The Department of Astronomy offers graduate programs leading to
the Master of Science and Doctor of Philosophy degrees. The goal
of the graduate program in astronomy is to provide broadly based
training in modern astrophysics and astronomy for a small and carefully
selected student body. Individually designed programs involving close
contact with faculty members are encouraged, and an understanding of
fundamental principles and techniques and their applications to research
problems of current interest is emphasized. Students are expected
to acquire a solid knowledge of modern physics as well as of general
astronomy. A major objective is to maintain an exciting intellectual
environment in which students can develop their scientific creativity and
their enthusiasm for astronomy.

Graduate Degree Programs in Astronomy

Astronomy, MS (http://catalog.illinois.edu/graduate/las/

Astronomy, PhD (p. 1)
optional concentration: Astrochemistry (http://catalog.illinois.edu/
graduate/las/concentration/astrochemistry)

Admission

Admission to the astronomy graduate program requires an outstanding
record of accomplishment and clear evidence of considerable
academic promise, as judged by test scores, resume (or c.v.), letters
of recommendation, personal statement, and strong intellectual
achievements. A bachelor’s degree or its equivalent in astronomy,
physics, chemistry, mathematics, or another related technical field from
an accredited college or university in the U.S. or an approved institution
of higher learning abroad is required for admission.

A minimum grade point average of 3.0 (A = 4.0) and satisfactory
scores on the Graduate Record Examination (GRE) (verbal, quantitative,
and advanced physics portions) are required for admission. Course
preparation in intermediate and advanced undergraduate physics and
astronomy are essential. Students are expected to make up deficiencies
during the first graduate year.

All applicants whose native language is not English are required
to submit the results of the TOEFL or IELTS as evidence of English
proficiency, as required by Graduate College policy. More information
on the English Proficiency Requirement can be found at the Graduate
College Admissions Web site (http://www.grad.illinois.edu/admissions/
instructions/04c).

Admission decisions are normally made once a year in the spring.
Applications for admission and financial assistance must be received by
January 15. In rare circumstances, applicants may be admitted for the
spring semester, in addition to the customary fall semester admissions.

See the Astronomy graduate admissions Web site
(www.astro.illinois.edu/academics/graduate/) for more information and
application materials.

Graduate Teaching Experience

Although teaching is not a general Graduate College requirement,
experience in teaching is considered an important part of the graduate
experience in this program.

Faculty Research Interests

Research activity in the Department of Astronomy includes observational
and theoretical investigations of a wide array of astronomical objects:

• Early-universe cosmology (inflation, particle dark matter, cosmic
  nucleosynthesis)
• Large-scale structure of the universe (cosmic microwave background,
galaxy clusters)
• Extragalactic systems (galaxy structure and evolution, interacting
galaxies, active galaxies, jets, and quasars)
• Intergalactic medium (multiple phases, molecular clouds, HII regions,
bubbles and superbubbles, planetary nebulae, supernova remnants,
magnetic fields, and galactic structure)
• Stars (formation, structure and evolution, atmospheres,
nucleosynthesis, novae, supernovae, pulsars, and stellar statistics)
• Compact objects (black holes, neutron stars, white dwarfs)

Theoretical astrophysics is also a strong research interest many faculty
members in the Department of Astronomy and the Department of
Physics. Current activity centers on:

• Astrophysical fluid dynamics, magnetohydrodynamics and radiation
  hydrodynamics
• Physics of dense stellar matter
• Accretion phenomena
• High energy and relativistic astrophysics
• Cosmic inflation and structure formation
• Nuclear and particle processes in cosmology and astrophysics
• Black hole physics and astrophysics
• Gravitational lensing
• Gravitational wave phenomena

Facilities and Resources

• The Dark Energy Survey
• The Large Synoptic Survey Telescope
• The South Pole Telescope
• Astronomy students and faculty successfully compete for time on
  national facilities. These include ground-based telescopes of the
  National Radio Astronomy Observatory, such as the Atacama Large
  Millimeter Telescope and the Very Large Array, and the National
  Optical Astronomy Observatory telescopes. Illinois research involves

Information listed in this catalog is current as of 04/2020
many space-based telescopes, including the Hubble, Planck, Spitzer, Herschel, Chandra, and Fermi.

