The Health and Well-being for Designed Environments Certificate at the University of Illinois at Urbana Champaign is designed to provide environmental design professionals with an in-depth understanding of the relationship between conditions in the built environment and individual performance and population health, well-being, and quality of life. This Campus Graduate Certificate not only provides strong foundational knowledge of built environment and health and new tools for design in this area, but also offers students multiple opportunities to apply this knowledge and skill in on-going projects.

Certificate coursework enables students to develop expertise in research and strategies for environmental design to improve human health and wellbeing outcomes through design solutions and interventions in diverse environment types and contexts, at a range of scales. Responding to an unmet need in the profession, students completing the certificate will be prepared to work on interdisciplinary teams addressing complex societal problems involving the built environment’s critical role in human health and wellbeing in the US and internationally.

Information listed in this catalog is current as of 07/2022
