerequisite: Graduate status or consent of instructor. In addition, familiarity with DNA and protein sequence data, and basic Windows computing skills are required.

CPSC 566 Plant Gene Regulation credit: 4 Hours.
Current topics and literature on the function and regulation of higher plant genes. Topics of emphasis: transposable elements, their effect on gene expression and variation, and uses in tagging and isolating genes; the developmental, tissue specific, or environmental regulations of plant genes; the structure, synthesis, subcellular targeting, and regulation of major cereal and legume seed proteins; the use of genetic engineering to explore the regulation of plant genes or to alter traits of agricultural importance. Same as HORT 566. Prerequisite: CPSC 352, MCB 450, or consent of instructor.

CPSC 567 Bioinformatics & Systems Biol credit: 4 Hours.
Bioinformatics and Systems Biology are emerging disciplines that address the need to manage and interpret the massive quantities of data generated by genomics research. In systems biology, advances in genomics, bioinformatics, and structural biology are used to generate global and unified views that integrate fragmentary knowledge of biological systems, their components and their interrelationships. This course is intended for students interested in the crossroads of biology and computational science and includes both lectures and hands-on experience. Same as IB 505. Prerequisite: Graduate level status or consent of instructor.

CPSC 569 Applied Bioinformatics credit: 4 Hours.
Same as ANSC 542 and IB 506. See ANSC 542.

CPSC 588 Plant Biochemistry credit: 4 Hours.
Enzymes and pathways involved in plant intermediary metabolism. Basic cell physiology, bioenergetics, and hormonal regulation of metabolism. Same as HORT 588 and IB 524. Prerequisite: CPSC 484 and MCB 450.

CPSC 590 Professionalism and Ethics credit: 2 Hours.
Topics related to professional activities of agricultural and natural resource scientists, including scientific writing and publishing, grantsmanship and money management, oral presentation skills, finding and keeping a job, and mentoring and teaching are discussed. Ethical dimensions of these areas are explored through case studies. Same as NRES 590.

CPSC 591 Grad Bioinformatics Seminar credit: 1 to 2 Hours.
Same as INFO 591 and LIS 583. See INFO 591.
CPSC 593 Adv Studies in Crop Sciences credit: 1 to 8 Hours.
Directed studies of selected problems or topics relevant to Crop Sciences. Study may be in one of the following fields: 1) Plant Breeding and Genetics; 2) Plant Molecular Biology; 3) Plant Physiology; 4) Crop Production and Ecology; 5) Biometrics; 6) Plant Pathology; 7) Entomology; and 8) Weed Science. Prerequisite: Consent of instructor.

CPSC 594 Professional Orientation CPSC credit: 1 Hour.
Discussion of the philosophy and components of graduate education in Crop Sciences including discussion of the development of methods and strategies useful in research, teaching, and extension. Students will be required to develop and submit a proposal describing planned research for a non-thesis research project, M.S. thesis or Ph.D. Dissertation. Approved for S/U grading only.

CPSC 598 Seminar credit: 1 Hour.
Current research in crops, genetic engineering, plant protection and other topics relevant to Crop Sciences. Approved for both letter and S/U grading. May be repeated to a maximum of 14 hours if topics vary. Prerequisite: Graduate standing.

CPSC 599 Thesis Research credit: 0 to 16 Hours.
Individual research under supervision of faculty. Required of all students working toward the Master of Sciences (thesis option) or Doctor of Philosophy in Crop Sciences. Approved for S/U grading only. May be repeated to a maximum of 16 hours if topics vary.

Curriculum and Instruction (CI)

Courses

CI 199 Undergraduate Open Seminar credit: 1 to 5 Hours.
Approved for both letter and S/U grading. May be repeated.

CI 260 Serving Child in Schools/Comm credit: 3 Hours.
This community engagement course is designed for students interested in working with children (defined as birth through high school), careers serving children, and/or parenthood. The focus for this course is tutoring and mentoring children (elementary through high school). A minimum of two hours per week of approved community service related to children is a requirement of the course. Placements with schools will be made through the course instructor. Class content focuses on relating to children, motivating and engaging children in learning, community institutions and agencies serving children, and social issues affecting the lives of American children today.

CI 335 Content Area App of Educ Tech credit: 1 Hour.
Course will explore a wide range of educational technologies, investigating in detail those that can be effectively integrated into the full range of content areas in education. Course will cover the use of distributed information servers, multi-media collaborative network applications and other advanced instructional technologies to support learning and teaching. Approved for letter grade. Prerequisite: EPS 201, EPSY 236 or equivalent; admission to Elementary or Secondary Teacher Education Program.

CI 395 Independent Study credit: 2 or 3 Hours.
Permits study of problems not considered in other courses; for students who excel in self-direction and intellectual curiosity. Approved for both letter and S/U grading. Prerequisite: Junior or senior standing; minimum GPA of 3.5; completion of Advanced Composition requirement, and consent of adviser and staff member supervising the work.

CI 401 Intro Tchg in a Diverse Societ credit: 3 Hours.
Orients the student to ways in which English, Mathematics, Science, or Social Studies is learned in middle school and senior high school settings. Integrates an introduction to the use of technology as both a tool and a context for teaching and learning. As participants in a series of learning activities, students will reflect on the teaching and learning of English, Mathematics, Science, or Social Studies from an inquiry oriented perspective. Coursework is integrated with a middle or high school field experience to connect theory with practice in an examination of research and current trends in English, Mathematics, Science, or Social Studies education. 3 undergraduate hours. 3 graduate hours. Prerequisite: EPS 201, EPSY 201 or equivalent, concurrent enrollment in EOL 440, and admission to the Secondary Teacher Education Program.

CI 402 Tchg Diverse Middle Grade Stu credit: 3 Hours.
Examines the curriculum and philosophy of teaching students in the middle grades. Students will focus on a number of related topics including teaching a diverse middle school student population, including all students in instruction, using technology for teaching middle school English, Mathematics, Science, and Social Studies and alternative means of assessing students' learning. Seminar content will be integrated with coursework in adolescent development, and special education in middle school settings. Coursework is integrated with a middle grade field experience. 3 undergraduate hours. 3 graduate hours. Prerequisite: CI 401 and concurrent enrollment in CI 473 and EPSY 430.

CI 403 Tchg Diverse High School Stu credit: 3 Hours.
Examines the curriculum and philosophy of teaching students in high school grades. Students will focus on a number of related topics including teaching a diverse student population, including all students in instruction, using technology for teaching high school English, Mathematics, Science, and Social Studies and alternative means of assessing students' learning. Seminar content will be integrated with coursework in instructional technology, assessment, and special education with high school students. Coursework is integrated with a high school field experience. 3 undergraduate hours. 3 graduate hours. Prerequisite: CI 402. Requires concurrent enrollment in EPSY 485 and SPED 405.
CI 404 Tchg and Assessing Sec Sch Stu credit: 4 Hours.
Emphasizes the practical application of theory and recommended practices for developing curriculum, teaching, and assessing learning in the middle and senior high school years. 4 undergraduate hours. 4 graduate hours. Prerequisite: CI 403. Concurrent enrollment in EDPR 442 required.

CI 405 Intro Tchg Elem Age Children credit: 2 Hours.
Examines the contexts of elementary education in the public schools. Includes content on teaching as a profession and community/family contexts of education. Coursework is integrated with field experiences with elementary children. 2 undergraduate hours. 2 graduate hours. Prerequisite: EPS 201; EPSY 236; admission to the Elementary Teacher Education Program.

CI 406 Thry Prac in Elem Schl Tch I credit: 4 Hours.
Course examines teaching in the elementary grades. Students will focus on a number of related topics, including classroom management, instructional design, personal and professional attributes of effective teachers, and multicultural perspectives. Coursework is integrated with field assignments in public elementary schools. 4 undergraduate hours. 4 graduate hours. Prerequisite: CI 405; admission to the Elementary Teacher Education Program.

CI 407 Thry Prac in Elem Schl Tch II credit: 2 Hours.
Course continues the examination of teaching in the elementary grades, begun in CI 405 and CI 406. In addition to continuing the study of some topics introduced in the previous courses, students will focus on the following topics as they complete student teaching: designing instruction for classes including special needs students, managing technology in the classroom, and working with parents. 2 undergraduate hours. 2 graduate hours. Prerequisite: CI 406; admission to the Elementary Teacher Education Program. Requires concurrent enrollment in EDPR 432.

CI 410 Middle School Instruction credit: 2 Hours.
Students will develop an understanding of general middle school instructional theory and practices, with a focus on teaching in their content area(s) of concentration. Emphasis is on middle school instruction based on the current standards of the National Middle School Association. 2 undergraduate hours. 2 graduate hours.

CI 415 Lang Varieties,Cult,& Learning credit: 3 Hours.
For students in the elementary certification program. Introduces students to issues related to first- and second-language development, cultural diversity, and language variation. Addresses the above issues in terms of teaching and learning and serves as a base for subsequent courses that will extend these issues in the content areas. 3 undergraduate hours. 3 graduate hours. Prerequisite: Students must be admitted to the Elementary Education Program prior to taking this course.

CI 420 Found of Early Childhood Educ credit: 3 OR 5 Hours.
Study of the role of the early childhood teacher in designing, organizing, and implementing educational programs for children in preschools, kindergartens, and the first three grades of the elementary school; includes the history, philosophy, and theory of early childhood education; includes morning school practicum providing at least 90 hours of early field experience. Prerequisite: Admission to the Early Childhood Teacher Education Program; EPS 236; EPS 201; CI 468.

CI 421 Prin & Prac in Early Childhood credit: 3 Hours.
Studies the principles and practices of using play as an educational tool in early childhood education; reviews historical, philosophical, and psychological foundations of nursery-kindergarten methods; assesses techniques relating play to various aspects of instruction; surveys materials and equipment; and presents methods of classroom evaluation. 3 undergraduate hours. No graduate credit. Prerequisite: CI 420; admission to the Early Childhood Teacher Education Program. Concurrent enrollment in EDPR 420 and EDPR 438; credit or concurrent registration in EDPR 250, section EC.

CI 422 Families, Communities, Schools credit: 3 Hours.
Principles and practices of building partnerships and collaboration among families, community agencies, and schools in a diverse society for early childhood professionals; covers strategies for building understanding, trust, and effective communication with all children and their families including those who have special needs, have cultural and linguistic differences, come from non-traditional family configurations, and who face poverty, health problems, and/or family dysfunction. 3 undergraduate hours. 3 graduate hours. Prerequisite: Admission to the Early Childhood Teacher Education Program.

CI 424 Child Development & Technology credit: 3 or 4 Hours.
Theories of development will inform an analysis of current technologies marketed for pre-school children; issues related to technology and childhood will be explored. One class each week will focus on lectures and discussions about child development, the second class will focus on presentation of technology or technology genre and evaluation of their value for young children. 3 undergraduate hours. 4 graduate hours. Approved for both letter and S/U grading.

CI 430 Teaching Children Mathematics credit: 3 Hours.
Examines children's learning of mathematics and meaningful instructional methods, representations and materials. Emphasis given to number and operations (including both whole and rational numbers), number theory and statistics/probability. Includes laboratory experience with supervised problem solving. 3 undergraduate hours. 3 graduate hours. Credit is not given for both CI 430 and CI 431. Prerequisite: MATH 103; admission to the Elementary Teacher Education Program.

CI 431 Tchg Elementary Mathematics credit: 4 Hours.
Examines the organization, scope, and sequence of the mathematics program and the functional nature of mathematics; methods, techniques, experiences, and materials of value in teaching mathematics, and the role of the classroom teacher. Includes laboratory experience, with supervised problem solving. 4 undergraduate hours. 4 graduate hours. Credit is not given for both CI 430 and CI 431. Prerequisite: MATH 103; admission to the Special Education Program.
**Cl 432 Invest Approach Elem Math Inst credit: 3 Hours.**

Course will model and examine an investigative approach to elementary mathematics instruction, which is purposeful, inquiry-based, and meaningful mathematics instruction. Particular focus will be given to the teaching and learning of measurement, geometry and algebra/functions. 3 undergraduate hours. 3 graduate hours. Prerequisite: Cl 430 or 431; admission to the Elementary Teacher Education Program.

**Cl 433 Found of Bilingual Educ credit: 2 to 4 Hours.**

Analyzes historical, political, and educational influences on bilingual/ESL education in US. Theoretical foundation of bilingual and ESL programs are examined as well as the effectiveness of program models in promoting academic achievement. Meets standards and course requirements for the Illinois State Board of Education Teaching Approval and Endorsement for Bilingual and ESL teachers. Same as LLS 433. 3 undergraduate hours. 2 or 4 graduate hours.

**Cl 434 Teaching Secondary Math credit: 3 Hours.**

This is a required course for students seeking a mathematics endorsement at the middle school level while earning or holding teacher certification in another subject area. It is also required for students completing the campus Teacher Education Minor in Mathematics for grades 9-12 and the Teacher Education Minor in Mathematics for grades 6-8. This methods course covers: a) The NCTM and Illinois Learning Standards for Mathematics, b) “Best practice” in mathematics pedagogy, c) Assessment in the mathematics classroom, d) technology in mathematics classrooms, and e) the design of unit and lesson plans in mathematics. Students will design and deliver lessons as part of their course work. 3 undergraduate hours. 3 graduate hours. Prerequisite: Although there are no stated prerequisites for this course, it is advised that most, if not all, of the mathematics content requirements be completed before taking this course.

**Cl 435 Computer-Assisted Instruction credit: 4 Hours.**

Computer-assisted instruction (CAI) and its relation to classroom teaching; the teacher's role in development, management, and criticism of CAI lessons; treatment of topics including instructional capabilities of CAI systems, instructional programming, and the design of CAI lessons. 4 undergraduate hours. 4 graduate hours. Prerequisite: A 100 level Computer Science course or consent of instructor.

**Cl 436 Computer and Mathematics Educ credit: 4 Hours.**

Examines the role of the computer as an instructional tool in the secondary school mathematics classroom; reviews curricular materials and develops sample classroom projects in computer mathematics; analyzes computational problems and develops algorithms for their solution; and includes iteration, Monte Carlo methods, and simulation. 4 undergraduate hours. 4 graduate hours. Prerequisite: CS 101 or consent of instructor.

