BIOCHEMISTRY, BS

for the degree of Bachelor of Science Major in Biochemistry (Specialized Curriculum)

Undergraduate degree programs in Molecular & Cellular Biology Biochemistry, BS (http://catalog.illinois.edu/undergraduate/las/molecular-cellular-biology-bslas/) Molecular & Cellular Biology, BSLAS

for the degree of Bachelor of Science Major in Biochemistry (Specialized Curriculum)

The typical program of courses required to satisfy this degree totals 126-131 hours as outlined below including up to 12 hours of non-primary language (if not completed in high school); in no case will a program totaling less than 120 hours qualify for graduation. In addition, in order to graduate there is a minimum 2.0 cumulative academic grade point average and student must attain a 2.5 academic grade point average in the chemistry, biochemistry, biology, mathematics, physics and advanced electives in science/engineering courses specified in this curriculum. All proposals for course substitutions must be approved by the academic advisor. This curriculum is intended for those students who desire a rigorous education in chemistry, biochemistry, and biology, who have definite research-oriented goals, and whose career objectives include graduate school, MD/PhD programs, or industry.

Students earning the Biochemistry degree automatically complete the Chemistry minor. Students earning a degree in the Specialized Curriculum in Biochemistry may not earn a second degree in the Science and Letters Curriculum in Molecular and Cellular Biology.

Departmental distinction: A student seeking distinction must satisfy the following:

- Complete a minimum of 6 credit hours of undergraduate research (BIOC 290 and BIOC 492) with a minimum of 4 credit hours of BIOC 492.
- · Earn at least a 3.25 grade-point average.
- Present a senior thesis to the department.

General education: Students must complete the Campus General Education (https://courses.illinois.edu/gened/DEFAULT/DEFAULT/) requirements including the campus general education language requirement.

Hours

Composition I requirement

Minimum hours required for graduation: 120 hours.

Nontechnical Requirements: ⁶ variable			
General education:			
Foreign language - three semesters of college study (or three			
ears of high school study) in a single foreign language to satisfy ne campus foreign language requirement			
Composition I writing requirement to satisfy the campus			

Advanced Composition writing requirement (BIOC 460 is required) Humanities/Arts to satisfy the campus general education requirements

Social/Behavioral sciences to satisfy the campus general education requirements

Cultural Studies to satisfy the campus general education requirement

Electives (not including any credit in satisfaction of the above variable requirements)

Transfer credit must be approved by an advisor in biochemistry in order to be used to satisfy degree requirements.

A more detailed description of the requirements is listed in the Biochemistry Curriculum Handbook, available in room 419A of Roger Adams Laboratory.

PHYS 213 is not required if CHEM 442/CHEM 444 sequence is taken. Freshman orientation course is under development and will be required. See advisor for details.

An approved list of current courses will be updated annually in January/ February for the coming year. Contact advisor.

The requirements for the Campus General Education categories of Natural Sciences and Technology and Quantitative Reasoning I are fulfilled through coursework in the curriculum.

for the degree of Bachelor of Science Major in Biochemistry (Specialized Curriculum)

Sample Sequence

This sample sequence is intended to be used only as a guide for degree completion. All students should work individually with their academic advisors to decide the actual course selection and sequence that works best for them based on their academic preparation and goals. Enrichment programming such as study abroad, minors, internships, and so on may impact the structure of this four-year plan. Course availability is not guaranteed during the semester indicated in the sample sequence.

Students must fulfill their Language Other Than English requirement by successfully completing a third level of a language other than English. See the corresponding section on the Degree and General Education Requirements page (http://catalog.illinois.edu/general-information/ degree-general-education-requirements/).

Elective course

Technical

for the degree of Bachelor of Science Major in Biochemistry (Specialized Curriculum)

14

Upon successful completion of the Biochemistry Specialized Curriculum, students will be able to:

Technical

Elective course

- 1. Understand and appreciate that the diversity of life evolved over time by biomolecular processes of mutation, selection, genetic change, and epigenetics.
- 2. Explain that molecular and macromolecular structure as well as supramolecular architecture determine function and regulation.
- 3. Explain that information storage and flow are molecular-based, dynamic, and interactive.
- 4. Understand and appreciate that biochemical mechanisms and kinetics ensure relative cellular stability and function under external or internal changing condition.

- 5. Explain that energy is required by and transformed in biochemical systems as governed by the laws of thermodynamics.
- Illustrate that living organisms and biological systems interact via molecular connections.
- Design a scientific process and employ the scientific method, demonstrating that biochemistry is evidence-based and grounded in the formal practices of observation, objective measurement, and hypothesis testing.
- 8. Execute quantitative analysis and mathematical reasoning to interpret biochemical data.
- Construct and utilize predictive models and simulations that define chemical relationships, as well as molecular interactions of complex systems.
- Apply concepts from other sciences that span biology, chemistry, physics, mathematics, computation, and engineering to interpret biochemical phenomena.
- 11. Communicate biochemical concepts and understanding to members of a diverse scientific community, as well as to the general public.
- 12. Identify social and health-related dimensions of biochemical investigations.
