

LAW: TECH & PRIVACY, MS

Overview

for the degree of Master of Science in Law, Tech & Privacy concentration (online)

The online MS in Law, which is focused on applied legal strategy for business and tech, is a flexible, asynchronous program tailored to ambitious working professionals in business, compliance, technology, and related fields who seek to advance their careers without pausing their professional lives. Requiring just 8 courses this program equips students with practical, high-impact legal skills to navigate regulatory complexities, mitigate risks, communicate strategically with legal counsel, and drive ethical innovation in dynamic industries. Whether you're aiming for leadership roles like Chief Compliance Officer, Tech Policy Advisor, or Human Resources Director, or simply want to enhance your decision-making in fast-evolving sectors, the curriculum emphasizes real-world applications through case studies and simulations. Choose to concentrate by completing at least 4 of your 5 elective courses in one area (Business Integrity, Risk Management, and Strategic Compliance; or AI, Privacy, Cybersecurity, and Emerging Technology) for a specialized credential, or mix freely for broader expertise. Delivered fully online with no set class times and instruction and assignments that can be broken down flexibly into manageable bits, this program is tailored to the schedules of working professionals. It includes a variety of standalone, stackable certificates for quick upskilling and a pathway to the MS in Law degree.

Learning Outcomes

for the degree of Master of Science in Law, Tech & Privacy concentration (online)

Upon completion, graduates will be able to:

1. Understand legal frameworks relevant to AI, privacy, cybersecurity, and other emerging technologies, including their role in managing risks in regulated industries.
2. Apply regulatory frameworks to internal policies and procedures, tech deployments, vendor reviews, and incident responses, addressing common scenarios like high-risk AI classifications or breach notifications.
3. Analyze the ethical and legal risks of decisions related to technology in business and tech, contrasting those risks with other business or strategic priorities.
4. Evaluate competing policies, procedures, and strategies to protect against legal risks relating to privacy, cybersecurity, intellectual property, and related tech regulations, incorporating counsel feedback.
5. Create internal policies and business strategies that balance innovation, compliance, privacy, and security aims, tailored to organizational goals in regulated environments.