**Cl 437 Educational Game Design credit: 3 or 4 Hours.**

Examines the role that physical and digital games play in learning. Focuses on how people learn through play and how game structures support educational outcomes. Principles of game design are described and students apply them to the design of original games with a specified educational objective. Students learn to prototype, playtest, and evaluate the educational content of games. Surveys and samples games in the areas of serious games, persuasive games, games for impact, etc. 3 undergraduate hours. 4 graduate hours. Prerequisite: Junior standing or consent of instructor.

**Cl 438 Comp Pgrmmg and the Classroom credit: 3 or 4 Hours.**

A course for teaching methods related to computer programming in K-12 settings. Introduces theoretical and practical aspects of computer science education with an emphasis on learning to code and integrating coding into the classroom. Reviews pedagogical trends in computer science education for children of all ages, employing a variety of hands-on activities using developmentally-appropriate materials and resources. No prior programming experience required. 3 undergraduate hours. 4 graduate hours.

**Cl 442 Math, Sci, Tech in Early Child credit: 5 Hours.**

The principles, place and practice of science and mathematics education in early childhood education and in the lives of young children; stresses the functional nature of science and mathematics and their inter-relatedness; presents methods, techniques, experiences, and materials of value in teaching mathematics and science in early childhood education; and the role of the classroom teacher. Opportunity for experience in field and laboratory work. 5 undergraduate hours. 5 graduate hours. Prerequisite: Cl 420, general education requirements in mathematics (MATH 103 or equivalent), 2 years of college science, admission to the Early Childhood Teacher Education Program. Requires concurrent enrollment in EDPR 432.

**Cl 444 Social Stud Early Childhood Ed credit: 2 Hours.**

Course emphasizes the place of social studies in early childhood education program (preschool - grade 3). Focuses on several areas of knowledge related to the social life of the community as it is concerned with young children; (1) knowledge from the social sciences, (2) social cognition and social skills learning, and (3) ways of dealing with cultural and social diversity. 2 undergraduate hours. 2 graduate hours. Prerequisite: Cl 420; admission to the Early Childhood Teacher Education Program.

**Cl 446 Culture in the Classroom credit: 2 to 4 Hours.**

Explores cultural, political, and social factors that affect learning and teaching. Introduces students to the fields of educational anthropology and multicultural education and to the application of cultural information to curriculum development and classroom practice. The 3-hour undergraduate version and 4-hour graduate version meet the Cross-Cultural Studies for Teaching Limited-English-Proficient Students requirement for Bilingual and/or ESL Teaching Approval or Endorsement from the Illinois State Board of Education. 3 undergraduate hours. 2 or 4 graduate hours.
Prerequisite: Admission to a teacher education program.

Provides secondary and K-12 level education majors with principles and practices of effective language and literacy instruction in their content areas, CI 473 Literacy in Content Areas credit: 1 Hour.

EPSY 201; junior standing or consent of instructor.

and motivation. Includes issues related to diversity and ESL related to teaching reading. 3 undergraduate hours. 2 or 4 graduate hours. Prerequisite: CI 475, cultural and linguistic backgrounds, including dialect speakers and English learners. 3 undergraduate hours. 2 or 4 graduate hours. Prerequisite: CI 475, as the nature of social inquiry. Various instructional methods emphasizing direct experiences as well as reading are emphasized. Local, state, and national trends in curriculum and evaluation are addressed. Students engage in social inquiry, as well as develop, implement, and evaluate an action research project focusing in depth on a particular practice of social education. 3 undergraduate hours. 3 graduate hours. Prerequisite: Admission to the Elementary Teacher Education Program.

CI 448 Tchg Elem Social Studies credit: 3 Hours.
Course examines the nature and role of social studies in elementary schools, both in terms of the formal curriculum and of the impact of the school as a social system on children's social learning. Examines multiple approaches to what should be experienced and learned in social studies as well as the nature of social inquiry. Various instructional methods emphasizing direct experiences as well as reading are emphasized. Local, state, and national trends in curriculum and evaluation are addressed. Students engage in social inquiry, as well as develop, implement, and evaluate an action research project focusing in depth on a particular practice of social education. 3 undergraduate hours. 3 graduate hours. Prerequisite: Admission to the Elementary Teacher Education Program.

CI 449 Issues in Latina/o Educ credit: 2 to 4 Hours.
Critiques and explores various theoretical frameworks used to explain Latina/Latino academic achievement. Examines curricular and instructional issues by investigating how different school systems have implemented schooling for Latina/Latino students. Develops critical understanding of the role of education within the Latina/Latino community. Same as LLS 449. 3 undergraduate hours. 2 or 4 graduate hours.

CI 450 Tchg Elem Science I credit: 2 Hours.
Course is the first in a two-course sequence that examines science content, learning theory, and the teaching of science in the elementary school. Introductory course includes an introduction to children's learning in science and science content for elementary age children. 2 undergraduate hours. 2 graduate hours. Prerequisite: Admission to the Elementary Teacher Education Program.

CI 451 Tchg Elem Science II credit: 2 Hours.
Course is the second in a two-course sequence that examines elementary science content, learning theory, and the teaching of science in the elementary school. Course includes an examination of the nature of science, as well as methods and materials for teaching science and assessing science learning. 2 undergraduate hours. 2 graduate hours. Prerequisite: CI 450; admission to the Elementary Teacher Education Program.

CI 465 Lang Literacy in EC Educ I credit: 3 Hours.
Basic principles, techniques, and materials for the emergent literacy classroom. Emphasizes linguistic and cultural factors in culturally diverse settings. 3 undergraduate hours. 3 graduate hours. Prerequisite: EPSY 236; admission to the Early Childhood Teacher Education Program. Concurrent enrollment in CI 420.

CI 466 Lang Literacy in EC Educ II credit: 2 Hours.
Emphasizes developmentally appropriate practices for the teaching of reading and writing in grades K-2. 2 undergraduate hours. 2 graduate hours. Prerequisite: CI 465. Requires concurrent enrollment in EDPR 432.

CI 467 Princ Tchg Lit to Child Youth credit: 3 Hours.
Examines literature written for children and youth and the uses of literature in the school curriculum. 3 undergraduate hours. 3 graduate hours. Credit is not given for both CI 467 and LIS 403. Prerequisite: One college course in literature; admission to the Elementary Teacher Education Program.

CI 468 Children's Lit for EC Edu credit: 2 Hours.
Examines literature written for children ages birth-eight years, extensive reading and analysis of literature in all genres and formats; evaluations of literature in relation to cognitive and linguistic development, emergent literacy, linguistic and cultural diversity, and family and school literacy; reviews and applies theories about the functions of literature. 2 undergraduate hours. 2 graduate hours. Prerequisite: One college course in literature; admission to the Early Childhood Teacher Education Program.

CI 471 Princ Prac Foster Indep Rdg credit: 2 to 4 Hours.
Emphasizes reading comprehension and reading to learn in content fields in grades K-8. Includes focus on teaching reading to students from diverse cultural and linguistic backgrounds, including dialect speakers and English learners. 3 undergraduate hours. 2 or 4 graduate hours. Prerequisite: CI 475, a course in beginning reading, or consent of instructor.

CI 472 Tchg Reading in Grades 4-12 credit: 2 or 4 Hours.
Examines current literacy practices beyond the primary grades including factors related to reading comprehension, vocabulary development, fluency, and motivation. Includes issues related to diversity and ESL related to teaching reading. 3 undergraduate hours. 2 or 4 graduate hours. Prerequisite: EPSY 201; junior standing or consent of instructor.

CI 473 Literacy in Content Areas credit: 1 Hour.
Provides secondary and K-12 level education majors with principles and practices of effective language and literacy instruction in their content areas, consistent with the Core Language Arts and Content Standards of the Illinois State Board of Education. 1 undergraduate hour. 1 graduate hour. Prerequisite: Admission to a teacher education program.
CI 475 Teach Elem Rdg & Lang Arts I credit: 3 or 4 Hours.
First of a two-course sequence that examines the basic theories, issues, methods, and materials for a developmental K-8 language arts program. Emphasizes the need to integrate the four language arts (reading, writing, speaking, and listening) as tools for learning across the curriculum. Addresses cultural diversity in language arts instruction, with emphasis on linguistic diversity. 3 or 4 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CI 467 and admission to the Elementary Teacher Education Program. Elementary Education students register for 3 hours. Special Education students register for 4 hours.

CI 476 Teach Elem Rdg & Lang Arts II credit: 3 Hours.
Second of a two-course sequence that examines the basic theories, issues, methods, and materials for a developmental K-8 language arts program. It continues to emphasize the need to integrate the four language arts (reading, writing, speaking, and listening) as tools for learning across the curriculum. This second course, however, places a relatively greater emphasis on writing than on reading, speaking, and listening. Continues to address cultural diversity in language arts instruction, with emphasis on linguistic diversity. 3 undergraduate hours. 3 graduate hours. Prerequisite: CI 467 and CI 475; admission to the Elementary Teacher Education Program.

CI 477 Biling ESL Methods & Material credit: 4 Hours.
Focuses on bilingual and English-as-a-second language (ESL) curriculum development and instruction for bilingual and second-language learners (K-12) in a variety of language and program settings. Emphasizes bilingual and ESL materials selection and development, bilingual and ESL literacy instruction, bilingual and ESL content area instruction, and sheltered English instruction. Issues related to second-language acquisition, cultural and linguistic diversity, and parental and community involvement are reviewed. 4 undergraduate hours. 4 graduate hours. Prerequisite: CI 433 or consent of instructor.

CI 484 Learning Technologies credit: 3 or 4 Hours.
Same as HRD 472. See HRD 472.

CI 499 Issues and Development in Educ credit: 2 to 4 Hours.
Seminar course on topics not treated by regularly scheduled courses; requests for initiation may be made by students or faculty member. 2 to 4 undergraduate hours. 2 to 4 graduate hours. Approved for both letter and S/U grading. May be repeated to a maximum of 8 hours. Prerequisite: Junior standing.

CI 501 Fundamentals of Curr Develop credit: 4 Hours.
Examines a variety of definitions of curriculum developments; readings reflect current theories and research related to substantive issues in the field. How learning is influenced by stated goals of education, cultural background of the learners, structure of the school setting, competencies of teachers, psychological characteristics of the learners, and means of measuring student achievement.

CI 502 Introduction to Reading credit: 2 or 4 Hours.
Provides an overview of reading in the US. Topics covered include the definition of reading and its importance, theoretical models and philosophies of reading and reading instruction, the history of reading instruction, the development of reading skill, current research-based reading instruction, Federal legislation affecting reading instruction, and professional and state standards related to reading instruction.

CI 503 Reading Instruction, K-5 credit: 4 Hours.
The first of two courses focusing on research-based reading instruction for students in grades K-12. This course focuses primarily on the development of literacy from birth to preschool and reading instruction for the elementary grades, K-5.

CI 504 Reading Instruction, 6-12 credit: 4 Hours.
The second of two courses focusing on research-based reading instruction for students in grades K-12. This course focuses primarily on reading instruction for middle and high school students, grades 6-12. Reading comprehension in the content areas is a particular emphasis. Prerequisite: CI 503.

CI 505 Reading for Diverse Students credit: 4 Hours.
Reviews many of the linguistic, cultural, and social factors that affect students (K-12) reading instruction, assessment, and development. Drawing on socio-cognitive and socio-constructivist theories of literacy and culturally responsive pedagogy and social justice issues, the course involves the evaluation and design of instruction and assessments for students from diverse linguistic, cultural, and class backgrounds.

CI 506 Reading Coaching & Leadership credit: 4 Hours.
The course consists of two 2-hour components (1 and 2). The first component introduces students to course readings and discussions that explore the various roles of the K-12 reading specialist, including leadership, assessment, and coaching. The second component involves completion of an internship with a reading coach or reading specialist in which students observe and take on the roles of the reading specialist in professional development, curriculum design, instruction, and the management of resources. Both of these components are completed within the same semester. Prerequisite: CI 503, CI 504.

CI 507 Prob Trends in Spec Fields credit: 4 Hours.
Intensive examination of problems and trends in the subject fields. May be repeated to a maximum of 8 hours.

CI 508 Urban Schs & Schooling credit: 4 Hours.
This course is for anyone interested in issues of education in urban settings. It provides an overview of sociopolitical perspectives on teaching and learning for Latina/o, African American, American Indian, English learners, and other marginalized youth. The course explores how issues of identity and power are negotiated by students, communities, and teachers. Participants in the course will develop an understanding on how racism, classism, and the politics of language operate within urban schools. An emphasis of the course is on solutions that address social justice.
CI 509 Curriculum Research credit: 4 Hours.
Reviews the principal methodologies used in research on curriculum problems; emphasizes subject-analytical, large-scale survey, experimental, case methods, and clinical studies; emphasizes the conceptual and practical problems in such research.

CI 512 Mult Educ/Global Perspectives credit: 4 Hours.
Examines important topics in the area of multicultural education in the United States and around the world. Engages students in the critical exploration of theories and literature that interrogate traditional views of multicultural education. Analyzes issues of race, class, gender, religion, nationality, xenophobia, homophobia, and ability in the contexts of classrooms and other educational settings. Course work focuses on an emancipatory curriculum and pedagogy for transformation and social justice education. Same as AFST 555.

CI 517 Bilingual and ESL Assessment credit: 4 Hours.
Explores the role of assessment in education of culturally and linguistically diverse students in K - 12 classrooms. Current trends in assessment in the United States will be analyzed as well as how assessments are used for the identification and placement of bilingual and ESL students. The use and scoring of language proficiency assessments will be examined along with various forms of classroom-based assessment. Meets ISBE assessment requirements for a bilingual and ESL teaching approval or endorsement. Same as LLS 517. Prerequisite: CI 433 or consent of instructor.

CI 518 Evaluation of Edu Programs credit: 4 Hours.
Origins, assumptions, applications, and development of approaches to educational program evaluation in practice over the past twenty years; unobtrusive measures and noneducation evaluation systems; and practice in collecting evaluative data. Same as EPSY 572. Prerequisite: EPSY 480, one year of work with children or youth in an institutional setting, or consent of instructor.

CI 519 Methods of Child Study credit: 4 Hours.
Studies ways in which teachers can evaluate child behavior and development with an emphasis on classroom application; instruction and practice in the use and interpretation of observations, anecdotal records, rating scales, interviews, achievement tests, intelligence tests, questionnaires, and sociometric and projective techniques. Prerequisite: EPSY 404 or consent of instructor.

CI 520 Programs in Early Child Edu credit: 4 Hours.
Advanced course intended primarily for teachers and supervisors of younger children, ages three to eight; reviews and analyzes research findings, experimentation, and current trends in curriculum organization, procedures, and materials essential to developing classroom programs for children.

