MOLECULAR AND INTEGRATIVE PHYSIOLOGY

https://mcb.illinois.edu/departments/mip/

Head of the Department: Milan Bagchi
524 Burrill Hall
407 South Goodwin Avenue
Urbana, IL 61801
(217) 333-1735
E-mail: mcbinfo@life.uiuc.edu

Major: Molecular and Integrative Physiology
Degrees Offered: M.S., Ph.D.

Medical Scholars Program: Doctor of Philosophy (Ph.D.) in Molecular and Integrative Physiology and Doctor of Medicine (M.D.) through the Medical Scholars Program (http://www.med.uiuc.edu/msphd)

Graduate Degree Program

The graduate program in molecular and integrative physiology is designed to provide individualized training in preparation for research and teaching careers in molecular, cellular, and integrative physiology. The objective of the training is to produce scientists who are technically competent and broadly educated. The program offers a Ph.D. in Molecular and Integrative Physiology and a joint M.D./Ph.D. degree in conjunction with the College of Medicine. Please note: Students interested in this program must apply directly to the School of Molecular and Cellular Biology (http://mcb.illinois.edu). The Department of Molecular & Integrative Physiology does not accept applications for the master’s degree. During the first semester, students perform three laboratory rotations, choosing from any laboratory in the School. Students select a laboratory for their thesis research in December and formally join the appropriate graduate program at that time.

Admission

Candidates for admission must meet the minimum standards established by the Graduate College for graduate study at the University of Illinois at Urbana-Champaign, but final selection of students who enter the molecular and integrative physiology program each fall is determined by an admissions committee. Admission beginning in the spring semester is rarely allowed except under extraordinary circumstances. Students should have strong undergraduate training in science. To be admitted, students should have a grade point average between an A and a B and three letters of recommendation that indicate ability to perform graduate work. All applicants are required to submit scores of the Graduate Record Examination (GRE) or similar examinations. Applicants whose native language is not English are required to submit the results of the Test of English as a Foreign Language (TOEFL). The department requires a minimum score of 590 on the paper-based TOEFL (243 on the computer-based test), the Graduate College requirement. For admission purposes, TOEFL scores are valid for only two years before the proposed term of entry.

Medical Scholars Program

The Medical Scholars Program permits highly qualified students to integrate the study of medicine with study for a graduate degree in a second discipline, including Molecular and Integrative Physiology. Students may apply to the Medical Scholars Program prior to beginning graduate school or while in the graduate program. Applicants to the Medical Scholars Program must meet the admissions standards for and be accepted into both the doctoral graduate program and the College of Medicine. Students in the dual degree program must meet the specific requirements for both the medical and graduate degrees. On average, students take eight years to complete both degrees. Further information on this program is available by contacting the Medical Scholars Program, 125 Medical Sciences Building, (217) 333-8146 or at www.med.illinois.edu/msp (http://www.med.illinois.edu/msp).

Graduate Teaching Experience

Experience in teaching is considered a vital part of the graduate program and is required as part of the academic work of all Ph.D. candidates in this program. Minimum teaching requirement is 50% for one semester. However, it is strongly recommended that students gain experience equivalent to 50% for at least two semesters.

Financial Aid

Financial support is guaranteed for all students who remain in good academic standing.

Master of Science in Molecular and Integrative Physiology

The M.S. is earned in route to the Ph.D. degree. Students are not admitted to the M.S. program.

MCB 401 & MCB 402 Cell & Membrane Physiology and Sys & Integrative Physiology (College of Medicine M1 Physiology, both semesters, or equivalent, or proficiency exam.)

MCB 501 Advanced Biochemistry
MCB 502 Advanced Molecular Genetics
MCB 509 Curr Topics Mol & Int Physiol
MCB 580 Res Ethics & Responsibilities

Six credit hours taken from courses listed on the department's Course Menu

Required registration in MIP 595 each semester until passing the qualifying exam

MCB 581 Laboratory Rotation I
& MCB 582 and Laboratory Rotation II
& MCB 583 and Laboratory Rotation III

Total Hours 32

Other Requirements

Other requirements may overlap

Minimum Number of 500-level 12
Hours Required Overall in Program:
Students whose native language is other than English are required to have passed the SPEAK test before taking the Qualifying Examination.
Passing the qualifying exam is required.
All core courses must be completed with grades of B or above.
Minimum GPA: 2.75

Information listed in this catalog is current as of 06/2016
Doctor of Philosophy in Molecular and Integrative Physiology

The doctoral program uses a flexible approach to curriculum requirements. Students are required to take two core courses, three laboratory rotations (five weeks each), and electives. The students in consultation with a faculty advisory committee choose additional courses in chemistry, biochemistry, immunology, molecular biology, mathematics, and cell biology. Students are encouraged to begin research as soon as they identify an area of research interest. The department has a particularly strong focus in cell physiology, comparative physiology, computational biology, neurophysiology, and endocrinology. Courses and lab research are supplemented by a weekly seminar series. Toward the end of the second year, students must submit a report describing their initial research and pass an oral qualifying examination in order to continue in the Ph.D. program. One year after their qualifying examinations, and no later than the end of their eighth semester in the program, students are expected to take their preliminary examinations in which they present their thesis topic and preliminary research to a faculty committee. Finally, a thesis, which is based on original work in one area of physiology and which demonstrates a thorough knowledge of underlying theories and experimental approaches, must be defended at the final examination. Most students complete their Ph.D. training in four to five years.

Entering with approved M.S. degree