- A number of projects in the Department of Astronomy partner with the National Center for Supercomputing Applications (NCSA) at Illinois. This includes development and application of astrophysical simulations such as the FLASH package and general relativistic magnetohydrodynamic codes that provide insight into the nature of structure formation and the physics of black holes. Astronomy faculty also leverage NCSA’s pioneering development of cyberinfrastructure environments to facilitate data transport for the Sloan Digital Sky Survey (SDSS), the Dark Energy Survey, the Square Kilometer Array, and the Large Synoptic Survey Telescope. NCSA and the Astronomy Department also jointly founded the Laboratory for Cosmological Data Mining to apply novel algorithms to the rich datasets now available for cosmological analysis, including those from the SDSS and Wilkinson Microwave Anisotropy Probe.

- Illinois is the home of the Blue Waters National Petascale Computing Facility, one of the most powerful supercomputers in the world, and the most powerful on a university campus. A portion of Blue Waters time is dedicated to Illinois faculty, and Astronomy students and faculty use Blue Waters for their research.

Financial Aid

University fellowships are available and may be combined with part-time teaching assistantships. Most resident students are supported for their first two or three years by half-time teaching assistantships. The typical teaching assistant takes two or three graduate courses per semester and spends twenty hours per week handling quiz sections in elementary astronomy courses. Teaching assistantships are responsible positions, and the concomitant duties are considered to be a valuable part of the student’s educational experience. Advanced students may compete for research assistantships offered by faculty members whose research is partially supported by federal grants.

for the degree of Doctor of Philosophy in Astronomy

For additional details and requirements refer to the department’s Graduate Programs (http://www.astro.illinois.edu/academics/graduate/programs) and the Graduate College Handbook (http://www.grad.illinois.edu/gradhandbook).

First Summer Research Project (4 hours)

During the first summer in residence, each student will enroll in ASTR 590 (Independent Study) and will complete a research project with an Astronomy Department faculty member. A paper reporting the results is required, which must be prepared in scientific journal style and approved by the faculty member.

Master’s Degree Required Before Admission to PhD? No  
Qualifying Exam Required No  
Preliminary Exam Required Ph.D. Preliminary Examination consists of a written preliminary paper on the Ph.D. research topic and an oral examination. It must be passed by the end of the third year of study.

Information listed in this catalog is current as of 04/2020
Final Exam/Dissertation Defense Required
Completion of an original research project culminating in a dissertation thesis publishable in whole or in part is required. The final examination is a defense of the doctoral dissertation.

Dissertation Deposit Required Yes

Minimum GPA: 3.0

1 Students entering with an approved M.A. or M.S. degree may proficiency out of ASTR 501 and ASTR 502 with departmental approval. Other 500-level ASTR graduate courses must be taken in the unit for substitute credit hours.

2 Demonstrated Proficiency in Astronomy (ASTR 404, ASTR 405, ASTR 406 and ASTR 414)
Students must show proficiency in the four courses by one of the following options:
• Pass the appropriate section of the placement exam (four sections aligned to the four courses), which is offered at the start of every Fall semester. A student can petition to take the exam once more the following year. The decision on petition approval by the graduate advisor will depend on the student’s background and proficiency plan.
• Pass the course with a B grade or better.
• Students who have had an equivalent course at another institution (B grade or better) may petition for those courses to count as proficiency.

3 Of the additional formal coursework, 8 is the minimum number of hours in the unit (excluding thesis research, non-thesis research, and independent study credit hours).

4 Of the additional formal coursework, 8 (with 4 in the unit) is the minimum number of 500-level hours (excluding thesis research, non-thesis research, and independent study credit hours).

Information listed in this catalog is current as of 04/2020