CI 521 Curr Prob Trends in EC Edu credit: 4 Hours.
Includes principles underlying education practices in day care centers, preschool/nursery and kindergarten settings derived from theory and research in developmental psychology, social psychology, anthropology, and other related disciplines.

CI 522 Arts in EC: Curr in Context credit: 4 Hours.
Role of dance, drama, music, literature, and the visual arts in early childhood education, focusing on production/performance, appreciation, history, and aesthetics. Interrelationships among curriculum, notions of child development, cultural contexts, and unique traditions of different arts disciplines. Current art education practices in the United States and other countries. Requires attendance at performances and visits to an art museum. Prerequisite: Graduate status.

CI 530 Trends and Issues in Math Edu credit: 4 Hours.
Addresses theories of learning, research studies, curriculum development projects, and other factors that have influenced elementary mathematics programs; also considers problems and issues in contemporary programs. Prerequisite: CI 500 or CI 520 or consent of instructor.

CI 532 Prof Development in Math Ed credit: 4 Hours.
Considers research perspectives, policies and practices associated with the professional development of mathematics teachers. Specifically, students will examine what policymakers recommend for effective professional development, what research findings seem to suggest, how schools do professional development for successful mathematics teaching, and the implications of policy and real world practices for equality of opportunity for mathematics learning.

CI 533 Problem Solving in Math Ed credit: 4 Hours.
Focuses on the role of problem solving in the learning and teaching of mathematics. Examines mathematical problem solving processes, as well as issues surrounding the use of problem solving in K-12 mathematics classrooms, including recent reform trends, equity issues, and distinctions among teaching "about", "for", and "through" problem solving.

CI 534 Teaching and Learning Geometry credit: 4 Hours.
This course concentrates on the teaching and learning of geometry in middle school and high school by examining the history of school geometry, comparing curricular expectations and rationales for geometry instruction over time. The course provides an overview of theoretical models regarding the teaching and learning of geometry. At the same time, the course provides opportunities for discussing practical issues of teaching geometry with work on geometrical problems and laboratory sessions using dynamic geometry. Prerequisite: Acceptance into a graduate program.

CI 535 Teaching and Learning Algebra credit: 4 Hours.
This course examines perspectives about the teaching and learning of algebra in middle school and high school. Topics include an examination of historical perspectives on algebra in the school curriculum, a study of the nature of algebra and algebraic thinking, an analysis of teaching strategies for teaching algebra, an examination of documents on algebraic reasoning, and explorations of the use of technological tools to support the teaching and learning of algebra. Prerequisite: Acceptance into a graduate program.
CI 536 MST Proseminar I credit: 2 Hours.
Provides an introduction to doctoral studies, research, and careers in Math, Science, and Technology (MST) Education. Topics include a basic orientation to research in MST education, doctoral program hurdles, potential career paths, and MST education research funding. Although this seminar is designed for CI students in MST education, students in other programs may also enroll.

CI 537 Discourse in STEM Classrooms credit: 4 Hours.
An overview of relevant literature regarding discourse in STEM classrooms with emphasis on teachers’ perspectives, students’ perspectives, and interactions between the teacher and the students. Discusses research methodologies for the study of discourse in STEM classrooms and implications of research for the education and the professional development of pre-service and in-service teachers. Prerequisite: Acceptance into a graduate program.

CI 540 Current Issues in Sci Edu credit: 4 Hours.
Advanced seminar in science education for teachers, consultants, and administrators. Identifies major problems and issues; analyzes current trends and research; and develops a philosophical framework related to science education. Prerequisite: Teacher education course in science and two years of college science; or consent of instructor.

CI 541 Learning in Science credit: 4 Hours.
Focuses on influential theories of student learning and their implications for science education. Examines the theoretical underpinnings of these learning theories as well as their implications for student learning, instruction, and assessment.

CI 542 Science Ed & Phil of Science credit: 4 Hours.
Surveys issues in philosophy of science that are central to science education through an exploration of the works of twentieth century philosophers of science who were most influential in shaping thinking about science in the science education community. Relevant readings from science and history of science are also explored. Prerequisite: College level coursework in a science discipline or consent of instructor.

CI 543 Constructivism and MST Educ credit: 4 Hours.
Intended for those interested in a perspective on mathematics, science, and technology (MST) learning and teaching called constructivism, which has come to prominence in the past two decades, particularly in MST education. Constructivism focuses on the processes of sense-making or meaning construction through experience and/or social discourse. Designed to help participants examine the implications of constructivism for learning and teaching in mathematics, science, and technology. Prerequisite: A basic familiarity with mathematics, science, and/or technology.

CI 544 Ed Reforms & Inquiry credit: 4 Hours.
This course examines the history of science education reform efforts since the 1950s from the lens of inquiry, teaching and learning. The course examines developments in our understandings of inquiry as a pedagogical approach and set of instructional outcomes in middle and high school science education, as well as implications for instructions in precollege science classroom.

CI 545 Virtual Worlds in Education credit: 4 Hours.
Same as EPSY 554. See EPSY 554.

CI 546 MST Proseminar II credit: 2 Hours.
The course examines the process of double-blind review and the metrics associated with refereed research journals and researcher productivity in mathematics, science, and technology education. Students will be provided with practical experiences as journal ‘referees’ through reviewing manuscripts submitted for publication, and will develop thorough understandings of the entire process of publishing in refereed journals in the field of science, mathematics, and technology education. May be repeated in separate terms to a maximum of 4 hours if topics vary.

CI 547 Sociopol Persp Math Science credit: 4 Hours.
This course is for anyone interested in equity-related issues in mathematics and science education. It provides an overview of sociopolitical perspectives on mathematics and science education, including how issues of identity, power, and equity play out in teachings, learning, and research. Students will develop an understanding of how racism, classism, and the politics of language operate within mathematics and science classroom and in the practice of mathematics and science in society at large. An emphasis of the course is on solutions that address social justice.

CI 548 Capstone Project credit: 2 Hours.
Part I of the course focuses on the design on an action research project (capstone project), which integrates pedagogical and science content ideas addressed in the program courses. The project amounts to an empirical investigation of a student-generated research question around issues focused on science teaching and learning. Students are expected to collect data for their project, preferably in their own classrooms, in the period between Parts I and II of the course. Part II focuses on the analysis, interpretation, and discussion of the data collected, and the implications of the findings for classroom practice. May be repeated in separate terms to a maximum of 4 hours.

CI 550 Methods of Educational Inquiry credit: 4 Hours.
Critical consideration of research concepts and methods used in contemporary educational inquiry. Same as EPSY 573 and SPED 550.

Information listed in this catalog is current as of 11/2014
CI 552 Qualitative Writing credit: 4 Hours.
Focuses on analysis of data and writing of qualitative/ethnographic research in educational contexts. Topics include the history of qualitative research practices; approaches to the analysis and interpretation of multiple forms of data, including coding, discourse analysis, text analysis, and structural/post-structural analysis; different styles of qualitative writing; social theory as a framing device; and writing for publication. Provides a theoretically informed but very practical, hands-on approach to qualitative writing for graduate researchers across the broad range of educational and social science contexts. One part of the course focuses on methods of analysis through application, while a second part is designed as a writer's workshop in which students "write up" the data from a study in three narrative styles. Assignments include weekly readings, three short writing assignments, and a more substantial writing project. Advanced graduate standing is useful but not required.

CI 557 Using Theory in Tea Ed Res credit: 4 Hours.
Students in this course will read a variety of theoretical viewpoints in order to frame and critically examine teacher education research. Students will be encouraged to use multiple theories to frame research questions and findings as a way to situate themselves as researchers and consider ways in which multiple theoretical perspectives can be used to examine and interpret different aspects of their research in teacher education.

CI 558 Programs in Teacher Education credit: 4 Hours.
The focus of this course will be a study of programs in teacher education considered in light of historical, social, and policy influences and also related to wider issues in contemporary teacher education efforts and research. We will consider the current context of teacher preparation programs in the U.S., examine the historical factors that have brought U.S. teacher education to this point, assess the influence of public policy on teacher education in the U.S. and globally, and study a variety of exemplary models of teacher education in the U.S. and globally. Students will conduct a study of a particular program and present this in a poster session at the end of the semester.

CI 560 Trends & Issues Language Arts credit: 4 Hours.
Advanced seminar in literacy for teachers, researchers, and specialists. Focuses on trends and issues in elementary and middle school language arts. Current theories, relevant research and practical applications are considered in relation to reading, writing, listening, and speaking.

CI 561 Theory Prac in Child Comp credit: 4 Hours.
Focuses on theory and practice of children's written composition from preschool through middle school. Includes development of understanding of texts, pedagogy, motivation and classroom practices that facilitate writing. Students learn about their own writing, participate in peer writing conferences, and produce research or curricular projects for use in classrooms. Prerequisite: CI 475 and CI 476, or course in writing, or consent of instructor.

CI 562 Ling and the School Curr credit: 4 Hours.
Analyzes linguistics for the school curriculum including dialect diversities, use of language in social contexts, and variations in oral and written forms of language. Gives attention to classroom discourse in US and international settings, and ethnography of communication. Prerequisite: Admission to a doctoral program.

CI 563 Writing Studies I credit: 4 Hours.
Same as ENGL 505. See ENGL 505.

CI 564 Writing Studies II credit: 4 Hours.
Same as ENGL 506. See ENGL 506.

CI 565 Topics Research and Writing credit: 4 Hours.
Same as ENGL 582. See ENGL 582.

CI 566 Topics Writ Pedagogy & Design credit: 4 Hours.
Same as ENGL 583. See ENGL 583.

CI 567 Child Lit in the School Curr credit: 4 Hours.
Investigates trends and issues related to teaching literature in the school; focuses attention upon the organization and planning of a balanced literature curriculum (fictional and informational). Prerequisite: CI 467 or LIS 404; and a college course in English literature or consent of instructor.

CI 568 Cont Classics in Child Lit credit: 4 Hours.
Critically examines children's books that have received major national and international awards and prizes and the requirements for that distinction; gives particular attention to the most recent publications so honored and their implications for use in the classroom. Prerequisite: CI 467 or CI 567, or LIS 404; and ENGL 106, or equivalent; or consent of instructor.

CI 569 Topics Discourse and Writing credit: 4 Hours.
Same as ENGL 584. See ENGL 584.

CI 570 Issues & Trends in Reading credit: 4 Hours.
The timing of beginning reading, the influence of certain linguistic findings on methodology and terminology in instructional materials, and the influence of research on methodology are addressed in a way that provides a historical perspective for evaluating the merit of emerging issues and trends. Prerequisite: CI 475 and CI 476 or equivalent, or consent of instructor.

CI 573 Early/Elem Rdg Inst credit: 4 Hours.
Planning and evaluating reading instruction and materials in nursery school through Grade Three. Prerequisite: CI 475 or CI 471, or equivalent; or consent of instructor.
CI 575 Assessment in Reading credit: 4 Hours.
Nature, causes, and diagnosis of reading difficulties; translation of diagnostic information into instructional practice. Prerequisite: CI 475 or CI 471, or equivalent.

CI 576 Assessment-Based Reading Instr credit: 4 Hours.
Supervised experiences; special attention to evaluative and interpretative techniques in cases of severe reading disabilities based on the analysis of specific reading needs. May be repeated to a maximum of 8 hours. Prerequisite: CI 575.

CI 577 Clinical Practicum in Reading credit: 4 Hours.
Diagnostic procedures and individual instruction with small groups of children who have reading difficulties. Prerequisite: CI 575 and CI 576.

CI 578 Bilit Dev of Young Children credit: 4 Hours.
Helps students understand the language and literacy development of young bilinguals. Students will develop an understanding of the issues in biliteracy research, explore the diversity of research topics and perspectives in biliteracy research, and learn to think and write critically about research on early biliteracy development.

CI 580 Qual Rsch in Lang & Lit Educ credit: 4 Hours.
Focuses on the goals and nature of qualitative, observational study of life in educational settings, with an emphasis on oral and written languages. Adopts interpretive and critical perspectives on research and includes key readings on the ethnography of oral and written communication in schools, given a socioculturally and linguistically diverse society. All students will conduct a small scale study in an education site. Prerequisite: At least one semester of graduate course work.

CI 581 Aesthetics and Curriculum credit: 4 Hours.
Provides a synthesis of theoretical and autobiographical perspectives on aesthetic issues and their ramifications for the development and the critique of arts curricula. Drawing on art as an important source of knowledge and communication, the course reviews ideas from aesthetics and arts education (e.g., music, poetry, literature, visual arts, theater and dance education). Identifies principles common to all art forms but manifested differently in each of them to develop tools and skills for the design of, evaluation of, and research on arts curricula. Same as DANC 581. Prerequisite: Graduate standing, and background with one of the arts, or consent of instructor.

CI 582 Rdg and Wrtg Across the Curr credit: 4 Hours.
Designed for elementary and middle school educators, this course focuses on theory and practice related to both intradisciplinary integration (across the language arts) and interdisciplinary integration (across the content areas). Specific methods and strategies for fostering effective integrated literacy instruction are explored. Prerequisite: CI 475 and CI 476, or equivalent methods course in reading and language arts.

CI 584 Theories in SLA credit: 4 Hours.
Same as EALC 584, EPSY 563, FR 584, GER 584, ITAL 584, LING 584, PORT 584, and SPAN 584. See SPAN 584.

CI 585 Informational Children's Lit credit: 4 Hours.
Intended for elementary and middle school teachers, this course is an introduction to informational, or nonfiction children's literature. Students will explore the importance of including informational literature in the curriculum, how to select informational children's literature, and methods for teaching with informational text and for helping children learn from informational text. Prerequisite: CI 467, or equivalent children's literature course; CI 475 and CI 476, or equivalent methods course in reading and language arts.

CI 587 Multicultural Literature K-12 credit: 4 Hours.
This course focuses on the meaning, function, and value of multicultural/multiethnic literature in teaching and learning. Through readings, dialogue, and research, students will focus on rewards of teaching and reading multiculturally that make it worth any effort involved. Blending multicultural theory and research, literary study, and educational practice, this course is appropriate for graduate students in education, library science, and English literature and for any other graduate student interested in the role of literature in our culturally diverse society. Prerequisite: A college literature course taken as part of an approved teacher certification program, college literature course in English literature, or consent of instructor.

CI 590 Sem for Adv Stu of Education credit: 0 to 8 Hours.
Approved for both letter and S/U grading. Prerequisite: Admission to doctoral study.

CI 591 Field Study & Thesis Seminar credit: 4 to 8 Hours.
Assists doctoral candidates in planning field studies and thesis problems. Students are expected to present their studies at each of four stages: (1) the inception, delimitation, tentative design stage; (2) the proposed design stage; (3) the revised design stage; and (4) the final design stage. Students are expected to analyze critically all presentations. Prerequisite: Admission to doctoral study.

CI 592 Ed.D. Proseminar credit: 2 Hours.
Course covers various topics related to research in practice and critical reading of research in the field of curriculum and instruction. May be repeated to a maximum of 6 hours in separate terms. Prerequisite: Ed.D. students.

CI 595 Independent Study credit: 2 or 4 Hours.
Offers opportunity and challenge of self-directive, independent study; develops the individual's ability as an independent student, and enables the student to pursue needed study in a field in which appropriate courses are not being offered during a given term. May be repeated to a maximum of 8 hours with approval. Prerequisite: Approval of study outline by adviser and the department chairperson prior to enrollment.

CI 599 Thesis Research credit: 0 to 16 Hours.
Individual direction of research and thesis writing. Approved for S/U grading only. May be repeated.

Information listed in this catalog is current as of 11/2014
Czech (CZCH)

Czech Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/CZCH)

Courses

CZCH 101 Elementary Czech I credit: 4 Hours.
Develops basic proficiency in Czech in listening, speaking, reading, and writing.

CZCH 102 Elementary Czech II credit: 4 Hours.
Continuation of CZCH 101. Prerequisite: CZCH 101.

CZCH 199 Undergraduate Open Seminar credit: 1 to 5 Hours.
May be repeated.

CZCH 201 Second-year Czech I credit: 4 Hours.
Develops intermediate-level proficiency in Czech in listening, speaking, reading, and writing. Prerequisite: CZCH 102 or equivalent.

CZCH 202 Second-year Czech II credit: 4 Hours.
Continuation of CZCH 201. Prerequisite: CZCH 201 or equivalent.

CZCH 484 Readings in Czech credit: 3 or 4 Hours.
Reading and analysis of selected texts. 3 undergraduate hours. 4 graduate hours. Prerequisite: CZCH 202 or consent of instructor.

Dance (DANC)

Dance Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/DANC)

Courses

DANC 100 Intro to Contemporary Dance credit: 3 Hours.
Overview of major works, figures, and trends responsible for shaping dance as an evolving contemporary art form. The course will have lecture, viewing, discussion and experiential (studio participation) components. For non-dance majors.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Western Compartv Cult

DANC 101 Modern Dance I credit: 2 Hours.
Introduction to basic dance technique and movement improvisation; the study of motion as an art, group relationships in improvisation, and discussion of choreographic ideas. For non-dance majors. May be repeated to a maximum of 8 hours.

DANC 102 Modern Dance II credit: 2 Hours.
Intermediate dance technique and improvisation. For non-dance majors. May be repeated to a maximum of 8 hours. Prerequisite: DANC 101 or consent of instructor.

DANC 103 Contact Improvisation credit: 2 Hours.
Introduction to basic elements of Contact Improvisation through learning skills such as weight sharing, falling, rolling, responding to touch, momentum, gravity and disorientations. Course work will include dancing, dance making, viewing dance, in-class discussions and short writing assignments. Students must attend the Department of Dance's "November Dance" production in KCPA. May be repeated to a maximum of 8 hours. Prerequisite: For non-dance majors.

DANC 104 Making Dances credit: 2 Hours.
Introduction to basic choreographic elements. Course work will include dancing, dance making, viewing dance, in-class discussions and short writing assignments. Concert attendance is required. May be repeated to a maximum of 8 hours. Prerequisite: For non-dance majors.

DANC 105 Jazz Dance I credit: 2 Hours.
Introduction to basic dance technique and stylistic work in the jazz idiom. May be repeated to a maximum of 8 hours. Prerequisite: For non-dance majors.

DANC 106 Jazz Dance II credit: 2 Hours.
Progressive development of the concepts and skills in DANC 105. May be repeated to a maximum of 8 hours. Prerequisite: DANC 105 or equivalent; or consent of instructor. For non-dance majors.

DANC 107 Ballet I credit: 2 Hours.
Introduction to ballet for nondance majors. May be repeated to a maximum of 8 hours. Prerequisite: For non-dance majors.

DANC 108 Ballet II credit: 2 Hours.
Progressive development of the concepts and skills in DANC 107; for the non-dance major. May be repeated to a maximum of 8 hours. Prerequisite: Two semesters of DANC 107 or equivalent or consent of instructor. For non-dance majors.
DANC 109 Ballet III credit: 2 Hours.
Intermediate level of Ballet technique for non-dance majors. Course is a continuation and development of the skills in DANC 108. May be repeated to a maximum of 8 hours. Prerequisite: Two semesters of DANC 108 or equivalent or consent of instructor. For non-dance majors.

DANC 110 Beginning Jazz Technique credit: 1 Hour.
Introduction to basic dance techniques and stylistic work in the jazz idiom for experienced dancers. Emphasis on a conceptual understanding of jazz style (as related to America's own cultural diversity) and the development of the specific skills necessary for performance and teaching. May be repeated to a maximum of 2 hours. Prerequisite: Major standing in Dance or consent of instructor.

DANC 111 Cultural Dance Forms credit: 2 Hours.
Provides students with the physical study of various world dance forms. Topics reflect specializations of faculty, such as Capoeira, African dance, Balinese dance, and Chinese forms. May be repeated to a maximum of 4 hours in the same term and 8 hours in separate terms.

DANC 112 Hip Hop credit: 2 Hours.
Hip-Hop dance technique will consist of the study and practice of Urban dance forms grounded in hip-hop culture. Students will explore the multiple dimensions of hip-hop dance as they train in the fundamentals of each form, learn its respective historical context, and access ways of incorporating individual ideas and lived experiences into their dancing. May be repeated in separate terms up to 8 hours.

DANC 120 Tap Dance I credit: 1 Hour.
Introduction to basic tap technique for non-dance majors. Emphasis is on a conceptual understanding of tap style and the development of the specific skills needed for performance. May be repeated to a maximum of 8 hours. Prerequisite: For non-dance majors.

DANC 121 Tap Dance II credit: 2 Hours.
Intermediate level of tap dance technique for non-dance majors. Course is a continuation of DANC 120, emphasizing a progression in movement vocabulary, style, rhythm, and performance quality. May be repeated to a maximum of 8 hours. Prerequisite: DANC 120 or equivalent, or consent of instructor.

DANC 131 Production Practicum I credit: 1 or 2 Hours.
Practical experience in the production of dance concerts mounted in the Krannert Center for the Performing Arts. May be repeated to a maximum of 6 hours. (1 hour credit per concert up to 2 hours per term).

DANC 150 Orientation to Dance credit: 2 Hours.
Survey of the field including dance as a theatre art, careers, injury prevention and nutrition. Also serves to orient incoming students to the faculty, programs, and policies of the Department of Dance, and the production and performing resources in the Krannert Center for the Performing Arts. Prerequisite: Major standing in Dance or consent of instructor.

DANC 160 Beg Contemp Modern Tech Core credit: 1 to 3 Hours.
Elementary technique for majors with emphasis on a conceptual understanding of movement principles and the development of technical skill and performance sensitivity. May be repeated to a maximum of 18 hours. Prerequisite: Major standing in Dance or consent of instructor.

DANC 162 Beginning Improvisation Technique credit: 1 Hour.
Experience in selective, basic processes of movement involvement, both individual and group; special attention to organic, economical bodily use, the dynamics and quality of which are necessary to the activity being performed. Prerequisite: Limited to dance majors.

DANC 166 Beginning Ballet Tech Core credit: 1 or 2 Hours.
Elementary ballet for dance majors; emphasizes placement, refinement of adagio, pirouette, jumps, and connecting steps. May be repeated to a maximum of 8 hours. Prerequisite: Major standing in Dance or consent of instructor.

DANC 167 Beginning Ballet Tech Elect credit: 1 or 2 Hours.
Elementary ballet for dance majors; emphasizes placement, refinement of adagio, pirouette, jumps, and connecting steps. May be repeated to a maximum of 8 hours. Prerequisite: Major standing in Dance or consent of instructor.

DANC 199 Undergraduate Open Seminar credit: 1 to 5 Hours.
May be repeated to a maximum of 9 hours.

DANC 200 Listen and Move credit: 3 Hours.
In-depth study of musical form, history, culture, and styles, taught from a physical learning, i.e., dance, perspective. Musical and dance forms will be studied across cultures and time periods, from both a technical and a cross-cultural perspective. Content will be delivered as a series of video lectures and performances, and online readings. Students will create movement studies that mirror the musical forms being analyzed, produce video documentation of these works, engage in peer review of other students' performance work, and complete exams that cover the cultural and historical aspects of the examples studied. This course satisfies the General Education Criteria for: UIUC: Literature and the Arts

DANC 210 Int Jazz Technique credit: 1 Hour.
Introduction to basic dance techniques and stylistic work in the jazz idiom for experienced dancers. Emphasis on a conceptual understanding of jazz style (as related to America's own cultural diversity) and the development of the specific skills necessary for performance and teaching. May be repeated to a maximum of 2 hours. Prerequisite: Major standing in Dance or consent of instructor.
DANC 211 Int Hip Hop Technique credit: 1 Hour.
Hip-Hop dance technique will consist of the study and practice of Urban dance forms grounded in hip-hop culture. Students will explore the multiple dimensions of hip-hop dance as they train in the fundamentals of each form, learn its respective historical context, and access ways of incorporating individual ideas and lived experiences into their dancing. May be repeated in separate terms for a maximum of 8 hours. Prerequisite: For majors only.

DANC 215 Int Tap Dance Technique credit: 1 Hour.
Introduction to basic tap technique for experienced dancers. Emphasis on a conceptual understanding of tap style and the development of the specific skills necessary for performance and teaching. May be repeated to a maximum of 2 hours. Prerequisite: Major standing in Dance, or consent of instructor.

DANC 220 Perf Pract Student Works I credit: .5 to 2 Hours.
Performance laboratory involving the rehearsal and performance of student works under faculty supervision. Approved for S/U grading only. Prerequisite: Consent of instructor. A maximum of 16 hours of performance credit may be counted toward degree requirements.

DANC 221 Performance in Grad Thesis I credit: 1 to 3 Hours.
Performance laboratory involving the rehearsal and performance of student works under faculty supervision performed in MFA Thesis concert. Prerequisite: Consent of instructor. A maximum of 16 hours of performance credit may be counted toward degree requirements.

DANC 222 Perf Pract November I credit: 1 to 3 Hours.
Performance laboratory involving the rehearsal and performance of works by faculty and visiting artists performed in November Dance. Prerequisite: Consent of instructor. A maximum of 16 hours of performance credit may be counted toward degree requirements.

DANC 223 Perf Pract February I credit: 1 to 3 Hours.
Performance laboratory involving the rehearsal and performance of works by faculty and visiting artists performed in February Dance. Prerequisite: Consent of instructor. A maximum of 16 hours of performance credit may be counted toward degree requirements.

DANC 231 Production Practicum II credit: 1 or 2 Hours.
Practical experience in the production of dance concerts mounted in the Krannert Center for the Performing Arts. May be repeated to a maximum of 6 hours. (1 hour credit per concert up to 2 hours per term).

DANC 232 Repertory Company credit: 2 Hours.
Provides dance majors with diverse performing experiences in the community. Venues will include area schools, nursing homes, and special populations. Students will participate in the creation of lecture-demonstrations which may include improvisation and choreography. Participation in all performances is a requirement. May be repeated to a maximum of 6 hours. Prerequisite: Major standing in Dance or consent of instructor.

DANC 240 Dance History credit: 3 Hours.
Introduction to major artistic movements in dance history from ancient Greece through the 20th century. Goal of the course is to gain a broad understanding of dance in relation to socio-political ideologies of gender, race, sexuality, and national identities. Prerequisite: Major standing in Dance or consent of instructor.

DANC 245 Introduction to Somatics credit: 1 Hour.
Introduction to the basic concepts and principles of somatic practices, or body-mind disciplines, as related to dance. Through reading, writing, and experiential work, students will learn basic tenets of a number of somatic practices such as Ideokinesis and Imagery, Body-Mind Centering, The Alexander Technique, Bartenieff Fundamentals, and the Feldenkrais Method. Exploration of the ways in which somatics has helped to shape current dance training practices by looking at common themes and distinguishing features of these modalities.

DANC 259 Contact Improv for Act/Mus/Dan credit: 1 Hour.
In this interdisciplinary course, performing arts students learn physical skills necessary for the practice of the contact improvisation (CI) partnering dance form as well as improvisational and performance skills. Encourages contemplation of the broader philosophical implications inherent in the form: community building and accepting difference. Content includes visits to lectures and events outside the Dance Department. May be repeated in separate terms to a maximum of 4 hours.

DANC 260 Int Contemp Modern Tech Core credit: 1 to 3 Hours.
Progressive development of the concepts in DANC 160 and DANC 161, with emphasis on the qualitative and definitive performance of a variety of technical styles. May be repeated to a maximum of 18 hours. Prerequisite: Major standing in Dance and successful completion of two semesters of DANC 160; or consent of instructor.

DANC 261 Int Contemp Modern Tech Elect credit: 1 to 3 Hours.
Progressive development of the concepts in DANC 160 and DANC 161, with emphasis on the qualitative and definitive performance of a variety of technical styles. May be repeated to a maximum of 18 hours. Prerequisite: Major standing in Dance and successful completion of two semesters of DANC 160; or consent of instructor.

DANC 262 Choreographic Process I credit: 2 Hours.
Theory and practice in principles of dance composition; emphasis on solo creative work using various approaches to composition. Prerequisite: DANC 163 or consent of instructor.
DANC 266 Intermediate Ballet Tech Core credit: 1 or 2 Hours.
Intermediate ballet for dance majors; a progressive development of movement concepts and vocabulary in DANC 166 and DANC 167, with emphasis on technical development and extended movement combinations. May be repeated to a maximum of 8 hours. Prerequisite: Major standing in Dance and successful completion of two semesters of DANC 166 or DANC 167; or consent of instructor.

DANC 267 Intermediate Ballet Tech Elect credit: 1 or 2 Hours.
Intermediate ballet for dance majors; a progressive development of movement concepts and vocabulary in DANC 166 and DANC 167, with emphasis on technical development and extended movement combinations. May be repeated to a maximum of 8 hours. Prerequisite: Major standing in Dance and successful completion of two semesters of DANC 166 or DANC 167; or consent of instructor.

DANC 268 Music Theory for Dancers credit: 3 Hours.
Introduction to basic music theory with a concentration on rhythm. The first half of the term will concentrate on 1) learning, understanding, and being conversant in basic music parameters; 2) analytical listening; 3) notation; 4) transcripts; 5) reading notation/following a score; 6) performance of simple rhythm patterns. The second half will deal with form and formal analysis as it relates to choreography, as well as more advanced parameters of music theory. Prerequisite: Major standing in Dance or consent of instructor.

DANC 301 Yoga Practicum for Dancers credit: 1 Hour.
Introduces basic yoga asanas (postures) and brief overview of the 8-limb system of yoga. Focus will be on understanding correct alignment and developing inner awareness. Weekly home practice, journal, and discussions about yoga philosophy are required. May be repeated in separate terms to a maximum of 8 hours.

DANC 310 World Dance Forms credit: 1 Hour.
Provides students with the physical study of various world dance forms. Topics reflect specializations of faculty, such as Capoiera, African dance, Balinese dance, and Chinese forms. May be repeated in the same term to a maximum of 2 hours. May be repeated in separate terms to a maximum of 8 hours. Prerequisite: Consent of instructor.

DANC 330 Dance Documentation credit: 1 Hour.
This is a hands-on course for students interested in exploring the relationship between dance and camera and the fundamentals of dance documentation. Using critical and experiential approach, we will explore the technical and artistic capabilities of mini-DV cameras and film-editing software to create dance performance documentation. Students will learn to execute clear and effective camerawork in relationship to dance performance, and to utilize editing software to most clearly display the artistic intent of the choreographers and directors. May be repeated up to 8 hours in separate terms. Prerequisite: For majors only, or by instructor approval.

DANC 331 Production Practicum III credit: 1 or 2 Hours.
Practical experience in all aspects of the production of dance concerts mounted in the Krannert Center for the Performing Arts and within the Department of Dance. May be repeated to a maximum of 6 hours. (1 hour credit per concert up to 2 hours per term). Prerequisite: DANC 131, DANC 231 or equivalent, and consent of instructor.

DANC 340 Dancing Black Popular Culture credit: 3 Hours.
Introduces students to black dance aesthetics and its interconnectedness with American popular culture. By exploring its cultural, political and historical roots, coupled with theoretical concepts of “the popular” and ties to the vernacular, the course will be organized around significant markers that have shaped black dance’s development. Same as AFRO 340.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: US Minority Culture(s)

DANC 345 Dance Anatomy and Kinesiology credit: 3 Hours.
The study of human and anatomy and kinesiology, specifically as applied to dance. The human musculoskeletal system, movement analysis, and conditioning principles are covered both theoretically and practically.
This course satisfies the General Education Criteria for:
UIUC: Life Sciences

DANC 350 Creative Dance for Children credit: 3 Hours.
Through lecture, discussion and practice, students develop skills to teach elements and concepts of dance to children ages 4-10. Course includes strategies for behavior and time management, spatial transitions, and how to organize and communicate creative concepts clearly and effectively. Students will observe master teaching and apply teaching techniques, acquire lesson plans that form the basis for a creative dance curriculum and the skills to implement them, and participate in all phases of a creative dance curriculum, including informal performance. Same as ARTE 350 and HDFS 361. May be repeated to a maximum of 6 hours. Prerequisite: Consent of instructor.

DANC 360 Int/Adv Contemp Mod Tech Core credit: 1 to 3 Hours.
Progressive development of the concepts in DANC 260 and DANC 261, with emphasis on virtuosity and versatility. May be repeated to a maximum of 18 hours. Prerequisite: Major standing in Dance or consent of instructor; departmental placement.

DANC 361 Int/Adv Contemp Mod Tech Elect credit: 1 to 3 Hours.
Progressive development of the concepts in DANC 260 and DANC 261, with emphasis on virtuosity and versatility. May be repeated to a maximum of 18 hours. Prerequisite: Major standing in Dance or consent of instructor; departmental placement.

Information listed in this catalog is current as of 11/2014
DANC 362 Choreographic Process II credit: 2 Hours.
Choreography for the experienced student; includes performance of at least one original work. May be repeated to a maximum of 10 hours. Prerequisite: DANC 263 or consent of instructor.

DANC 363 Advanced Improvisation credit: 1 Hour.
Exploration of the physical skills and philosophical concepts at the base of improvisation practice. Students will develop individual and collective approaches to improvisatory structures, systems and performance contexts as well as look at the historical ways that improvisation has been used in contemporary performance. The course will culminate in performance in various public and private contexts.

DANC 366 Int/Adv Ballet Tech Core credit: 1 or 2 Hours.
Intermediate/Advanced ballet for dance majors; a progressive development of movement concepts and vocabulary in DANC 266 and DANC 267. For dancers of advanced technical level with the ability to execute the ballet vocabulary. May be repeated to a maximum of 8 hours. Prerequisite: Major standing in dance or consent of instructor; or Departmental placement.

DANC 375 Production in Dance credit: 1 Hour.
Examines the theoretical and practical aspects of dance production. Includes lighting, costumes, scenery, props, audio, make-up, and management. Commitment outside of scheduled class includes participation in the production of the annual Senior Concert.

DANC 400 Viewing Dance credit: 1 Hour.
Overview of contemporary dance from the United States, Canada, and Europe focusing on the current works of significant emerging and established choreographers working in the field today. 1 undergraduate hour. 1 graduate hour. Approved for S/U grading only. May be repeated to a maximum of 4 hours.

DANC 401 Alexander Tech for Dancers credit: 1 Hour.
Introduces the Alexander Technique: a practical method for changing habitual movement patterns which interfere with coordination, ease, and efficiency of movement. The course focuses on learning the principles through hands-on work, readings, discussions, and application to dance. 1-3 individual lessons outside of class required per term. 1 undergraduate hour. 1 graduate hour. Prerequisite: Major standing in Dance or consent of instructor.

DANC 402 Alexander Technique Practicum credit: 1 or 3 Hours.
Facilitates conscious and reasoned control of the human organism as a psychophysical whole. Helps students recognize habits that constitute their daily activities and discard, through conscious control, those that impede open-minded enquiry and self-reliance. Through one-on-one work with certified teachers and trainees, students will learn to change habitual patterns of coordination. 1 undergraduate hour. 3 graduate hours. May be repeated in separate terms to a maximum of 8 undergraduate hours or 6 graduate hours.

DANC 410 Advanced Jazz Technique credit: 1 Hour.
Continuation of DANC 110, emphasizing the conceptual understanding of the jazz style and development of specific skills necessary for this idiom. No undergraduate credit. 1 graduate hour. May be repeated to a maximum of 4 hours. Prerequisite: Major standing in Dance or DANC 110 or equivalent and consent of instructor.

DANC 411 Adv Hip Hop Technique credit: 1 Hour.
Advanced Level Hip Hop Class. Hip-Hop dance technique will consist of the study and practice of Urban dance forms grounded in hip-hop culture. Students will explore the multiple dimensions of hip-hop dance as they train in the fundamentals of each form, learn its respective historical context, and access ways of incorporating individual ideas and lived experiences into their dancing. No undergraduate credit. 1 graduate credit. May be repeated in separate terms up to 8 hours. Prerequisite: For majors only.

DANC 420 Perf Pract Student Works II credit: .5 to 2 Hours.
Performance laboratory involving the rehearsal and performance of student works under faculty supervision. 0.5 to 2 undergraduate hours. 0.5 to 2 graduate hours. Approved for S/U grading only. May be repeated to a maximum of 16 hours. Prerequisite: Consent of instructor.

DANC 421 Performance in Grad Thesis II credit: 1 to 3 Hours.
Performance laboratory involving the rehearsal and performance of student works under faculty supervision performed in MFA Thesis concert. 1 to 3 undergraduate hours. 1 to 3 graduate hours. May be repeated to a maximum of 16 hours. Prerequisite: Consent of instructor.

DANC 422 Perf Pract November II credit: 1 to 3 Hours.
Performance laboratory involving the rehearsal and performance of works by faculty and visiting artists performed in November Dance. 1 to 3 undergraduate hours. 1 to 3 graduate hours. May be repeated to a maximum of 16 hours. Prerequisite: Consent of instructor.

DANC 423 Perf Pract February II credit: 1 to 3 Hours.
Performance laboratory involving the rehearsal and performance of works by faculty and visiting artists performed in February Dance. 1 to 3 undergraduate hours. 1 to 3 graduate hours. May be repeated to a maximum of 16 hours. Prerequisite: Consent of instructor.
DANC 424 Collaborative Performance credit: 1 or 2 Hours.
COLAB is an interdisciplinary class fusing improvisation, composition and collaborative projects for students in the departments of Music, Dance and Engineering. The class will be run along the lines of a professional performance company. Work in class will include sharing and adapting the principles and elements from each of these disciplines with a focus on producing material that will be presented in numerous public performances throughout the semester. 1 undergraduate hour. 2 graduate hours. May be repeated to a maximum of 3 undergraduate hours or 6 graduate hours in separate terms. Prerequisite: DANC 162 or DANC 259 or consent of instructor.

DANC 425 Dance Internship credit: 1 to 4 Hours.
Supervised field experience in community and/or professional organizations in a variety of danced-related areas. Provides students with work experience and exposure to professional situations. Written and/or video documentation and department presentation of internship activities required. 1 to 4 undergraduate hours. 1 to 4 graduate hours. Approved for S/U grading only. May be repeated to a maximum of 6 hours. Prerequisite: Major standing in Dance and consent of instructor.

DANC 431 Production Practicum IV credit: 1 or 2 Hours.
Practical experience in all aspects of the production of dance concerts mounted in the Krannert Center for the Performing Arts and within the Department of Dance. 1 to 2 undergraduate hours. 1 to 2 graduate hours. May be repeated to a maximum of 6 hours. (1 hour credit per concert up to 2 hours per term). Prerequisite: DANC 131 or DANC 231, or equivalent and consent of instructor.

DANC 441 Dance History Seminar credit: 3 Hours.
Survey of critical approaches in dance studies including feminist theory, poststructural, and postcolonial theory, historiography, and ethnographic research methods. Course topics will cover a variety of theatrical, popular, and social dance practices. 3 undergraduate hours. 3 graduate hours. May be repeated to a maximum of 6 undergraduate hours and 9 graduate hours. Prerequisite: DANC 240 or consent of instructor.

DANC 445 Dance Kinesiology and Somatics credit: 4 Hours.
Introduction to human anatomy and kinesiology, specifically as applied to dance; introduction to the field of Somatics; approaches to improving the use of the body; exploration of the connections between the body, the mind, and movement. 4 undergraduate hours. 4 graduate hours. Prerequisite: Major standing in dance or consent of instructor.

DANC 450 Teaching Workshop credit: 3 Hours.
Methods and approaches to the teaching of dance technique in the modern, ballet, and jazz idioms. 3 undergraduate hours. 3 graduate hours. Prerequisite: Junior standing in Dance or consent of the instructor.

DANC 451 Ind Study and Special Topics credit: 1 to 4 Hours.
Special projects in research or creative investigation taught on an individual or class basis. 1 to 4 undergraduate hours. 1 to 4 graduate hours. May be repeated to a maximum of 8 hours. Prerequisite: Junior standing in Dance and consent of instructor.

DANC 455 Supervised Teaching credit: 1 to 4 Hours.
Practical teaching experience under the supervision of a faculty member; weekly conference devoted to evaluation and planning. Teaching areas include major and non-major university courses and classes for community adults and children. 1 to 4 undergraduate hours. 1 to 4 graduate hours. May be repeated to a maximum of 8 hours with approval.

DANC 459 Contact Improv Act/Mus/Dan II credit: 1 or 2 Hours.
An interdisciplinary course in which performing arts students learn physical skills necessary for the practice of the contact improvisation (CI) partnering dance form as well as improvisational and performance skills. Encourages contemplation of the broader philosophical implications inherent in the form: community building and accepting difference. Content includes visits to lectures and events outside the dance department. 1 or 2 graduate hours. May be repeated in separate terms to a maximum of 4 undergraduate hours or 6 graduate hours if topics vary.

DANC 460 Adv Contemp Modern Tech Core credit: 1 to 3 Hours.
Modern technique for advanced graduate students. 1 to 3 undergraduate hours. 1 to 3 graduate hours. May be repeated to a maximum of 16 hours. Prerequisite: Major standing in dance or consent of instructor; or departmental placement.

DANC 461 Adv Contemp Modern Tech Elect credit: 1 to 3 Hours.
Modern technique for advanced graduate students. 1 to 3 undergraduate hours. 1 to 3 graduate hours. May be repeated to a maximum of 16 hours. Prerequisite: Major standing in dance or consent of instructor; or departmental placement.

DANC 462 Composition Workshop credit: 2 Hours.
Structured creative utilization of formal choreographic elements in the creation, rehearsal, staging, and performance of original dance works. 2 undergraduate hours. 2 graduate hours. Approved for S/U grading only. Prerequisite: Graduate standing in dance or consent of instructor.

DANC 464 Composer-Chor Workshop credit: 2 Hours.
For experienced composers and choreographers; explores the many relationships between musical composition and choreography. Same as MUS 471. 2 undergraduate hours. 2 graduate hours. Prerequisite: For dance majors, DANC 263 or consent of instructor; for music majors, MUS 106 or equivalent, other compositional experience, and consent of instructor.
DANC 465 Screendance credit: 3 Hours.
Provides a comprehensive approach, from camera use to editing techniques, leading to a practical ability to develop and produce video projects on a basic level. Course focuses on developing choreographic projects designed specifically for the video/film format. 3 undergraduate hours. 3 graduate hours. Prerequisite: DANC 330. Non-dance majors admitted by audition on a space-available basis.

DANC 466 Advanced Ballet Tech Core credit: 1 to 3 Hours.
Ballet for advanced students. 1 to 3 undergraduate hours. 1 to 3 graduate hours. May be repeated to a maximum of 16 hours. Prerequisite: Major standing in dance or consent of instructor or departmental placement.

DANC 467 Advanced Ballet Tech Elect credit: 1 to 3 Hours.
Ballet for advanced students. 1 to 3 undergraduate hours. 1 to 3 graduate hours. May be repeated to a maximum of 16 hours. Prerequisite: Major standing in dance or consent of instructor or departmental placement.

DANC 495 Senior Career Seminar credit: 1 Hour.
Addresses survival strategies and the transition from academe to the profession. Course content includes research and discussion of career possibilities in performance, choreography, teaching, community dance work, therapy, and the dance-related fields of health/fitness/recreation. Students will research individualized projects in an area of interest. 1 undergraduate hour. No graduate credit. Prerequisite: Senior standing in Dance.

DANC 498 Senior Thesis Production credit: 1 or 2 Hours.
The planning, design, and production of the Senior Capstone Project (DANC 499) for public performance. Students will work as a team to plan the Senior Concerts including designing and producing promotional materials and managing technical rehearsals and performances. 1 or 2 undergraduate hours. No graduate credit. May be repeated in separate terms. Prerequisites: DANC 375. Concurrent enrollment in DANC 499 is required.

DANC 499 Senior Thesis Project credit: 1 to 2 Hours.
The creation of a culminating choreographic/performance project. 1 to 2 undergraduate hours. No graduate credit. Approved for S/U grading only. May be repeated to a maximum of 2 hours. Prerequisite: DANC 362 and senior standing in Dance. Concurrent enrollment in DANC 498 is required.

DANC 510 Grad Seminar/Special Topics credit: 4 Hours.
Survey of professional organizations, publications, scholarly resources and trends culminating in student presentation of projects examining current issues in the field. May be repeated to a maximum of 12 hours. Prerequisite: Graduate standing in Dance.

DANC 520 Synthesis Laboratory credit: 4 Hours.
Required laboratory course focused on the practice of synthesizing expertise in choreography, physical practice, teaching, written and oral communication, and creative career planning. Critical theory and inquiry will be intertwined with rigorous examination of performance and construction of dance-making. Issues of sustaining practice, testing and conveying one's mission and vision, and elaborating on one's individual research in relationship to the field will be emphasized. May be repeated up to 8 hours in separate terms. Spring and Fall terms, even years. Prerequisite: Graduate standing in Dance required.

DANC 530 Somatics in Dance Training credit: 3 Hours.
Addresses current issues and trends in the teaching of dance technique, with a focus on the incorporation of dance science and somatics into dance training. Course includes reading, writing, discussion, teaching observation, and experiential work. Prerequisite: Completion of DANC 445 and DANC 450, or consent of instructor.

DANC 531 MFA Prof Practice Seminar credit: 1 Hour.
A course examining current field practices and trends including curatorial practices, and interdisciplinary practices. Includes preparation of practical materials for career presentation and examination of resources. Approved for S/U grading only. May be repeated to a maximum of 3 hours. Prerequisite: Graduate standing in Dance.

DANC 532 Digital Media for Dancers credit: 2 Hours.
Survey of the manipulation of digital images, video, and audio, with an emphasis on how these technologies are valuable to the dancer as both creative and marketing tools. Prerequisite: Graduate standing in dance.

DANC 541 Contemporary Directions I credit: 2 Hours.
A critical approach to 20th century dance with emphasis on the evolution of ideas that have influenced and shaped the dance of today. Prerequisite: Graduate standing in dance or consent of instructor.

DANC 542 Contemporary Directions II credit: 2 Hours.
Continuation of Dance 541 Contemporary Directions I emphasizing viewing, discussing, analyzing, and writing about the work of current significant contemporary choreographers worldwide with special attention toward contextualizing student research. May be repeated in separate terms up to 4 hours. Prerequisite: DANC 541 or consent of instructor. For graduate students only except by permission of instructor.

DANC 550 Advanced Research in Dance credit: 1 to 4 Hours.
Advanced Independent Research in an opportunity for exceptional returning level professional MFA candidates in Dance to design and implement an in-depth examination of a creative, historical, contemporary, philosophical, technological, or educational facet of dance under the guidance of a faculty advisor. May be repeated for a maximum of 12 graduate hours. Prerequisite: Consent of instructor, advisor, and graduate program director.
DANC 560 Advanced Physical Practice credit: 1 to 4 Hours.
MFA candidates are required to maintain a demonstrated level of technical proficiency through a consistent graduate level physical practice. The physical practice of each candidate is determined through advisement and may include ballet technique, modern technique, Alexander Technique, yoga, or additional somatic practices offered in the department. Approved for S/U grading only. May be repeated to a maximum of 24 hours. Prerequisite: MFA candidate in dance.

DANC 562 Graduate Composition II credit: 2 Hours.
Includes reading, writing, and discussion. Students will examine the creative process, the conventions that form choreographers’ works, and the historical situations from which specific dance works spring. Students will produce works in specific contexts outside the standard theatre setting. They will be responsible for all promotional and production aspects of a project that will be presented to the public. Prerequisite: Dance 462.

DANC 581 Aesthetics and Curriculum credit: 4 Hours.
Same as CI 581. See CI 581.

DANC 598 Creative Thesis Project credit: 4 Hours.
The design, implementation, and completion of a culminating creative project in choreography and/or performance. Approved for S/U grading only. May be repeated to a maximum of 8 hours. Prerequisite: 28 hours of graduate work in dance, including 4 hours in choreography.

E. Asian Languages & Cultures (EALC)

EALC Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/EALC)

Courses

EALC 114 Introduction to East Asian Art credit: 4 Hours.
Same as ARTH 114. See ARTH 114.
This course satisfies the General Education Criteria for:
UIUC: Non-Western Cultures

EALC 120 East Asian Civilizations credit: 3 Hours.
Same as HIST 120. See HIST 120.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: Non-Western Cultures

EALC 122 History East Asian Religions credit: 3 Hours.
Introduction to East Asian religious traditions; emphasizes the ideas of Confucianism, Taoism, and Buddhism in China and their historical interactions. Same as RLST 122.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: Non-Western Cultures

EALC 130 The Chinese Language credit: 3 Hours.
An introduction to the sociolinguistic study of the Chinese language. Approved for both letter and S/U grading. This course does not fulfill the campus foreign language requirement.
This course satisfies the General Education Criteria for:
UIUC: Non-Western Cultures
UIUC: Social Sciences

EALC 132 Zen credit: 3 Hours.
Same as RLST 132. See RLST 132.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: Non-Western Cultures

EALC 199 Undergraduate Open Seminar credit: 1 to 5 Hours.
May be repeated.

EALC 220 Traditional China credit: 3 Hours.
Same as HIST 220. See HIST 220.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: Non-Western Cultures
EALC 221 Modern China credit: 3 Hours.
Same as HIST 221. See HIST 221.
This course satisfies the General Education Criteria for:
UIUC: Non-Western Cultures

EALC 222 Chinese Thght Confucius to Mao credit: 3 Hours.
Examination of China’s principal philosophical, religious, and political schools of thought - such as Confucianism, Taoism, Zen Buddhism, and Maoism - as ways of understanding one of the world’s major civilizations; the period of the classical philosophers, the glory years of empire, and the troubled era of Western contact receive approximately equal attention. Same as HIST 222 and RLST 224.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: Non-Western Cultures

EALC 226 Premodern Japanese History credit: 3 Hours.
Same as HIST 226. See HIST 226.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: Non-Western Cultures

EALC 227 Modern Japanese History credit: 3 Hours.
Same as HIST 227. See HIST 227.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: Non-Western Cultures

EALC 240 Chinese Civilization credit: 3 Hours.
Introduction to the historical development of Chinese civilization. Emphasis will be on broad themes and the connections among cultural values, social institutions, political structures, and contacts with outsiders. Visual and literary evidence will be stressed.
This course satisfies the General Education Criteria for:
UIUC: Non-Western Cultures

EALC 250 Intro to Japanese Culture credit: 3 Hours.
Topical introduction to Japanese cultural and aesthetic life with attention to cultural and aesthetic patterns as they are reflected in literature, language, and the arts.
This course satisfies the General Education Criteria for:
UIUC: Non-Western Cultures
UIUC: Social Sciences

EALC 275 Masterpieces of East Asian Lit credit: 3 Hours.
Study of major works in the literary traditions of China and Japan, including haiku, noh, Tale of Genji, kabuki, Tang poetry, Ming theater, and the colloquial tale. Same as CWL 275. No knowledge of Chinese or Japanese language required.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Non-Western Cultures

EALC 278 Contemporary East Asia credit: 3 Hours.
Introduction to aspects of daily life in East Asia in relation to local and extra-local political and economic structures and transformations. Same as ANTH 287.

EALC 285 Intro to Korea Through Film credit: 3 Hours.
Course uses film, literary, and ethnographic works to explore the impact of Post-Colonial (1945-present) socioeconomic and cultural transformation on the personal and collective South Korean experience. Same as ANTH 285.

EALC 287 Introduction to Buddhism credit: 3 Hours.
Same as RLST 287. See RLST 287.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: Non-Western Cultures

EALC 305 Japan Lit in Translation I credit: 3 Hours.
Survey of Japanese literature from earliest times to 1600; readings in prose, poetry, and drama in English translation. Same as CWL 311.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Non-Western Cultures
EALC 306 Japan Lit in Translation II credit: 3 Hours.
Survey of Japanese literature from 1600 to recent times; readings in prose, poetry, and drama in English translation; and lectures and papers. Same as CWL 312.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Non-Western Cultures

EALC 307 Classical Chinese Lit credit: 3 Hours.
Surveys Chinese literary works from the classical tradition (history, philosophy, poetry, literary criticism) with attention to intellectual and artistic values. Same as CWL 307. No knowledge of Chinese is required.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Non-Western Cultures

EALC 308 Chinese Popular Lit credit: 3 Hours.
Surveys Chinese popular literary works written in the vernacular language (short story, novel, and drama), with attention to cultural and artistic values. Same as CWL 308. No knowledge of Chinese is required.
This course satisfies the General Education Criteria for:
UIUC: Literature and the Arts
UIUC: Non-Western Cultures

EALC 333 Language in Japanese Society credit: 3 Hours.
Examines aspects of language use in contemporary Japanese society, including cross-cultural communication, social/regional variations, and problems surrounding linguistic/ethnic minorities in Japanese society. Prerequisite: Completion of JAPN 202 or equivalent.

EALC 343 Gov & Pol of China credit: 3 Hours.
Same as PS 343. See PS 343.

EALC 361 Women in East Asia credit: 3 Hours.
Interdisciplinary inquiry into the cultural and social patterns that have shaped women's lives in China, Japan, and Korea. Same as GWS 361.
This course satisfies the General Education Criteria for:
UIUC: Non-Western Cultures
UIUC: Social Sciences

EALC 365 Contemporary Korean Society credit: 3 Hours.
Introduces contemporary Korean society: the twentieth century struggle of Korea for an individual identity; the Korean road to modernization and its significance for the United States and the developing world. Same as SOC 365.
This course satisfies the General Education Criteria for:
UIUC: Non-Western Cultures
UIUC: Social Sciences

EALC 367 History of Korea credit: 3 Hours.
Historical examination of the Korean experience, from the earliest times to the present day: basic political, social, economic patterns; examination of the cultural and intellectual tradition; Korea's historical role in Asia; the Korean colonial experience; Korea in the modern world. Same as HIST 325.
This course satisfies the General Education Criteria for:
UIUC: HistPhilosoph Perspect
UIUC: Non-Western Cultures

EALC 390 Individual Study credit: 2 to 4 Hours.
Directed readings in the languages and literatures of East Asia. The area selected depends on the student's interest. May be repeated to a maximum of 8 hours. Prerequisite: Consent of instructor.

EALC 391 Honors Tutorial credit: 2 to 4 Hours.
Tutorial in the civilizations of East Asia. The country and discipline depend on student interests. All students submit a substantial paper. May be repeated to a maximum of 6 hours. Prerequisite: Consent of instructor.

EALC 398 Colloquium in EALC credit: 3 Hours.
May be repeated to a maximum of 6 hours. Prerequisite: Junior standing.

EALC 401 Chinese Art credit: 3 or 4 Hours.
Same as ARTH 401. See ARTH 401.

EALC 402 Ways of Seeing in Edo Japan credit: 3 or 4 Hours.
Same as ARTH 402. See ARTH 402.

EALC 403 Word and Image in Chinese Art credit: 3 or 4 Hours.
Same as ARTH 403. See ARTH 403.
EALC 411 The Chinese Novel credit: 3 or 4 Hours.
Reading and analysis of representative pieces of Chinese fiction from the fourth century B.C. to 1900 with emphasis on the development of Chinese fiction, its place in the literary tradition, and its role in society. Same as CWL 411. 3 undergraduate hours. 4 graduate hours. No knowledge of Chinese is required.

EALC 412 Mod Chinese Lit in Translation credit: 3 or 4 Hours.
Reading and analysis of representative selections from Chinese literature since the May 4 Movement (early 20th century), with special attention to the relationship between literature and ideology in twentieth-century China. Same as CWL 412. 3 undergraduate hours. 4 graduate hours. No knowledge of Chinese is required.

EALC 413 Premodern Chinese Drama credit: 3 or 4 Hours.
Survey of Chinese drama from the 12th century through the early 20th century. Students will read major works of Chinese drama in English translation, as well as works on stagecraft, performance styles, the social functions of drama and the social role of actors. Videotaped contemporary performances of traditional drama will be viewed. Same as CWL 416 and THEA 488. 3 undergraduate hours. 4 graduate hours.

EALC 415 Mod Japan Lit in Translation credit: 2 to 4 Hours.
Critical study of selected 20th century writers with an emphasis on cultural background, world view, human relationships, aesthetic theories, Japanese and Western traditions, and universal literary issues. Same as CWL 415. 3 undergraduate hours. 2 or 4 graduate hours. Requires no knowledge of Japanese; readings and films. Prerequisite: Junior standing or consent of instructor.

EALC 420 China Under the Qing Dynasty credit: 2 to 4 Hours.
Same as HIST 420. See HIST 420.

EALC 421 Soc-Econ Hist Modern China credit: 2 to 4 Hours.
Same as HIST 422. See HIST 422.

EALC 425 Chinese Poetry and Translation credit: 3 Hours.
A critical introduction to major Chinese poetic genres and an in depth examination of various translation strategies used in the translation of Chinese poetry. The poetry component acquaints students with essential aspects of Chinese language and poetry and thus enables them to evaluate the translated texts from the perspectives of both an insider and outsider. The translation component entails both the evaluation of existing translations and practice by the students. Same as TRST 430. 3 undergraduate hours. 3 graduate hours.

EALC 426 Early Modern Japan credit: 3 or 4 Hours.
Same as HIST 426. See HIST 426.

EALC 427 Twentieth-Century Japan credit: 3 or 4 Hours.
Same as HIST 427. See HIST 427.

EALC 430 Intro to East Asian Ling credit: 3 or 4 Hours.
Same as LING 430. See LING 430.

EALC 466 Japanese Cinema credit: 3 or 4 Hours.
Same as MACS 466. See MACS 466.

EALC 469 The Ethnography of Korea credit: 3 or 4 Hours.
Survey of the English-language anthropological study and representation of Korea, situating this literature topically, historically, theoretically, and methodologically. Same as ANTH 489. 3 undergraduate hours. 4 graduate hours. Prerequisite: ANTH 103 or ANTH 230, or EALC 285 or EALC 365 or EALC 367, or consent of instructor.

EALC 475 Discourse&Grammar in EA Langs credit: 3 or 4 Hours.
Examines how the regularities in language use that we think of as 'grammar' emerge from communicative needs in discourse. Focuses on analysis of grammatical phenomena in East Asian languages. Requires advanced knowledge of Chinese, Japanese, or Korean. 3 undergraduate hours. 4 graduate hours. Prerequisite: LING 430; junior standing or consent of instructor.

EALC 476 Classical Chinese Thought credit: 3 or 4 Hours.
Inquiry into the major schools of Chinese thought in the Classical Period through the Han (206 B.C. - A.D. 220): Confucianism, Taoism and Legalism. Topics such as the concept of history, military thought and logic will be covered. Readings are in English. Same as CWL 478 and HIST 425. 3 undergraduate hours. 4 graduate hours. Prerequisite: One 200 or 300-level course on Chinese culture or consent of instructor.

EALC 484 Buddhist Meditation credit: 3 Hours.
Same as RLST 484. See RLST 484.
EALC 488 History of Chinese Buddhism credit: 3 or 4 Hours.
Survey of the history of Chinese Buddhism since its introduction; analysis of Buddhological trends and styles; and the sociocultural milieu of Chinese Buddhism and its place in the total history of ideas and lifestyles. Same as RLST 488. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: RLST 287 or consent of instructor.

EALC 490 Individual Study credit: 2 to 12 Hours.
Supervised individualized study of a topic not covered by regular course offerings. The topic must be approved by the instructor. 2 to 12 graduate hours. May be repeated to a maximum of 16 hours. Prerequisite: Consent of instructor.

EALC 495 Topics in Asian Religions credit: 3 or 4 Hours.
Same as RLST 495. See RLST 495.

EALC 500 Proseminar in EALC credit: 4 Hours.
Interdisciplinary introduction for first-term East Asian Languages and Cultures graduate students to western-language writings on East Asia that have been important to modern scholarship on the region. The proseminar will cover the three cultures of the region in an interdisciplinary fashion, focusing on the methods of various disciplines in their treatment of East Asia. Method refers both to the kinds of materials studies, and the theory and tools used in research.

EALC 501 Seminar in Chinese Art credit: 4 Hours.
Same as ARTH 501. See ARTH 501.

EALC 520 Problems in Chinese History credit: 4 Hours.
Same as HIST 520. See HIST 520.

EALC 521 Seminar in Chinese Literature credit: 4 Hours.
Examination of Chinese literature from a variety of genres and historical periods intended to prepare students for independent work in literary criticism and analysis. Readings include both primary texts and important works of secondary scholarship. Students will produce a term paper based on independent research. May be repeated to a maximum of 8 hours with approval.

EALC 522 Seminar in Chinese History credit: 4 Hours.
Same as HIST 521. See HIST 521.

EALC 526 Problems in Japanese History credit: 4 Hours.
Same as HIST 526. See HIST 526.

EALC 527 Seminar in Japanese History credit: 4 Hours.
Same as HIST 527. See HIST 527.

EALC 531 Seminar in Japanese Lit credit: 4 Hours.
Examination of Japanese literature from a variety of genres and historical periods designed to prepare advanced students for independent work in literary criticism and analysis. Texts in the vernacular are read and discussed from a variety of critical perspectives. Students produce a term paper based on current scholarship in the field of Japanese literary studies. May be repeated in same or subsequent terms as topics vary to a maximum of 12 hours. Prerequisite: A reading knowledge of Japanese.

EALC 550 Seminar in EALC credit: 4 Hours.
Seminar on selected topics. Topic varies with instructor. May be repeated to a maximum of 12 hours. Prerequisite: Consent of instructor.

EALC 560 East Asian Language Pedagogy credit: 4 Hours.
Course is for teachers of Japan, Chinese, or Korean language who wish to improve their teaching skills and learn more about second and foreign language acquisition specific to the East Asian Language context. Besides reviewing research on language teaching methodology and curriculum development, students will observe each other conduct practice classes and analyze videotapes of class sessions. Undergraduates may enroll with consent of instructor and the Graduate College. Prerequisite: Native or near-native fluency in Japan, Chinese, or Korean.

EALC 567 Popular Religion in East Asia credit: 4 Hours.
Same as RLST 568. See RLST 568.

EALC 584 Theories in SLA credit: 4 Hours.
Same as CI 584, EPSY 563, FR 584, GER 584, ITAL 584, LING 584, PORT 584, and SPAN 584. See SPAN 584.

EALC 588 Sem Second Lang Learn credit: 4 Hours.
Same as FR 588, GER 588, ITAL 588, LING 588, PORT 588, and SPAN 588. See SPAN 588.

EALC 590 Individual Study and Research credit: 2 to 12 Hours.
Supervised individual investigation or study of a topic not covered by regular course offerings. The topic selected by the student and the proposed plan of study must be approved by the adviser and the instructor. May be repeated. Prerequisite: Consent of instructor.

EALC 599 Thesis Research credit: 0 to 16 Hours.
Research and guidance in writing theses for advanced degrees. Approved for S/U grading only. May be repeated to a maximum of 16 hours. Prerequisite: Satisfactory completion of the preliminary examinations.

Information listed in this catalog is current as of 11/2014
Earth, Society, & Environment (ESE)

ESE Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/ESE)

Courses

ESE 103 Earth's Physical Systems credit: 4 Hours.
Same as GEOG 103. See GEOG 103.
This course satisfies the General Education Criteria for:
UIUC: Physical Sciences

ESE 104 Geology of the National Parks credit: 3 Hours.
Same as GEOL 104. See GEOL 104.
This course satisfies the General Education Criteria for:
UIUC: Physical Sciences

ESE 106 Geographies of Globalization credit: 3 Hours.
Same as GEOG 106. See GEOG 106.
This course satisfies the General Education Criteria for:
UIUC: Social Sciences
UIUC: Western Compartv Cult

ESE 111 Emergence of Life credit: 3 Hours.
Same as GEOL 111. See GEOL 111.
This course satisfies the General Education Criteria for:
UIUC: Life Sciences

ESE 117 The Oceans credit: 3 Hours.
Same as GEOL 117. See GEOL 117.
This course satisfies the General Education Criteria for:
UIUC: Physical Sciences

ESE 118 Natural Disasters credit: 3 Hours.
Same as GEOL 118 and GLBL 118. See GEOL 118.
This course satisfies the General Education Criteria for:
UIUC: Physical Sciences

ESE 120 Severe and Hazardous Weather credit: 3 Hours.
Same as ATMS 120. See ATMS 120.
This course satisfies the General Education Criteria for:
UIUC: Quant Reasoning II

ESE 126 Extinction: Dinosaurs to Dodos credit: 3 Hours.
Same as GEOL 106 and IB 106. See IB 106.
This course satisfies the General Education Criteria for:
UIUC: Life Sciences

ESE 140 Climate and Global Change credit: 3 Hours.
Same as ATMS 140. See ATMS 140.
This course satisfies the General Education Criteria for:
UIUC: Physical Sciences

ESE 143 History of Life credit: 3 Hours.
Same as GEOL 143. See GEOL 143.
This course satisfies the General Education Criteria for:
UIUC: Life Sciences

ESE 170 Nature Religion credit: 3 Hours.
Same as RLST 170. See RLST 170.

ESE 199 Undergraduate Open Seminar credit: 1 to 5 Hours.
Special topics in Earth, Society, and the Environment; content is variable. May be repeated if topics vary.

ESE 200 Earth Systems credit: 3 Hours.
Interdisciplinary lecture class intended to introduce Earth Systems studies, which focuses on integrating social and natural science approaches to studying the Earth and its environments.
ESE 202 American Environmental History credit: 3 Hours.

ESE 208 History of the Earth System credit: 4 Hours.
Same as GEOL 208. See GEOL 208.
This course satisfies the General Education Criteria for:
UIUC: Physical Sciences

ESE 210 Contemp Social & Env Problems credit: 3 Hours.
Same as GEOG 210. See GEOG 210.
This course satisfies the General Education Criteria for:
UIUC: Social Sciences

ESE 215 Resource Conflicts credit: 3 Hours.
Same as GEOG 215 and GLBL 215. See GEOG 215.
This course satisfies the General Education Criteria for:
UIUC: Social Sciences

ESE 222 Big Rivers of the World credit: 3 Hours.
Same as GEOG 222. See GEOG 222.

ESE 287 Environment and Society credit: 3 Hours.
Same as GEOG 287, NRES 287, PS 273 and SOC 287. See NRES 287.
This course satisfies the General Education Criteria for:
UIUC: Social Sciences
UIUC: Western Compartv Cult

ESE 289 Environment & Sust Field Study credit: 1 Hour.
Group expedition to study environment and sustainability issues at a nearby field site. Includes in-class meetings, student-led presentation, and a field trip that may be short as part of a day or as long as several days. Field trip and field trip fee required. Additional fees may apply. See Class Schedule. Approved for letter and S/U grading. May be repeated in separate terms if topics vary. Prerequisite: For ESE majors, minors, and Sustainability Learning Community students. Non majors can apply to the waitlist.

ESE 311 Environmental Issues Today credit: 3 Hours.
Seminar exposing students in the Environmental Fellows Program to different disciplinary perspectives on specific environmental issues, as revealed in the scholarly literature. Specific problems will vary from term to term. This seminar helps students make the transition from disciplinary to interdisciplinary thinking. Team-taught. Same as ATMS 311. Prerequisite: Admission to Environmental Fellows Program or consent of advisor.

ESE 320 Water Planet, Water Crisis credit: 3 Hours.
Study of the science of water on planet earth, the developing water crisis, and some possible solutions to it. Topics include water's unique physical and chemical properties; how it profoundly shapes the earth/ocean/atmosphere system; dynamics of oceans, atmosphere, lakes, rivers, groundwater, and ice masses; current fresh water supplies and their distribution on earth relative to population; current and future water crises and the compounding effects of droughts, floods, and global change; and prospects for some technological and economic approaches to easing the crisis. Same as GEOG 370 and GEOL 370.

ESE 333 Earth Materials and the Env credit: 4 Hours.
Same as GEOL 333. See GEOL 333.

ESE 350 Sustainability and the City credit: 3 Hours.
Same as GEOG 350. See GEOG 350.

ESE 360 Environmental Writing credit: 3 Hours.
Equips students to write about the environment for various audiences, with a focus on specific current efforts to promote sustainability on the Urbana-Champaign campus. We will practice effective techniques for each stage of the writing process—from defining topics, to gathering information, to crafting active, engaging prose. Readings will include models of effective environmental writing and "how to" pieces by experts. Research will include visits to campus sites and student-conducted interviews with subjects. Prerequisite: Completion of campus Composition I general education requirement. This course satisfies the General Education Criteria for:
UIUC: Advanced Composition

ESE 379 Intro to GIS Systems credit: 4 Hours.
Same as GEOG 379. See GEOG 379.

ESE 380 GIS II: Spatial Prob Solving credit: 4 Hours.
Same as GEOG 380. See GEOG 380.
This course satisfies the General Education Criteria for:
UIUC: Quant Reasoning II

ESE 381 Environmental Perspectives credit: 3 Hours.
Same as GEOG 381. See GEOG 381.
ESE 386 Arctic Environment & Society credit: 6 Hours.
Same as GLBL 386 and SCAN 386. See GLBL 386.

ESE 389 Environ & Sust Field Expedition credit: 3 Hours.
Group expedition to study environment and sustainability issues at a field site. Includes in-class meetings, student-led presentation, and field trip; expeditions run during spring break, winter break, in mid-May or in intercession; dates depend on location. Field Trip and field trip fee required. Additional fees may apply. See Class Schedule. May be repeated in separate terms if topics vary. Prerequisite: For ESE majors and Sustainability Living Learning Community students. Non majors can apply to the waitlist.

ESE 401 ESE Capstone credit: 3 Hours.
Capstone experience for majors in Earth, Society, and Environment Sustainability. 3 undergraduate hours. 3 graduate hours. Approved for letter and S/U grading.

ESE 411 Geomorphology credit: 4 Hours.
Same as GEOL 401. See GEOL 401.

ESE 421 Earth Systems Modeling credit: 4 Hours.
Same as ATMS 421, GEOG 421, GEOL 481 and NRES 422. See ATMS 421.

ESE 439 Biogeography credit: 3 Hours.
Same as ANTH 436, GEOG 436, IB 439, and NRES 441. See IB 439.

ESE 445 Earth Resources Sustainability credit: 3 Hours.
Introduces the physical (energy, mineral, and soil) resources of the Earth, the environmental consequences of producing and using resources, the controls on resource supplies, and the alternatives to traditional supplies. Focuses on the geological origin and context of resources, the means of exploration and production, the history of production, and sustainability issues related to consumption and depletion. Provides an understanding of why resources can be scarce and expensive, why many are not renewable, and why their use impacts the Earth System. May include field trips. 3 undergraduate hours. 3 graduate hours. Credit is not given for both ESE 445 and GEOL 380. Prerequisite: Junior standing or higher.

ESE 452 Ecosystem Ecology credit: 3 Hours.
Same as IB 452 and NRES 462. See IB 452.

ESE 465 Transp and Sustainability credit: 3 or 4 Hours.
Same as GEOG 465. See GEOG 465.
This course satisfies the General Education Criteria for: UIUC: Advanced Composition

ESE 466 Environmental Policy credit: 3 or 4 Hours.
Same as GEOG 466. See GEOG 466.

ESE 470 Introduction to Hydrogeology credit: 4 Hours.
Same as GEOG 470. See GEOG 470.

ESE 481 Intl Environ Cooperation credit: 3 Hours.
Same as GEOG 481. See GEOG 481.

ESE 482 Challenges of Sustainability credit: 3 Hours.
An interdisciplinary approach to investigating the meaning and practice of sustainability in the contemporary Earth system. As a consequence, students explore the sustainability of crucial resources - water, soil, energy, mineral and the biota - in the context of the social and environmental systems in which these resources are used, including the moral, physical, ecological, political and economic. Same as GEOG 482 and GEOL 483. 3 undergraduate hours. 3 graduate hours. Prerequisite: Junior or senior standing, or consent of instructor.

ESE 497 Special Topics in ESE credit: 1 to 4 Hours.
Advanced topics course, consisting of seminar or lectures in subjects not covered by regular course offerings; for advanced undergraduates and graduate students. Possible field study in a prominent geological locality; includes in-class meetings, student-led presentations, and field trip; trips run during spring break, winter break, in mid-end May; dates depend on location. Additional fees may apply. See Class Schedule. 1 to 4 undergraduate hours. 1 to 4 graduate hours. Approved for letter and S/U grading. May be repeated in the same or separate terms to a maximum of 12 undergraduate hours or 8 graduate hours. Prerequisite: Consent of instructor.

Economics (ECON)

ECON Class Schedule (https://courses.cites.illinois.edu/schedule/DEFAULT/DEFAULT/ECON)
Courses

ECON 101 Introduction to Economics credit: 4 Hours.
General survey of the operation of the economic system; emphasizes the determination of the level of national income, the pricing and allocation of products, and factors of production under existing conditions in the United States. This is an honors course limited to students currently enrolled in the Chancellor's Scholar Program. Credit is not given for ECON 101 if credit has been earned in both ECON 102 and ECON 103.
This course satisfies the General Education Criteria for:
UIUC: Social Sciences

ECON 102 Microeconomic Principles credit: 3 Hours.
Introduction to the functions of individual decision-makers, both consumers and producers, within the larger economic system. Primary emphasis on the nature and functions of product markets, the theory of the firm under varying conditions of competition and monopoly, and the role of government in prompting efficiency in the economy. Credit is not given for ECON 102 and ACE 100.
This course satisfies the General Education Criteria for:
UIUC: Social Sciences

ECON 103 Macroeconomic Principles credit: 3 Hours.
Introduction to the theory of determination of total or aggregate income, employment, output, price levels, and the role of money in the economy. Primary emphasis on monetary and fiscal policy, inflation, unemployment, economic growth, and international economics.
This course satisfies the General Education Criteria for:
UIUC: Social Sciences

ECON 198 Economics at Illinois credit: 1 Hour.
An introductory course intended to help students explore the various fields of economics. Presents brief introductions to various faculty members within the Department of Economics at Illinois and an overview of their respective fields. Enrollment limited to undergraduate Economics majors only. Approved for S/U grading only.

ECON 199 Undergraduate Open Seminar credit: 0 to 5 Hours.
Approved for both letter and S/U grading. May be repeated.

ECON 202 Economic Statistics I credit: 3 Hours.
Introduction of basic concepts in statistics including the presentation of data, descriptive statistics, probability theory, discrete and continuous distributions, sampling distributions, estimation, and hypothesis testing. The approach of the class includes both learning the concepts behind basic statistics and also how to apply these concepts in "real-life" situations. Utilizes a practical project format. To complete the Business Statistics sequence, students must also complete ECON 203. Credit is not given for ECON 202 if credit for a college-level introductory statistics course such as PSYC 235, SOC 280, or STAT 100 has been earned. Prerequisite: Credit or registration in one of MATH 220, MATH 221, MATH 234.
This course satisfies the General Education Criteria for:
UIUC: Quant Reasoning I

ECON 203 Economic Statistics II credit: 3 Hours.
Continuation of ECON 202. Builds upon point and interval estimation as well as hypothesis testing skills first introduced in ECON 202. Utilizes a practical project format to extend the student skill set to include simple and multiple linear regression and time series techniques. Prerequisite: ECON 202; one of MATH 220, MATH 221, MATH 234.

ECON 210 Environmental Economics credit: 3 Hours.
Same as ACE 210, ENVS 210, NRES 210, and UP 210. See ACE 210.
This course satisfies the General Education Criteria for:
UIUC: Social Sciences

ECON 220 Intl Economic Principles credit: 3 Hours.
Principles-level course in international economics for non-majors. The first half of course, international trade, covers such topics as comparative advantage, protectionism (tariff and nontariff), impact on income distribution, and industrial policies. The second half, international finance, covers topics such as balance of payments, exchange-rate determination, currency crises, dollarization, and macroeconomic policy in an open economy. Issues relating to globalization will be covered in both halves. Prerequisite: ECON 101; or ECON 102 (or ACE 100) and ECON 103. Credit in ECON 220 is not applicable toward graduation in the Economics Major.

ECON 302 Inter Microeconomic Theory credit: 3 Hours.
Microeconomic analysis including value and distribution theory; analysis of the pricing of the factors of production integrated in a micro-general equilibrium context which builds towards explaining the resource allocation process. Prerequisite: ECON 102 or equivalent. MATH 220, MATH 221, MATH 234 or equivalent.

ECON 303 Inter Macroeconomic Theory credit: 3 Hours.
The modern theory of the determination of the level and rate of growth of income, employment, output, and the price level; discusses alternate fiscal and monetary policies to facilitate full employment and economic growth. Prerequisite: ECON 102, ECON 103. Recommended: MATH 125; one of MATH 220, MATH 221, MATH 234.

Information listed in this catalog is current as of 11/2014
ECON 397 Senior Research I credit: 2 to 4 Hours.
Research and readings course for students majoring in economics; may be taken by students in the college honors program in partial fulfillment of the honors requirements. Prerequisite: Cumulative grade-point average of 3.0 or honors in the junior year, or consent of instructor; senior standing.

ECON 398 Senior Research II credit: 2 to 4 Hours.
Research and readings course for students majoring in economics; may be taken by students in the college honors program in partial fulfillment of the honors requirements. Prerequisite: Cumulative grade-point average of 3.0 or honors in the junior year; senior standing.

ECON 399 Undergraduate Open Seminar credit: 0 to 9 Hours.
Independent study course covering topics not treated by regular course offerings. This class does not satisfy departmental graduation requirements. Approved for both letter and S/U grading. May be repeated. Prerequisite: Junior or senior standing. ECON 101 or equivalent is recommended. ECON 102 or equivalent is recommended.

ECON 411 Public Sector Economics credit: 2 to 4 Hours.
Economic analysis of government tax and expenditure policies; topics include public good and externality theory, public choice theory, income distribution, cost-benefit analysis, principles of taxation, tax incidence, economic effects and optimal structures of major taxes, and taxation in developing economies. 3 undergraduate hours. 2 or 4 graduate hours. Prerequisite: ECON 302 or consent of instructor.

ECON 414 Urban Economics credit: 3 or 4 Hours.
Analyzes the urban economy. Topics include: economic reasons for the existence of cities; the theory of urban spatial structure; the effects of taxation on housing decisions; the economics of freeway congestion; economics analysis of local public goods and services; economic analysis of rent control, slum policies and land-use controls. Same as FIN 414. 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: ECON 302.

ECON 420 International Economics credit: 2 to 4 Hours.
Introduction to the theory of international trade and finance with selected application to current problems of trade policy, balance of payments adjustment, the international monetary system, and globalization issues. 3 undergraduate hours. 2 or 4 graduate hours. Prerequisite: ECON 302 or equivalent, or consent of instructor; ECON 303 is recommended.

ECON 440 Economics of Labor Markets credit: 2 to 4 Hours.
Studies the microeconomic determinants of labor demand and supply, economic effects of unions, and macroeconomic labor market problems. Same as LER 440. 3 undergraduate hours. 2 or 4 graduate hours. Prerequisite: ECON 302 or equivalent.

ECON 450 Development Economics credit: 2 to 4 Hours.
Analyzes the economic problems associated with newly developing nations; emphasizes their economic structures, their factor scarcities, and their programs for development. Not open for graduate credit to graduate candidates in economics. 3 undergraduate hours. 2 or 4 graduate hours. Graduate credit is not given for both ECON 450 and ECON 550 or ECON 551. Prerequisite: ECON 102 and ECON 103 or equivalent. ECON 302 strongly recommended.

ECON 452 The Latin American Economies credit: 2 to 4 Hours.
Focuses on the economic history of the region, the recent industrialization process and its impact, the role of the state and foreign capital, the impact of the recent privatization processes, inflation and stabilization policies, and issues surrounding the distribution of income. Same as ACE 452. 3 undergraduate hours. 2 or 4 graduate hours. Prerequisite: ECON 102 or ECON 303 2 to 4 Hours. ECON 302 or ECON 303 strongly recommended.

ECON 462 Macroeconomic Policy credit: 2 or 3 Hours.
Analyze current macroeconomic policy issues, problems, and techniques; discusses various policy techniques including monetary, fiscal, incomes, and exchange rate policies, and their effectiveness for treating inflation, unemployment, productivity, resource and exchange rate problems. May emphasize current issues in developed economies or in emerging market economies. 3 undergraduate hours. 2 or 3 graduate hours. Prerequisite: ECON 303 or equivalent.

ECON 465 Mathematical Economics credit: 2 to 4 Hours.
Introduction to game theory with applications to economics; emphasizes the analysis of static and dynamic games with or without complete information. 3 undergraduate hours. 2 or 4 graduate hours. Prerequisite: One of MATH 125, MATH 225, MATH 415; MATH 241 or equivalent; ECON 302.

ECON 469 Economics of Risk credit: 3 or 4 Hours.
Exploration of economic decisions under uncertainty. Includes expected utility theory and non-expected utility theory; applications to individual decision problems in investment and insurance; general equilibrium in markets under uncertainty, including problems generated by asymmetric information; measurement of risk; the value of information obtained before a decision. 3 or 4 undergraduate hours. 3 or 4 graduate hours. Prerequisite: ECON 302 or equivalent; one of MATH 220 or MATH 221 or equivalent.

ECON 471 Intro to Applied Econometrics credit: 2 to 4 Hours.
Introduction to specification, estimation, prediction and evaluation of econometric models, emphasizing the interplay between statistical theory and economic applications. 3 undergraduate hours. 2 or 4 graduate hours. Prerequisite: ECON 203 or equivalent; ECON 302 or ECON 303.

ECON 480 Industrial Comp and Monopoly credit: 2 to 4 Hours.
Analyzes the ways firms and markets are organized, how they interact, outcomes of various types of firm behavior and performance of markets, and causes and types of market failure. Particular emphasis on the contribution of game theory as the equilibrium concept in oligopoly settings. 3 undergraduate hours. 2 or 4 graduate hours. Prerequisite: ECON 302.
ECON 481 Govt Reg of Economic Activity credit: 2 to 4 Hours.
Analysis of economic bases, policies, and consequences of government regulation of economic activity. Reasons for government intervention in market behavior, methods of government intervention, and outcomes are studied. 3 undergraduate hours. 2 or 4 graduate hours. Prerequisite: ECON 302 or consent of instructor.

ECON 482 Health Economics credit: 3 or 4 Hours.
Economic analysis of the health care industry to explain the demand for and supply of medical care. Includes analysis of behavior of consumers, producers, and insurers; and public policies to regulate the industry and to provide services for the poor and elderly. 3 undergraduate hours. 4 graduate hours. Prerequisite: ECON 302 is recommended.

ECON 483 Econ of Innovation and Tech credit: 2 to 4 Hours.
Examines the economic factors shaping innovation and technical change since the industrial revolution with emphasis on the economic relationship between science and technology and the role of government in technical change. 3 undergraduate hours. 2 or 4 graduate hours. Prerequisite: ECON 102 or equivalent; ECON 302 or consent of instructor.

ECON 484 Law and Economics credit: 2 to 4 Hours.
Applications of economic theory to problems and issues in both civil and criminal law and the effect of legal rules on the allocation of resources; includes property rights, liability and negligence assignment, the use of administrative and common law to mitigate market failure, and the logic of private versus public law enforcement. 3 undergraduate hours. 2 or 4 graduate hours. Prerequisite: ECON 302 or equivalent.

ECON 490 Topics in Economics credit: 3 or 4 Hours.
Treatment of special topics in economics. 3 undergraduate hours. 4 graduate hours. May be repeated in the same term to a maximum of 6 undergraduate hours or 8 graduate hours. May be repeated in separate terms to a maximum of 9 undergraduate hours or 8 graduate hours. Prerequisite: ECON 302 or consent of instructor.

ECON 500 Microeconomics credit: 4 Hours.
Emphasizes microeconomic theory; principal topics include a review of value and distribution theory, the theory of choice by households and firms, general microeconomic theory, and theoretical developments of current interest. Credit is not given for both ECON 500 and ECON 528. Graduate credit for both ECON 302 and ECON 500 is given only upon recommendation of the student's adviser and approval by the Department of Economics. Prerequisite: ECON 102 or equivalent. MSPE Graduate Student Standing.

ECON 501 Macroeconomics credit: 4 Hours.
Emphasis on macroeconomic theory; principal topics include a review of Keynesian macroeconomic theory, formal growth theory, and selected business cycle theory. Credit is not given for both ECON 501 and ECON 529. Graduate credit for both ECON 303 and ECON 501 is given only upon recommendation of the student's adviser and approval by the Department of Economics. Prerequisite: ECON 102 and ECON 103 or equivalent. MSPE Graduate Student Standing.

ECON 502 Economic Statistics credit: 4 Hours.
Classical statistics and regression analysis; descriptive statistics, probability and point and interval estimation; decision theory; variance analysis; and linear regression and least-squares estimates. Prerequisite: A course in statistics or consent of instructor. MSPE Graduate Student Standing.

ECON 503 Econometrics credit: 4 Hours.
Develops a general methodological basis for searching for quantitative economic knowledge; integrates and gives operational content to the topics of economic, statistical, and econometric theory. Prerequisite: ECON 502, or equivalent. MSPE Graduate Student Standing.

ECON 504 Time Series Analysis in Econ credit: 4 Hours.
Modern time series analysis techniques for handling economic data which arises in a happenstance fashion through time and their application to specific economic problems. Prerequisite: ECON 503 or STAT 578, or equivalent. MSPE Graduate Student Standing.

ECON 505 Introduction to Game Theory credit: 4 Hours.
